

Dear Commissioners;

I don't agree with the drugging of children at such a young age.

Most babies are born with some of the things that they want to eat them for, but grow out of these things by the age of 3 or 4 years of age.

My 3 children had some of the things that Psychiatry wants to screen children for, but grew out of them by 3 yrs of age, now are normal adults.

Please save our future generation.

Kind Regards

Paul Pollard.
