Table 14A.38 **Users of NDA community support services, by geographic location (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | <i>Unit</i> | <i>NSW (j)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (k)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|----------------|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (a) | The potential population for 2008-09, 2009-10 and 2010-11 has been revised. See Box 14.4 and section 14.7. Data previously published in the 2013 Report have been updated in this Report. | | | | | | | | | |
| (b) | Data on service users in each geographic location were estimated based on service users' residential postcodes. Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location. | | | | | | | | | |
| (c) | Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Row totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory. | | | | | | | | | |
| (d) | Data for all service users exclude 1717 service users in 2006-07, 3752 service users in 2007-08 whose postcode was not reported and 5489 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09. | | | | | | | | | |
| (e) | Data for users of NDA funded community support services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | | |
| (f) | Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of people aged under 65 years in that geographic location, multiplied by 1000. Data on service users per 1000 potential population are derived by dividing the number of service users in a geographic location by the potential population aged under 65 years in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report. | | | | | | | | | |
| (g) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. | | | | | | | | | |
| (h) | Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (i) | Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability. | | | | | | | | | |
| (j) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |

Table 14A.38 **Users of NDA community support services, by geographic location (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| <i>Unit</i> | <i>NSW (j)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (k)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-------------|----------------|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
|-------------|----------------|------------|------------|-----------|---------------|------------|------------|-----------|-------------|

(k) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

- (a) The potential population for 2008-09, 2009-10 and 2010-11 has been revised. See Box 14.4 and section 14.7. Data previously published in the 2013 Report have been updated in this Report.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Row totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.
- (d) Data for all service users exclude 1730 service users in 2006-0, 2184 service users in 2007-08 whose postcode was not reported and 2258 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (e) Data for users of NDA funded community access services exclude specialist psychiatric disability services identified by the jurisdiction.
- (f) Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of people aged under 65 years in that geographic location, multiplied by 1000. Data on service users per 1000 potential population are derived by dividing the number of service users in a geographic location by the potential population aged under 65 years in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.

Table 14A.39 **Users of NDA community access services, by geographic location (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | <i>Unit</i> | <i>NSW (j)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (k)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|----------------|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (g) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. | | | | | | | | | |
| (h) | Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (i) | Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability. | | | | | | | | | |
| (j) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (k) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |

(a) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.

Table 14A.40 **Users of NDA respite services, by geographic location (a), (b), (c), (d), (e), (f), (g), (h)**

| <i>Unit</i> | <i>NSW (i)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (j)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-------------|---|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (b) | Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Row totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory. | | | | | | | | |
| (c) | Data for all service users exclude 637 service users in 2006-07, 483 service users in 2007-08 whose postcode was not reported and 512 service users in 2008-09 whose geographic location could not be determined. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09. | | | | | | | | |
| (d) | Data for users of NDA funded respite services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | |
| (e) | Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of people aged under 65 years in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data. | | | | | | | | |
| (f) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. | | | | | | | | |
| (g) | Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | |
| (h) | Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability. | | | | | | | | |
| (i) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | |
| (j) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |

- (a) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Row totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.
- (d) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of people aged 15 and over in that geographic location, multiplied by 1000. Data on service users per 1000 potential population are derived by dividing the number of service users in a geographic location by the potential population aged 15 and over in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (f) Data for all service users exclude six service users in 2003-04, ten service users in 2004-05, 231 service users in 2005-06, 13 service users in 2006-07, 136 service users in 2007-08 whose postcode was not reported and 83 service users in 2008-09 whose geographic location could not be derived, thus totals may differ from other tables. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.

Table 14A.41 **Users of NDA employment services, by geographic location (a), (b), (c), (d), (e), (g)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT (h)</i> | <i>NT</i> | <i>Aust</i> |

(g) From 1 October 2008, targeted support services previously delivered by the Australian Government and included in employment services were transferred to other service groups delivered by State and Territory governments.

(h) Service user data for inner regional areas of ACT include service users from inner regional residential postcodes that are in NSW.

| 2012-13 | | | | | | | | | | |
| Proportion of the Indigenous potential population accessing State/Territory delivered disability support services | | | | | | | | | | |
| Total | % | 30.3 | 26.7 | 21.1 | 29.1 | 39.9 | 16.0 | 51.9 | 45.3 | 28.8 |

(a) State/Territory delivered disability support services comprise accommodation support, community support (includes case management/co-ordination), community access and respite.

(b) People with psychiatric disability may use NDA specialist disability service types. In some jurisdictions, specialist psychiatric disability services are funded specifically to provide such support. For comparability, the indicator excludes those who only receive specialist psychiatric disability services. This does not exclude those people with a psychiatric condition who receive other specialist disability services.

(c) Refer to data quality information for caveats relating to Indigenous potential population and the identification of Indigenous service users.

(d) The potential population for 2008-09, 2009-10, and 2010-11 and 2011-12 has been revised. Data previously published in the 2014 Report have been updated in this Report.

(e) Changes in the linking procedures implemented for 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for this year.

(f) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.

(g) Disability support services reported in this table are delivered by states and territories. Under the National Health Reform Agreement (NHRA) the Commonwealth funds these services for Indigenous people aged 50-64, except in Victoria and WA.

(h) The number of Indigenous people in Victoria accessing disability support services is believed to be overstated. Victoria is currently implementing improved client linkage and other data quality initiatives to address this issue in future years.

Table 14A.42 Indigenous users of state/territory delivered NDA disability support services (aged 0-64 years) as a proportion of the Indigenous estimated potential population (a), (b), (c), (d), (e), (f)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic (g)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |

|--|-------------|------------|----------------|------------|-----------|---------------|------------|------------|-----------|-------------|

(i) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

| 2007-08 | 1.2 | 1.7 | 1.5 | 1.9 | 3.4 | 2.7 | 1.1 | 1.3 | 1.6 |
| 2008-09 | 1.4 | 1.5 | 1.5 | 1.6 | 3.7 | 2.8 | 1.3 | 1.2 | 1.7 |
| 2009-10 | 1.5 | 1.5 | 1.5 | 1.6 | 3.7 | 2.9 | 1.3 | 0.5 | 1.7 |
| 2010-11 | 1.5 | 1.6 | 1.6 | 1.6 | 4.0 | 3.0 | 1.4 | 1.0 | 1.8 |
| 2011-12 | 1.6 | 1.4 | 1.7 | 1.7 | 3.7 | 3.0 | 1.4 | 1.3 | 1.8 |
| 2012-13 | 1.6 | 1.4 | 1.6 | 2.0 | 3.8 | 3.1 | 1.4 | 2.5 | 1.8 |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (b) Data for all service users exclude 954 service users in 2003-04, 2436 service users in 2004-05, 687 service users in 2005-06, 868 service users in 2006-07, 686 service users in 2007-08 and 748 service users in 2008-09 whose indigenous status was not reported, thus accommodation support service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) Data for users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (d) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (e) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (f) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Comparisons of the Indigenous and non-Indigenous populations' access to services per 1000 people should be undertaken with care. The need for services is likely to be greater for Indigenous Australians than non-Indigenous Australians due to the higher prevalence of disability. The AIHW estimated that the proportion of Indigenous Australians aged over 18 years who had a profound or severe core activity limitation is approximately 2.4 times that of non-Indigenous Australians.
- (h) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (i) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

Table 14A.43 Users of NDA accommodation support services, by Indigenous status (a), (b), (c), (d), (e), (f), (g), (h)

| 2011-12 | 5.8 | 8.4 | 4.1 | 6.4 | 10.3 | 11.0 | 12.2 | 9.0 | 6.7 |
| 2012-13 | 5.9 | 8.6 | 4.6 | 6.3 | 9.8 | 11.5 | 12.1 | 8.4 | 6.8 |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (b) Data for all service users exclude 27 356 service users in 2004-05, 15 013 service users in 2005-06, 5451 service users in 2006-07, 5788 service users in 2007-08 and 9197 service users in 2008-09 whose Indigenous status was not reported, thus community support service users per 1000 total population may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) Data for users of NDA funded community support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (d) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (e) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (f) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Comparisons of the Indigenous and non-Indigenous populations' access to services per 1000 people should be undertaken with care. The need for services is likely to be greater for Indigenous Australians than non-Indigenous Australians due to the higher prevalence of disability. The AIHW estimated that the proportion of Indigenous Australians aged over 18 years who had a profound or severe core activity limitation is approximately 2.4 times that of non-Indigenous Australians.
- (h) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (i) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (j) For Victorian 2012-13 expenditure data, the reduction in expenditure dollars in Community Access was offset equally by a corresponding increase in Community Support. This was due to an output structure realignment, whereby Day Programs was amalgamated under Individualised Support Packages from 2012-13 onwards.

**Table 14A.44 Users of NDA community support services, by Indigenous status
(a), (b), (c), (d), (e), (f), (g), (h)**

| | <i>NSW (i)</i> | <i>Vic (j)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (k)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|----------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (j) | Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (b) Data for all service users exclude 7283 service users in 2003-04, 5222 service users in 2004-05, 3057 service users in 2005-06, 3218 service users in 2006-07, 3499 service users in 2007-08 and 4875 service users in 2008-09 whose Indigenous status was not reported, thus community access service users per 1000 total population may differ from other tables. This 'not reported' total includes recreation/holiday programs (service type 3.02) who were not required to complete the item on Indigenous status; however those who did provide a response are included in the data. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) Data for users of NDA funded community access services exclude specialist psychiatric disability services identified by the jurisdiction.
- (d) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (e) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (f) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Comparisons of the Indigenous and non-Indigenous populations' access to services per 1000 people should be undertaken with care. The need for services is likely to be greater for Indigenous Australians than non-Indigenous Australians due to the higher prevalence of disability. The AIHW estimated that the proportion of Indigenous Australians aged over 18 years who had a profound or severe core activity limitation is approximately 2.4 times that of non-Indigenous Australians.
- (h) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (i) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Where Indigenous status was inconsistently recorded for the same user, the user was counted as an Indigenous Australian.
- (b) Data for all service users exclude 3667 service users in 2004-05, 1791 service users in 2005-06, 1879 service users in 2006-07, 1885 service users in 2007-08 and 1832 service users in 2008-09 whose Indigenous status was not reported, thus respite service users per 1000 total population may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (c) Data for users of NDA funded respite services exclude specialist psychiatric disability services identified by the jurisdiction.

Table 14A.46 Users of NDA respite services, by Indigenous status (a), (b), (c), (d), (e), (f), (g)

| | <i>NSW</i> (h) | <i>Vic</i> | <i>Qld</i> | <i>WA</i> (i) | <i>SA</i> (j) | <i>Tas</i> (k) | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|---------------|---------------|----------------|------------|-----------|-------------|
| (d) | Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. | | | | | | | | |
| (e) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data. | | | | | | | | |
| (f) | Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | |
| (g) | Comparisons of the Indigenous and non-Indigenous populations' access to services per 1000 people should be undertaken with care. The need for services is likely to be greater for Indigenous Australians than non-Indigenous Australians due to the higher prevalence of disability. The AIHW estimated that the proportion of Indigenous Australians aged over 18 years who had a profound or severe core activity limitation is approximately 2.4 times that of non-Indigenous Australians. | | | | | | | | |
| (h) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | |
| (i) | WA data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06. | | | | | | | | |
| (j) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |
| (k) | Tasmanian and ACT data for 2004-05 for service users per 1000 Indigenous Australians are not published as they are based on a small number of service users. | | | | | | | | |

np Not published.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory.
- (b) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged 15–64 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (d) Data for all service users exclude 4498 service users in 2003-04, 2665 service users in 2004-05, 1288 service users in 2005-06, 91 service users in 2006-07, 126 service users in 2007-08 and 267 service users in 2008-09 whose Indigenous status was not reported, thus employment service users per 1000 total population aged 15–64 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (e) Comparisons of the Indigenous and non-Indigenous populations' access to services per 1000 people should be undertaken with care. The need for services is likely to be greater for Indigenous Australians than non-Indigenous Australians due to the higher prevalence of disability. The AIHW estimated that the proportion of Indigenous Australians aged over 18 years who had a profound or severe core activity limitation is approximately 2.4 times that of non-Indigenous Australians.
- (f) From 1 October 2008, targeted support services previously delivered by the Australian Government and included in 'employment services' were transferred to other service groups delivered by State and Territory governments.
- (g) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (h) In 2011-12, South Australia implemented modified models of service in adult community teams which streamlined the provision of service and response.

| 2011-12 | 1.6 | 1.4 | 1.7 | 1.7 | 3.7 | 3.0 | 1.4 | 1.3 | 1.8 |
| 2012-13 | 1.6 | 1.4 | 1.6 | 2.0 | 3.8 | 3.1 | 1.4 | 2.5 | 1.8 |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory.
- (b) Data for service users born in a non-English speaking country were based on responses for country of birth with English Proficiency Groups 2–4. For 2003-04 and 2004-05 data, this includes all countries except Australia, New Zealand, Canada, United Kingdom, South Africa, Ireland or the United States of America, which are classified as English speaking countries. From 2005-06, Zimbabwe is also included as an 'English speaking country'. Where country of birth was inconsistently recorded for the same service user, the service user was counted as having been born in a non-English speaking country.
- (c) Data for all service users exclude 1023 service users in 2003-04, 866 service users in 2004-05, 824 service users in 2005-06, 834 service users in 2006-07, 603 service users in 2007-08 and 705 service users in 2008-09 whose country of birth was not reported, thus accommodation support service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (d) The State and Territory data on people born in an English/non-English speaking country are derived using country of birth data from the *2001 Australian Census of Population and Housing* (for data to 2006-07) and the *2006 Australian Census of Population and Housing* (for 2007-08 and 2008-09 data) and the estimated resident population of states and territories in the relevant year. Estimates exclude people whose country of birth was not stated or who were visitors to Australia from overseas.
- (e) Data for service users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (f) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (g) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (h) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

**Table 14A.51 Users of NDA accommodation support services, by country of birth
(a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | <i>NSW (j)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (k)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (i) | The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | |
| (j) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | |
| (k) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |

Table 14A.53 **Users of NDA community access services, by country of birth (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | NSW (j) | Vic | Qld | WA | SA (k) | Tas | ACT | NT | Aust |
|---------|---------|-----|-----|-----|--------|-----|-----|-----|------|
| 2010-11 | 2.2 | 2.5 | 2.1 | 2.2 | 4.4 | 3.4 | 1.4 | 0.9 | 2.4 |
| 2011-12 | 2.3 | 2.3 | 2.3 | 2.3 | 4.4 | 3.3 | 1.3 | 1.1 | 2.5 |
| 2012-13 | 2.4 | 1.6 | 2.2 | 2.2 | 4.2 | 3.4 | 1.7 | 2.1 | 2.3 |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory.
- (b) Data for service users born in a non-English speaking country were based on responses for country of birth with English Proficiency Groups 2–4. This includes all countries except Australia, New Zealand, Canada, United Kingdom, South Africa, Ireland, the United States of America or Zimbabwe which are classified as English speaking countries. Where country of birth was inconsistently recorded for the same service user, the service user was counted as having been born in a non-English speaking country.
- (c) Data for all service users exclude 4446 service users in 2006-07, 4545 service users in 2007-08 and 5572 service users in 2008-09 whose country of birth was not reported, thus community access service users per 1000 total population aged under 65 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (d) The State and Territory data on people born in an English/non-English speaking country are derived using country of birth data from the *2001 Australian Census of Population and Housing* (for 2006-07 data) and the *2006 Australian Census of Population and Housing* (for 2007-08 and 2008-09 data) and the estimated resident population of states and territories in the relevant year. Estimates exclude people whose country of birth was not stated or who were visitors to Australia from overseas.
- (e) Data for service users of NDA funded community access services exclude specialist psychiatric disability services identified by the jurisdiction.
- (f) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged under 65 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (g) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (h) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (i) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.
- (j) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions.
- (k) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory.
- (b) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (c) Data for service users born in a non-English speaking country were based on responses for country of birth with English Proficiency Groups 2–4. For 2003-04 and 2004-05 data, this includes all countries except Australia, New Zealand, Canada, United Kingdom, South Africa, Ireland or the United States of America, which are classified as English speaking countries. From 2005-06, Zimbabwe is also included as an 'English speaking country'.
- (d) Data for all service users exclude 2481 in 2003-04, 2248 in 2004-05, 4975 in 2005-06, 750 in 2007-08 and 400 service users in 2008-09 whose country of birth was not reported, thus employment service users per 1000 total population aged 15–64 years may differ from other tables. Due to the relatively high missing rate of data, care should be taken when interpreting this indicator.
- (e) The State and Territory data on people born in an English/non-English speaking country are derived using country of birth data from the *2001 Australian Census of Population and Housing* (for data to 2006-07) and the *2006 Australian Census of Population and Housing* (for 2007-08 and 2008-09 data) and the estimated resident population of states and territories in the relevant year. Estimates exclude people whose country of birth was not stated or who were visitors to Australia from overseas.
- (f) Data for users per 1000 people are derived by dividing the number of service users by the number of people aged 15–64 years, multiplied by 1000. Data for users per 1000 potential population are derived by dividing the number of service users by the potential population, multiplied by 1000. The potential populations for 2006-07 have been revised, therefore data for service users per 1000 potential population can differ from those in the 2009 Report.
- (g) From 1 October 2008, targeted support services previously delivered by the Australian Government and included in 'employment services' were transferred to other service groups delivered by State and Territory governments.
- (h) The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.

(a) Employment Support Services are delivered by the Australian Government.

(b) The estimated number of people aged 15–64 years with an employment restriction for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.

(c) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.

(d) Changes in the linking procedures implemented for 2008-09 data may have the effect of slightly increasing the number of unique service users within the DS NMDS for this year.

(e) Includes people with not stated Country of Birth.

(f) Includes people with not stated Remoteness Area.

– Nil or rounded to zero. np Not published.

(a) Australian Disability Enterprises are delivered by the Australian Government.

(b) The potential population is calculated for people aged 15-64 adjusted for labour force participation. See section 14.7 for information on how the potential population is defined. The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. Data previously published in the 2014 Report have been updated in this Report.

(c) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.

(d) Changes in the linking procedures implemented for 2008-09 data may have the effect of slightly increasing the number of unique service users within the DS NMDS for this years.

(e) Includes people with not stated Country of Birth.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Individuals might have accessed services from both accommodation service type categories (institutional/large residential or community accommodation and care services).
- (b) Data for service users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (c) Community accommodation and care services include group homes, attendant care/personal care, in-home accommodation support, alternative family placement, and other accommodation support.
- (d) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (e) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. The relatively low proportion of accommodation support users in community setting in NSW is largely a historical issue.
- (g) Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users.
- (h) In 2011-12, South Australia implemented modified models of service in adult community teams which streamlined the provision of service and response.

(a) Data are for permanent residents in aged care.

(b) These data should be interpreted with care (particularly for the NT). There may be issues related to the age of Indigenous residents being incorrectly recorded. An assessment of the data set in the NT has previously shown that approximately half of Indigenous Australians' ages were incorrectly recorded.

(a) Data are for permanent residents in aged care.

(b) The definition of YPIRAC service user was refined after the 2006-07 collection.

(c) In New South Wales, potential clients are assessed for eligibility and, if eligible, are only offered further services (including an assessment of support needs) when there is capacity to provide them. Clients are not considered service users until they actually receive a YPIRAC-funded support service, such as assistive products and technology, individual care planning or accommodation support services.

Table 14A.64 **Estimated number of YPIRAC service users who have achieved program objectives since entry to the program, 30 June 2011 (a), (b), (c), (d), (e), (f)**

| | Unit | 0-50 Years | 0-64 Years | Total |
|--|------|-------------|------------|-------------|
| Objective 1 | | | | |
| People moving out of residential aged care to more age-appropriate supported disability accommodation | no. | 197 | 53 | 250 |
| Objective 2 | | | | |
| People at risk diverted from inappropriate admission to residential aged care | no. | 213 | 31 | 244 |
| Objective 3 | | | | |
| People provided with enhanced services within a residential aged care setting, for whom residential aged care is the only available, suitable supported accommodation option | no. | 358 | 98 | 456 |
| Total YPIRAC service users in reporting period | no. | 1109 | 323 | 1432 |
| Objective 1 | | | | |
| People moving out of residential aged care to more age-appropriate supported disability accommodation | % | 17.8 | 4.8 | 22.5 |
| Objective 2 | | | | |
| People at risk diverted from inappropriate admission to residential aged care | % | 19.2 | 2.8 | 22.0 |
| Objective 3 | | | | |
| People provided with enhanced services within a residential aged care setting, for whom residential aged care is the only available, suitable supported accommodation option | % | 32.3 | 8.8 | 41.1 |

- (a) Service user numbers are estimates after the use of a statistical linkage key to adjust for individuals who received services in more than one jurisdictions therefore state and territory totals may not add to the Australian total.
- (b) Service users may have received services in more than one collection period and may have had different target groups and residential settings recorded in different years. The most recently provided target group and residential setting were used to determine whether service users have achieved program objectives.
- (c) The definition of YPIRAC service user was refined after the 2006-07 collection.
- (d) The definition of 'YPIRAC assessment' was refined, 'YPIRAC client monitoring' was added as a service type and the data items relating to service use were refined and restructured after the 2006-07 reporting year.
- (e) Total is a running total over 5 years of the YPIRAC initiative. Numbers may not add to the total number of YPIRAC users as not all service users may have achieved objectives, and some service users may have achieved more than one objective as their circumstances or service availability changed over time.
- (f) The 50-64 age group includes a small number of YPIRAC service users (<5) aged 66 who were included in YPIRAC for operational reasons.

Table 14A.69 **NSW quality assurance processes**

Features of quality assurance system Under the NSW Disability Services Act (DSA) 1993, all government funded or provided services for people with disability must conform to the principles and application of principles found in Schedule of the Act. The DSA does not specify how services are to be monitored to ensure they comply with the principles and applications.

Ageing, Disability and Home Care's (ADHC) quality reform is built on the National Quality Framework and is based on the NSW Disability Services Standards (DSS), which align with the endorsed National Standards for Disability Services. The reform aims to deliver a consistent approach to quality assurance across the sector. Through the use of external verification by a third party, people with a disability, their families and carers, ADHC and other stakeholders will have assurance that all service providers are meeting the NSW DSS.

The reform aligns with ADHC's strategic objective to develop a unified, regulated sector with service users at the centre and the sector's own Directions for Industry Development. It is being implemented in partnership with National Disability Services (NDS).

As set out in the 2012 – 2015 Funding Agreement, and ADHC's quality policy, all disability funded service providers by 30 June 2015 will be required to:

1. Implement a quality management system; and
2. Provide evidence to an independent third party to confirm organisational performance against the NSW DSS.

From 1 July 2013, service providers are required to report on their progress in achieving the milestones which are fundamental to the implementation of ADHC's quality reform requirements. The Quality Framework Reporting (QFR) has been developed to assist organisations in reviewing service performance and progress against implementing the quality requirements and meeting the NSW DSS. The requirement to complete and submit a QFR is part of an organisation's Funding Agreement with ADHC. The QFR forms part of the reporting requirements outlined in Clause 4.2 - Reporting of the Funding Agreement regarding providing information on, or in relation to, any third party accreditations, verifications or certifications. The QFR serves as a statement of an organisation's ongoing commitment to quality and is designed to encourage service providers to engage in a process of continuous quality improvement as the sector transitions to a person centred disability service system.

For service providers' receiving only Community Care Support Program (CCSP) funding the requirement to comply with the Home Care Standards, will continue to apply until 30 June 2015. The ADHC quality reform requirements will apply from 1 July 2015.

Table 14A.69 **NSW quality assurance processes**

| | |
|--|--|
| <p><i>What are the relevant NSW Disability Services Standards 2012 service standards</i></p> <p>The NSW Disability Services Standards were updated in June 2012 are consistent with the revised National Standards for Disability Services (National Standards) 2013.</p> <p>The six NSW Disability Services Standards are:</p> <p>Rights Each person receives a service that promotes and respects their legal and human rights and enables them to exercise choice like everyone else in the community</p> <p>Participation and inclusion Each person is encouraged and supported to contribute to social and civic life in their communities in the way they choose</p> <p>Individual Outcomes Each person is supported to exercise choice and control over the design and delivery of their supports and services</p> <p>Feedback and complaints When a person wants to make a complaint, the service provider will make sure the person's views are respected, that they are informed as the complaint is dealt with, and have the opportunity to be involved in the resolution process</p> <p>Service access Each person is assisted to access the supports and services they need to live the life they choose</p> | <p>NSW <i>Disability Services Act (DSA) 1993</i> principles and application of principles</p> <p>1 Principles Persons with disabilities have the same basic human rights as other members of Australian society. They also have the rights needed to ensure that their specific needs are met.</p> <p>NSW Disability Services Act (DSA) 1993 principles and application of principles Their rights, which apply irrespective of the nature, origin, type or degree of disability, include the following:</p> <ul style="list-style-type: none"> a) persons with disabilities are individuals who have the inherent right to respect for their human worth and dignity, b) persons with disabilities have the right to live in and be part of the community, c) persons with disabilities have the right to realise their individual capacities for physical, social, emotional and intellectual development, d) persons with disabilities have the same rights as other members of Australian society to services which will support their attaining a reasonable quality of life, e) persons with disabilities have the right to choose their own lifestyle and to have access to information, provided in a manner appropriate to their disability and cultural background, necessary to allow informed choice, f) persons with disabilities have the same right as other members of Australian society to participate in the decisions which affect their lives, g) persons with disabilities receiving services have the same right as other members of Australian society to receive those services in a manner which results in the least restriction of their rights and opportunities, |
|--|--|

Table 14A.69 **NSW quality assurance processes****Service management**

Service providers are well managed and have strong and effective governance to deliver positive outcomes for the people they support.

h) persons with disabilities have the right to pursue any grievance in relation to services without fear of the services being discontinued or recrimination from service providers,
 i) persons with disabilities have the right to protection from neglect, abuse and exploitation.

2 Applications of principles

Services and programs of services must apply the principles set out in clause 1.

In particular, they must be designed and administered so as to achieve the following:

(a) to have as their focus the achievement of positive outcomes for persons with disabilities, such as increased independence, employment opportunities and integration into the community,

a) NSW Disability Services Act (DSA) 1993 principles and application of principles

(b) to contribute to ensuring that the conditions of the everyday life of persons with disabilities are the same as, or as close as

.....

Table 14A.69 NSW quality assurance processes

- (c) to form part of local co-ordinated service systems and other services generally available to members of the community, wherever possible,
- (d) to meet the individual needs and goals of the persons with disabilities receiving services,
- (e) to meet the needs of persons with disabilities who experience an additional disadvantage as a result of their gender, ethnic origin or Aboriginality,
- (f) to promote recognition of the competence of, and enhance the image of, persons with disabilities,
- b) NSW Disability Services Act (DSA) 1993 principles and application of principles
- (g) to promote the participation of persons with disabilities in the life of the local community through maximum physical and social integration in that community,
- (h) to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities,
- (i) to ensure that organisations providing services (whether specifically to persons with disabilities or generally to members of the community) are accountable to persons with disabilities who use them, the advocates of those persons, the State and the community generally for the provision of information from which the quality of those services can be judged,
- (j) to provide opportunities for persons with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their chronological age,
- (k) to ensure that persons with disabilities participate in the decisions that affect their lives,
- c) NSW Disability Services Act (DSA) 1993 principles and application of principles

Table 14A.69 NSW quality assurance processes

(l) to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision-making about the services they receive,

(m) to recognise the importance of preserving the family relationships and the cultural and linguistic environments of persons with disabilities,

(n) to ensure that appropriate avenues exist for persons with disabilities to raise and have resolved any grievances about services, and to ensure that a person raising any such grievance does not suffer any reprisal,

(o) to provide persons with disabilities with, and encourage them to make use of, avenues for participating in the planning and operation of services and programs which they receive and to provide opportunities for consultation in relation to the development of major policy and program changes,

(p) to respect the rights of persons with disabilities to privacy and confidentiality.

Table 14A.69 NSW quality assurance processes
Future directions

1. The Disability Inclusion Bill 2014 was passed by the NSW Parliament on 14 August 2014 and is now the Disability Inclusion Act 2014 (the Act) and will replace the NSW Disability Services Act 1993. When the new Act and regulation commences, it will have two main roles: Committing the NSW Government to making communities more inclusive and accessible for people with disability now and into the future. These commitments will continue even when the National Disability Insurance Scheme (NDIS) is operating across NSW.
2. Regulating specialist disability supports and services to people with disability in NSW and introducing better safeguards for these services until the change over to the NDIS.

The new Act and regulation sets out as a condition of the provision of funding to any eligible entity that it must comply with the NSW Disability Services Standards and provide evidence to an independent third party to confirm organisational performance against the NSW Disability Services Standards or comparable standards of another jurisdiction approved by the Secretary.

The Disability Inclusion Act and Regulations 2014 commenced from 3 December 2014.

Implementation of the NSW Quality Framework will assist providers of specialist disability services in NSW to be well positioned to transition to the NDIS.

The following quality requirements incorporate the NSW Disability Service Standards and National Home Care Standards:

- An articulated quality policy statement that requires service providers to demonstrate conformity to quality requirements including
 - o Implement a quality management system;
 - o Provide evidence to an independent third party to confirm organisational performance against the NSW Disability Service Standards.
- Third Party Verification processes to be undertaken on a three year cycle;
- A strategy to support assessors, clients and providers in the implementation of the framework.
- Mutual recognition of quality standards which providers are required to meet through other funding programs

Table 14A.70 **Victorian quality assurance processes**

| Features of assurance system | quality |
|------------------------------|---|
| | <p>Under the <i>Disability Act 2006</i>, the Minister must determine the standards to be met by disability service providers in the provision of disability services. A disability service provider must comply with the relevant applicable standards. The Secretary, Department of Human Services, must specify performance measures and may monitor service provider compliance with the relevant performance measures in respect of the standards. Both the standards and performance measures have been published in the Victoria Government Gazette.</p> <p>The <i>Quality Framework for Disability Services in Victoria (2007)</i> was implemented in 1997 and revised in 2007 to better support the goals of the Victorian State Disability Plan 2002–2012 and the principles of the Disability Act 2006. The <i>Quality Framework for Disability Services in Victoria (2007)</i> introduced critical new key elements:</p> <ul style="list-style-type: none"> • Outcomes Standards • focus on supports to facilitate personal outcomes • a framework for independent quality monitoring. <p>Under the Quality Framework, disability service providers are required to undertake organisational self-assessment against the Standards for Disability Services in Victoria, including service user assessment of the service provider's performance against these Standards. Service providers may use any self-assessment and service user assessment processes with the capacity to demonstrate compliance with the Standards, but are encouraged to select an approach that best reflects the service type and consumer requirements. Disability service providers measure the quality of their practice by gathering data against the evidence indicators of the standards. The evidence indicators include:</p> <ul style="list-style-type: none"> • indicators that describe compliance with the Standards • developmental indicators that describe examples of continuous quality improvement. <p>The Quality Framework requires all disability service providers to have a quality plan. The quality plan uses information gathered from the self-assessment (including the service user assessment) and any other quality review processes and sets the priorities and actions for improvements for the forthcoming continuous quality improvement cycle.</p> <p>Both department-managed and community service organisations disability service providers must comply with the Standards and are also required to undergo independent monitoring for compliance against the Standards by 2012.</p> |

Table 14A.70 **Victorian quality assurance processes**

| <i>What are the relevant service standards</i> | Standards for Disability Services in Victoria: Outcome Standards | Standards for Disability Services in Victoria: Industry Standards |
|--|--|---|
| <p>The <i>Outcomes Standards</i> are used to determine whether services and supports make a difference in the lives of people. The Outcome Standards are:</p> <ul style="list-style-type: none"> • Individuality Each individual has goals, wants, aspirations and support needs and makes decisions and choices about their life • Capacity Each individual's abilities and potential are identified and encouraged • Participation Each individual is able to access his or her community • Citizenship Each individual has rights and responsibilities as a member of the community • Leadership Each individual has the opportunity to inform the way that supports are provided <p><i>Evidence indicators</i></p> <p>A suite of evidence indicators of the Outcome Standards has been developed for 16 life areas. The indicators map back to the Outcome Standards for Disability Services and will be used to determine compliance. These evidence indicators describe measurable elements of practice that may be used to assess whether the support is in place to assist people with a disability achieve the outcome.</p> | <p>The <i>Industry Standards</i> are used to measure systems and processes and ensure that organisations are meeting legislative and funding obligations. The Industry Standards are:</p> <ul style="list-style-type: none"> • Service Access Fair and equitable practices that are consistent with funding obligations, applicable legislation and purpose of the service are applied when managing and allocating resources. • Individual Needs Planning and support is tailored, flexible, responsive and appropriate to the individual. • Decision-Making and Choice Support options are planned, developed, implemented and reviewed in a manner that are responsive to the decisions, choices, and aspirations of individuals. • Privacy, Dignity and Confidentiality Privacy, dignity and confidentiality is respected and maintained. • Participation and Integration Support options are planned, developed, implemented and reviewed in a manner that build opportunities for individuals to participate in the life of the community. | |

Table 14A.70 **Victorian quality assurance processes**

Table 14A.71 **Queensland quality assurance processes**

| <i>Features of assurance system</i> | <i>quality</i> |
|--|---|
| | <p>Under the <i>Queensland Disability Act 2006</i>, the Minister may make disability service standards for improving the quality of disability services provided by funded service providers. The service standards must detail the way in which disability services are to be provided by funded service providers. The service standards must include indicators to measure whether funded service providers have met the standards. The Act also details how the Minister may approve a process under which a service provider may be certified by an external certification body as meeting the service standards.</p> <p>All services delivered or recurrently funded by the Department of Communities are required to achieve certification against the Queensland Disability Service Standards, Queensland Disability Advocacy Standards (for advocacy service providers) or ISO 9001:2000 (for providers of information and print disability and other support services), as appropriate to their service. The initial implementation of quality systems involves a five-step process: establish the quality system framework; service user assessment; self assessment; establish a plan for continuous improvement and external validation by an independent certification body. Once a service provider has achieved certification, they must undergo recertification and progress through the implementation cycle every three years, with annual surveillance audits to ensure certification is maintained and an improvement plan has been implemented.</p> |
| <p><i>What are the relevant service standards?</i></p> | <p>Queensland Disability Service Standards</p> <p>Service access Each person with a disability seeking a service has access to the service on the basis of relative need and within available resources.</p> <p>Individual needs Individual needs and personal goals are met in the least restrictive way possible and within available resources.</p> <p>Decision making and choice Participation as fully as possible, in decision making, choice of activities and events in daily life in relation to the services received.</p> <p>Privacy, dignity and confidentiality Recognition of the right to privacy, dignity and confidentiality in all aspects of life.</p> <p>Participation and integration Support and encouragement to participate and be included in the life of the community.</p> |

Table 14A.71 **Queensland quality assurance processes**

Queensland Disability Service Standards

Valued status

Providing opportunities to develop skills to participate in and achieve valued roles within the community.

Complaints and disputes

A proactive approach to complaints and disputes management that safeguards service users/supports from retributive action when raising complaints.

Service management

Effective corporate governance through sound and visible management systems and practice.

Protection of legal and human rights and freedom from abuse and neglect

Upholding the legal and human rights of each person with a disability and taking action to prevent and/or respond to allegations of abuse and neglect.

Staff recruitment, employment and development

Recruitment, selection and development of paid and unpaid staff that ensures they have the relevant values, skills, knowledge and competencies to support service delivery to service users.

Each of the Queensland Disability Service Standards has a set of service standard indicators. The external certification body uses these indicators to assess the service provider to determine whether they comply with the standards. The Queensland Disability Advocacy Standards are a modified version of the above standards. The ISO 9001:2008 standards apply to providers of information and print disability and other support services. See the following website for more details on these standards: www.disability.qld.gov.au/key-projects/quality/publications-tools-resources/resources/resource-kits.html

Future directions

The Department of Communities is exploring options to reduce regulatory burden under the Queensland Compact. This includes the development of common standards for human services across the department. A review of the National Standards for Disability Services is also currently underway.

Table 14A.72 **WA quality assurance processes**

| <i>Features of assurance system</i> | <i>quality</i> |
|-------------------------------------|--|
| | <p>Under the <i>WA Disability Services Act 1993</i>, the Disability Services Commission can establish guidelines and standards for the provision of disability services other than disability services provided by carers. The DSA does not specify how services are to be monitored to ensure they comply with the guidelines and standards.</p> <p>The Disability Services Commission has recently implemented the Quality Management Framework (QMF). Under the QMF, recurrently funded service providers must demonstrate that the services they provide continuously address the quality requirements. One of the key features of the QMF is the consumer focused outcomes and performance indicators for each service type. Outcomes are what services are expected to achieve for the benefit of the individual using their service. Under the QMF, all services will also be evaluated for their compliance with the nine Disability Services Standards. Services will be evaluated through the following processes:</p> <ul style="list-style-type: none"> • Service provider and consumer baseline assessment surveys (BAS) — every five years service providers will complete a BAS about the QMF Outcomes and some of the Disability Services Standards. At the same time as the service provider BAS, a separate survey will be sent to a representative sample of individuals with a disability, their families and carers at a program level for each service provider. The information collected from the BAS will be presented in a written report to each service provider. • Self Assessments — every year (other than the year a BAS or Independent Evaluation occurs) service providers will complete a Self Assessment. Service providers will be expected to provide information about their consumers' progress against the QMF outcomes. Service providers will also be expected to invite groups of consumers, their families and carers to have a say about different aspects of the service provided and include their feedback as part of the Self Assessment report. • Independent Evaluation — an external independent evaluators will complete an independent evaluation of services every 3–4 years. The focus of an independent evaluation will be on the results from the service provider's last BAS or Self Assessment report. The independent evaluator will pay particular attention to the views of people with disabilities, their families and carers and invite them to have a say about the quality of the services they receive. |

Table 14A.72 **WA quality assurance processes**

What are the relevant WA Disability Services Standards service standards

QMF outcomes

Service Access

Each consumer seeking a service has access to a service on the basis of relative need and available resources.

Individual Needs

Each person with a disability receives a service which is designed to meet, in the least restrictive way, his or her individual needs and personal goals.

Decision Making and Choice

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of his or her daily life in relation to the services he or she receives.

Privacy, Dignity and Confidentiality

Each consumer's right to privacy, dignity and confidentiality in all aspects of his or her life is recognised and respected.

Participation and Integration

Each person with a disability is supported and encouraged to participate and be involved in the life of the community.

Valued Status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable him or her to achieve valued roles in the community.

Each outcome has a series of performance indicators by which the performance of disability service providers will be assessed and evaluated. A set of steps or sequence of activities that need to be undertaken to achieve a desired outcome have also been developed for each service area (these are called response chains). For more information on the indicators and the response chains see the following website:

www.disability.wa.gov.au/serviceproviders/qmf/qmfindicators.html

Outcomes For Accommodation Support

Wellbeing

Outcome: Maintenance and/or improvement of the social, mental, physical, emotional, spiritual, sexual and cultural aspects of the individual.

Relationships And Social Connection

Outcome: Relationships are diverse and contribute to the individual's life and social connections.

Lifestyle

Outcome: Participation in a lifestyle of the individual's choice.

Home

Outcome: The place where a person lives is safe, secure and comfortable, and where they can be themselves.

| <p>Complaints and Disputes Each consumer is free to raise and have resolved, any complaints or disputes he or she may have regarding the service provider or the service.</p> <p>Service Management Each service provider adopts sound management practices which maximise outcomes for consumers.</p> <p>Protection of Human Rights and Freedom from Abuse and Neglect The service provider acts to prevent abuse and neglect, and to uphold the legal and human rights of consumers.</p> | <p><u>Outcomes for Individual Advocacy</u></p> <p>Capacity Building Outcome: The individual's abilities and potential to contribute to society are encouraged and respected and sensitive to their lifestyle and culture.</p> <p>Community Connections Outcome: The individual is welcomed by their community to participate in the activities and the relationships of their choice.</p> <p>Citizenship Outcome: The individual is aware of their rights and exercises them as a community member</p> <p><u>Outcomes for Systemic Advocacy</u></p> <p>Citizenship Outcome: The community recognises people with a disability as citizens with equal participation in community life.</p> <p><u>Outcomes for Alternatives to Employment</u></p> <p>Social participation Outcome: Participation and engagement in and/or with the community, in activities of the individual's choice (including but not limited to recreational, community, domestic, social, cultural, religious) that involves interacting with individuals other than paid support workers and immediate family members.</p> |

Table 14A.72 WA quality assurance processes

QMF outcomes

Personal Independence

Outcome: engagement in natural settings, using natural supports, in tasks of every day life (including but not limited to personal, recreational, community, domestic, social, religious, cultural).

Life Long Learning

Outcome: Maintenance and acquisition of skills, competencies and knowledge to support the individual's independence, personal interests and inclusion in their community.

Enhanced Natural Support Networks

Outcome: Relationships established with individuals other than immediate family members and paid support workers that contribute in a positive way to the individual in their everyday life.

Outcomes For Disability Professional Services**Independence**

Outcome: The individual's independence in daily living is maximised.

Participation

Outcome: Participation in everyday life in usual settings.

Outcomes for Recreation Services**Wellbeing**

Outcome: To maintain and or improve the individual's sense of well being.

QMF outcomes

Social Connectedness

Outcome: The individual participates in their community in a range of activities and relationships of their choice.

Welcoming communities

Outcome: Communities are supportive and inclusive of all people.

Table 14A.72 WA quality assurance processes

Future directions Ongoing work to fully implement the Quality Management Framework across service providers.

Source: WA Government 2005, *Disability Services Standards*, www.disability.wa.gov.au/publication/disabilityservicesstandards.html (accessed 1 December 2009). Table 14A.73 **SA quality assurance processes**

| | |
|---|---|
| <i>Features of quality assurance system</i> | <p>Under the SA Disability Services Act 1993, a disability service provider funded under the Act must apply the principles and meet the objectives set out in the Schedules 1 and 2. In addition, the Act specifies that the Minister must cause a disability service funded under the Act to be reviewed at intervals of not more than three years, for the purpose of assessing the extent to which the principles and objectives set out in the Schedules to this Act are being applied and met.</p> <p>Disability SA only funds and/or purchases disability services from providers that are on the Disability Services Provider Panel. To qualify for the Panel, disability service providers are required to adhere to the National Standards for Disability Services and demonstrate how these standards are implemented in their organisation. Organisations are required to provide information on how they currently monitor compliance with the National Standards for Disability Services. To qualify, all disability service organisations are also required to undertake or have completed a Quality Assurance system. The Service Excellence Program has been developed by the Department for Communities and Social Inclusion for use by non-government community service providers.</p> <p>The Service Excellence Program is an accredited quality improvement program aimed at supporting non-government organisations (NGOs) to improve and achieve sustainable excellence. Service Excellence Program is based on a set of standards that were mapped against a number of quality frameworks, including the National Standards for Disability Services. The structure of SEP is organised around three categories:</p> <ul style="list-style-type: none"> • Leadership and Management – strategic planning, governance, policies and procedures and financial and contract management. • People, Partnerships and Communication – effective, safe and accessible service delivery. • Service Provision – meeting strategic objectives and consumer needs through high quality services. <p>Each category is divided into topics with specific standards. Each standard is described through a set of requirements and linked to examples. These provide a guide or set of prompts as to what evidence may be relevant for the requirement of the standard. They are intended to give the organisation some guidance about how to achieve the standard. Under the Service Excellence Program, services can be accredited at the certificate or award level.</p> |
|---|---|

Table 14A.73 **SA quality assurance processes**

| | | | |
|--|---|---|--|
| | <p>The Program includes the following steps:</p> <ul style="list-style-type: none"> • Completion of a self-assessment against the Service Excellence Standards — service providers identify actions for implementation before an external assessment is undertaken. • Undertake an external assessment — the external assessor provides a written report to confirm the areas where a service provider is performing well and recommend potential areas for improvement. • Develop a quality action plan — the service provider develops a plan based on recommendations from the external assessment report. The plan identifies actions to improve quality against each standards. <p>Each category is divided into topics with specific standards. Each standard is described through a set of requirements and linked to examples. These provide a guide or set of prompts as to what evidence may be relevant for the requirement of the standard. They are intended to give the organisation some guidance about how to achieve the standard. Under the Service Excellence Program, services can be accredited at the certificate or award level.</p> <p>Disability SA, the government disability services provider, self-assesses against the Business Excellence Framework adopted across all areas of the Department for Families and Communities. In addition, some Disability SA outlets meet specific quality assurance system requirements in relation to catering, aged care and Home and Community Care services, where applicable.</p> | | |
| <p><i>What are the relevant service standards?</i></p> | <p>SA Disability Service Standards</p> <p>Service Access Each consumer seeking a service has access to a service on the basis of relative need and available resources.</p> <p>Individual Needs Each person with a disability receives a service which is designed to meet, in the least restrictive way, their individual needs and personal goals.</p> | <p>Service Excellence Program — Certificate level</p> <p>LEADERSHIP AND MANAGEMENT C.1 PLANNING C.1.1 Strategic Planning: Strategic planning is undertaken to further organisational and service development. C.1.2 Business Plans: A Business Planning process is used to implement your Strategic Plan and to plan and monitor organisational performance.</p> | <p>Service Excellence Program — Award level (meets the Certificate level standards and additional standards)</p> <p>LEADERSHIP AND MANAGEMENT A.1 Planning A.1.1 Leadership: Leadership is innovative, progressive and self critical. A.1.2 Knowledge Management: The organisation has effective processes to collect and interpret data, to create information and to refine information into knowledge.</p> |

| SA Disability Service Standards | Service Excellence Program — Certificate level | Service Excellence Program — Award level (meets the Certificate level standards and additional standards) |
|---------------------------------|---|---|
|---------------------------------|---|---|

Table 14A.73 **SA quality assurance processes****Decision Making and Choice**

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of their daily life in relation to the services he or she receives.

Privacy, Dignity and Confidentiality

Each consumer's right to privacy, dignity and confidentiality in all aspects of their life is recognised and respected.

Valued Status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable them to achieve valued roles in the community.

Participation and Integration

Each person with a disability is supported and encouraged to participate and be involved in the life of the community.

Complaints and Disputes

Each consumer is free to raise and have resolved any complaints or disputes he or she may have regarding the service.

Service Management

Each service adopts sound management practices which maximise outcomes for consumers.

C.2 GOVERNANCE**C.2.1 Sound Governance:**

A commitment to sound governance, a high level of mutual accountability, ethical conduct, objectivity and integrity are evident in all activities.

C.2.2 Legislative and Organisational: Policies and procedures are in place to achieve service outcomes in line with legislative and organisational requirements.

C.2.3 Risk Management:

Policies and procedures are in place to manage risk.

C.3 FINANCIAL AND CONTRACT MANAGEMENT**C.3.1 Sound Finances:**

The Chief Executive and managers maintain sound financial decision-making processes to ensure the efficient and effective use of the resources under their control. Financial management is transparent, accountable and appropriately authorised. The organisation's physical resources are managed to ensure an effective, safe and efficient service.

A.1.3 Continuous Improvement:

A culture of continuous quality improvement is well established.

A.2 GOVERNANCE**A.2.1 Critical Review:**

A commitment to good governance is demonstrated through critical review by the governing body.

A.2.1 Risk Management:

Risks to the organisation, consumers and staff are minimised through formal risk management systems.

A.3 FINANCIAL AND CONTRACT MANAGEMENT**A.3.1 Financial Management:**

Financial management practices are effective and aligned to Strategic Directions

A.3.2 Contract Management:

Formal agreements and less formal partnerships reflect individual and organisational values and standards and foster effective relationships.

A.4 PEOPLE**A.4.1 Supporting People:**

People at all levels are the essence of an organisation and their full involvement enables their abilities to be directed towards its purpose.

A.4.2 Workforce Planning:

Workforce planning and development considers future organisational requirements and supports competence, commitment and personal development of staff.

A.4.3 Cultural Diversity:

Table 14A.73 **SA quality assurance processes**

| SA Disability Service Standards | Service Excellence Program — Certificate level | Service Excellence Program — Award level (meets the Certificate level standards and additional standards) |
|--|--|--|
| <p>Protection of Human Rights and Freedom from Abuse The service provider acts to prevent abuse and neglect and to uphold the legal and human rights of service recipients.</p> | <p>PEOPLE, PARTNERSHIPS AND COMMUNICATION C.4 PEOPLE C.4.1 Human Resources: Human resources are managed to create an effective and competent service. Recruitment processes are effective, roles are defined and relevant ongoing training provided. C.4.2 Occupational Health, Safety and Welfare: OHS&W systems are incorporated into business planning and work processes. C.5 PARTNERSHIPS C.5.1 Working collaboratively with other organisations on agreed common goals and contributing to knowledge and development of the community.</p> | <p>A.5 PARTNERSHIPS NO FURTHER REQUIREMENTS AT AWARD LEVEL A.6 COMMUNICATION A.6.1 Organisational Culture: The organisation pursues an integrated and coordinated service delivery culture. A.6.2 Improving Communication: Planned communication strategies ensure consistency and timeliness and engender trust and respect. A.7 SERVICE OUTCOMES A.7.1 Benchmarking: Service Outcomes are compared against community or industry norms. A.8 CONSUMER OUTCOMES A.8.1 Valuing Consumer Participation: Consumer participation is valued and fostered.</p> |

Table 14A.73 **SA quality assurance processes**

Service Excellence Program —
Certificate level

Physical resources include buildings,
equipment, furniture, vehicles and IT.

C.3.2 Contract Management:

Sound administration of contracts
should reflect individual and
organisational values, enable disclosure
and ensure integrity.

C.5.2 Teamwork:

Co-operation, collaboration and
teamwork are achieved through
engagement of staff, consumers and
stakeholders in development, planning
and evaluation. Teamwork exists
through alignment of activities to a
common purpose and is inclusive of
volunteer and student contributions.

6 COMMUNICATION

C.6.1 Information Dissemination:

Appropriate communication systems
and strategies ensure information is
disseminated internally at all levels and
externally to all key stakeholders.

SERVICE PROVISION

Table 14A.73 **SA quality assurance processes**

Service Excellence Program —
Certificate level

C.7.1 Outcomes Monitored:
Service outcomes are planned,
monitored and subject to ongoing
review.

CONSUMER OUTCOMES

C.8.1 Consumer Participation:
Consumers are recognised as key
partners in shaping service development
and assessing quality of service
delivery.

C.8.2 Consumer Empowerment:
Strategies to empower consumers to
take greater control of their care and
their lives generally are encouraged.
Feedback is valued and is used as a
continuous improvement tool.

Future directions Planning to implement an additional Disability Services Standard: Cultural Competency and Inclusion.

Table 14A.74 **Tasmanian quality assurance processes**

| <i>Features of assurance system</i> | <i>quality</i> |
|-------------------------------------|---|
| | <p>The <i>Quality and Safety Framework for Tasmania's DHHS Funded Community Sector</i> (the Framework) requires funded community sector organisations to undertake quality and safety activities against recognised standards, have systems and processes in place to record and monitor improvement activities, and to ensure that feedback and learnings from incidents contribute towards enhancing service delivery. Organisations are also required to notify the Department of Health and Human Services (DHHS) of any serious consumer related incident or incidents that impact on the organisation's capacity to deliver the funded service.</p> <p>Unless a regulatory requirement exists which determines the standards a funded community sector organisation must comply with, the Framework allows organisations to self-select the state, national or international standards most relevant to the services they deliver. The DHHS Quality and Safety Standards remain an option for organisations, however where national standards exist organisations are encouraged to consider utilising them.</p> <p>The Department of Health and Human Services (DHHS) monitors compliance with the Framework through an annual meeting with the funded community sector organisation, discussing performance against contractual requirements, and a three yearly quality and safety review. The quality and safety review includes a site visit to view the organisation's documentation, systems and processes, and to obtain feedback from consumers, staff, volunteers and management including Board or Committee members. A draft report is provided to the organisation and the organisation's feedback is considered by the review team prior to finalising the report</p> |

| <i>What are the service standards</i> | <i>relevant</i> Disability Services Standards set out in Part 1 of the <i>Disability Services Act 2011</i> . | DHHS Quality and Safety Standards |
|---------------------------------------|--|--|
| | <p>The standards to be complied with in respect of the provision of services relating to persons with disabilities are as follows:</p> <ol style="list-style-type: none"> 1. Services are to be designed and administered so as to achieve positive outcomes for persons with disabilities, such as increased independence, education and employment opportunities and integration into the community. 2. Services are to be designed and administered so as to ensure that the conditions of every-day life of persons with disabilities are the same as, or as close as possible to, the conditions of every-day life of other members of the community. 3. Services are to be provided as part of local co-ordinated service systems and be integrated with services generally available to members of the community, wherever possible. 4. Services are to be tailored to meet the individual needs and goals of persons with disabilities. 5. Programs and services are to be designed and administered so as to meet the needs of persons with disabilities who experience additional disadvantage as a result of their sex, ethnic origin, Aboriginality or geographic location. | <p>Safe Environment Consumers receive services in an environment that is safe.</p> <p><i>Elements</i></p> <ul style="list-style-type: none"> • Fire • Food • Medication • Health and Safety <p>Consumer Focus Consumers receive services that respect their rights and are responsive to their needs and desires.</p> <p><i>Elements</i></p> <ul style="list-style-type: none"> • Lifestyle and Wellbeing • Collaboration and Coordination • Cultural Diversity • Individual Safety • Rights and Responsibilities |

Table 14A.74 **Tasmanian quality assurance processes**

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011*.

6. Programs and services are to be designed and administered so as to promote recognition of the competence of, and enhance the image of, persons with disabilities.

7. Programs and services are to be designed and administered so as to promote the participation of persons with disabilities in the life of the local community through maximum physical and social integration in that community.

8. Programs and services are to be designed and administered so as to ensure that no single organization providing services exercises control over all or most aspects of the life of a person with disabilities.

9. Programs and services are to be designed and administered so as to be as free as possible from aversive, restrictive and intrusive treatment practices.

DHHS Quality and Safety Standards

Workforce

Consumers receive services that are provided by appropriately trained and supported staff and volunteers.

Elements

- Recruitment
- Roles and Responsibilities
- Professional Development
- Sustainability
- Workforce Diversity

Incidents and Feedback

Consumers receive services from community sector organisations that appropriately manage incidents and actively seek and respond to feedback.

Elements

- Compliments
- Complaints
- Incidents

Table 14A.74 **Tasmanian quality assurance processes**

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011*.

DHHS Quality and Safety Standards

10. Organizations providing services, whether those services are provided specifically to people with disabilities or generally to members of the community, are to be accountable to those persons with disabilities who use their services, the advocates of such people, the State and the community generally for the provision of information from which the quality of their services can be judged.

11. Programs and services are to be designed and administered so as to provide opportunities for persons with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their age.

12. Services are to be designed and administered so as to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision making about the services they receive.

13. Programs and services are to be designed and administered so as to ensure that appropriate avenues exist for persons with disabilities to raise and have resolved any

Consumer Information

Consumers receive services that recognise and respect their right to have their personal information managed in an appropriately confidential manner.

Elements

- Collection
- Handling
- Security

Governance

Consumers receive services that are effectively and efficiently managed.

Elements

- Culture and Values
- Financial Reporting
- Communication and Engagement
- Evidence Based Decision Making
- Legislation and Regulation
- Partnership
- Risk Management
- Strategic Planning

Table 14A.74 **Tasmanian quality assurance processes**

Disability Services Standards set out in Part 1 of the *Disability Services Act 2011*.

14. Services are to be designed and administered so as to provide persons with disabilities with, and encourage them to make use of, avenues for on-going participation in the planning and operation of services which they receive.

15. Programs and services are to be designed and administered so as to provide persons with disabilities with opportunities for consultation in relation to the development of major policy and program changes.

16. Programs and services are to be designed and administered so as to respect the rights of persons with disabilities to privacy and confidentiality.

17. Priority of access to services is to be on the assessed needs of each person based on:

- (a) the person's wishes
- (b) the level of disability and its impact on the person
- (c) the extent of support provided to the person from all sources
- (d) the benefits to the person of preventive services over remedial measures.

Future directions Tasmania continues to be actively involved in the development of the NDIS Quality and Safeguards Framework.

Table 14A.75 ACT quality assurance processes

| | |
|---|---|
| <i>Features of quality assurance system</i> | <p>Under the <i>ACT Disability Services Act 1991</i>, the Minister may approve grants of financial assistance to—</p> <ul style="list-style-type: none"> (a) a provider of services; or (b) a person with a disability; or (c) a researcher; <p>subject to the prospective grantee entering into an agreement with the Minister.</p> <p>The Minister shall not approve a grant unless satisfied—</p> <ul style="list-style-type: none"> (a) that the grant would further the principles set out in schedule 1 of the Act and comply with any guidelines (which must be consistent with schedule 1 and 2 of the Act) (b) that the programs and services funded by the grant would comply with the requirements set out in schedule 2 of the Act. <p>The ACT Government have also developed a set of generic good practice standards for community service organisations. The standards are a resource for quality improvement and are designed to help organisations better understand where they are going well and identify and plan how improvements can be made. Service providers are required to undertake a self-assessment process against the standards. The self assessment process includes the following steps: plan the assessment process, undertake assessment against the standards including seeking feedback from service users, develop a quality improvement plan, implement quality improvement plan in conjunction with your overall strategic plan and review progress against the quality improvement plan and evaluate outcomes.</p> |
|---|---|

Table 14A.75 ACT quality assurance processes

What are the relevant ACT Disability Services Act 1991 Schedule 1 and 2 service standards

Raising the Standard — Generic standards for continuous improvement in community service organisations

Schedule 1 Human rights principles to be furthered in relation to people with disabilities

- 1 All people with disabilities are individuals who have the inherent right to respect for their human worth and dignity.
- 2 People with disabilities, whatever the origin, nature, type or degree of disability, have the same basic human rights as other members of society and should be enabled to exercise these basic human rights.
- 3 People with disabilities have the same rights as other members of society to realise their individual capacities for physical, social, emotional and intellectual development.
- 4 People with disabilities and carers of people with disabilities have the same right as other members of society to services that will support their attaining a reasonable quality of life.
- 5 People with disabilities have the same right as other members of society to make and actively participate in the decisions that affect their lives and are entitled to appropriate and necessary support to enable participation in, direction and implementation of the decisions that affect their lives.

Standards – Governance and management

- 3.1 Leadership and governance
 - Standard 3.1.1 Leadership
 - Standard 3.1.2 Governing body
 - Standard 3.1.3 Governance processes
- 3.2 Effective management
 - Standard 3.2.1 Effective and strategic management
 - Standard 3.2.2 Accountability
 - Standard 3.2.3 Financial management
 - Standard 3.2.4 Information management
- 3.3 Planning, evaluation and quality improvement
 - Standard 3.3.1 Planning
 - Standard 3.3.2 Evaluation
 - Standard 3.3.3 Research
 - Standard 3.3.4 Quality improvement
- 3.4 Human resource management
 - Standard 3.4.1 Recruitment, selection and appointment
 - Standard 3.4.2 Performance management
 - Standard 3.4.3 Training and development

Table 14A.75 **ACT quality assurance processes**

ACT Disability Services Act 1991 Schedule 1 and 2

6 People with disabilities have the same right as other members of society to receive services in a manner that results in the least restriction of their rights and opportunities.

7 People with disabilities have the same right of pursuit of any grievance in relation to services as have other members of society.

8 People with disabilities who wish to pursue a grievance also have the right to—

(a) adequate support to enable pursuit of the grievance; and

(b) be able to pursue the grievance without fear of discontinuation of services or recrimination from any person or agency who may be affected by or involved in the pursuit of the grievance.

Schedule 2 Requirements to be complied with in relation to the design and implementation of programs and services relating to people with disabilities

1 Services should have as their focus the achievement of a better quality of life for people with disabilities, such as increased independence, education and employment opportunities and integration into the community.

Raising the Standard — Generic standards for continuous improvement in community service organisations

Standard 3.4.4 Work satisfaction

Standard 3.4.5 Personnel management and systems

Standard 3.4.6 Management of volunteers

Standard 3.4.7 Committee and board development

3.5 Safety and office environment

4.4 Policy development and advocacy

Standard 4.4.1 Policy development and research

Standard 4.4.2 Advocacy and representation

Standard 4.4.3 Partnerships and coalitions

4.5 Membership services

Standard 4.5.1 Ethical leadership and representation

Standard 4.5.2 Serving the membership

4.6 Sector development

Standard 4.6.1 Change generation and management

Standard 4.6.2 Information, advice and support

Table 14A.75 ACT quality assurance processes

ACT Disability Services Act 1991 Schedule 1 and 2

8 Programs and services should be designed and administered so as to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities.

9 Organisations providing services, whether those services are provided specifically to people with disabilities or generally to the community, should make available information from that the quality of their services can be judged.

10 Programs and services should be designed and administered so as to provide opportunities for people with disabilities to reach goals and enjoy lifestyles that are valued by the community generally and are appropriate to their age.

11 Services should be designed and administered so as to ensure that people with disabilities have access to advocacy support where necessary to ensure adequate participation in decision making about the services they receive.

12 Programs and services should be designed and administered so as to ensure that appropriate avenues exist for people with disabilities to raise and have resolved any grievances about services.

13 Services should be designed and administered so as to provide people with disabilities with, and encourage them to make use of, avenues for continuing participation in the planning and operation of services that they receive. In particular, programs and services provided to people with disabilities by the Territory and organisations should provide opportunities for consultation in relation to the development of major policy and program changes.

14 Programs and services should be designed and administered so as to respect the rights of people with disabilities to privacy and confidentiality.

Table 14A.75 **ACT quality assurance processes**

Future directions A new quality framework is being developed for implementation.

| NT Disability Services Act (DSA) 1993 principles and objectives | NT Disability Service Standards |
|--|--|
| <p>(g) persons with disabilities have the same right as other members of Australian society of the pursuit of a grievance in relation to services.</p> <p>Objectives The objectives for providers of services or researchers are that:</p> <p>(a) the services should have as their focus, the achievement of positive outcomes for people with disabilities, such as increased independence, employment opportunities and integration into the community;</p> <p>(b) the services should contribute to ensuring that the conditions of the every-day life of people with disabilities are the same as, or as close as possible to, norms and patterns which are valued in the general community;</p> <p>(c) the services should be provided as part of the local co-ordinated service systems and be integrated with services generally available to members of the community, wherever possible;</p> <p>(d) the services should be tailored to meet the individual needs and goals of the people with disabilities receiving those services;</p> <p>(e) the program or the services should be designed and administered to meet the needs of people with disabilities who experience a double disadvantage as a result of their gender, ethnic origin or Aboriginality;</p> <p>(f) the program or the services should be designed and administered to promote recognition of the competence of, and enhance the image of, people with disabilities;</p> | <p>Respect for Rights Each person with a disability will receive services delivered in a manner that respects and protects their rights as outlined in the principles and objectives of the Northern Territory Disability Services Act.</p> <p>Promoting Cultural and Family Relationships Each person with a disability will receive services that recognise and support their cultural heritage and foster links with their families.</p> <p>Support and Training for Support Workers and Volunteers The agency upholds management practices that value support workers and volunteers, involve them in decision-making and provide them with thorough orientation and training for all aspects of their employment or support roles.</p> <p>Consumer – Focused Service Management Agencies implement sound management practices that maximise consumers' quality of life.</p> <p>Each of the standards has supporting standards and examples of good and poor practice in service delivery.</p> |

Table 14A.76 NT quality assurance processes

NT Disability Services Act (DSA) 1993 principles and objectives

(g) the program or the services should be designed and administered to promote the participation of people with disabilities in the life of the local community through maximum physical and social integration in that community;

(h) the program or the services should be designed and administered to ensure that no single organisation providing services exercises control over all or most aspects of the life of a person with disabilities;

(j) the organisations or persons providing services to persons with disabilities, whether those services are provided specially to persons with disabilities or generally to members of the community, should be accountable to those persons with disabilities who use their services, advocates of those persons, the Territory and the community generally for the provision of information from which the quality of their services can be judged;

(k) the program or the services should be designed and administered to provide opportunities for people with disabilities to reach goals and enjoy lifestyles which are valued by the community generally and are appropriate to their chronological age;

(m) the services should be designed and administered to ensure that persons with disabilities have access to advocacy support where necessary to ensure adequate participation in decision-making about the services they receive;

(n) the program or the services should be designed and administered to ensure that appropriate avenues exist for people with disabilities to raise and have resolved any grievances about services;

Table 14A.76 NT quality assurance processes

NT Disability Services Act (DSA) 1993 principles and objectives

(p) the program or the services should be designed and administered to provide people with disabilities with, and encourage them to make use of, avenues for participating in the planning and operation of services which they receive and the Territory and organisations should provide opportunities for consultation in relation to the development of major policy and program changes;

(q) the program or the services should be designed and administered to respect the rights of people with disabilities to privacy and confidentiality; and

(r) the activities of the provider of services which relate to persons with disabilities should be conducted in accordance with the Principles set out in Schedule 2.

Future directions

A recent review of Disability Services in the NT has identified the need for an integrated quality management system across the NT Department of Health and Families. A new quality framework is being developed for implementation.

Table 14A.77 **Australian Government quality assurance processes**

| | |
|-------------------------------------|---|
| <i>Features of assurance system</i> | <p data-bbox="392 234 2067 268"><i>quality</i> Under the Commonwealth <i>Disability Services Act 1986</i>, the Minister may, by legislative instrument, determine:</p> <ul style="list-style-type: none"> <li data-bbox="481 272 2067 336">(a) eligibility standards to be observed in the provision of an eligible service (including accommodation support services, print disability services, respite care services) <li data-bbox="481 341 2067 373">(b) disability employment standards to be observed in the provision of an employment service <p data-bbox="481 378 2067 442">When the Minister determines disability employment standards the Minister must, by legislative instrument, also approve key performance indicators to be applied in assessing whether the standards have been observed.</p> <p data-bbox="481 446 2067 638">Under the Act, the Secretary may approve an authority to grant accreditation to certification bodies. The authority must be internationally recognised as a suitable authority to grant accreditation and perform its functions in an independent and impartial way. The accredited certification body may give certificates of compliance to relevant organisations if it is satisfied that the service meets the disability employment standards. A service provider cannot receive funding (a grant) unless it is accredited (certified) or, for a new service, is seeking to be accredited, within 12 months of receiving a funding grant. If a service loses its certification and funding it needs to regain certification before funding is considered.</p> <p data-bbox="481 643 2067 675">The Certification process is summarised as follows:</p> <p data-bbox="481 679 2067 775">Step 1 - Start the process — gather and review background information about the organisation. This helps the organisation to assess exactly what they need to consider for their certification audit. This scoping exercise is a preliminary process before the more detailed internal audit the organisation will need to undertake later as part of their preparation for certification.</p> <p data-bbox="481 780 2067 844">Step 2 - Choose a certification body — the certification body needs to have been formally accredited by JAS-ANZ to assess services against the Disability Services Standards.</p> <p data-bbox="481 849 2067 912">Step 3 - Notify the Department — a newly funded organisation needs to notify the appropriate department that they intends to obtain a Certificate of Compliance against the Disability Services Standards.</p> <p data-bbox="481 917 2067 1011">Step 4 - Conduct an internal audit — Internal audits are designed to enable an organisation to assess how well they perform against the Disability Services Standards. Certification bodies may require an organisation to submit material related to an internal audit, along with policies and procedures, before they decide whether to proceed with a certification audit.</p> |
|-------------------------------------|---|

Table 14A.77 Australian Government quality assurance processes

Step 5 - Prepare for certification audit — the organisation will need to prepare material, schedule activities and meetings and generally organise, in partnership with the certification body, how the certification audit will proceed.

Step 6 - Participate in certification audit — the organisation assists the certification body obtain the information it needs, as well as ensuring that the interviews and feedback sessions organised proceed as scheduled.

Step 7 - Follow-up certification audit if required — after the certification audit, the organisation receives an audit report from the certification body. The report is also be given to the funding body. For each KPI an organisation receives a rated of major nonconformity (three months to correct), nonconformity (six months to correct) or conformity. The KPI with the lowest rating under each Standard, across all service types, determines the overall rating for each Standard.

An organisation cannot be granted certification until all major nonconformities and nonconformities have been corrected, and that correction has been verified by the certification body.

Table 14A.77 **Australian Government quality assurance processes**

Step 8 - Commence 3 year audit cycle — the 3 year audit cycle commences with a successful initial certification audit followed by a first surveillance audit 12 months later, a second surveillance audit at 24 months, and a re-assessment audit on completion of the three year period. Prior to each annual audit an internal audit is required, at which time corrective action can be taken if needed. A follow up surveillance audit may also be part of the process if issues in the annual audit which need to be rectified are identified by the certification body. Prior to the reassessment audit (3 years from certification) it is necessary to renegotiate the contract with the certification body. The 3 year audit cycle recommences with a successful reassessment audit.

What are the relevant service standards Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA) 2007* legislative instrument. DEEWR has separate, but identical Standards - Disability Employment Standards (DEEWR) 2007.

Service access

Each person with a disability who is seeking a service has access to a service on the basis of relative need and available resources.

KPI 1.1 The service provider adopts and applies non-discriminatory entry rules in respect of age, gender, race, culture, religion or disability, consistent with the contractual obligations of the service provider and the purpose of the service.

KPI 1.2 The service provider's entry and exit procedures are fair and equitable and consistently applied.

Individual needs

Each person with a disability receives a service that is designed to meet, in the least restrictive way, his or her individual needs and personal goals.

KPI 2.1 Each individual's employment goals are established objectively to reflect his or her needs and personal goals.

KPI 2.2 Each individual's employment goals are used as a basis for service provision, with the service provider undertaking a process of planning, implementation, review and adjustment to facilitate the achievement of these goals.

KPI 2.3 Services are delivered to meet each individual's employment goals through pathways and plans that do not have any unnecessary restrictions or constraints.

Table 14A.77 Australian Government quality assurance processes

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA) 2007* legislative instrument

Decision making and choice

Each person with a disability has the opportunity to participate as fully as possible in making decisions about the events and activities of his or her daily life in relation to the service he or she receives.

KPI 3.1 The service provider provides appropriate and flexible opportunities for each individual to participate in decision-making at all levels, including individual choices in pre employment and employment planning, service delivery planning and corporate and business planning.

KPI 3.2 The service provider acts upon the outcomes of service recipient input into decision-making.

Privacy, dignity and confidentiality

Each service recipient's right to privacy, dignity and confidentiality in all aspects of his or her life is recognised and respected.

KPI 4.1 The service provider complies with the Information Privacy Principles of the Privacy Act 1988 in order to protect and respect the rights of individual service recipients. The service provider does not disclose personal information about service recipients without their informed consent.

KPI 4.2 The service provider promotes tolerance and respect for each service recipient's personal needs and circumstances.

Participation and integration

Each person with a disability is supported and encouraged to participate and be involved in the community.

KPI 5.1 The service contributes to individual outcomes for service recipients that progressively builds opportunities for their participation and involvement in the community through employment.

Valued status

Each person with a disability has the opportunity to develop and maintain skills and to participate in activities that enable him or her to achieve valued roles in the community.

KPI 6.1 The service promotes the belief and ability of service recipients to fulfil valued roles in the community.

Table 14A.77 **Australian Government quality assurance processes**

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA) 2007* legislative instrument

KPI 6.2 The service promotes employment opportunities for service recipients to fulfil valued roles in the community.

KPI 6.3 The service develops and maintains service recipients' skills relevant to their roles in the community. **Complaints and disputes**

Each service recipient is encouraged to raise, and have resolved without fear of retribution, any complaints or disputes he or she may have regarding the service provider or the service.

KPI 7.1 The service provider encourages the raising of complaints by service recipients regarding any areas of dissatisfaction with the service provider and the service.

KPI 7.2 Service recipients have no fear of retribution in raising complaints.

KPI 7.3 The service provider facilitates the resolution of complaints or disputes by service recipients regarding the service provider and the service.

Service management

Each service provider adopts quality management systems and practices that optimise outcomes for service recipients.

KPI 8.1 The service provider has management systems in place that facilitate quality management practices and continuous improvement.

Table 14A.77 **Australian Government quality assurance processes**

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA) 2007* legislative instrument

Employment conditions

Each person with a disability enjoys working conditions comparable to those of the general workforce.

KPI 9.1 The service provider ensures that people with a disability, placed in open or supported employment, receive wages according to the relevant Australian Pay and Classification Scale (APCS), special Federal Minimum Wage (SFMW), award, order or industrial agreement (if any). A wage must not have been reduced, or be reduced, because of award exemptions or incapacity to pay or similar reasons and, if a person is unable to work at full productive capacity due to a disability, the service provider is to ensure that a pro-rata wage based on the applicable special SFMW, APCS, award, order or industrial agreement is paid. This pro-rata wage must be determined through a transparent assessment tool or process, such as Supported Wage System (SWS), or tools that comply with the criteria referred to in the Guide to Good Practice Wage Determination including:

- compliance with relevant legislation;
- validity;
- reliability;
- wage outcome; and
- practical application of the tool.

KPI 9.2 The service provider ensures that, when people with a disability are placed in employment, their conditions of employment are consistent with general workplace norms and relevant Commonwealth and State legislation.

KPI 9.3 The service provider ensures that, when people with a disability are placed and supported in employment, they, and if appropriate, their guardians and advocates, are informed of how wages and conditions are determined and the consequences of this.

Service recipient training and support

The employment opportunities of each person with a disability are optimised by effective and relevant training and support.

KPI 10.1 The service provider provides or facilitates access to relevant training and support programs that are consistent with the employment goals and opportunities of each service recipient.

Table 14A.77 **Australian Government quality assurance processes**

Disability Employment Standards and Key Performance Indicators as contained in the *Disability Services Standards (FaCSIA) 2007* legislative instrument

Staff recruitment, employment and training

Each person employed to deliver services to a person with a disability has relevant skills and competencies.

KPI 11.1 The service provider identifies the skills and competencies of each staff member.

KPI 11.2 The service provider ensures that its staff have relevant skills and competencies.

KPI 11.3 The service provider ensures the provision of appropriate and relevant training and skills development for each staff member.

Protection of human rights and freedom from abuse

The service provider acts to prevent abuse and neglect and to uphold the legal and human rights of service recipients.

KPI 12.1 The service provider takes all practical and appropriate steps to prevent abuse and neglect of its service recipients.

KPI 12.2 The service provider upholds the legal and human rights of its service recipients.

Future directions

Development and implementation of a National Disability Advocacy Program Quality Assurance System.

Table 14A.82 People with reported disability aged 15–64 years who are satisfied with the quality of assistance received from organised and formal services in the last six months, by country of birth, 2012 (a), (b), (c), (d)

| | <i>Unit</i> | <i>Estimate</i> | <i>95 per cent CI (±)</i> |
|--|-------------|-----------------|---------------------------|
| Numerator — number of people satisfied with the quality of formal services received in the last 6 months | | | |
| Australia | '000 | 226.9 | 19.7 |
| Other English speaking countries (e) | '000 | 27.1 | 6.2 |
| All English speaking countries | '000 | 252.8 | 22.0 |
| Non–English speaking countries (f) | '000 | 31.3 | 7.7 |
| Total | '000 | 286.0 | 22.4 |
| Denominator — number of people with disability, who received formal assistance and/or who needed formal assistance with at least one activity in the last 6 months | | | |
| Australia | '000 | 283.5 | 22.7 |
| Other English speaking countries (e) | '000 | 32.5 | 6.4 |
| All English speaking countries | '000 | 316.0 | 25.3 |
| Non–English speaking countries (f) | '000 | 42.3 | 8.5 |
| Total | '000 | 359.7 | 25.8 |
| Proportion of people with disability who report being satisfied with the quality of formal services received in the last 6 months | | | |
| Australia | % | 80.0 | 2.5 |
| Other English speaking countries (e) | % | 83.4 | 9.8 |
| All English speaking countries | % | 80.0 | 2.5 |
| Non–English speaking countries (f) | % | 74.0 | 9.9 |
| Total | % | 79.5 | 2.4 |

(a) Data includes only those people who undertook a personal interview, and does not include proxy interviews.

(b) Excludes need for assistance with health care.

(c) Excludes people who are residents of cared accommodation.

(d) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. See data quality statement for more details.

(e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Border Protection) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.

(f) Non–English speaking countries includes those people for whom country of birth was inadequately described. This is estimated to be less than 0.1 per cent nationally.

(a) Primary carers (aged 15 years or over) with a main recipient aged 0–64 years, or with a non-main recipient aged 0–64 with a profound or severe core activity limitation. See data quality statement for more details.

(b) Estimates based on the Survey of Disability, Ageing and Carers sample who were primary carers of people, aged 0–64 years who were interviewed personally.

(c) Only includes primary carers who reported receiving assistance from formal services to assist with their caring role in the last 6 months.

(d) Not stated' responses on receipt and quality of formal services have been excluded from both the numerator and the denominator. Proportions have been calculated excluding these 'not stated' responses. The sample of primary carers who did not state their receipt and satisfaction with the quality of formal services received represent 25.3 per cent of all primary carers in the population. See data quality statement for more details.

(e) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. See data quality statement for more details.

- (a) Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See Chapter 2 (section 2.5) for details.
- (b) For the service user data used to derive this indicator, services provided by local governments are counted as government. For 2003-04 and 2004-05 expenditure data; NSW, Victoria, WA and SA allocated expenditure on local government services to non-government provided services. Queensland allocated expenditure on local government services to non-government provided services for 2003-04 only. Tasmania allocated expenditure on local government services to government provided services. The ACT and the NT do not have local government provided services. Jurisdictional comparisons thus need to be undertaken with care.
- (c) Data are based on adjusted net expenditure (expenditure minus receipts) divided by the number of service users during the relevant period.

Table 14A.87 Real government expenditure per user of NDA accommodation support services (2012-13 dollars) (a), (b), (c), (d), (e), (f), (g)

| | <i>NSW (h)</i> | <i>Vic (i)</i> | <i>Qld (j)</i> | <i>WA (k)</i> | <i>SA (l)</i> | <i>Tas (m)</i> | <i>ACT (n)</i> | <i>NT (o)</i> | <i>Aust</i> |
|-----|--|----------------|----------------|---------------|---------------|----------------|----------------|---------------|-------------|
| (d) | Data for non-government provided services reflect the cost to government and not the full cost of providing the accommodation. Governments make a contribution towards non-government provided services. | | | | | | | | |
| (e) | Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory. Individuals may also have accessed both government and non-government services. Data for service users of NDA services funded by the states and territories exclude specialist psychiatric disability services specifically identified by the jurisdiction. | | | | | | | | |
| (f) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Service type outlet response rates (table 14.3 in chapter) and service user response rates by outlet (table 14.4 in chapter) should be taken into consideration when interpreting this indicator. | | | | | | | | |
| (g) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | |
| (h) | NSW data has had lower-than-average response rates, which has led to under reporting of service user numbers compared to other jurisdictions. Government and non-government sectors have not been accurately recorded in the NSW DS MDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time. NSW expenditure for GH includes expenditure for Other Community and the unit cost figure shown here is the average unit cost across both GH and other community clients. | | | | | | | | |
| (i) | Victorian 2003-04 service user data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users. For 2004-05, the cost per service user for non-government provided accommodation support services in institutional/residential settings is overstated due to a move towards community based and individualised settings, which was not reflected in the expenditure data. For 2010-11, data for non-government provided accommodation support services in group homes excludes capital grants. | | | | | | | | |
| (j) | For Queensland, improved direct attribution of expenditure to service types resulted in improved reporting of expenditure per user of government provided accommodation support services in other community settings from 2004-05 onwards and for government provided accommodation support services in group homes for 2006-07. Previous years expenditure data used to derive these results have been revised (for 2004-05 and 2005-06) as a result of improved financial data reporting capability. Some Government provided accommodation support services receive funding from Queensland Health, the data reported only include funding provided by the Department of Communities. | | | | | | | | |
| (k) | WA service user data for 2007-08 were provided directly by WA and have not been validated by the AIHW. The revisions correct for a coding error related to users allocation to government or non-government services. 2012-13 data are affected by changes to the WA Procurement Reforms that commenced mid-year 2013-14. Approximately 500 service users, previously captured against respite transferred to accommodation and approximately 300 service users were transferred from "government provided accommodation support services in other community settings" to "non-government provided accommodation support services in other community settings" | | | | | | | | |

Table 14A.87 Real government expenditure per user of NDA accommodation support services (2012-13 dollars) (a), (b), (c), (d), (e), (f), (g)

| | <i>NSW (h)</i> | <i>Vic (i)</i> | <i>Qld (j)</i> | <i>WA (k)</i> | <i>SA (l)</i> | <i>Tas (m)</i> | <i>ACT (n)</i> | <i>NT (o)</i> | <i>Aust</i> |
|-----|--|----------------|----------------|---------------|---------------|----------------|----------------|---------------|-------------|
| (l) | For SA, the data used to derive these results have been revised for 2003-04, 2004-05 and 2005-06. Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |
| (m) | There are no government provided accommodation support services in institutional/residential settings in Tasmania. All government run group homes have been outsourced from 2008-09 onwards. | | | | | | | | |
| (n) | In the ACT, the increase in expenditure for government provided accommodation support in group homes from 2004-05 to 2005-06 was the result of a combination of the factors including: service user information being excluded as a result of data cleansing analyses of the NMDS forms or being reclassified to 'other community settings'. The increase in expenditure for government provided accommodation support in other community settings was the result of data cleansing as some service users were not counted for this output. | | | | | | | | |
| (o) | There are no government provided accommodation support services or non-government provided accommodation support services in institutional/residential settings in the NT. | | | | | | | | |
| (p) | Cost per user of State or Territory accommodation support services in group homes in NSW includes services provided in other community settings. | | | | | | | | |

.. Not applicable. – Nil or rounded to zero.

- (a) Service user data used to derive this indicator are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Individuals might have accessed services from more than one State or Territory.
- (b) This indicator is derived using service user data provided by the AIHW. Cost per employment service user data may differ from those reported in the Australian Government's annual report, as the Australian Government and the AIHW use different rules to count the number of employment service users. Where a person has used more than one service outlet during the reporting period, the person is counted more than once by the Australian Government, whereas the AIHW counts each person only once. In addition, the Australian Government includes independent workers in calculating service user numbers, whereas the AIHW does not.
- (c) Service user numbers used to derive these results include a small number of users of services provided by organisations classified as government related, such as local councils. The total user number for 2006-07 includes users of targeted employment services.
- (d) Total expenditure reflects only direct employment and case-based funding expenditure. It does not include expenditure on quality assurance assessment and certification payments or employer incentives such as supported wage system and wage subsidies which cannot be identified against specific user activity types.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

- (a) Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GDP price deflator 2012-13 = 100 (table AA.51).
- (b) Total expenditure reflects only direct employment and case-based funding expenditure. It does not include expenditure on quality assurance assessment and certification payments or employer incentives such as supported wage system and wage subsidies which cannot be identified against specific user activity types.
- (c) Service user data are estimates after a statistical linkage key is used to account for individuals who have received services from more than one service type outlet during the relevant period. Individuals might have accessed services from more than one State or Territory over the relevant period.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) User numbers include a small number of users of services provided by organisations classified as government related, such as local councils. The total user number for 2006-07 includes users of targeted employment services.

.. Not applicable. na Not available.

- (a) Government expenditure per service user for Australia, excludes Australian Government expenditure on State and Territory administered services that was not provided as transfer payments.
- (b) Service user data quality continues to improve following the implementation of the NDA NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Payroll tax data relates to NT Government service provision and does not include expenditure for program management and administration.

| 2013-14 | 7.5 | 7.5 | 6.0 | 3.6 | 4.0 | 11.2 | 5.4 | 5.0 | 6.4 | 6.5 |

(a) See table 14A.80 for an explanation of different methods of apportioning departmental costs.

Table 14A.91 Government administrative expenditure as a proportion of total recurrent expenditure on services (per cent) (a)

| | <i>NSW (b)</i> | <i>Vic</i> | <i>Qld (c)</i> | <i>WA (d)</i> | <i>SA</i> | <i>Tas (e)</i> | <i>ACT (f)</i> | <i>NT</i> | <i>Aus Gov (g)</i> | <i>Aust</i> |
|-----|--|------------|----------------|---------------|-----------|----------------|----------------|-----------|--------------------|-------------|
| (b) | The decrease in NSW administrative expenditure as a proportion of total recurrent expenditure on services in 2008-09 and 2009-10 reflects an improved overhead allocation model which results in better allocation of funding to direct and non-direct service expenditures. The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies. | | | | | | | | | |
| (c) | Payroll tax data for Queensland include payroll tax, accrued payroll tax and long service leave on-costs recovered payroll tax. Payroll tax is excluded from administrative expenditure data. | | | | | | | | | |
| (d) | The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance. | | | | | | | | | |
| (e) | In Tasmania, reduction in administrative expenditure for 2009-10 was due to improved processes for aligning administrative and direct service delivery expenditure. In 2012-13 and 2013-14 administrative expenditure increased due to a change in methodology for allocating corporate and divisional overheads. | | | | | | | | | |
| (f) | In the ACT, in 2006-07, administrative expenditure was impacted by the centralisation of some administrative services. | | | | | | | | | |
| (g) | Australian Government administrative expenditure is an attribution of cost based on average staffing levels. | | | | | | | | | |

- (a) For people aged 15–64 years, living in households.
- (b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.
- (c) For 2009 the rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (d) For the 2003 ABS Survey of Disability, Ageing and Carers, Australia, the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately.

np Not published.

(a) For people aged 15–64 years, living in households.

(b) Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.

(c) A person has a restriction if he/she has difficulty participating in life situations, needs assistance from another person or uses an aid. A long term condition is defined as a disease or disorder which has lasted or is likely to last for at least six months; or a disease, disorder or event (e.g. stroke, poisoning, accident etc.) which produces an impairment or restriction which has lasted or is likely to last for at least six months. Long-term conditions have been coded to a classification based on the Australian Standard Classification of Education (ASCED), 2001 (cat. no. 1272.0).

(d) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(e) Cells in the table have been randomly adjusted to avoid the release of confidential data.

TABLE 14A.96

Table 14A.96 **Labour force participation and employment of people aged 15-64 years, 2009 (per cent) (a), (b), (c)**

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|------------|-------------|-------------|------------|-------------|------------|-------------|-------------|-------------|
| Labour force participation rate | | | | | | | | | |
| People with disability | | | | | | | | | |
| With a profound/severe core activity limitation | 30.2 ± 8.6 | 30.6 ± 7.6 | 43.9 ± 9.6 | 37.7 ± 9.4 | 36.9 ± 10.4 | 26.9 ± 6.7 | 42.3 ± 10.4 | 47.5 ± 16.0 | 34.6 ± 4.0 |
| Without a profound/severe core activity limitation | 55.7 ± 5.0 | 62.8 ± 5.2 | 60.7 ± 5.1 | 64.5 ± 5.9 | 60.6 ± 6.1 | 52.1 ± 5.1 | 73.2 ± 5.5 | 72.0 ± 7.3 | 60.0 ± 2.0 |
| All people with disability | 49.9 ± 4.5 | 54.6 ± 3.9 | 56.5 ± 4.7 | 59.0 ± 5.4 | 55.9 ± 5.5 | 45.1 ± 4.6 | 66.3 ± 5.3 | 67.7 ± 7.0 | 54.1 ± 1.7 |
| People without disability | 80.9 ± 1.1 | 79.5 ± 1.5 | 82.9 ± 1.8 | 84.1 ± 1.8 | 81.9 ± 1.7 | 81.0 ± 2.0 | 85.4 ± 1.7 | 86.4 ± 2.5 | 81.5 ± 0.5 |
| Employment rate | | | | | | | | | |
| People with disability | | | | | | | | | |
| With a profound/severe core activity limitation | 89.0 ± 9.6 | 83.2 ± 12.5 | 87.8 ± 10.1 | 95.6 ± 5.9 | 90.8 ± 10.2 | 90.9 ± 8.5 | 97.5 ± 5.1 | 91.0 ± 12.4 | 88.3 ± 4.6 |
| Without a profound/severe core activity limitation | 88.1 ± 3.9 | 92.4 ± 3.1 | 88.8 ± 4.3 | 88.9 ± 4.6 | 92.0 ± 4.6 | 92.7 ± 3.7 | 93.2 ± 3.6 | 95.7 ± 3.3 | 90.0 ± 1.7 |
| All people with disability | 88.3 ± 3.4 | 91.1 ± 3.3 | 88.6 ± 4.0 | 89.8 ± 3.9 | 91.8 ± 4.1 | 92.4 ± 3.7 | 93.8 ± 3.2 | 95.2 ± 3.6 | 89.7 ± 1.4 |
| People without disability | 94.1 ± 0.8 | 94.4 ± 1.0 | 94.5 ± 1.2 | 95.4 ± 1.1 | 95.3 ± 1.1 | 96.3 ± 0.9 | 96.8 ± 0.9 | 96.9 ± 1.1 | 94.6 ± 0.3 |

- (a) The labour force participation and employment rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (b) Due to differences in collection methodology, the data collected by the ABS Disability Module (used in the Survey of Education and Training Experience) relate to a broader 'disability and long-term health condition' population than the 'disability' population obtained from the much more detailed Survey of Disability, Ageing and Carers — however, the characteristics of the populations are similar. The data are suitable for population comparisons, but not for prevalence updates between Disability, Ageing and Carers surveys.
- (c) For people aged 15–64 years.

(a) The labour force participation and employment rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(b) Data in italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

(a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the SDAC and the ABS disability module. The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics). It is likely that the reduction is at the less severe end of the profound or severe core activity limitation population. As such, these data will differ from those of previous years.

(b) For people aged 15–64 years.

(c) People who have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

(d) People who do not have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

(a) For people aged 15–64 years.

(b) Disability includes Profound core activity limitation, Severe Core Activity Limitation, Moderate Core Activity Limitation, Mild core activity limitation, Education/employment restriction only

Table 14A.99 Labour force participation and employment of all people with disability, by special needs groups, 2009 (per cent) (a), (b), (c), (d), (e)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(c) Data in *Italics* indicates a RSEs of between 25 per cent and 50 per cent. Data with RSEs over 50 per cent are not published.

(d) The labour force participation and employment rates reported in this table include 95 per cent confidence intervals (for example, X per cent \pm X per cent).

(e) Due to differences in collection methodology, the data collected by the ABS Disability Module (used in the Survey of Education and Training Experience) relate to a broader 'disability and long-term health condition' population than the 'disability' population obtained from the much more detailed Survey of Disability, Ageing and Carers — however, the characteristics of the populations are similar. The data are suitable for population comparisons, but not for prevalence updates between Disability, Ageing and Carers surveys.

– Nil or rounded to zero.

| Indigenous Australians | 76.4 | 77.6 | 76.1 | 87.9 | 84.8 | 82.4 | 88.5 | 83.2 | 79.3 |

(a) For people aged 15–64 years.

(b) The ABS 2006 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the SDAC and the ABS disability module. The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics). It is likely that the reduction is at the less severe end of the profound or severe core activity limitation population. As such, these data will differ from those of previous years.

(c) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

(a) For people aged 15–64 years, living in households.

(b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

(c) For the ABS Survey of Disability, Ageing and Carers 2003, the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately.

(d) Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

.. Not applicable. **np** Not published.

(a) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(b) Cells in the table have been randomly adjusted to avoid the release of confidential data.

(c) 'Other' includes inner regional, outer regional and remote areas. Excludes very remote and migratory. See data quality statement for further details.

(d) 'Other' includes outer regional and remote areas.

– Nil or rounded to zero. .. Not applicable.

- (a) Data in *Italics* indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (c) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.
- (d) Non-English speaking countries includes those persons for whom country of birth was inadequately described. Non-English speaking countries include Zimbabwe for 2012.
- (e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.
- (f) Non-English speaking countries includes those persons for whom country of birth was inadequately described.

(a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

Table 14A.107 **Employment to population rate for people with disability aged 15–64 years, all with reported disability, by country of birth, by State/Territory ('000) (a), (b)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|------------------------------------|-------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|-------------------|
| All english speaking countries | % | 51.5 ± 2.8 | 52.7 ± 3.1 | 49.2 ± 3.0 | 59.7 ± 5.9 | 50.9 ± 3.7 | 46.7 ± 4.4 | 70.4 ± 6.4 | 61.4 ± 5.6 | 52.3 ± 1.3 |
| Non-English speaking countries (f) | % | 37.7 ± 5.3 | 30.3 ± 6.0 | 35.3 ± 10.6 | 44.2 ± 11.1 | 40.8 ± 11.0 | 27.6 ± 20.4 | 50.3 ± 21.4 | 68.1 ± 23.5 | 36.2 ± 3.4 |
| Total | % | 49.1 ± 2.2 | 48.5 ± 2.2 | 48.3 ± 2.7 | 57.7 ± 5.4 | 49.9 ± 3.7 | 46.0 ± 4.3 | 68.4 ± 7.5 | 62.2 ± 6.6 | 50.0 ± 1.0 |

(a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(c) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.

(d) Non-English speaking countries includes those persons for whom country of birth was inadequately described. Non-English speaking countries include Zimbabwe for 2012.

(e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.

(f) Non-English speaking countries includes those persons for whom country of birth was inadequately described.

(a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

- (a) Data in *Italics* indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.
- (b) For people aged 5–64 years, living in households.
- (c) For 2009 the rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (d) For the 2003 ABS Survey of Disability, Ageing and Carers, the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately.
- (e) Confidence intervals are not available for 2003 data.
- (f) Includes church/special community activities and voluntary work (including advocacy).
- (g) Totals may be less than the sum of the components as a person might have participated in more than one activity.
- (h) Includes other activity not specified elsewhere, voluntary activities, other special interest group activities, art/craft group activity and performing Arts group activity.

– Nil or rounded to zero. **np** Not published.

(a) For people aged 5–64 years, living in households.

(b) Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.

(c) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(a) Data in *Italics* indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(c) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom and the United States of America.

(d) Non–English speaking countries includes those persons for whom country of birth was inadequately described. Non–English speaking countries include Zimbabwe for 2012.

(e) Other English speaking countries are as stated in the English Proficiency Group Classification (Dept of Immigration and Citizenship) and include Canada, Ireland, New Zealand, South Africa, United Kingdom, United States of America and Zimbabwe.

(f) Non–English speaking countries includes those persons for whom country of birth was inadequately described.

– Nil or rounded to zero. **np** Not published.

(a) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(b) Cells in the table have been randomly adjusted to avoid the release of confidential data.

(c) 'Other' includes inner regional, outer regional and remote areas. Excludes very remote and migratory. See data quality statement for further details.

(d) 'Other' includes outer regional and remote areas.

(a) Data in Italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with care. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use. These estimates are not published.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

– Nil or rounded to zero. **np** Not published.

TABLE 14A.140

Table 14A.140 **Participation in voluntary work for an organisation or group, by disability status, 2010 (per cent) (a), (b)**

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| <i>2006</i> | | | | | | | | | |
| People with a profound/severe core activity limitation (c) | 12.8 | 13.5 | 16.3 | 14.1 | 16.6 | 15.0 | 21.1 | 17.0 | 14.3 |
| People without a profound/severe core activity limitation (d) | 18.5 | 19.2 | 20.0 | 18.2 | 21.6 | 21.8 | 23.4 | 19.2 | 19.4 |
| <i>2010</i> | | | | | | | | | |
| People with a profound/severe core activity limitation (c) | 11.9 | 12.5 | 15.3 | 13.3 | 14.4 | 13.3 | 9.5 | 28.3 | 13.2 |
| People without a profound/severe core activity limitation (d) | 16.9 | 17.8 | 18.9 | 16.9 | 19.5 | 19.7 | 9.8 | 34.8 | 17.9 |

(a) The ABS 2011 and 2006 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

(b) For people aged 15–64 years.

(c) People who have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

(d) People who do not have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).

- (a) The ABS 2006 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). The ASSNP is conceptually comparable with the SDAC and ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).
- (b) People with a core activity need for assistance are those who have need for assistance with core activities: self-care, mobility and communication because of a disability or long term health condition (lasting six months or more).
- (c) Results include people who usually reside in the dwelling and who were present on Census night only. People who were visitors and those people who were not present in the household were excluded.

| No need for assistance with a core activity limitation | 6.7 | 6.9 | 6.1 | 6.0 | 6.4 | 5.2 | 11.2 | 4.4 | 6.6 |

(a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the ABS disability module. The ASSNP is conceptually comparable with the ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

(b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

| <i>No educational attainment — not stated and inadequately described</i> | | | | | | | | | |
| With a profound/severe core activity limitation | 15.3 | 17.4 | 13.1 | 13.8 | 14.1 | 13.1 | 11.1 | 19.8 | 15.0 |
| Without a profound/severe core activity limitation | 5.9 | 5.5 | 4.9 | 5.0 | 5.3 | 5.4 | 3.4 | 6.7 | 5.4 |

(a) The ABS 2011 Census module, used to source these data, was designed to measure 'Core Activity Need for Assistance' (ASSNP). In previous years, the data were sourced from the ABS disability module. The ASSNP is conceptually comparable with the ABS disability module population of people who have a profound or severe core activity limitation, but due to the different collection methodology and shortening of the question set used, the population identified is smaller (but displays very similar characteristics).

(b) Profound/severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care.

(c) For people aged 15–64 years.

Source: ABS (unpublished), 2011 Census of Population and Housing.

(a) Reports provisional BCC data that has not been validated and may be subject to revision.

(b) The proportion of BCC funded agencies that submitted HACC MDS data differed across jurisdictions and ranged from 93 per cent to 100 per cent in 2011-12, 51 per cent to 100 per cent in 2012-13 and 75 per cent to 100 per cent in 2013-14. Actual client numbers may be higher than those reported here.

(c) The proportion of BCC clients with an unknown or invalid date of birth differed across jurisdictions and ranged from 0 per cent to 1.2 per cent. Nationally, the proportion of BCC clients with an unknown or invalid date of birth was 0.3 per cent.

(d) Data for Australia for 2012-13 is not comparable to previous years due to the inclusion of data for Victoria and WA.

(e) Allied Health Care includes at Home and at Centre.

(f) Nursing Care includes at Home and at Centre.

(a) Reports provisional BCC data that has not been validated and may be subject to revision.

(b) The proportion of BCC funded agencies that submitted HACCC MDS data differed across jurisdictions and ranged from 93 per cent to 100 per cent in 2011-12, 51 per cent to 100 per cent in 2012-13 and 75 per cent to 100 per cent in 2013-14. Actual client numbers may be higher than those reported here.

Table 14A.158 **Basic community care services received within remote areas by people aged under 65 years and Indigenous Australians aged under 50 years (a), (b), (c)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust (d)</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-----------------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-----------------|

(c) The proportion of BCC clients with an unknown or invalid date of birth differed across jurisdictions and ranged from 0 per cent to 1.2 per cent. Nationally, the proportion of BCC clients with an unknown or invalid date of birth was 0.3 per cent.

(d) Data for Australia for 2012-13 is not comparable to previous years due to the inclusion of data for Victoria and WA.

(e) Allied Health Care includes at Home and at Centre.

(f) Nursing Care includes at Home and at Centre.

Data quality information — Services for people with disability, chapter 14

Data Quality Information

Data quality information (DQI) provides information against the seven Australian Bureau of Statistics (ABS) data quality framework dimensions, for a selection of performance indicators in the Services for people with disability chapter. DQI for additional indicators will be progressively introduced in future reports.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI are available for the following performance indicators:

| | |
|--|----|
| Access to NDA specialist disability services | 2 |
| Service use by severity of disability | 9 |
| Service use by special needs groups | 16 |
| Service use by special needs groups – Indigenous people | 23 |
| Assistance for younger people with disability in residential aged care | 28 |
| Labour force participation and employment of people with disability | 31 |
| Client and carer satisfaction | 33 |
| Labour force participation of primary carers of people with disability | 37 |
| Social participation of people with disability | 41 |

Access to NDA specialist disability services

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity — access. |
| Indicators | Access to NDA specialist disability services. |
| Measure (computation) | <p>1. Numerator: Number of users of specialist disability services (all ages) in the reporting period.</p> <p>2. Denominator: Estimated potential population for specialist disability services on 30 June at start of reporting period.</p> <p>The potential population is defined as people aged under 0–64 years with the potential to require disability support services.</p> <p>The potential population is calculated by applying adjusted age–sex specific rates of the potential population (from the Survey of Disability, Ageing and Carers (SDAC) 2009 and 2012) to the 30 June Estimated Resident Population at the beginning of the reporting period by State/Territory by age group by sex.</p> <p>National level age–sex rates from SDAC 2009 and 2012, rather than State/Territory–age–sex rates, are used due to the high sampling errors associated with some of the State/Territory–age–sex rate estimates. The national level age–sex rates from SDAC 2009 and 2012 are adjusted by the rate ratio of the Indigenous State/Territory–age–sex rate of need for assistance with core activities to the all persons State/Territory–age–sex rate of need for assistance with core activities, as calculated from Census 2011 data. Estimates of potential population by Remoteness Area are calculated by applying the Census 2011 distributions of Remoteness Area for people who need assistance with core activities by State/Territory by age group by sex to the State/Territory by age group by sex potential population estimates.</p> <p>3. Percentage: $R/N \times 100$ where R = number of service users (all ages) in the DS NMDS during the reporting period and N = estimated potential population on 30 June at the start of the reporting period.</p> <p>Performance indicators for disability services provided by the Australian Government (disability employment services only) are restricted to the age range 15–64 years.</p> |
| Data source/s | <p>Numerator: DS NMDS. For general issues relating to the DS NMDS, refer to the DS NMDS data quality information.</p> <p>Denominator: 2009 and 2012 SDAC, 2011 Census of Population and Housing (Census 2011), ERP and Indigenous Population Projections.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>AIHW</p> <p>The AIHW is an Australian Government statutory authority accountable to Parliament and operates under the provisions of the <i>Australian Institute of Health and Welfare Act 1987</i>. The AIHW provides expert analysis of data on health, housing and community services. More information about the AIHW is available on the AIHW website.</p> <p>When errors are found in published data, those errors are corrected immediately in publications on the AIHW website, and where necessary, in online tables and online interactive data cubes. Corrections are documented on the AIHW website.</p> |
| | <p>DS/CSTDA NMDS</p> <p>DS/CSTDA NMDS data are provided by both non–government service providers and state/territory and Australian Government agencies. (The DS NMDS' name was changed, from the Commonwealth–State/Territory Disability Agreement National Minimum Dataset, on 1 January 2009.) Service providers collate data in relation to each of their service type outlets providing services under the NDA, as well as the service users who access these outlets. A limited number of data items are provided by government agencies. Government agencies compile, edit and verify the data, and supply a final data set to the AIHW for further verification, national collation and analysis.</p> |

The set of privacy and data principles for the DS/CSTDA NMDS collection are outlined in the Data Guide, the most recent version of which is available on the AIHW website.

All State and Territory governments and the Australian Government are required to provide data annually for the DS NMDS, and are responsible for the quality and timeliness of the data.

ABS

For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see [ABS Institutional Environment](#).

Department of Social Services (DSS) Disability Employment Services (DES) collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving DMS.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Relevance

Data from several different sources, each referencing different time periods, are used to produce data:

- the CSTDA NMDS 2008-09 and earlier
- the DS NMDS 2009-10 and later
- the HACC MDS
- the DSS DES collection
- the 2009 and 2012 SDAC
- ABS Estimated Resident Population at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2012-13 referenced DS NMDS 2012-13, the 2009 and 2012 SDAC, ERP June 2012, the 2011 Census and 30 June 2012 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas nor Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age–sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008 and 30 June 2013 rates.

The use of national level SDAC 2009 and 2012 age–sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and Remoteness Area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS/CSTDA NMDS

DS/CSTDA NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS/CSTDA NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES

collection. The 2008-09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009-10 and later years DS NMDS include services provided under the NDA during each of those years.

Data collected in the DS/CSTDA NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, Remoteness Area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the CSTDA/NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. In Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the CSTDA/NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability Support Services 2012-13*.

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2012-13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. In 2011-12, the proportion of invalid linkage keys was 0.5 per cent, ranging from zero to 2.2 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys were recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt-in' approach. All other states and territories follow an 'opt-out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the State/Territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008-09 to 2012-13. The source data that becomes available at the latest date is the DS/CSTDA NMDS data. This is typically published 15 months after the end of the reference year, e.g. the 2012-13 report was released on 4 July 2014.

HACC MDS data is provided to the AIHW before publication for the current reporting

year (for the 2015 report this is 2013-14). However, the latest HACC statistical report to be published is for 2011-12.

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Results from the 2011 Census have been released. Census TableBuilder, from which need for assistance data were extracted, was released in 2013.

Estimated Resident Population data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011 Census and recast estimates back to September 1991. These rebased/recast estimates have been used in calculation of the potential population for all years.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS/CSTDA NMDS

Potential sources of error in the DS/CSTDA NMDS are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data. Not stated/not collected rates vary substantially across jurisdictions and data items.

The DS/CSTDA NMDS aims to provide complete national data on all services provided under the NDA/CSTDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2012-13 and 97.5 per cent in 2011-12). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions. Further information about 'not stated/not collected' rates is available in the accompanying appendix tables.

The 2008-09 CSTDA NMDS data was initially confirmed by State/Territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008-09 performance indicators in this report. The 2009-10 DS NMDS data confirmed by State/Territory and Australian Government agencies in March 2011 were used to produce 2009-10 performance indicators. Coding errors advised subsequently were reported in Disability Support Services 2009-10.

In response to concerns expressed by some jurisdictions, changes were made to the DS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008-09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS/CSTDA NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the relative standard error (RSE), is estimated below for the age–sex specific potential population rates.

Estimated RSE for age–sex potential population rates at national level (per cent)

| Age group (years) | General population | | potential Respite care population | | DES/Open Employment potential population | |
|-------------------|--------------------|--------|-----------------------------------|--------|--|--------|
| | Male | Female | Male | Female | Male | Female |
| 0–9 | 8.2 | 9.7 | 10.8 | 15.3 | na | na |
| 10–14 | 9.3 | 15.0 | 13.9 | 18.2 | na | na |
| 15–24 | 8.9 | 11.3 | 13.6 | 15.4 | 6.7 | 7.5 |
| 25–34 | 11.7 | 12.0 | 24.3 | 24.9 | 6.8 | 5.9 |
| 35–44 | 13.6 | 11.7 | 21.4 | 24.6 | 5.5 | 5.9 |
| 45–49 | 15.3 | 17.4 | 28.9 | 46.1 | 6.1 | 6.0 |
| 50–54 | 18.1 | 15.2 | 30.4 | 23.6 | 6.6 | 5.4 |
| 55–64 | 10.3 | 7.9 | 14.3 | 16.9 | 3.5 | 3.0 |

na Not applicable.

Source: ABS (unpublished) *Disability, Ageing and Carers*, 2012.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- the Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- it is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (state/territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002.

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA

NMDS data items is given in the AIHW publication *Australia's national disability services data collection: Redeveloping the Commonwealth–state/territory disability agreement National Minimum Data Set*.

From 1 October 2008, targeted support services previously delivered by the Australian Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The denominator 'estimated potential population for specialist disability services' is defined in appendix A. However, this does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

DS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR – online metadata repository
- National Community Services Data Dictionary.

DS/CSTDA NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in 'Disability support services' available in hard copy or on the AIHW website. As well, the annual DS/CSTDA NMDS Data Guide and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- DS NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the assessment of disability support needs following broadly consistent principles and practices across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested
- Data measuring the potential population is not explicitly available for the required time point and so has been estimated from several different sources under several key assumptions. The assumption of constant age–sex specific rates of severe/profound core activity limitation over time is not contradicted by comparison

of age–sex specific rates of severe/profound core activity limitation from SDAC 2009 to SDAC 2012. A further assumption that national level age–sex specific rates of severe/profound core activity limitation from the 2012 SDAC apply consistently across states/territories is untested

- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources.

Service use by severity of disability

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

ABS

For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see ABS Institutional Environment.

Department of Social Services (DSS) DES collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving Disability Management Services.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Relevance

Data from several different sources, each referencing different time periods, are used to produce data.

- the CSTDA NMDS 2008-09 and earlier
- the DS NMDS 2009-10 and later
- the HACC MDS
- the DSS DES collection
- the 2009 and 2012 SDAC
- ABS Estimated Resident Population at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2012-13 referenced DS NMDS 2012-13, the 2009 and 2012 SDAC, ERP June 2012, the 2011 Census and 30 June 2012 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas nor Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age–sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008 and 30 June 2013 rates.

The use of national level SDAC 2012 age–sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and Remoteness Area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS/CSTDA NMDS

DS/CSTDA NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS/CSTDA NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES

collection. The 2008-09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009-10, and later year DS NMDS include services provided under the NDA during each of these years.

Data collected in the DS/CSTDA NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by State and Territory, remoteness area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the CSTDA/NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. In Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the CSTDA/NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability support services 2012-13*.

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2012-13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. In 2011-12, the proportion of invalid linkage keys was 0.5 per cent, ranging from zero to 2.2 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys were recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt-in' approach. All other states and territories follow an 'opt-out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the state/territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008-09 to 2012-13. The source data that becomes available at the latest date is the DS/CSTDA NMDS data. This is typically published 15 months after the end of the reference year, e.g. the 2012-13 report was released on 4 July 2014.

HACC MDS data is provided to the AIHW before publication for the current reporting

year (for the 2015 report this is 2013-14). However, the latest HACC statistical report to be published is for 2011-12.

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Results from the 2011 Census have been released. Census TableBuilder, from which need for assistance data were extracted, was released in 2013.

Estimated Resident Population data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011 Census and recast estimates back to September 1991. These rebased/recast estimates have been used in calculation of the potential population for all years.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS/CSTDA NMDS

Potential sources of error in the DS/CSTDA NMDS are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data. Not stated/not collected rates vary substantially across jurisdictions and data items.

The DS/CSTDA NMDS aims to provide complete national data on all services provided under the NDA/CSTDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2012-13 and 97.5 per cent in 2011-12). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions. Further information about 'not stated/not collected' rates is available in the accompanying appendix tables.

The 2008-09 CSTDA NMDS data was initially confirmed by state/territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008-09 performance indicators in this report. The 2009-10 DS NMDS data confirmed by state/territory and Australian Government agencies in March 2011 were used to produce 2009-10 performance indicators. Coding errors advised subsequently were reported in Disability Support Services 2009-10.

In response to concerns expressed by some jurisdictions, changes were made to the DS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008-09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS/CSTDA NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the relative standard error (RSE), is estimated below for the age–sex specific potential population rates.

Estimated RSE for age–sex potential population rates at national level (per cent)

| Age group (years) | General population | | potential Respite care population | | DES/Open Employment potential population | |
|-------------------|--------------------|--------|-----------------------------------|--------|--|--------|
| | Male | Female | Male | Female | Male | Female |
| 0–9 | 8.2 | 9.7 | 10.8 | 15.3 | na | na |
| 10–14 | 9.3 | 15.0 | 13.9 | 18.2 | na | na |
| 15–24 | 8.9 | 11.3 | 13.6 | 15.4 | 6.7 | 7.5 |
| 25–34 | 11.7 | 12.0 | 24.3 | 24.9 | 6.8 | 5.9 |
| 35–44 | 13.6 | 11.7 | 21.4 | 24.6 | 5.5 | 5.9 |
| 45–49 | 15.3 | 17.4 | 28.9 | 46.1 | 6.1 | 6.0 |
| 50–54 | 18.1 | 15.2 | 30.4 | 23.6 | 6.6 | 5.4 |
| 55–64 | 10.3 | 7.9 | 14.3 | 16.9 | 3.5 | 3.0 |

na Not applicable.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- The Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- Information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- It is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (state/territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002.

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA NMDS data items is given in the AIHW publication *Australia's national disability services data collection: Redeveloping the Commonwealth–state/territory disability agreement National Minimum Data Set*.

From 1 October 2008, targeted support services previously delivered by the Australian

Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The denominator 'estimated potential population for specialist disability services' is defined in appendix A. However, this does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

DS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR – online metadata repository
- National Community Services Data Dictionary.

DS/CSTDA NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost-recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in 'Disability support services' available in hard copy or on the AIHW website. As well, the annual DS/CSTDA NMDS Data Guide and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- DS NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the assessment of disability support needs following broadly consistent principles and practices across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested
- The DS NMDS includes data on 'Activity and participation life area', which indicates whether users need assistance with activities of daily living, activities of independent living or activities of work, education and community living. These data are collected in a matrix, where how often a user needs help is collected at the same time as whether they need help with these activities. The concept of severity of need for assistance more closely aligns with data on how often help is needed. However, information presented for this measure is of whether users need assistance with

these activities. For future reports, consideration should be given to using information on how often help is needed.

- Data measuring the potential population is not explicitly available for the required time point and so has been estimated from several different sources under several key assumptions. The assumption of constant age–sex specific rates of severe/profound core activity limitation over time is not contradicted by comparison of age–sex specific rates of severe/profound core activity limitation from SDAC 2009 and SDAC 2012. A further assumption that national level age–sex specific rates of severe/profound core activity limitation from the 2009 SDAC apply consistently across states/territories is untested
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources.

Service use by special needs groups

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

Indicator definition and description

| | |
|------------------------------|---|
| Element | Equity — access. |
| Indicators | Service use by special needs groups. |
| Measure (computation) | <p>1. Numerator: Number of users of specialist disability services (all ages) in the reporting period.</p> <p>2. Denominator: Estimated potential population for specialist disability services on 30 June at start of reporting period.</p> <p>The potential population is defined as people aged under 0–64 years with profound or severe core activity limitation.</p> <p>The potential population is defined as people aged under 0–64 years with the potential to require disability support services.</p> <p>The potential population is calculated by applying adjusted age–sex specific rates of the potential population (from the Survey of Disability, Ageing and Carers (SDAC) 2009 and 2012) to the 30 June Estimated Resident Population at the beginning of the reporting period by State/Territory by age group by sex.</p> <p>National level age–sex rates from SDAC 2009 and 2012, rather than State/Territory–age–sex rates, are used due to the high sampling errors associated with some of the State/Territory–age–sex rate estimates. The national level age–sex rates from SDAC 2009 and 2012 are adjusted by the rate ratio of the Indigenous State/Territory–age–sex rate of need for assistance with core activities to the all persons State/Territory–age–sex rate of need for assistance with core activities, as calculated from Census 2011 data. Estimates of potential population by Remoteness Area are calculated by applying the Census 2011 distributions of Remoteness Area for people who need assistance with core activities by State/Territory by age group by sex to the State/Territory by age group by sex potential population estimates.</p> <p>3. Percentage: $R/N \times 100$ where R = number of service users (all ages) in the DS NMDS during the reporting period and N = estimated potential population on 30 June at the start of the reporting period.</p> <p>Performance indicators for disability services provided by the Australian Government (disability employment services only) are restricted to the age range 15–64 years.</p> |
| Data source/s | <p>Numerator: DS NMDS. For general issues relating to the DS NMDS, refer to the DS NMDS data quality information.</p> <p>Denominator: AIHW calculation of potential population from SDAC, Census and ERP and Indigenous Population Projections (see ABS data quality statements).</p> |

Data Quality Framework Dimensions

Relevance

supply a final data set to the AIHW for further verification, national collation and analysis.

The set of privacy and data principles for the DS/CSTDA NMDS collection are outlined in the Data Guide, the most recent version of which is available on the AIHW website.

All state and territory governments and the Australian Government are required to provide data annually for the DS NMDS, and are responsible for the quality and timeliness of the data.

ABS

For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see ABS Institutional Environment.

Department of Social Services (DSS) DES collection (from which Disability Management Services (DMS) data are sourced)

The DSS DES collection provides monthly and annual estimates of the number of people receiving Disability Management Services.

The DES collection is conducted in the course of operations by Employment Service Provider Agencies funded by DSS to provide employment services. These providers are required to use the DSS-built and supplied Employment Services System to monitor the provision of services, to manage client information and to provide management information to DSS, including DES collection information.

Data from several different sources, each referencing different time periods, are used to produce data.

- the CSTDA NMDS 2008-09 and earlier
- the DS NMDS 2009-10 and later
- the HACC MDS
- the DSS DES collection
- the 2009 and 2012 SDAC
- ABS Estimated Resident Population at 30 June
- the 2011 Census
- ABS Indigenous Population Projections.

For instance, tables for 2012-13 referenced DS NMDS 2012-13, the 2009 and 2012 SDAC, ERP June 2012, the 2011 Census and 30 June 2012 Indigenous population projections. This may reduce the overall accuracy of the estimates.

SDAC 2009 and 2012

Data from the SDAC do not cover very remote areas nor Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age–sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008 and 30 June 2013 rates.

The use of national level SDAC 2009 and 2012 age–sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and remoteness area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS/CSTDA NMDS

DS/CSTDA NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS/CSTDA NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES collection. The 2008-09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. The 2009-10 and later year DS NMDS include services provided under the NDA during each of those years.

Data collected in the DS/CSTDA NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by state and territory, Remoteness Area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the CSTDA/NDA across jurisdictions. In particular, the provision of specialist psychiatric disability and early childhood intervention services differed across states and territories. In Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the CSTDA/NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services.

In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data are interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see *Disability support services 2012-13*.

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2012-13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. In 2011-12, the proportion of invalid linkage keys was 0.5 per cent, ranging from zero to 2.2 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys were recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt-in' approach. All other states and territories follow an 'opt-out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

DSS DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS' general funding allocation.

Data collected in the DES collection include the state/territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

Performance measures are provided for years from 2008-09 to 2012-13. The source data that becomes available at the latest date is the DS/CSTDA NMDS data. This is

typically published 15 months after the end of the reference year, e.g. the 2012-13 report was released on 4 July 2014.

HACC MDS data is provided to the AIHW before publication for the current reporting year (for the 2015 report this is 2013-14). However, the latest HACC statistical report to be published is for 2011-12.

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Results from the 2011 Census have been released. Census TableBuilder, from which need for assistance data were extracted, was released in 2013.

Estimated Resident Population data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to the 2011 Census and recast estimates back to September 1991. These rebased/recast estimates have been used in calculation of the potential population for all years.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

DS/CSTDA NMDS

Potential sources of error in the DS/CSTDA NMDS are data items for which the response is not stated or not collected. If the characteristics of the people for whom the information is not available are different to those people for whom information is reported, there is potential for bias to be introduced into the data. Not stated/not collected rates vary substantially across jurisdictions and data items.

The DS/CSTDA NMDS aims to provide complete national data on all services provided under the NDA/CSTDA, service type outlets and service users each year. The national response rate for service type outlets is based on the number of service type outlets that responded out of the total number of funded outlets in each jurisdiction (98.0 per cent in 2012-13 and 97.5 per cent in 2011-12). It is not possible to calculate a national response rate for service users, as some outlets do not report on all service users due to administrative or other error. In addition, some service types are not required to report service user information.

'Not stated/not collected' rates for individual data items varied substantially across items and jurisdictions. Further information about 'not stated/not collected' rates is available in the accompanying appendix tables.

The 2008-09 CSTDA NMDS data was initially confirmed by state/territory and Australian Government agencies in July 2010. Some coding errors were subsequently identified and, following National Disability Information Management Group (NDIMG) endorsement in March 2011, revisions were made to the data set. The revised data set was used to produce the 2008-09 performance indicators in this report. The 2009-10 DS NMDS data confirmed by state/territory and Australian Government agencies in March 2011 were used to produce 2009-10 performance indicators. Coding errors advised subsequently were reported in Disability Support Services 2009-10.

In response to concerns expressed by some jurisdictions, changes were made to the DS/CSTDA NMDS processing rules in 2010. These changes were to be effective for the 2008-09 NMDS and future collections. The changes involve no longer attempting to match records with either missing sex or an estimated date of birth with existing records within the same year's data or previous years' DS/CSTDA NMDS data. The matching process provided a means by which these not stated or estimated values could be updated based on other records that, given their high match in other items, were assumed to represent the same service user. By no longer performing these functions these records now stand alone, thereby increasing slightly the number of unique service users within the DS/CSTDA NMDS.

SDAC 2009 and 2012

Estimates from the SDAC are subject to sampling variability as the SDAC is a sample survey. A measure of the sampling variability, the relative standard error (RSE), is estimated below for the age–sex specific potential population rates.

Estimated RSE for age–sex potential population rates at national level (per cent)

| Age group (years) | General population | | potential Respite care population | | DES/Open Employment potential population | |
|-------------------|--------------------|--------|-----------------------------------|--------|--|--------|
| | Male | Female | Male | Female | Male | Female |
| 0–9 | 8.2 | 9.7 | 10.8 | 15.3 | na | na |
| 10–14 | 9.3 | 15.0 | 13.9 | 18.2 | na | na |
| 15–24 | 8.9 | 11.3 | 13.6 | 15.4 | 6.7 | 7.5 |
| 25–34 | 11.7 | 12.0 | 24.3 | 24.9 | 6.8 | 5.9 |
| 35–44 | 13.6 | 11.7 | 21.4 | 24.6 | 5.5 | 5.9 |
| 45–49 | 15.3 | 17.4 | 28.9 | 46.1 | 6.1 | 6.0 |
| 50–54 | 18.1 | 15.2 | 30.4 | 23.6 | 6.6 | 5.4 |
| 55–64 | 10.3 | 7.9 | 14.3 | 16.9 | 3.5 | 3.0 |

na Not applicable.

Source: ABS (unpublished) *Disability, Ageing and Carers, 2012*.

DSS DES collection (source of DMS numerators)

The quality of DMS data are enhanced using the Employment Services System, in three ways:

- The Employment Services System is used for all services provided by Employment Provider Agencies, not just DES users, which improves the quality of DMS data as missing or conflicting data can be resolved by comparison with data from other programs
- Information is linked with Centrelink data for the purposes of determining eligibility for payments, and this provides another opportunity to complete missing information and correct errors
- It is a condition of provision of services that a client provide complete and correct information.

As a result, information presented on DMS data has negligible missing values.

Information on users is derived from data on episodes of assistance over the course of the reference year. Individuals' multiple episodes are linked by means of a linkage key called the Job Seeker ID. When a potential user contacts a Provider Agency for assistance, information including name, address and date of birth is used to match them to previous episodes of assistance.

2011 Census of Population and Housing

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from 2011 Census data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about 2011 Census data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DS/CSTDA NMDS consists of a set of nationally significant data items that are collected in all jurisdictions (state/territory and Australian Government) and an agreed method of collection and transmission. Data items and definitions have remained consistent each year since the launch of the redeveloped national collection in 2002.

Data items are largely based on national community services data standards to enable comparability between collections. Items are also designed to be comparable with other major collections such as the SDAC and international standards including the World Health Organization's International Classification of Functioning and Disability (ICF). More information about the design and comparability of CSTDA NMDS data items is given in the AIHW publication *Australia's national disability*

services data collection: Redeveloping the Commonwealth–state/territory disability agreement National Minimum Data Set.

From 1 October 2008, targeted support services previously delivered by the Australian Government and included in the service group 'employment services' were transferred to State/Territory governments and thus recorded as State/Territory delivered disability support services. Targeted support services delivered by the Australian Government are not included in the NDA performance indicators.

As detailed in the 'Relevance' and 'Timeliness' sections, there are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues such as rates of service use greater than 100 per cent.

The denominator 'estimated potential population for specialist disability services' is defined in appendix A. However, this does not match well with the numerator, which comprises people who used specialist disability services. People who used these services do not necessarily have the same health conditions or core activity limitations as those people included in the potential population. They may instead have a mild/moderate core activity limitation or limitations in other activities — for example, with working or education.

Accessibility

DS/CSTDA NMDS

The AIHW provides a variety of products that draw upon the DS/CSTDA NMDS. Published products available on the AIHW website are:

- Disability support services (annual report/bulletin): These publications are available for free download from the AIHW website
- Interactive disability data cubes: These contain subsets of national information from the 1999 NMDS onwards, which allow people to construct data tables online according to their needs
- Australia's Welfare (biennial report)
- Ad hoc data are available on request (charges apply to recover costs)
- METeOR – online metadata repository
- National Community Services Data Dictionary.

DS/CSTDA NMDS data are used for service planning and monitoring in individual jurisdictions, and for reporting national performance indicators. Performance indicators formed part of the accountability measures under the third CSTDA, and were published annually as part of the FaHCSIA publication Commonwealth State/Territory Disability Agreement annual public report. The AIHW also released supporting web publications which included these indicator tables in more detail, and these are available on the AIHW website.

ABS

The ABS website provides information and data on the ERP, Census Need for Assistance and information on disability recorded in the SDAC. Detailed data extractions are available through the National Information Referral Service (cost–recovery applies).

Interpretability

Supporting information on the quality and use of the DS/CSTDA NMDS are published annually in 'Disability support services' available in hard copy or on the AIHW website. As well, the annual DS/CSTDA NMDS Data Guide and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- DS NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the assessment of disability support needs following broadly consistent principles and practices across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested
- Data measuring the potential population is not explicitly available for the required time point and so has been estimated from several different sources under several key assumptions. The assumption of constant age–sex specific rates of severe/profound core activity limitation over time is not contradicted by comparison

of age–sex specific rates of severe/profound core activity limitation from SDAC 2009 and SDAC 2012. A further assumption that national level age–sex specific rates of severe/profound core activity limitation from the 2012 SDAC apply consistently across states/territories is untested

- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources.

Service use by special needs groups – Indigenous people

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity – access. |
| Indicator | Service use by special needs groups – Indigenous people. |
| Measure (computation) | <p>1. Numerator: Number of Aboriginal and Torres Strait Islander people (all ages) who used specialist disability services in the reporting period.</p> <p>2. Denominator: Estimated Indigenous potential population for disability services aged 0–64 years on 30 June at start of reporting period.</p> <p>The potential population is defined as people aged under 0–64 years with the potential to require disability support services.</p> <p>The Indigenous potential population is calculated by applying adjusted age–sex specific rates of the potential population (from the Survey of Disability, Ageing and Carers (SDAC) 2009 and 2012) to the 30 June Indigenous Projected Population at the beginning of the reporting period by State/Territory by age group by sex. Research indicates that the age–sex specific rates of the potential population are significantly different for Indigenous people compared to non-Indigenous people, hence an adjustment to account for these differences must be applied to national level all person age–sex specific rates of the potential population.</p> <p>National level age–sex rates from SDAC 2009 and 2012, rather than State/Territory–age–sex rates, are used due to the high sampling errors associated with some of the State/Territory–age–sex rate estimates. The national level age–sex rates from SDAC 2009 and 2012 are adjusted by the rate ratio of the Indigenous State/Territory–age–sex rate of need for assistance with core activities to the all persons State/Territory–age–sex rate of need for assistance with core activities, as calculated from Census 2011 data. Estimates of Indigenous potential population by Remoteness Area are calculated by applying the Census 2011 distributions of Remoteness Area for people who need assistance with core activities by State/Territory by age group by sex to the State/Territory by age group by sex Indigenous potential population estimates.</p> <p>3. Percentage: $R/N \times 100$ where R = number of Aboriginal and Torres Strait Islander people (all ages) who used specialist disability services in the reporting period and N = estimated Indigenous potential population aged 0–64 years on 30 June at start of reporting period.</p> <p>Performance Indicators reporting on disability services funded by the Australian Government (employment services only) are restricted to the age range 15–64 years and not stated age.</p> |
| Data source/s | <p>Numerator: DS NMDS. For general issues relating to the DS NMDS, refer to the DS NMDS data quality information.</p> <p>Denominator: AIHW calculation of Indigenous potential population from SDAC, Census and Indigenous Projected Population.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>AIHW</p> <p>The AIHW is an Australian Government statutory authority accountable to Parliament and operates under the provisions of the <i>Australian Institute of Health and Welfare Act 1987</i>. The AIHW provides expert analysis of data on health, housing and community services. More information about the AIHW is available on the AIHW website.</p> <p>When errors are found in published data, those errors are corrected immediately in publications on the AIHW website, and where necessary, in online tables and online interactive data cubes. Corrections are documented on the AIHW website.</p> <p>For information on the institutional environment of the ABS, including the legislative obligations of the ABS, please see ABS Institutional Environment.</p> |
| Relevance | <p>Data from several different sources, each referencing different time periods, are used to produce data. Data used are from the DS NMDS for years from 2008–2009 to</p> |

2012-13, the 2009 and 2012 SDAC, ERP for 30 June for years from 2008 to 2012, 2006 and 2011 Census, and Indigenous Projected Population at 30 June for years from 2008 to 2012. This may reduce the overall quality of the estimates.

- The Indigenous status data item from the SDAC 2009 and 2012 is not usable for the purposes of calculating the Indigenous potential population, so a rate ratio adjustment, calculated from information from the Census, is made to the national all person age–sex specific severe/profound core activity limitation rates, as detailed in the Measure section. The use of these adjustments assumes consistency between the rate ratio as calculated from Census information, and the corresponding information if it were collected from the SDAC 2009 and 2012. Two particular points of note with regards to this assumption are:
 - Information from Census 2011 about people with need for assistance with core activities is based on the self–enumeration (interview in Indigenous communities) of four questions, whereas people are defined as being in the potential population in SDAC 2009 and 2012 on the basis of a comprehensive interviewer–administered module of questions, and thus the two populations are different, although they are conceptually related.
 - ABS research indicates that the Indigenous identification rate differs between the Census and interviewer administered surveys.
- The cultural appropriateness for Indigenous people of data collection instruments designed for the total population is not known; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated Indigenous potential population used in this indicator.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC 2009 and 2012 on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and Remoteness Area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

DS/CSTDA NMDS

DS/CSTDA NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the determination of eligibility and the assessment of disability support needs following broadly consistent principles across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested.

The DS/CSTDA NMDS collects data about specialist disability support services according to nationally agreed data definitions. It includes data on all such services (including ESS data) except DMS data, which is collected from the DSS DES collection. The 2008-09 CSTDA NMDS includes services received, or purchased with, funding under the third CSTDA during the period 1 July 2008 to 31 December 2008, and/or provided under the NDA during the period 1 January 2009 to 30 June 2009. Later years' DS NMDS include services provided under the NDA.

Data collected in the DS/CSTDA NMDS include characteristics of specialist disability services provided during the reporting period, the people receiving services and the outlets providing services. Disaggregation by state and territory, Remoteness Area, demographic characteristics, support needs, broad service groups and service types are available.

The scope of services varied in terms of programs that were provided under the CSTDA/NDA across jurisdictions. In particular, the provision of specialist psychiatric disability differed across states and territories. In Victoria and Queensland (in some cases), specialist psychiatric disability services were provided under the CSTDA/NDA. In all other jurisdictions specific mental health services were funded and provided under health, rather than disability, portfolios. To facilitate comparability of data, specialist psychiatric disability services in Victoria and Queensland are excluded from the NDA performance indicators. That is, the data excludes those who only receive specialist psychiatric disability services, but does not exclude those people with a psychiatric condition who receive other specialist disability services. In addition, the predominant service models vary across jurisdictions, and this may affect comparability of data. For example, differences across the states and territories in the

predominant model of accommodation support lead to differences in the number of people accessing those services. Caution is recommended in the use or interpretation of performance at the service type level. There is a risk when service type level data is interpreted in isolation as various service types are complementary and the emphasis on different services reflects jurisdictional policy directions. For more information, see Disability support services: services provided under the National Disability Agreement 2012-13.

Counts of service users are estimates derived using a statistical linkage key. Invalid or incomplete linkage keys mean that it is not possible to fully eliminate multiple counting of service users. This is believed to lead to a slight overestimate of service user numbers. In 2012-13, the proportion of invalid linkage keys was 0.3 per cent, ranging from zero to 1.3 per cent of the total number of service user records in each jurisdiction. In 2011-12, the proportion of invalid linkage keys was 0.5 per cent, ranging from zero to 2.2 per cent of the total number of service user records in each jurisdiction. A small number of invalid linkage keys were recovered for the final data sets by comparison with records from current or previous years.

The process for collecting the statistical linkage key in Victoria leads to a relatively high number of invalid linkage keys and an associated high estimate of service users. In Victoria, the process for collecting service user information is an 'opt-in' approach. All other states and territories follow an 'opt-out' approach in which individuals may elect not to provide their information for the NMDS, although procedures for opting out of the data collection vary. This affects the comparability of counts of service users across jurisdictions.

Department of Social Services (DSS) DES collection (source of DMS numerators)

DES eligibility criteria are determined by DSS, resulting in consistency of eligibility across all states/territories. Eligibility for DMS support is based on the presence of a disability or medical condition, which results in ongoing support in the workplace. It is not currently possible to distinguish between DMS users who do and who do not have a disability.

DMS services are funded as part of DSS's general funding allocation.

Data collected in the DES collection include the state/territory where the service was provided, referrals/commencements/exits, job placement outcomes, Indigenous status, country of birth, age, sex, broad medical condition and allowance type, and homeless/refugee/previous offender flags.

The scope of services provided under the DMS is not known to vary across jurisdictions.

Timeliness

The source data that becomes available at the latest date is the DS/CSTDA NMDS data. This is typically published 15 months after the end of the reference year, e.g. the 2012-13 report was released on 4 July 2013.

DSS DES information for a reference year is generally available four months after the end of that year.

The 2009 and 2012 SDAC is used to provide prevalence rates of people in the potential population. Results for the 2012 SDAC were released on 13 November 2013.

Results from the 2011 Census have been released. Census TableBuilder, from which need for assistance data were extracted, was released in 2013.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

A potential source of error in the DS NMDS is people for whom Indigenous status is not stated or not collected. For example in 2012-13, the not stated/not collected rate varied across jurisdictions from a low rate of zero for Australian Government agencies, to a high rate of 10.6 per cent for Victorian agencies; the overall rate being 3.8 per cent. See the accompanying appendix for further details. Not stated or not collected Indigenous status may introduce bias into the results affecting both the accuracy of estimates and the comparability of estimates across jurisdictions. In addition, a coding audit of the Indigenous status data item has not been undertaken, thus the accuracy of the rate of Indigenous identification in the DS NMDS is not known.

For general issues relating to the DS NMDS, refer to the DS NMDS data quality

information.

Being a sample survey, estimates from the SDAC are subject to sampling variability. A measure of the sampling variability, the relative standard error (RSE) per cent, was estimated for the age–sex specific rates of the potential population and can be found in the Accuracy section of the data quality information.

The cultural appropriateness for Indigenous people of data collection instruments designed for the total population is not known. Poor cultural sensitivity of data collection instruments is a potential source of non–sampling error which affects the accuracy of Indigenous potential population estimates. The size of this error, if present, cannot be measured.

Potential sources of error in Census data include failure to return a Census form or failure to answer every applicable question. Information calculated from Census 2011 data excludes people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced. In particular for Indigenous estimates, undercounting of Indigenous Australians may introduce bias into the results which would affect the comparability of estimates across jurisdictions. The net Census undercount for all Indigenous Australians was estimated at 11.5 per cent, calculated as the difference between the Census count and estimated Indigenous population on Census night. Estimates of the Indigenous net undercount for all jurisdictions are included below.

Estimated Indigenous net Census undercount

| <i>Jurisdiction</i> | <i>Undercount rate (per cent)</i> |
|---------------------|-----------------------------------|
| NSW | 16 |
| Vic | 19 |
| Qld | 17 |
| WA | 18 |
| SA | 20 |
| Tas | 18 |
| ACT | 17 |
| NT | 15 |

Source: ABS Cat no. 3238.0.55.001

Quality statements about Census 2011 data items can be found on the ABS website.

For general issues relating to the SDAC, Census and Indigenous Projected Population, refer to ABS data quality statements.

Coherence

For general issues relating to the DS NMDS, refer to the DS NMDS data quality information.

There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources.

While the numerator is taken from the DS NMDS, the denominator is an estimate derived from SDAC, Indigenous Projected Populations and Census data. In the denominator, 'estimated potential population for specialist disability services' is derived from calculations based on disability type, main health condition and activity limitations. However, this does not match well with the numerator, which consists of people who used specialist disability services. People who used these services do not necessarily align with people identified in SDAC as potentially requiring services. For instance, some may have health conditions underlying their disability that would usually be treated in the health system rather than by specialist disability services. This mismatch is more evident in certain types of services, such as open employment services, which are not necessarily tailored towards people with particular limitations.

For general issues relating to the SDAC, Census and Indigenous Projected Population, refer to ABS data quality statements.

As well, the annual DS/CSTDA NMDS Data Guide and the data specifications in METeOR, AIHW's online metadata registry aid in interpretation of DS/CSTDA NMDS data.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- The quality of data about Indigeneity varies substantially between jurisdictions and data sources. Caution should be exercised when interpreting these data. It is recommended that these data be viewed in close conjunction with information about data quality
- DS NMDS data are generated by processes that deliver services to people. It is assumed that these processes involve the assessment of disability support needs following broadly consistent principles and practices across jurisdictions, although it is known that differing assessment tools are in use across jurisdictions. This assumption is untested
- Data measuring the Indigenous potential population is not explicitly available for the required time point and so has been estimated from several different data sources under several key assumptions. Previous research has confirmed that Indigenous Australians experience severe or profound core activity limitation at more than twice the rate as non-Indigenous Australians but relative rates by age group and sex, across states and territories and remoteness areas, have not been fully investigated. In particular, caution should be exercised in comparing indicators for jurisdictions with very different remoteness area distributions of Indigenous population
- The use of 2011 Census data to adjust underlying age–sex specific rates the potential population to account for the higher level of disability among Indigenous Australians involves mixing self–report data from a relatively simple instrument for measuring need for assistance with sample survey data collected by trained interviewers using a comprehensive survey instrument. The cultural appropriateness for Indigenous people of data collection instruments designed for the total population is not known; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated Indigenous potential population used in this indicator
- There are issues with the consistency of the numerator and denominator for this performance indicator, as the numerator and denominator are drawn from differently defined populations and different data sources.

Assistance for younger people with disability in residential aged care

Data quality information for this indicator has been sourced from the AIHW with additional Steering Committee comments

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity – access. |
| Indicator | Assistance for younger people with disability in residential aged care. |
| Measure (computation) | <p>1. Numerator: Number of younger people with disability in residential aged care assisted with more appropriate forms of accommodation, diversionary strategies and/or enhanced services.</p> <p>Measure (1): Percentage change in the number of people aged 0–64 years (and Indigenous Australians aged 0–49 years) in residential aged care.</p> <p>Measure (2): The proportion of service users (people aged 0–64 years and Indigenous Australians aged 0–49 years) in the Younger People in Residential Aged Care program (YPIRAC) who have achieved program objectives since its inception.</p> <p>2. Denominator: Measure (1): Estimated potential population for specialist disability services on 30 June at the start of the reporting period.</p> <p>The potential population is defined as people aged under 65 years with profound or severe core activity limitation.</p> <p>Data measuring the potential population is not available for the required time point and so has been estimated from several sources (see ‘Data Sources’ below) based on the following assumptions:</p> <p>(i) For the purposes of calculation, it is assumed that age–sex specific proportions of the potential population remain constant over time. (ii) The assumption that national age–sex specific proportions of the potential population from SDAC 2009 and 2012 apply consistently across states/territories is untested.</p> <p>3. Rate: For measure (1): $R/N \times 10\,000$ where R = number of younger people with disability aged 0–64 years admitted to permanent residential aged care in the reporting period and N = estimated potential population on 30 June at the start of the reporting period.</p> |

| | |

| Relevance | Data from several different sources, each referencing different time periods, are used to produce this performance indicator. Data used are from: |

- DSS Aged Care Data Warehouse
- the 2009 and 2012 SDAC
- ABS Estimated Resident Population at 30 June (various years)
- the 2011 Census
- ABS Indigenous Population Projections (various years).

SDAC 2009 and 2012

Data from the SDAC 2009 and 2012 do not cover very remote areas nor Indigenous communities, whereas the other data sources cover all geographical areas of Australia.

The potential population rate increased from 2.6 per cent of the population in 2009 to 2.8 per cent in 2012. The change for each age–sex group was smoothed for years between 2009 and 2012, and the same annual changes were applied in calculating 30 June 2008 and 30 June 2013 rates.

The use of national level SDAC 2009 and 2012 age–sex specific potential population rates assumes these rates to be consistent across states and territories. This assumption is untested.

2011 Census of Population and Housing

Information from the 2011 Census about people with need for assistance with core activities is based on the self–enumerated completion of four questions, whereas people are defined as being in the potential population in SDAC on the basis of a comprehensive interviewer administered module of questions. These two populations are thus different but conceptually closely related.

The use of 2011 Census data about country of birth and Remoteness Area distributions for people with need for assistance with core activities assumes these distributions to be consistent over time. This assumption is untested.

The DSS Aged Care Data Warehouse

The Ageing and Aged Care data warehouse is a consolidated data warehouse of service provider and service recipient data held by the Ageing and Aged Care Division and the Office of Aged Care Quality and Compliance of the DSS.

Timeliness

Performance measures are provided from 2008-09 to 2013-14.

DSS Aged Care Data Warehouse: Claims are submitted by approved providers on a monthly basis for services delivered under residential age care, CACP, EACH and EACHD. Data for the previous financial year are available in October each year.

The 2009 and 2012 SDAC are used to provide prevalence rates of people in the potential population. Results of the 2012 SDAC were released on 13 November 2013.

Results from the 2011 Census have been released. Census TableBuilder, from which need for assistance data were extracted, was released in 2013.

ERP data are produced each quarter, with results published six months after the reference date. On 20 June 2013, the ABS released final ERP rebased to Census 2011 and recast estimates back to September 1991. These rebased/recast estimates have been used in calculation of the potential population for all years.

Indigenous Population Projections are produced irregularly – the most recent release was in April 2014. As these data are projections, there is no timeliness issue as information for the performance measure reference years has been available for some time prior to those reference years.

Accuracy

The DSS aged care data used to calculate the numerator of this benchmark are from an administrative data collection designed for payment of subsidies to service providers and have accurate data on the number and location of funded aged care places. Being a sample survey, estimates from SDAC 2012 are subject to sampling variability. A measure of the sampling variability, the relative standard error (RSE), is estimated below for the age–sex specific rates of severe/profound core activity limitation (the previous potential population definition).

Estimated RSE for age–sex potential population rates at national level (per cent)

| <i>Age group (years)</i> | <i>Male</i> | <i>Female</i> |
|--------------------------|-------------|---------------|
| 8.2 | 9.7 | 8.2 |
| 9.3 | 15.0 | 9.3 |
| 8.9 | 11.3 | 8.9 |
| 11.7 | 12.0 | 11.7 |
| 13.6 | 11.7 | 13.6 |

| | | |
|------|------|------|
| 15.3 | 17.4 | 15.3 |

| 10.3 | 7.9 | 10.3 |

Source: *Disability, Ageing and Carers, 2012 unpublished data*

Potential sources of error in Census data include failure to return a Census form or failure to answer applicable questions. Data distributions calculated from Census 2011 data excluded people for whom data item information was not available. Should the characteristics of interest of the people excluded differ from those people included, there is potential for bias to be introduced into the data distributions. Quality statements about Census 2011 data items can be found on the ABS website.

See also ABS data quality statements.

Coherence

The DSS aged care data used to construct the numerator of this benchmark are consistent and comparable over time. There are issues with the consistency of the numerator and denominator, as the numerator and denominator are drawn from differently defined populations and different data sources. These issues reduce the consistency of the performance indicators and lead to quality issues.

While the numerator is taken from the DSS Aged Care Data Warehouse, the denominator is an estimate derived from SDAC, ERP Census 2011 and Indigenous Projections data. In the denominator, 'estimated potential population for specialist disability services' is defined as the estimated population requiring, or entitled to, disability services. However, this does not match well with the numerator, which consists of people who used specialist residential aged care services. People who used these services may have a mild or moderate core activity limitation or limitations in other activities.

Accessibility

Information on definitions used in the DSS Aged Care Data Warehouse is available in the *Aged Care Act 1997* and *Aged Care Principles*, and in *The Residential Aged Care Manual 2009*.

The ABS website provides information and data on the ERP, Census Need for Assistance, Indigenous population projections and the SDAC. Detailed data extractions are available through the National Information Referral Service (cost-recovery applies).

Interpretability

Aggregated data can be obtained on request from the Department of Social Services.

Data Gaps/Issues Analysis

Key data gaps/ issues

The Steering Committee notes the following key data gaps/issues:

- The data used to measure the number of younger people in residential aged care are from an administrative data collection designed for payment of subsidies to service providers and have accurate data on the number and location of funded aged care places
- Data measuring the potential population is not explicitly available for the required time point and so has been estimated from several different sources under several key assumptions. The assumption of constant age–sex specific rates of severe/profound core activity limitation over time is not contradicted by comparison of age–sex specific rates of severe/profound core activity limitation from SDAC 2003 to SDAC 2012. A further assumption that national level age–sex specific rates of severe/profound core activity limitation from the 2012 SDAC apply consistently across states/territories is untested
- There are issues with the consistency of the numerator and denominator for this performance benchmark, as the numerator and denominator are drawn from differently defined populations and different data sources.

Labour force participation and employment of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS)

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity (Outcomes) — Labour force participation rate for people with disability aged 15–64 years. |
| Indicator | Labour force participation and employment of people with disability. |
| Measure (computation) | Numerator: Number of people with disability aged 15–64 years who are in the labour force (employed or unemployed). Denominator: Total number of persons with disability aged 15–64 years. |
| Data source/s | The numerator and denominator for this indicator are drawn from the ABS 2012 Survey of Disability, Ageing and Carers (SDAC). |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>SDAC data are collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the Census and Statistics Act 1905 and the Australian Bureau of Statistics Act 1975. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.</p> <p>For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.</p> |
| Relevance | <p>The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions.</p> <p>Labour force participation data are collected in the SDAC using the ABS standard 'minimum set' of questions to produce estimates of the current economically active population. Aggregates produced from these questions are designed to be consistent with international concepts of employment and unemployment.</p> |
| Timeliness | <p>The SDAC is conducted every three years over an approximate six month period. Results from the 2009 survey were released in April 2011. The results from the 2012 survey were released in November 2013.</p> |
| Accuracy | <p>Sample and Response Rate:</p> <p>The SDAC is conducted in all States and Territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each state and territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1000 health establishments and 500 other non-private dwellings.</p> <p>The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.</p> <p>Scope and Coverage:</p> <p>Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the Northern Territory has a significant proportion of the population in very remote areas and/or Indigenous Communities. As such it is important to interpret Northern Territory estimates in light of these areas being excluded from scope.</p> <p>For the first time in 2012, SDAC has excluded a small number of private dwellings that</p> |

are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on Northern Territory estimates, as around 10 per cent of Northern Territory households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication *Disability, Ageing and Carers, Australia: Summary of Findings, 2012*.

For SDAC data, the confidence interval for each estimate and proportion have been supplied. Where an estimate or proportion has a confidence interval above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the confidence interval is not published.

Coherence

The SDAC collect a range of demographic, financial and other information that can be analysed in conjunction with the disability status and labour force participation rate of respondents.

The labour force information collected in SDAC is designed to be comparable with data collected in the monthly Labour Force Survey and other surveys.

Accessibility

See publication *Disability, Ageing and Carers, Australia: Summary of Findings, 2012* (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability

Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals. The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, *Disability, Ageing and Carers, Australia: Summary of Findings, 2012* on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Client and carer satisfaction

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (ABS data) with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness – Quality – Client and carer perceptions |
| Indicator | Client and carer satisfaction |
| Measure (computation) | <p><i>Client satisfaction</i> — the proportion of people with disability who are satisfied with the quality of assistance received from organised and formal services in the last six months</p> <p><i>Numerator:</i> number of people aged 15–64 years with disability who report being satisfied with the quality of formal services they have received, for all activities they receive assistance with</p> <p><i>Denominator:</i> number of people aged 15–64 years, who were personally interviewed and reported receiving formal assistance for at least one activity and/or who report needing formal assistance with at least one activity</p> <p><i>Carer satisfaction</i> — the proportion of primary carers of people with disability who are satisfied with the quality of assistance received from formal services, by the person with disability and by the carer in the last six months</p> <p><i>Numerator:</i> number of primary carers (of people aged 0–64 years) who report being satisfied with the quality of formal services received to help them in their caring role</p> <p><i>Denominator:</i> number of primary carers (of people aged 0–64 years) who were interviewed personally and reported receiving formal assistance in their caring role in the previous 6 months</p> |
| Data source/s | The numerator and denominator for this indicator are drawn from the Survey of Disability, Ageing and Carers (SDAC). |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>The SDAC is collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.</p> <p>For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.</p> |
| Relevance | <p>Client satisfaction:</p> <p>The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions.</p> <p>Data on satisfaction with the quality of the formal services they have received was collected for the first time in the 2012 SDAC.</p> <p>Carer satisfaction:</p> <p>The SDAC collects information about primary carers and non–primary carers of people with disability.</p> <p>A primary carer is a person who provides the most assistance that is informal in nature, in terms of help or supervision, to a person with one or more of the core activities of mobility, self–care or communication. The assistance has to be ongoing, or likely to be ongoing, for at least six months. In this survey, primary carers only include people aged 15 years and over. People aged 15 to 17 years were only interviewed personally if parental permission was granted.</p> <p>People who confirm they are the primary carer of a person with disability are asked about the assistance they provide, the assistance they can call on, and their</p> |

employment experience. They are also asked to complete a self-enumeration form which collects information about their attitudes to, and experience of, their caring role. Where the carer has more than one recipient of care, the information collected in the personal interview and self-enumeration form is in regard to the person receiving the most help or supervision from him/her (the main recipient of care).

The scope of primary carers are primary carers with a main recipient of care aged: 0–64 years, or 65 years and over, but only where the carer is also caring for someone aged 0–64 years who lives with the carer and the recipient aged 0–64 years has a profound or severe core activity limitation

As age and disability status are collected or derived from information provided in interviews with the responsible adult and/or the recipient of care, these data items are only available for recipients of care (other than the main recipient of care) where the recipient lives with the carer. Therefore, the data may exclude some primary carers who would otherwise be in-scope if age and disability status information was available for all their recipients of care.

Data are available for primary carers only.

In the SDAC self-enumeration form, primary carers are asked a series of questions about the assistance they receive from organised services:

- whether received assistance from any organised services in the last month
- satisfaction with quality of assistance received from these organised services (e.g. with regard to timeliness and appropriateness of the service).

The primary carer population for both the numerator and denominator excludes:

- people who did not receive formal assistance in their caring role in the previous 6 months
- primary carers who did not state their receipt and satisfaction with the quality of formal services received on the self-enumeration form
- primary carers who were not interviewed personally (ie by proxy).

Timeliness

The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013.

Accuracy

Sample and Response Rate:

The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the Northern Territory has a significant proportion of the population in very remote areas and/or Indigenous Communities and therefore Northern Territory estimates should be interpreted with care.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on Northern Territory estimates, as around 10 per cent of Northern Territory households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0). The Relative Standard Errors (RSE) for each estimate and proportion have been supplied. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.

In addition, in a very small number of instances, an estimate is provided but the proportion has not been published, due to the impact of perturbation.

'Not-stated' responses for self-enumerated data items relating to caring:

In the 2012 SDAC some of the data items relating to caring which were self-enumerated by primary carers had moderately high levels of not stated responses (approximately 25 per cent of the estimated population of primary carers). This introduces the potential for non-response bias if those who did respond were inherently different to the total population of primary carers. However, analysis showed there were no substantial differences between primary carers who responded and all primary carers on the following characteristics: sex, age, remoteness and country of birth. For more information on non-response rates for this indicator see the explanatory notes section of Disability, Ageing and Carers, Australia: Additional data cubes, 2012 (cat. no. 4430.0.55.009).

Coherence

The SDAC collects a range of information such as disability status, main health condition, use of aids, patient experience etc, that can be analysed in conjunction with these measures.

Carer satisfaction:

Both the numerator and the denominator are drawn from the same dataset, with the numerator being a subset of the denominator population.

Estimates of primary carers in a particular population group presented in these tables may not match estimates for primary carers in the same population group presented in other indicators.

The particular specification of the in-scope primary carer population for this indicator represents only 54 per cent of the primary carer population identified in the SDAC, and therefore comparisons with other published information on primary carers sourced from the SDAC should be made with caution. Mostly, the primary carers that are out-of-scope are not included because they are not caring for someone aged 0-64 years.

The Explanatory Notes section of Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) provides more detailed information on the differences between the SDAC over time.

Accessibility

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability**Confidentiality:**

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are

consistent with statistics released via services such as Table Builder

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no. 4430.0) on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Data Gaps/Issues Analysis

**Key data gaps/
issues**

The Steering Committee notes the following key data gaps/issues:

- The SDAC is planned to be conducted every three years (guaranteed to 2018).
- For SDAC estimates and proportions with relative standard errors (RSEs) greater than 50 per cent, the ABS has suppressed the relative standard errors and 95 per cent confidence intervals (CI) as these are considered too unreliable for general use.
- The size of the SEs means that SDAC data may not be adequate for measuring change over time. Small year to year movements may be difficult to detect if the size of the SEs is large compared to the size of the difference between estimates.
- Disaggregation of this indicator by Indigenous status is a high priority.

Labour force participation of primary carers of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS).

Indicator definition and description

| | |
|------------------------------|---|
| Element | Equity (Outcomes) — Labour force participation rate for carers aged 15–64 of people with disability. |
| Indicator | Labour force participation of primary carers of people with disability. |
| Measure (computation) | Numerator: Number of carers aged 15–64 years (carers of people aged 0–64 years with disability) who are in the labour force (employed or unemployed). Denominator: Total number of carers (carers of people aged 0–64 years with a disability) aged 15–64 years. |
| Data source/s | The numerator and denominator for this indicator are drawn from the ABS 2012 Survey of Disability, Ageing and Carers (SDAC). |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>SDAC data are collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents.</p> <p>For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment.</p> |
| Relevance | <p>The SDAC collects information about primary carers and non–primary carers of people with disabilities.</p> <p>Tables for this indicator are presented for two groups of carers – ‘primary carers’ and ‘all carers’ (primary and non–primary carers combined) – with a third population group (‘non–carers’) included for comparison purposes.</p> <p>SDAC Definitions of primary carers and carers:</p> <p>A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more of the core activities of mobility, self–care or communication. The assistance has to be ongoing, or likely to be ongoing, for at least six months. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted.</p> <p>Where the primary carer has more than one recipient of care, the main recipient of care is the one receiving the most help or supervision. A sole recipient is also classed as a main recipient.</p> <p>More generally, a carer is a person of any age who provides any informal assistance, in terms of help or supervision, to persons with disabilities or long–term health conditions or persons who are elderly (i.e. aged 65 years or over). The assistance has to be ongoing, or likely to be ongoing, for at least six months. Assistance to a person in a different household related to ‘everyday activities’, without specific information on the activities. Where the care recipient lives in the same household, the assistance is for one or more of the following core and non–core activities:</p> <ul style="list-style-type: none">• cognition/emotion• communication• health care• household chores• meal preparation• mobility• property maintenance• reading or writing• self–care• transport. |

Definitions used in this indicator:

The scope of primary carers for these indicators are primary carers with a main recipient of care aged:

- 0–64 years, or
- 65 years and over, but only where the carer is also caring for someone aged 0–64 years who lives with the carer and the recipient aged 0–64 years has a profound or severe core activity limitation.

The scope of 'all carers' for these indicators are primary carers as specified above, and non-primary carers of co-resident recipients of care aged 0–64 years. As these data pertain to carers of recipients aged 0–64 years, carers (including primary carers) who only provide care to persons aged 65 years and over have been excluded.

As age and disability status are collected or derived from information provided in interviews with the responsible adult and/or the recipient of care, these data items are only available for recipients of care (other than, for primary carers, the main recipient of care) where the recipient lives with the carer. Therefore, the data may exclude some carers who would otherwise be in-scope if age and disability status information was available for all their recipients of care.

'Non-carers' consist of people not identified in the SDAC as having a caring role to people of any age.

Labour force, employment and unemployment:

Labour force participation data are collected in the SDAC using the ABS standard 'minimum set' of questions to produce estimates of the current economically active population. Aggregates produced from these questions are designed to be consistent with international concepts of employment and unemployment.

Underemployment:

A person is considered underemployed if they: are employed, usually work 34 hours or less per week, would like a job with more hours, and are available to start work with more hours if offered a job in the next four weeks.

In the SDAC, the definition of 'underemployed' excludes persons employed full-time who worked only part-time hours in the reference week for economic reasons (eg: through being stood down or due to insufficient work available).

Age Restriction:

All tables for this indicator are restricted to people aged 15–64 years.

Timeliness

The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013. Results from the 2012 survey were released in November 2013.

Accuracy**Sample and Response Rate:**

The SDAC is conducted in all States and Territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each state and territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings.

The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.

Scope and Coverage:

Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the Northern Territory has a significant proportion of the population in very remote areas and/or Indigenous Communities. As such it is important to interpret Northern Territory estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on Northern Territory estimates, as

around 10 per cent of Northern Territory households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication *Disability, Ageing and Carers, Australia: Summary of Findings, 2012*. The Relative Standard Errors (RSE) for each estimate and proportion have been supplied. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.

In addition, in a very small number of instances, an estimate is provided but the proportion has not been published, due to the impact of perturbation.

Coherence

The SDAC collects a range of demographic, financial and other information that can be analysed in conjunction with the labour force participation rate of carers of persons with disability.

The labour force information collected in SDAC is designed to be comparable with data collected in the monthly Labour Force Survey and other surveys. The exception is the definition of underemployment which excludes persons employed full-time who worked only part-time hours in the reference week for economic reasons (eg: through being stood down or due to insufficient work available). This information is not collected on the ABS standard 'minimum set' of labour force questions.

Both the numerator and the denominator are drawn from the same dataset, with the numerator being a subset of the denominator population. The denominator population is the same in all applicable tables (either total persons or total labour force, aged 15–64 years).

Estimates of primary carers in a particular population group presented in these tables may not match estimates for primary carers in the same population group presented in other NDA indicators.

The particular specification of the in-scope carer population for this indicator represents only 56 per cent of the carer population (aged 15–64 years), and 66 per cent of the primary carer population (aged 15–64 years) identified in the SDAC. Therefore comparisons with other published information on carers and primary carers sourced from the SDAC should be made with caution.

The sum of 'all carers' and 'non-carers' in these tables will not provide the total population aged 15–64 years as the tables exclude completely the remaining 44 per cent of carers (aged 15–64 years) identified in the SDAC who are out-of-scope for this indicator. Mostly, these carers are out-of-scope because they are not caring for someone aged 0–64 years.

The Explanatory Notes section of *Disability, Ageing and Carers, Australia: Summary of Findings, 2012* (cat. no. 4430.0) provides more detailed information on the differences between the SDAC over time.

Accessibility

See publication *Disability, Ageing and Carers, Australia: Summary of Findings, 2012* (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability

Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, *Disability, Ageing and Carers, Australia: Summary of Findings, 2012* on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Social participation of people with disability

Data quality information for this indicator has been sourced from the Survey of Disability, Ageing and Carers (data supplied by ABS)

Indicator definition and description

| | |
|-----------------------|---|
| Element | Equity (Outcomes) — Social participation of people with disability in social and community activities. |
| Indicator | Various — Social participation of people with disability. |
| Measure (computation) | Numerator: Number of people with disability who had face-to-face contact with family or friends who don't live with them in the previous week (15–64 years), or travelled to a social activity in the last two weeks (5–64 years), or reported the main reason they couldn't leave home as often as they would like was their own disability or medical condition (5–64 years). Denominator: Total number of persons with disability aged 15–64 years and total number of persons with disability aged 5–64 years. |
| Data source/s | The numerator and denominator for this indicator are drawn from the ABS 2012 Survey of Disability, Ageing and Carers (SDAC). |

Data Quality Framework Dimensions

| | |
|---------------------------|---|
| Institutional environment | SDAC data are collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i> . These ensure the independence and impartiality of the ABS, and the confidentiality of respondents. For more information on the institutional environment of the ABS, including legislative obligations, financing and governance arrangements, and mechanisms for scrutiny of ABS operations, please see ABS Institutional Environment. |
| Relevance | The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions. A range of social and community participation data are collected in the SDAC from persons aged 5 years and over with disability. These include visits from family and friends and travelling to social events in the previous fortnight. Persons who reported one or more instances of social or community participation in the specified timeframes are included in this indicator. |
| Timeliness | The SDAC is conducted every three years over an approximate six month period. Results from the 2009 survey were released in April 2011. Results from the 2012 survey were released in November 2013. |
| Accuracy | Sample and Response Rate: The SDAC is conducted in all States and Territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each state and territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings. The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response. Scope and Coverage: Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the Northern Territory has a significant proportion of the population in very remote areas and/or Indigenous Communities. As such it is |

important to interpret Northern Territory estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on Northern Territory estimates, as around 10 per cent of Northern Territory households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys.

The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates:

All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012.

For SDAC data, the confidence interval for each estimate and proportion have been supplied. Where an estimate or proportion has a confidence interval above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the confidence interval is not published.

Coherence

The SDAC collect a range of demographic, financial and other information that can be analysed in conjunction with the social participation of people with disability.

Accessibility

See publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012 (cat. no.4430.0) for an overview of results from the SDAC. Other information from the survey is available on request – see further information in the SDAC Quality Declaration.

Interpretability

Confidentiality:

To minimise the risk of identifying individuals in aggregate statistics, a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals.

The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Additional Information:

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012 on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Attachment tables

Attachment tables are identified in references throughout this chapter by a '15A' prefix (for example, table 15A.1). A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the Review website at www.pc.gov.au/gsp.

This chapter reports on:

- *child protection services* — functions of government that receive and assess allegations of child abuse and neglect, and/or harm to children and young people, provide and refer clients to family support and other relevant services, and intervene to protect children
- *out-of-home care services* — care for children placed away from their primary caregivers for protective or other family welfare reasons
- *intensive family support services* — specialist services that aim to prevent the imminent separation of children from their primary caregivers as a result of child protection concerns and to reunify families where separation has already occurred. (Performance data for intensive family support services are not yet available, and reporting for intensive family support services is limited to expenditure data and information on the numbers of children commencing intensive family support services)
- *family support services* — activities associated with the provision of lower level (that is, non-intensive) services to families in need, including identification and assessment

of family needs, provision of support and diversionary services, some counselling and active linking and referrals to support networks. These services are typically delivered via voluntary arrangements (as distinct from court orders) between the relevant agency and family. (Performance data for family support services are not yet available, and reporting for family support services is limited to expenditure data).

Improvements to the reporting of child protection services in this edition include:

- data now reported for six jurisdictions compared with five previously for the ‘children with current documented case plans’ indicator
- an increase in the comparability of activity group data with an extra jurisdiction now reporting on children commencing, rather than receiving, services
- an increase in the comparability of expenditure with two jurisdictions increasing inclusions
- reporting an unknown Indigenous status category for lengthier historical data series reporting of children in notifications, investigations and substantiations and children on care and protection orders.

15.1 Profile of child protection services

Service overview

Child protection services

Child protection services are provided to protect children and young people aged 0–17 years who are at risk of harm within their families, or whose families do not have the capacity to protect them. These services include:

- receiving and responding to reports of concern about children and young people, including investigation and assessment where appropriate
- providing support services (directly or through referral) to strengthen the capacity of families to care safely for children
- initiating intervention where necessary, including applying for a care and protection order through a court and, in some situations, placing children or young people in out-of-home care to secure their safety
- ensuring the ongoing safety of children and young people by working with families to resolve protective concerns
- working with families to reunite children, who were removed for safety reasons, with their parents as soon as possible (in some jurisdictions, restoration may occur in voluntary placements as well)

-
- securing permanent out-of-home care when it is determined that a child is unable to be returned to the care of his or her parents, and working with young people to identify alternative supported living arrangements where family reunification is not possible.

Research suggests that children and families who come into contact with the child protection system often share common social and demographic characteristics. Families with a history of domestic violence, alcohol and substance abuse, psychiatric disability, and families with low incomes or that are reliant on pensions and benefits are over-represented in the families that come into contact with the child protection system (Department of Human Services 2002; The Allen Consulting Group 2008).

Child protection concerns and Aboriginal and Torres Strait Islander communities

Studies have highlighted the high incidence of child abuse and neglect within some Aboriginal and Torres Strait Islander communities, compared with non-Indigenous communities. Aboriginal and Torres Strait Islander families across Australia have been found to experience higher levels of violence, compared with non-Indigenous families (AIHW 2006). The final report of the NT Board of Inquiry into the Protection of Aboriginal Children from Sexual Abuse (2007) identified child sexual abuse as a significant issue for many of the remote NT Aboriginal communities consulted as part of the Inquiry. The final report of the WA Inquiry into Response by Government Agencies to Complaints of Family Violence and Child Abuse in Aboriginal Communities (Gordon Report 2002) also found high levels of violence and child abuse within Aboriginal communities in WA. Aboriginal and Torres Strait Islander children have higher rates of hospitalisations due to injury, higher rates of injury mortality and more frequent contact with child protection and youth justice systems than non-Indigenous children (AIHW 2014a).

The Report of the Board of Inquiry into the Child Protection System in the NT (2010) *Growing them strong, together* also observed the presence of multiple risk factors in Aboriginal communities, including lack of adequate housing, financial security and education. However, Aboriginal communities also possessed protective factors that can safeguard children and families from psychological distress, such as spirituality and connection to land, family and culture (Bamblett, Bath and Roseby 2010).

Out-of-home care services

Out-of-home care services provide care for children and young people aged 0–17 years who are placed away from their parents or family home for reasons of safety or family crisis. These reasons include abuse, neglect or harm, illness of a parent and/or the inability of parents to provide adequate care. Placements may be voluntary or made in conjunction with care and protection orders.

Out-of-home care services comprise home-based care (for example, foster care, care with a

child's extended family or other home-based arrangements), facility-based care (for example, community residential care) or independent living (which is often intensively supported) as a transition to full independence or supported placements. Across jurisdictions, there has been a shift away from the use of facility-based (or residential) care towards home-based care such as foster care and relative/kinship care.

Intensive family support services

Intensive family support services are an alternative to the removal of a child from his or her home for child protection reasons (box 15.1).

Box 15.1 Intensive family support services

Intensive family support services are specialist services that aim to:

- prevent the imminent separation of children from their primary caregivers as a result of child protection concerns
- reunify families where separation has already occurred.

Intensive family support services differ from other types of child protection and family support services referred to in this chapter, in that they:

- are funded or established explicitly to prevent the separation of, or to reunify, families
- provide a range of services as part of an integrated strategy focusing on improving family functioning and skills, rather than providing a single type of service
- are intensive in nature, averaging at least four hours of service provision per week for a specified short term period (usually less than six months)
- generally respond to referrals from a child protection service.

Intensive family support services may use some or all of the following strategies: assessment and case planning; parent education and skill development; individual and family counselling; drug and alcohol counselling and domestic and family violence support; anger management; respite and emergency care; practical and financial support; mediation, brokerage and referral services; and training in problem solving.

Child protection treatment and support services

A complementary suite of services, intended for future reporting, are known as child protection treatment and support services. These services target at-risk families where there are concerns about the safety and wellbeing of children. They may be less intensive in nature and focus on services that strengthen family relationships in response to concerns about the welfare of a child and may focus on either early intervention or reunification support. Child protection treatment and support services include educational services, clinical services including counselling, group work and other therapeutic interventions, and domestic violence services.

State and Territory governments, with the Australian Institute of Health and Welfare (AIHW), are considering options to implement a national data collection for child protection treatment and support services.

Source: AIHW (unpublished).

Family support services

Family support services are activities typically associated with the provision of lower level (that is, non-intensive) services to families in need, including identification and assessment of family needs, provision of support and diversionary services, some counselling, and active linking and referrals to support networks. These types of services are funded by government but can be delivered by a child protection agency or a non-government organisation. This suite of services does not typically involve planned follow-up by the applicable child protection agency after initial service referral or delivery. These types of services are delivered via voluntary arrangements (as distinct from court orders) between the agency and family.

This Report includes expenditure information for family support services (table 15A.1). Corresponding family support service activity data (for example, numbers of clients or numbers of referrals) are not yet available nationally. The Steering Committee considers that it is important to develop a data collection to quantify the extent and effectiveness of family support service activity.

Roles and responsibilities

State and Territory governments fund child protection, out-of-home care, family support (including intensive family support) and other relevant services (box 15.2 identifies State and Territory government departments responsible for these services during 2013-14). These services may be delivered by the government, non-government organisations and, in some cases, by for-profit providers. Child protection services investigate and assess reports, provide or refer families to support services, and intervene where necessary (including making court applications when an order is required to protect a child, and placing children in out-of-home care).

Box 15.2 **Government agencies responsible for child protection and out-of-home care services, 2013-14**

| | |
|-----|---|
| NSW | Department of Family and Community Services |
| Vic | Department of Human Services |
| Qld | Department of Communities, Child Safety and Disability Services |
| WA | Department for Child Protection and Family Support |
| SA | Department for Education and Child Development |
| Tas | Department of Health and Human Services |
| ACT | Community Services Directorate |
| NT | Department of Children and Families |

Other areas of government also have roles in child protection and provide services for children who have come into contact with relevant departments for protective reasons. These include:

- education and child care services, which in some jurisdictions have mandatory reporting responsibilities and conduct education on protective behaviours
- health services and mental health services, which support the assessment of child protection matters and deliver general medical and dental services as well as therapeutic, counselling and other services
- police, which investigate serious allegations of child abuse and neglect, particularly criminal matters, and may also work on child protection assessments with State and Territory departments responsible for child protection
- courts, which decide whether a child will be placed on an order.

A range of appointments, schemes and charters have been introduced by jurisdictions in recent years, to provide additional protection for clients of child protection systems. Examples of these are listed in box 15.3.

Box 15.3 Initiatives to provide additional protection for child protection clients

- | | |
|---------|--|
| Aus Gov | In April 2012, the Australian Government announced the introduction of a new national Children's Commissioner to champion the rights of Australia's young people. The inaugural National Children's Commissioner was appointed in February 2013. The National Children's Commissioner sits within the Australian Human Rights Commission, Australia's national independent statutory body dealing with human rights. |
| NSW | The Commission for Children and Young People works to improve the safety and wellbeing of children in NSW. The Commission conducts research into children's issues and makes recommendations to government on policies, practices and services that may affect children. In 2013, the Commission released a discussion paper calling for ideas on the establishment of a Children's advocate in NSW. The Office of the Children's Guardian is an independent government agency that administers the Working With Children Check (WWCC), a prerequisite for anyone undertaking paid or voluntary child-related work in NSW, and encourages organisations to develop their capacity to be safe for children. All applicant foster, relative and kinship carers and all adult household members (18 years and over) are required to obtain a WWCC clearance prior to the applicant's authorisation as a carer for a child or young person in out-of-home care. The Office promotes the best interests and rights of children and young people in care, including accrediting and monitoring agencies that arrange, provide or supervise out-of-home care, as well as accrediting non-government adoption service providers. |

Box 15.3 (continued)

- Vic** The Commission for Children and Young People has been established to promote continuous improvement and innovation in policies and practices relating to the safety and wellbeing of children and young people generally, and in particular those who are vulnerable, including those placed in out-of-home care. A Commissioner for Aboriginal Children and Young People has also been established to address issues specific to Aboriginal children and young people.
- Qld** Through implementation of recommendations from the Queensland Child Protection Commission of Inquiry, a new oversight system will replace the functions of the Commission for Children and Young People and Child Guardian which ceased operations on 30 June 2014. This includes the new Queensland Family and Child Commission, which will provide systemic leadership and strategic oversight of the child protection system; the new Office of the Public Guardian, which will provide individual advocacy for children in the child protection system; a new independent Child Death Case Review Panel, which will improve service provision and accountability and better complaints management with child-related complaints to be handled by the relevant department with oversight provided by the independent Queensland Ombudsman.
- WA** The Advocate for Children in Care provides advocacy and complaints management services for children and young people in care. In 2011-12, the Advocate also implemented a state-wide rollout of 'Viewpoint', an interactive online program for children in care aged 4 to 17 years to express their views, wishes and experiences to contribute to developing meaningful care plans. The Department's Complaints Management Unit is available to all customers. Formal monitoring of protection and care service standards by a Standards Monitoring Unit began on 1 July 2007. Seventeen districts are monitored on a two-year cycle and the monitoring regime has been extended across all placement service providers.
- SA** The Office of the Guardian monitors and assesses out-of-home care arrangements, advocates for, and advises on, the circumstances and needs of children and systemic issues affecting the quality of out-of-home care. Through outreach services, the Guardian ensures all children and young people in out-of-home care receive the individual advocacy they require. Further, the Guardian works with relevant agencies to ensure children in care involved in investigations of sexual abuse have an advocate.
- Tas** The Commissioner for Children's functions include promoting the rights and wellbeing of children and young people, and examining the policies, practices, services and laws affecting the health, welfare, care, protection and development of children and young people.

(continued on next page)

Box 15.3 (continued)

ACT The Public Advocate of the ACT monitors the provision of services, and protects and advocates for the rights of children and young people. Systemic issues are referred by the Public Advocate to the Commissioner for Children and Young People. The Commissioner consults with and promotes the interests of children. The Official Visitor's role is to visit and inspect places of care, of detention or therapeutic protection, and receive and inquire about complaints made concerning the care provided to children and young people at these locations. In addition, an ACT Charter of Rights for children and young people in out-of-home care was launched in November 2009. The Charter is consistent with the United Nations Convention on the Rights of the Child, the ACT Human Rights Act 2004, and the Children and Young People Act 2008, all of which emphasise the basic human rights to which children and young people are entitled.

NT The Office of the Children's Commissioner was established in 2008 to independently monitor the child protection system through the investigation of complaints and reporting against the Department of Children and Families' administration of the Care and Protection of Children Act. In July 2011, the powers of the Children's Commissioner were extended to allow the initiation of investigations without receiving a formal complaint. The scope of the Children's Commission's powers was expanded beyond children involved in the child protection system with 'protected children' changing to 'vulnerable children'. An Aboriginal peak body, Stronger Aboriginal Families, Together has been established to represent Aboriginal children, young people and their families.

Source: State and Territory governments (unpublished).

Size and scope

The child protection system

Child protection legislation, policies and practices vary across jurisdictions, which has some implications for the comparability of child protection data (Holzer and Bromfield 2008). However, the broad processes in child protection systems are similar (figure 15.1).

State and Territory government departments with responsibility for child protection are advised of concerns about the wellbeing of children through reports to these agencies. Reports may be made by people mandated to report or by other members of the community. Individuals and organisations mandated to report vary across states and territories, and may include medical practitioners, police officers, school teachers and principals. These reports are assessed and classified as child protection notifications, child concern reports, or matters requiring some other kind of response. Nationally, between 2008-09 and 2012-13, police were the most common source of notifications, although proportions varied across jurisdictions (AIHW 2014b and earlier editions).

Figure 15.1 is a simplified representation of the statutory child protection system. It depicts the common pathways through the statutory system and referrals to support services, which can take place at any point along the statutory service system. Children might or might not move sequentially along these pathways and, in some instances, children might move through these pathways quite rapidly (for example, on the same day). There are a range of other services and programs which work to meet the needs of children and families that are not depicted in this diagram, including health, education and early childhood services.

Notification

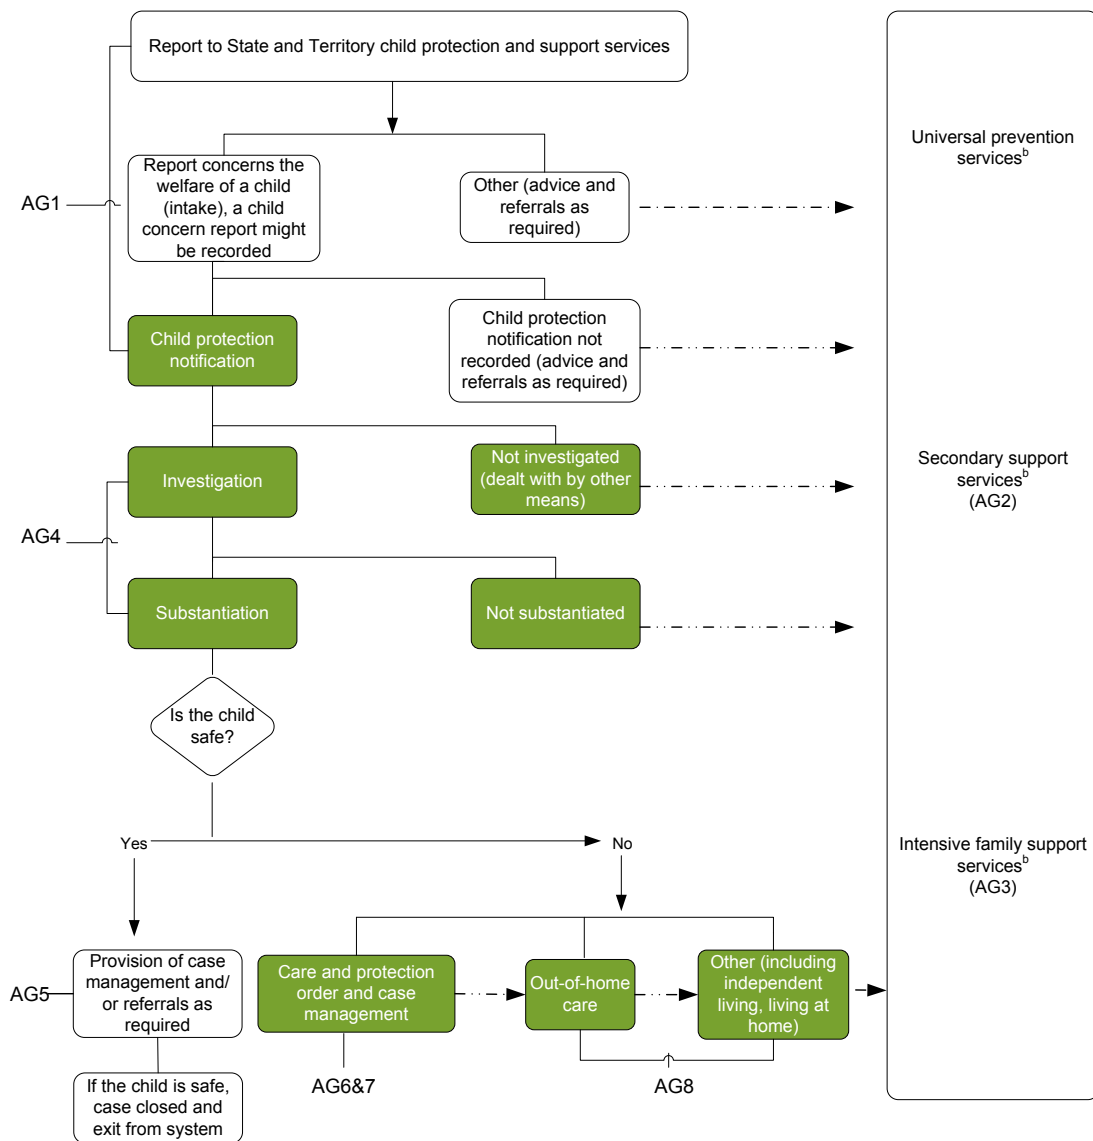

Notifications are reports lodged by members of the community with the appropriate statutory child protection department to signify that they have reason to believe that a child is in need of protection. Depending on the circumstances, not all reports received by child protection departments will be recorded as notifications. Most jurisdictions assess incoming reports to determine whether they meet the threshold for recording a notification. Where, for example, a determination is made that the alleged behaviour does not meet the definition of a child in need of protection, a child concern report or equivalent might be recorded instead. If the alleged behaviour does not meet the threshold for recording a notification or a child concern report, the person reporting the matter might be provided with general advice and/or a referral.

Jurisdictions count notifications at different points in the response to a report, ranging from the point of initial contact with the source of the report to the end of a screening and decision making process. This means the number of notifications is not strictly comparable across jurisdictions. Notifications are subsequently investigated based on the policies and practices in each jurisdiction (figure 15.1).

Prior to 2009-10, the rates of children subject to notifications, investigations and substantiations were calculated for children aged 0–16 years, while the rates of children on care and protection orders and in out-of-home care were calculated for children aged 0–17 years. From 2009-10 onwards, all child protection data are reported for the age range 0–17 years.

Nationally, 198 966 children aged 0–17 years were the subject of child protection notifications in 2013-14. This was equivalent to 37.8 notifications per 1000 children in the population aged 0–17 years. Nationally, 38 597 Aboriginal and Torres Strait Islander children aged 0–17 years were the subject of child protection notifications in 2013-14, equivalent to 132.9 notifications per 1000 Aboriginal and Torres Strait Islander children in the population aged 0–17 years (table 15A.8). The total number of notifications for each jurisdiction for 2013-14 (including cases where a child was the subject of more than one child protection notification) by Indigenous status of the child is reported in table 15A.5.

Figure 15.1 The child protection service^{a, b, c, d, e}

^a Dashed lines indicate that clients may or may not receive these services, depending on need, service availability, and client willingness to participate in voluntary services. ^b Support services include family preservation and reunification services provided by government and other agencies. Children and families move in and out of these services and the child protection system, and might also be in the child protection system while receiving support services. ^c Shading indicates data availability. ^d AG = Activity Group. ^e AG1 = Receipt and assessment of initial information about a potential protection and support issue; AG2 = Provision of generic family support services; AG3 = Provision of intensive family support services; AG4 = Secondary information gathering and assessment; AG5 = Provision of short term protective intervention and coordination services for children not on an order; AG6 = Seeking an order; AG7 = Provision of protective intervention, support and coordination services for children on an order; AG8 = Provision of out of home care services.

Source: State and Territory governments (unpublished).

Notification and investigation data are collected early in the child protection process and often before an agency has full knowledge of a child’s circumstances. This lack of

information and the inherent difficulties in identifying Indigenous status mean that data on the number of notifications and investigations by Indigenous status should be interpreted with care.

Investigation

An investigation is the process whereby the relevant department obtains more detailed information about a child who is the subject of a notification and makes an assessment about the harm or risk of harm to the child, and his or her protective needs. Not all notifications are investigated in all jurisdictions. For example, if a determination is made that a child and family are better served by family support services rather than a child protection response, children and families might be referred to diversionary and support services. Once it has been decided that an investigation is required, the investigation process is similar across jurisdictions.

The department responsible for child protection may obtain further information about the child and his or her family by checking information systems for any previous history, undertaking discussions with agencies and individuals, interviewing/sighting the child and/or interviewing the caregivers/parents. At a minimum, the child is sighted whenever practicable, and the child's circumstances and needs are assessed. Where possible, an investigation determines whether a notification is substantiated or not substantiated.

Nationally, 92 184 children aged 0–17 years who were the subject of a notification in 2013-14 were subsequently the subject of a finalised investigation in 2013-14. This was equivalent to 17.5 finalised investigations per 1000 children in the population aged 0–17 years (table 15A.8). Nationally, 23 210 Aboriginal and Torres Strait Islander children aged 0-17 years who were the subject of a notification in 2013-14 were subsequently the subject of an investigation in 2013-14, equivalent to 79.9 finalised investigations per 1000 Aboriginal and Torres Strait Islander children in the population aged 0–17 years. The total number of notifications investigated for each jurisdiction in 2013-14, by Indigenous status, is reported in table 15A.5.

Substantiation

The legal definition of harm or risk of harm, abuse or risk of abuse are similar across jurisdictions. Traditionally, child protection legislation and policy focused on the identification and investigation of narrowly defined incidents that were broadly grouped as types of abuse or neglect. Across all jurisdictions, the focus has now shifted away from the actions of parents and guardians, toward the desired outcomes for the child, the identification and investigation of actual and/or likely harm or risk to the child, and the child's needs. While the legal criteria for substantiating such matters are now similar across jurisdictions, there remain some differences in practice, including different thresholds for recording a substantiation related to risk of harm.

If an investigation results in a substantiation, intervention by child protection services might be needed to protect the child. This intervention can take a number of forms, including one or more of: referral to other services; supervision and support; an application to court; and a placement in out-of-home care.

Nationally, 40 844 children aged 0–17 years were the subject of a substantiation in 2013-14. This was equivalent to 7.8 substantiations per 1000 children in the population aged 0–17 years. The rate of children who were the subject of a substantiation increased from 6.2 per 1000 children in the population aged 0–17 years in 2009-10 (table 15A.8).

Nationally, 11 270 Aboriginal and Torres Strait Islander children, 28 149 non-Indigenous children and 1425 children of unknown Indigenous status were the subject of substantiations in 2013-14. The rate of children who were the subject of a substantiation per 1000 children in the target population aged 0–17 years was 38.8 for Aboriginal and Torres Strait Islander children and 5.7 for non-Indigenous children (table 15A.8).

Care and protection orders

Although child protection substantiations are often resolved without the need for a court order (which is usually a last resort), recourse to a court may take place at any point in the child protection investigation process. The types of orders available vary across jurisdictions and may include finalised guardianship or custody orders, finalised supervisory orders, and interim and temporary orders.

Nationally, 45 746 children aged 0–17 years were on care and protection orders at 30 June 2014. This was equivalent to 8.7 children on care and protection orders per 1000 children in the population aged 0–17 years. The number and rate of children aged 0–17 years who were the subject of a care and protection order has increased since 2010. At 30 June 2010, 37 730 children were on care and protection orders, a rate of 7.5 per 1000 children in the population aged 0–17 years (table 15A.8).

Nationally, 15 504 Aboriginal and Torres Strait Islander, 30 034 non-Indigenous children and 208 children of unknown Indigenous status were on care and protection orders at 30 June 2014. The rate of children on care and protection orders per 1000 children in the target population aged 0–17 years was 53.2 for Aboriginal and Torres Strait Islander children and 6.0 for non-Indigenous children (table 15A.8).

Further information regarding children on care and protection orders is included in the attachment tables. Table 15A.6 identifies the number of children admitted to and discharged from care and protection orders by Indigenous status for a ten year time series to 2013-14. Table 15A.7 identifies the number of children on care and protection orders by type of order and Indigenous status for a ten year time series to 2013-14.

Out-of-home care

Out-of-home care is one of a range of services provided to children and families where there is a need to provide safe care for a child. Children are placed in out-of-home care as a last resort when it is not in their best interests to remain with their family (for example, because there is no one suitable to provide care). Where children are placed in out-of-home care, placement with the extended family or community is sought where possible, particularly in the case of Aboriginal and Torres Strait Islander children (AIHW 2006). Continued emphasis is placed on improving case planning and case management processes to facilitate the safe return home of children in out-of-home care and to maximise case workers' contact time with children and families.

Nationally, 43 009 children were in out-of-home care at 30 June 2014. This was equivalent to 8.1 children in out-of-home care per 1000 children in the population aged 0–17 years (table 15A.18). The number and rate of children aged 0–17 years in out-of-home care has increased since 2010. At 30 June 2010, 35 895 children were in out-of-home care, a rate of 7.1 per 1000 children in the population aged 0–17 years (table 15A.18).

Nationally, 14 991 Aboriginal and Torres Strait Islander children and 27 827 non-Indigenous children were in out-of-home care at 30 June 2014. The rate of children in out-of-home care per 1000 children in the target population aged 0–17 years was 51.4 for Aboriginal and Torres Strait Islander children and 5.6 for non-Indigenous children (table 15A.18).

Further information on children in out-of-home care is included in the attachment tables.

- Table 15A.19 identifies the number of children in out-of-home care by Indigenous status and placement type at 30 June 2014.
- Table 15A.20 identifies the number of children in out-of-home care by Indigenous status and whether they were on a care and protection order at 30 June 2014.
- Table 15A.21 identifies the number of children in out-of-home care by Indigenous status and length of time in continuous out-of-home care at 30 June 2014.
- Table 15A.22 identifies the number of children who exited care during 2013-14, by Indigenous status and length of time spent in care.

Funding

Total recurrent expenditure on child protection and out-of-home care services was approximately \$3.3 billion nationally in 2013-14 — a real increase of \$77.8 million (2.4 per cent) from 2012-13. Of this expenditure, out-of-home care services accounted for the majority (65.4 per cent, or \$2.2 billion). Nationally, annual real expenditure on child protection and out-of-home care services has increased by \$543.4 million since 2009-10, an average increase of 4.6 per cent per year for the past five years (table 15A.1). 'Real'

expenditure refers to expenditure adjusted for general price movements over time, so that comparisons across years are not affected by inflation.

Recurrent expenditure on intensive family support services across all jurisdictions was \$300.8 million in 2013-14. Intensive family support services expenditure has fluctuated over the past five years (table 15A.30). Table 15A.1 and tables 15A.30–33 provide additional information about families and children who were involved with intensive family support services, including the cost of providing these services per child commencing intensive family support services.

This Report includes expenditure on family support services for all jurisdictions except SA. These data were introduced in the 2013 Report. Family support services are less intensive in nature and do not typically involve planned follow up and case management by child protection agencies (as is often the case with intensive family support services). Nationally, in 2013-14, expenditure on family support services amounted to \$377.1 million (table 15A.1).

In 2013-14, real recurrent expenditure on child protection, out-of-home care, intensive family support services and family support services per child aged 0–17 years in the population was \$758 nationally. The family support services category was first included in the Report for the 2011-12 financial year. Excluding family support services, the real recurrent expenditure on child protection, out-of-home care and intensive family support services per child aged 0–17 years in the population was \$686 nationally. In 2009-10, real recurrent expenditure on child protection, out-of-home care and intensive family support services per child aged 0–17 years was \$611 (table 15A.1). This represents an average increase of 2.9 per cent per year for the past five years.

Figure 15.2 depicts total real recurrent expenditure per child aged 0–17 years in the population for the period 2009-10 to 2013-14, excluding expenditure on family support services (for consistency across the time series).

Figure 15.2 **Real recurrent expenditure on child protection, out-of-home care and intensive family support services per child (total) (2013-14 dollars)^{a, b, c}**

^a Refer to table 15A.1 for detailed jurisdiction-specific footnotes and table 15A.4 for information on the comparability of expenditure data. ^b Excludes expenditure on family support services for consistency across the time series. ^c Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Figure 15.3 depicts expenditure including family support services per child aged 0–17 years in the population in 2013-14.

Figure 15.3 Recurrent expenditure on child protection, out-of-home care, family support services and intensive family support services per child, 2013-14^a

^a Refer to table 15A.1 for detailed jurisdiction-specific footnotes on expenditure data and table 15A.4 for information on the comparability of expenditure data.

Source: State and Territory governments (unpublished); table 15A.1.

It is a Steering Committee objective to report comparable estimates of costs. Ideally, the full range of costs to government would be determined on a comparable basis across jurisdictions. Where full costs cannot be calculated, costs should be estimated on a consistent basis across jurisdictions. However, in the area of child protection, there are differences across jurisdictions in the calculation of expenditure.

Table 15A.4 identifies the level of consistency across jurisdictions for a number of expenditure items. The scope of child protection systems also varies across jurisdictions, and expenditure on some services are included for some jurisdictions, but not for others.

15.2 Framework of performance indicators for child protection services

The framework of performance indicators for child protection and out-of-home care services is based on shared government objectives (box 15.4).

Box 15.4 Objectives for child protection and out-of-home care services

The aims of child protection services are to:

- protect children and young people who are at risk of harm within their families or whose families do not have the capacity to provide care and protection
- assist families to protect children and young people.

The aim of out-of-home care services is to provide quality care for children and young people aged 0–17 years who cannot live with their parents for reasons of safety or family crisis.

Child protection and out-of-home care services should be provided in an efficient and effective manner.

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of child protection services (figure 15.4). The performance indicator framework shows which data are comparable in the 2015 Report. For data that are not considered directly comparable, the text includes relevant caveats and supporting commentary. Chapter 1 discusses data comparability and data completeness from a Report-wide perspective (see section 1.6).

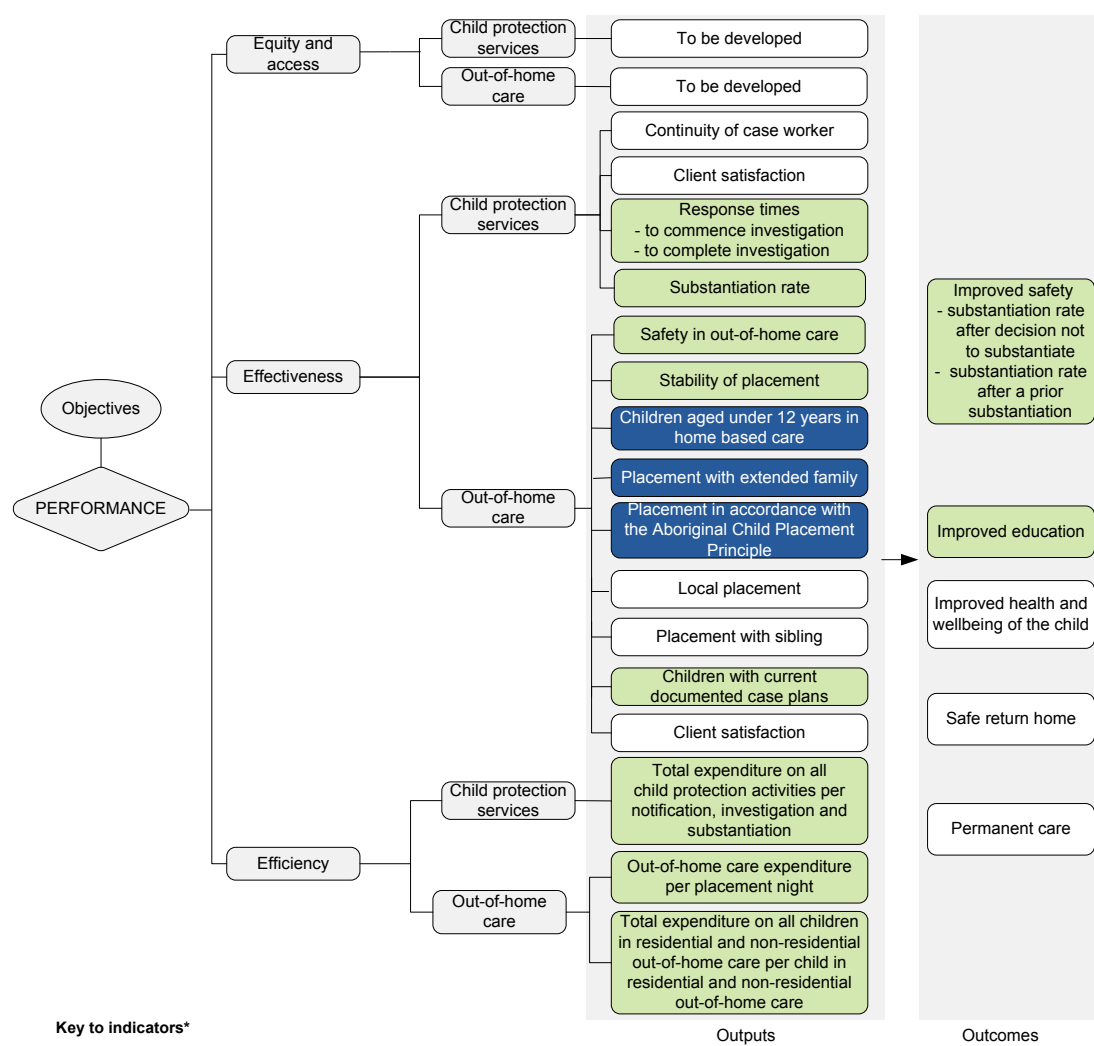

The Report's statistical context chapter contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics, including age profile, geographic distribution of the population, income levels, education levels, tenure of dwellings and cultural heritage (including Indigenous- and ethnic-status) (chapter 2). Chapter 2 also notes that the large populations of the eastern mainland states — NSW, Victoria and Queensland — have a significant effect on national averages, as approximately three quarters of Australia's population live in these states.

Data quality information (DQI) is being progressively introduced for all indicators in the Report. The purpose of DQI is to provide structured and consistent information about quality aspects of data used to report on performance indicators, in addition to material in the chapter or sector overview and attachment tables. DQI in this Report cover the seven dimensions in the ABS' data quality framework (institutional environment, relevance, timeliness, accuracy, coherence, accessibility and interpretability) in addition to dimensions that define and describe performance indicators in a consistent manner, and note key data gaps and issues identified by the Steering Committee. All DQI for the 2015 Report can be found at www.pc.gov.au/rogs/2015.

Prior to the 2014 Report, child protection data were sourced from the Australian Institute of Health and Welfare's (AIHW) national child protection aggregate data collection (with data having been supplied to the AIHW by State and Territory governments). In 2013, the AIHW began implementing a child-based unit record collection for child protection services. As a result of the ongoing implementation of this new data system, data for all jurisdictions could not be sourced from the AIHW in time for this Report. Data for NSW

and Queensland were sourced directly from State governments. Data for the remaining jurisdictions were sourced from the AIHW. The move from the aggregate collection to the unit record collection has not affected the comparability of child protection data over time.

Figure 15.4 **Child protection services performance indicator framework**

Key to indicators*

- Text** (Blue box) Most recent data for all measures are comparable and complete
- Text** (Green box) Most recent data for at least one measure are comparable and complete
- Text** (Light green box) Most recent data for all measures are either not comparable and/or not complete
- Text** (White box) No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the chapter

15.3 Key child protection services performance indicator results

Different delivery contexts, locations and clients can affect the equity/access, effectiveness and efficiency of child protection and out-of-home care services.

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see chapter 1, section 1.5).

Equity and access

Equity and access indicators are indicators of governments' objective to ensure that all clients have fair and equitable access to services on the basis of relative need and available resources (box 15.5).

Box 15.5 Equity and access to child protection services

'Equity and access to child protection and out-of-home care services' is yet to be defined. These indicators have been identified for development and reporting in future.

Effectiveness

Child protection services — continuity of case worker

'Continuity of case worker' is an indicator of governments' objective to ensure child protection services are delivered in an effective manner (box 15.6).

Box 15.6 Continuity of case worker

'Continuity of case worker' is yet to be defined.

The turnover of workers is a frequent criticism of the quality of child protection services. Effective intervention requires a productive working relationship between the worker and the child and family.

This indicator has been identified for development and reporting in future.

Child protection services — client satisfaction

‘Client satisfaction’ is an indicator of governments’ objective to provide high quality services that meet the needs of recipients (box 15.7).

Box 15.7 Client satisfaction

‘Client satisfaction’ is yet to be defined. It is intended that this indicator will measure client satisfaction with the statutory child protection system.

This indicator has been identified for development and reporting in future.

Box 15.8 provides examples of steps taken nationally and across jurisdictions to monitor, assess and promote client satisfaction with child protection and out-of-home care services.

Box 15.8 Developments in client satisfaction

Aust A national survey of the views of children in out-of-home care is currently being implemented to enable reporting against a set of indicators under the *National Standards for Out-of-Home Care*. The first national report on this survey is due to Ministers in 2015 and is expected to include qualitative and quantitative information about children's experience of out-of-home care.

NSW An independent Brighter Futures program evaluation was completed during 2006-10 by the Social Policy Research Centre. The final Evaluation report published in September 2010 identified an overall reduction in risk of harm reports for participants in the program. The evaluation also found that families with drug and alcohol problems and where domestic violence existed demonstrated the smallest reduction in reports over time. A 2-year Aboriginal Family Study, completed by Community Services in 2011, examined what worked for Aboriginal families participating in Brighter Futures. This study identified a reduction in child protection reports and the number of days in care for Aboriginal families who participated in Brighter Futures. On the basis of national and international research and the evaluation findings, program reform was implemented in January 2012. Key program changes included the delivery of the program by 16 non-government agencies, streamlined referral pathways, and refocussing the program to target families with children (0-8 years of age) at high risk of entering the statutory child protection system. In addition, an Early Intervention Council was established with the broad aim of building the government and community collaboration needed to improve outcomes for children at risk of entering or re-entering the statutory child protection system.

(continued on next page)

Box 15.8 (continued)

- Vic Child Protection clients and families were surveyed in 2001 about their experience of child protection intervention. Findings identified areas for practice improvement and also a range of strengths in child protection practice, including that in the majority of cases, child protection intervention improved the safety and life circumstances of children and young people. A more comprehensive survey commenced in 2011 (the Child and Family Services Outcomes Survey, or CAFSOS). An independent survey of the parents and carers of children receiving child protection, out-of-home care and intensive family support services was completed in 2012. A national survey of young people who are clients of these services is scheduled for 2014. Both surveys will be repeated after a 2-year interval to measure change. Client feedback is also routinely sought by Community Services Organisations as part of meeting Victorian out-of-home care service registration standards.
- Qld A new independent statutory body — the Office of the Public Guardian — took over responsibility for protecting the rights of vulnerable children and young people in the child protection system from 1 July 2014. As part of these responsibilities the Public Guardian took over running the Community Visitor Program to support the most vulnerable children and people in out-of-home care, youth detention, corrective services and mental health facilities. The Public Guardian also has special responsibilities to provide individual advocacy for children and young people in the child protection system, ensuring their views and wishes are taken into consideration when decisions are made about them and their care arrangements.
- WA The Department for Child Protection and Family Support has a number of system feedback loops to measure and respond to client satisfaction, including the collection of feedback from children and families, avenues for decisions to be reviewed, mechanisms for formal complaints, standards monitoring and an ongoing evaluation and review cycle for specific policies and services. The Viewpoint system is an online, interactive program for children in the care of the CEO aged 4–17 years, which enables children to express their views, wishes and experiences and to contribute meaningfully to their care plan. The Department’s corporate executive staff receive regular reports about the views of children collected through Viewpoint. The Advocate for Children in Care provides advocacy and complaint management services for children and young people in the care of the CEO. Formal complaints about Department services can also be made through the Complaints Management Unit. Requests from children and families to review Department decisions can be made through the Case Review Panel and the State Administration Tribunal. The Department’s Standards Monitoring Unit reviews both Department and community sector organisation services against the *Better Care Better Service* standards. The Department’s Information Research and Evaluation unit, and engaged external agencies, undertake a cycle of review and evaluation projects for key policies and services.

(continued on next page)

Box 15.8 (continued)

- SA** Client complaints, compliments and suggestions are reported to the Families SA client feedback system, 'RiskMan'. This information is assessed for appropriate follow up, and is reported to the Health and Community Services Complaints Commissioner on a quarterly basis, and the Families SA Executive Director. In addition, Create SA is contracted as the peak body representing the voices of all children in care. Children have the opportunity to provide evaluation feedback on training and programs they are involved in through formal surveys, and are encouraged to provide feedback on their experiences with Create SA through various media. Young people also complete an annual 'Report Card Survey' to provide feedback on their experiences in care and with Create SA. In 2013, the Guardians Office completed a report on the experiences of children who move placements in out-of-home care. The Guardian's Inquiry into the Impact and Experience of Moving While in Care sought children's views about the impact of changing their care placement and what would make it a better experience. The Inquiry also sought the views of people who most influence placement moves.
- Tas** An independent evaluation of the pilot Children's Visitors scheme for children and young people in out-of-home care was completed following the completion of the pilot scheme in 2011. The evaluation of this pilot scheme confirmed that there were both strengths and weaknesses with the scheme and recommended that a new model be developed to provide ongoing, independent support to the most vulnerable children and young people in out of home care. As such, a new youth mentoring program has been developed which is due to commence, providing long term, independent mentoring relationships for young people currently in care, preparing to leave care, and beyond. The program will be delivered across the state by Whitelion and will use volunteer mentors to build supportive relationships with clients. Major aims of the program include improving the engagement of young people with the care planning process and the associated decisions that affect them and consistently supporting clients to achieve their goals throughout their transition to independent living and beyond.
- ACT** The ACT has strengthened mechanisms to improve transparency and accountability in decision-making, and the provision of services to vulnerable and at risk children, young people and their families. These mechanisms include the establishment of a Decision Making Review Panel (the Panel) and a Complaints Unit in 2012. The Panel will review significant administrative decisions within the Office for Children, Youth and Family Support (OCYFS), Community Services Directorate. The Panel can review decisions made by staff of OCYFS, out-of-home care agencies or carers including: significant administrative decisions that have been reviewed by the line area and the senior delegate of OCYFS; decisions regarding matters of compensation or reimbursements; review of decisions directly referred to the Panel by the Director-General, the Deputy Director-General or the Executive Director, OCYFS; administrative decisions that have a significant or long term impact on the wellbeing of children and young people, carers or agencies; matters that might proceed to the ACT Civil and Administrative Tribunal for a review of an internal decision; and, matters where no decision has been reached and where it is established this delay has had a significant effect on the child or young person or their care environment.

(continued on next page)

Box 15.8 (continued)

The aim of the Complaints Unit is to improve processes to record and respond to complaints and feedback, report complaints data to executive, analyse data and identify areas requiring improvement, ensure accessible information on complaints and feedback is available to service users, and provision of feedback to staff regarding individual and systemic issues.

NT In 2013-14 the Department of Children and Families (DCF) formed a Professional Practice Division to enhance client outcomes. The Division includes a Practice Integrity and Complaints Management Unit and has launched Standards of Professional Practice. DCF has made the Charter of Rights for Children in Out of Home Care a foundation document in its interactions with children. The Out of Home Care Division is improving engagement of children during placement planning and review so that client satisfaction informs ongoing out of home care services. The Children's Commissioner's powers have also been strengthened to allow the Children's Commissioner to investigate concerns relating to vulnerable children without having to receive a formal complaint, and to resolve matters without the need for formal investigation.

Source: State and Territory governments (unpublished).

Child protection services — response times

'Response times' is an indicator of governments' objective to minimise the risk of harm to children by responding to notifications of possible child protection incidents and completing investigations in a timely manner (box 15.9). Notifications and investigations are defined on pages 15.11–12.

Box 15.9 **Response times**

'Response times' is defined by two measures:

- response time to commence investigations, defined as the length of time (measured in days) between the date a child protection department records a notification and the date an investigation is subsequently commenced
- response time to complete investigations, defined as the length of time (measured in days) between the date a child protection department records a notification and the date an investigation is completed (that is, the date an investigation outcome is determined by a department).

A short or decreasing length of time between recording a notification and commencing an investigation, and between recording a notification and completing an investigation, is desirable.

The length of time between recording a notification and commencing an investigation indicates a department's promptness in responding to child protection concerns. The length of time between recording a notification and completing an investigation indicates a department's effectiveness in conducting investigations in a timely manner.

This indicator should be interpreted with care, as jurisdictions record notifications at different stages in response to a report, and jurisdictions have different policies and legislation outlining the time recommended for commencing investigations, based on the seriousness of the child protection concern. Furthermore, while investigations should be conducted in a timely manner, it is important that expediency does not undermine a thorough and accurate assessment of the case. In addition, a number of factors outside the control of a department can affect the timeliness of investigations, including involvement by external parties (for example, police and schools) and an inability to locate a child and/or family.

Data reported for these measures are:

- comparable (subject to caveats) within some jurisdictions over time, but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

For most jurisdictions, and nationally, the majority of investigations were commenced within seven days of notification in 2013-14 (figure 15.5(a)). Response times to complete investigations varied across jurisdictions in 2013-14. Nationally, 45.8 per cent of investigations were completed in 28 days or less, 25.7 per cent were completed in 29 to 62 days, 12.8 per cent were completed in 63 to 90 days, and 15.7 per cent were completed in more than 90 days (figure 15.5(b)).

Figure 15.5 Proportion of investigations commenced and completed, by time taken, 2013-14^{a, b}

^a Caution should be used when interpreting results as jurisdictions count notifications at different points in response to a report, and have different policies and protocols governing the type of response to a notification. See source tables for detailed footnotes. ^b For the measure 'response times to commence investigations', in Tasmania's current system, the 'date investigation commenced' defaults to the date referred for investigation. This date is often not updated to reflect the actual date commenced which means the number of days to commence investigations is often understated.

Source: Australian Institute of Health and Welfare (AIHW) data collection (unpublished); tables 15A.15 and 15A.16.

Child protection services — substantiation rate

‘Substantiation rate’ is an indicator of governments’ objective to target investigations to those notifications where a substantive child abuse/neglect incident has occurred or is at risk of occurring (box 15.10).

Box 15.10 Substantiation rate

‘Substantiation rate’ is defined as the proportion of finalised investigations where harm or risk of harm was confirmed.

The substantiation rate provides an indication of the extent to which government avoided the human and financial costs of an investigation where no harm had occurred or was at risk of occurring. Neither a very high nor very low substantiation rate is desirable. A very low substantiation rate might indicate that notifications and investigations are not accurately targeted to appropriate cases, with the undesirable consequence of distress to families and undermining the likelihood that families will voluntarily seek support. It might also reflect a greater propensity to substantiate abuse incidents rather than situations of risk. A very high substantiation rate might indicate that the criteria for substantiation are unnecessarily bringing ‘lower risk’ families into the statutory system.

The rate of finalised investigations that were substantiated is influenced by a range of factors and might fluctuate because of policy, funding and practice changes, such as better targeting of investigative resources, the impact of mandatory reporting or factors such as increased community awareness and willingness to notify suspected instances of child abuse, neglect or harm.

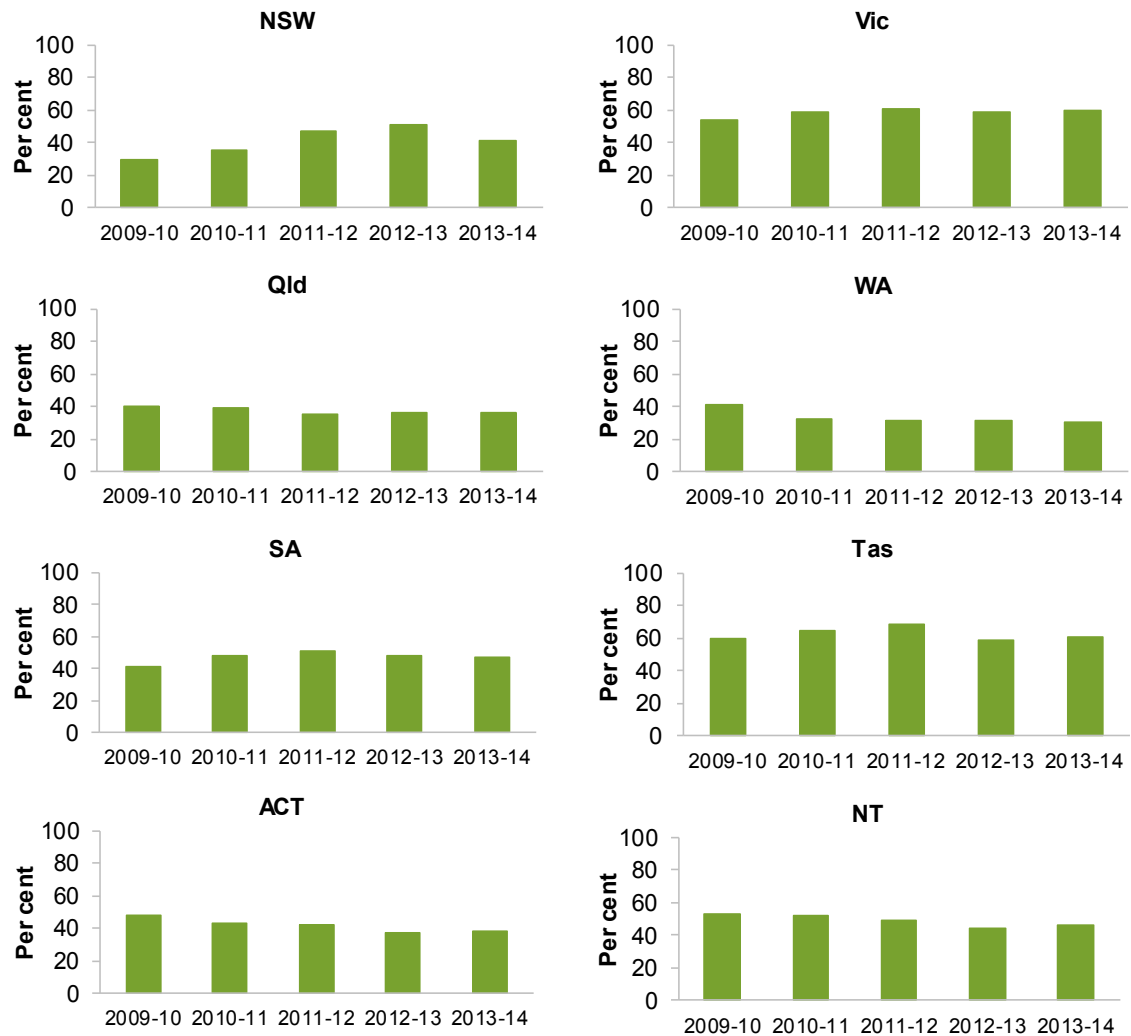

Data reported for this indicator are:

- comparable (subject to caveats) within some jurisdictions over time, but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The proportion of finalised child protection investigations that were substantiated varied across jurisdictions (figure 15.6).

Figure 15.6 Proportion of finalised child protection investigations that were substantiated^{a, b}

^a Data are not comparable across jurisdictions because definitions of substantiation vary significantly. Consequently, rates should not be compared across jurisdictions. ^b See source table for detailed footnotes.

Source: AIHW data collection (unpublished); table 15A.9.

Out-of-home care — safety in out-of-home care

‘Safety in out-of-home care’ is an indicator of governments’ objective to provide children who are under the care of the state with a safe home environment (box 15.11).

Box 15.11 Safety in out-of-home care

‘Safety in out-of-home care’ is defined by two measures:

- the proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect
- the proportion of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household providing out-of-home care.

The scope of these measures differs. For the first measure, the person responsible can be anyone who comes into contact with the child while the child is in out-of-home care and is for notifications received within the period. For the second measure, the person responsible is limited to someone in the household providing out-of-home care and is irrespective of the date of notification.

A zero, low or decreasing proportion of substantiations for both measures is desirable.

The proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect, assesses the overall safety of children in care. This may include events that occur outside of the child’s placement arrangements. The proportion of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household providing out-of-home care assesses the extent to which authorised carers provide safe care to children in care.

Care should be taken when interpreting this indicator as the threshold for substantiating harm or risk involving children in care is generally lower than that for substantiating harm or risk involving a child in the care of his or her own parents. This is because governments assume a duty of care for children removed from the care of their parents for protective reasons.

Data reported for these measures are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- incomplete for the current reporting period. All required 2013-14 data were not available for NSW or Victoria, which did not provide data for the number of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect; and the NT, which did not provide data for the number of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household providing out-of-home care. Victoria and the NT do not collect these data and NSW is currently working on improving data quality for future reporting.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Data for the measure ‘proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect’ are experimental. These data will be improved over time, but available data suggest the proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect varied across jurisdictions (table 15.1).

Table 15.1 Proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect, 2013-14^{a, b}

| | <i>Unit</i> | <i>NSW^c</i> | <i>Vic^d</i> | <i>Qld^e</i> | <i>WA^f</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|--|-------------|------------------------|------------------------|------------------------|-----------------------|-----------|------------|------------|-----------|
| Children in care who were the subject of a notification, which was substantiated | no. | na | na | 137 | 59 | 21 | 5 | 29 | 19 |
| Children aged 0-17 in at least one care placement during the year | no. | 20 520 | 10 041 | 8 438 | 4 485 | 3 089 | 1 273 | 776 | 1 134 |
| Proportion | % | na | na | 1.6 | 1.3 | 0.7 | 0.4 | 3.7 | 1.7 |

^a Data are not comparable due to differences across jurisdictions in policies, practices and reporting methods. ^b As a proportion of all children in at least one care placement. ^c In NSW, data for children in care who were the subject of a notification, which was substantiated are not available. NSW has made changes to its source system which, subject to quality assurance, will enable submission of data for 2015-16. ^d Data were not available for Victoria, as the Victorian Child Protection Service does not record the required data for children who are in out of home care. ^e Queensland's data comprise children subject to a harm report substantiation, which refers only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment; another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified. ^f WA data may include events that occur outside of the child's placement arrangements. **na** Not available.

Source: State and Territory governments (unpublished); table 15A.28.

The proportion of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household also varied across jurisdictions (table 15.2).

Table 15.2 Proportion of children in out-of-home care who were the subject of a substantiation and the person responsible was living in the household, 2013-14^{a, b}

| | Unit | NSW ^c | Vic ^d | Qld ^e | WA ^f | SA | Tas ^g | ACT | NT ^h |
|---|------|------------------|------------------|------------------|-----------------|-------|------------------|-----|-----------------|
| Children in care who were the subject of a substantiation and the person responsible was in the household | no. | 68 | 109 | 137 | 9 | 13 | 9 | 20 | na |
| Children aged 0–17 in at least one care placement during the year | no. | 20 520 | 10 041 | 8 438 | 4 485 | 3 089 | 1 273 | 776 | 1 134 |
| Proportion | % | 0.3 | 1.1 | 1.6 | 0.2 | 0.4 | 0.7 | 2.6 | na |

^a Data are not comparable due to differences across jurisdictions in policies, practices and reporting methods. ^b As a proportion of all children in at least one care placement. ^c For NSW, the numerator provided for this measure (the number of children in care who were the subject of a substantiation and the person believed responsible was in the household providing out-of-home care) excludes children who are in government authorised and funded out-of-home care placements where the out-of-home care placement is facilitated by a non-government organisation (NGO). However, the denominator for this measure (all children aged 0–17 in at least one care placement during the year) encompasses all children in out-of-home care (including children in government authorised and funded out-of-home care placements where the out-of-home care placement is facilitated by an NGO). This affects the reported rate (a lower rate is derived than would be the case if the numerator and denominator aligned). ^d In Victoria, quality of care concerns can range from minor quality issues through to possible physical or sexual abuse. All reports are treated seriously at the outset of the process and the best interests of the child or young person are considered paramount. Substantiated abuse may involve physical, emotional or sexual abuse, neglect (including medical neglect). An allegation of abuse may not be substantiated if at any stage during the investigation process insufficient evidence is found to support the allegation. Substantiated quality of care concerns encompass completed investigations where quality of care concerns are substantiated and action is taken in response. ^e Queensland's data comprise children subject to a harm report substantiation, which refer only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. Queensland's consideration of 'the person believed responsible' relates to overall harm or risk of harm to the child in care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment; another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified. It does not report on whether harm was the result of the actions or inactions of the child's carer or staff member of a care service or whether harm or risk of harm was not as a result of their actions or inactions i.e., there was no indication that the carer, staff member or care service has not met the standards of care required under the Child Protection Act 1999. Therefore, Queensland's data are broader than the scope of the national counting rule and should not be compared with other jurisdictions' data. ^f WA data do not include substantiations relating to relatives of foster carers or other children in the household. ^g Tasmania's data are not able to be separately identified as to whether or not the person responsible was living in the household or visiting. ^h Data are not available for the NT as the NT data system does not record the person responsible. **na** Not available.

Source: State and Territory governments (unpublished); table 15A.27.

Out-of-home care — stability of placement

'Stability of placement' is an indicator of governments' objective to provide high quality services that meet the needs of recipients on the basis of relative need and available resources (box 15.12).

Stability of placement is an important indicator of service quality for children placed away from their family for protective reasons, particularly for those who require long term placements. Data are collected on the number of different placements for children on a care and protection order who exited out-of-home care. Data are grouped according to the length of time in care (less than 12 months, and 12 months or more).

Box 15.12 Stability of placement

'Stability of placement' is defined as the proportion of children who had one or two placements during a period of continuous out-of-home care.

A low number of child placements (one or two) per period of care is desirable, but must be balanced against other placement quality indicators, such as placements in compliance with the Aboriginal Child Placement Principle, local placements and placements with siblings.

Children can have multiple short term placements for appropriate reasons (for example, an initial placement followed by a longer term placement) or it may be desirable to change placements to achieve better compatibility between a child and family. It is not desirable for a child to stay in an unsatisfactory or unsupportive placement. Also, older children are more likely to have multiple placements as they move towards independence and voluntarily seek alternate placements.

Data are collected only for children who are on orders and who exit care during the reporting period. There are limitations to counting placement stability using a cohort of children on exit from care rather than longitudinally tracking a cohort of children on their entry into care: an exit cohort is biased to children who stayed a relatively short time in care and thus were more likely to have experienced fewer placements.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data were not available for WA.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, 84.0 per cent of children on a care and protection order who exited care after less than 12 months in 2013-14 experienced one or two placements. Proportions varied across jurisdictions (figure 15.7).

Figure 15.7 Proportion of children on an order exiting care after less than 12 months, who had one or two placements^{a, b, c}

^a Data refer to children exiting care during the relevant year. ^b See source table for detailed footnotes. ^c WA data for 2010-11 onwards are not available as these data cannot be extracted from WA's aggregate child protection data system. ^c Results for Tasmania for 2011-12 and 2013-14 should not be compared with prior years as respite placements are now excluded from the count of placements. Exclusion of this placement type was not possible in previous years due to system limitations.

Source: AIHW data collection (unpublished); table 15A.26.

Across jurisdictions, children who had been in out-of-home care longer tended to have had more placements. The proportion of children exiting care in 2013-14 after 12 months or more who had experienced one or two placements was 46.9 per cent nationally but varied across jurisdictions (figure 15.8).

Figure 15.8 **Proportion of children on an order exiting care after 12 months or more, who had one or two placements^{a, b, c}**

^a Data refer to children exiting care during the relevant year. ^b See source table for detailed footnotes. ^c WA data for 2010-11 onwards are not available as these data cannot be extracted from WA's aggregate child protection data system. ^c Results for Tasmania for 2011-12 and 2013-14 should not be compared with prior years as respite placements are now excluded from the count of placements. Exclusion of this placement type was not possible in previous years due to system limitations.

Source: AIHW data collection (unpublished); table 15A.26.

Out-of-home care — children aged under 12 years in home-based care

'Children aged under 12 years in home-based care' is an indicator of governments' objective to provide services which meet the needs of recipients (box 15.13).

Box 15.13 Children aged under 12 years in home-based care

'Children aged under 12 years in home-based care' is defined as the number of children aged under 12 years placed in home-based care divided by the total number of children aged under 12 years in out-of-home care.

A high or increasing rate for this indicator is desirable. This indicator should be interpreted in conjunction with other placement indicators.

Placing children in home-based care is generally considered to be in their best interests, particularly for younger children. Children will generally make better developmental progress (and have more ready access to normal childhood experiences) in family settings rather than in residential or institutional care environments.

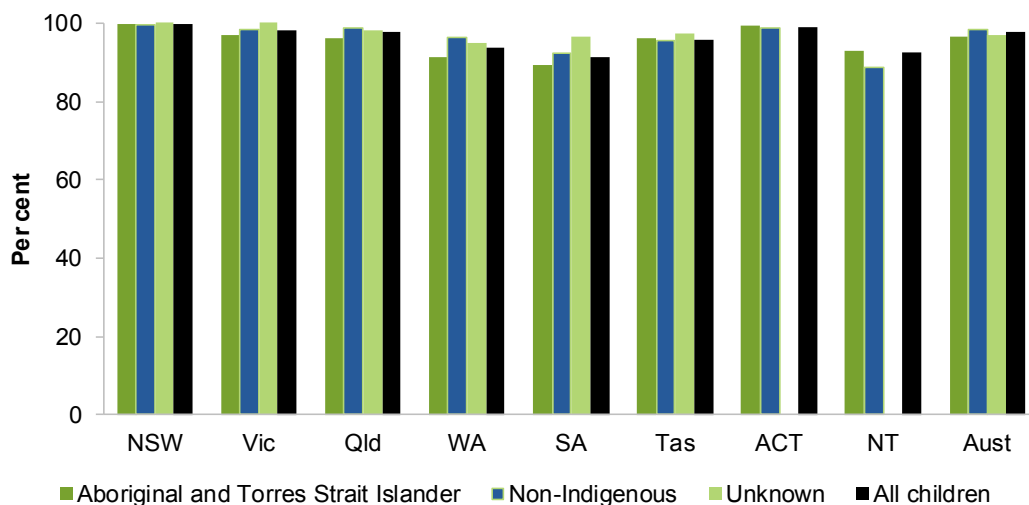

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, the proportion of all children aged under 12 years in care who were placed in home-based care at 30 June 2014 was 97.6 per cent. In most jurisdictions, and nationally, the proportions of Aboriginal and Torres Strait Islander and non-Indigenous children aged under 12 years who were placed in home-based care were similar (figure 15.9).

Figure 15.9 Proportion of children aged under 12 years in out-of-home care who were in a home-based placement, by Indigenous status, 30 June 2014^a

^a See source table for detailed footnotes.

Source: AIHW data collection (unpublished); table 15A.25.

Out-of-home care — placement with extended family

‘Placement with extended family’ is an indicator of governments’ objective to provide services that meet the needs of recipients (box 15.14).

Box 15.14 Placement with extended family

‘Placement with extended family’ is defined as the proportion of all children in out-of-home care who are placed with relatives or kin who receive government financial assistance to care for that child.

A high or increasing rate for this indicator is desirable. Placing children with their relatives or kin is generally the preferred out-of-home care placement option. This option is generally associated with better long term outcomes due to increased continuity, familiarity and stability for the child. Relatives are more likely to have or to form long term emotional bonds with the child. Placement with familiar people can help to overcome the loss of attachment and belonging that can occur when children are placed in out-of-home care.

Placement with extended family should be considered with other factors in the placement decision, as placements with extended family may not always be the best option. Long standing family dynamics can undermine the pursuit of case goals such as reunification, and the possibility of intergenerational abuse needs to be considered. In addition, depending on the individual circumstances of the child, it may be more important to have a local placement that enables continuity at school, for example, rather than a distant placement with relatives.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Figure 15.10 shows the proportion of children placed with relatives or kin by Indigenous status. The proportion of children placed with relatives or kin at 30 June 2014 was greater for Aboriginal and Torres Strait Islander children than for non-Indigenous children in most jurisdictions, and nationally (figure 15.10).

The Aboriginal Child Placement Principle gives considerable emphasis to the placement of Aboriginal and Torres Strait Islander children with extended family. This principle is discussed in box 15.15.

Figure 15.10 Proportion of children in out-of-home care placed with relatives/kin, by Indigenous status, 30 June 2014^{a, b, c}

^a See source table for detailed footnotes. ^b ACT unknown is zero. ^c NT non-Indigenous and unknown are zero. Due to system limitations, data reported for the NT do not provide a realistic view of children placed with relatives/kin. Refer to data in figure 15.11.

Source: AIHW data collection (unpublished); table 15A.23.

Out-of-home care — placement in accordance with the Aboriginal Child Placement Principle

‘Placement in accordance with the Aboriginal Child Placement Principle’ is an indicator of governments’ objective to protect the safety and welfare of Aboriginal and Torres Strait Islander children while maintaining their cultural ties and identity (box 15.15).

Box 15.15 Placement in accordance with the Aboriginal Child Placement Principle

'Placement in accordance with the Aboriginal Child Placement Principle' is defined as the number of Aboriginal and Torres Strait Islander children placed with the child's extended family, Aboriginal and Torres Strait Islander community or other Aboriginal and Torres Strait Islander people, divided by the total number of Aboriginal and Torres Strait Islander children in out-of-home care. Data are reported separately for children placed (i) with relative/kin, (ii) with a non-relative Aboriginal and Torres Strait Islander carer or in Aboriginal and Torres Strait Islander residential care, and (iii) not placed with relative/kin, a non-relative Aboriginal and Torres Strait Islander carer or in Aboriginal and Torres Strait Islander residential care.

A high or increasing proportion of children placed in accordance with the principle is desirable. This indicator should be interpreted with care as it is a proxy for compliance with the principle. This indicator reports the placement outcomes of Aboriginal and Torres Strait Islander children rather than compliance with the principle. The indicator does not reflect whether the hierarchy was followed in the consideration of the best placement for the child, nor whether appropriate Aboriginal and Torres Strait Islander individuals or organisations were consulted.

Placing Aboriginal and Torres Strait Islander children in circumstances consistent with the Aboriginal Child Placement Principle is considered to be in their best interests. However, it is one factor among many considerations for the child's safety and wellbeing that must be carefully considered in the placement decision. In the application of this principle, departments consult with and involve appropriate Aboriginal and Torres Strait Islander individuals and/or organisations. If the preferred options are not available, the child may be placed (after appropriate consultation) with a non-Indigenous family or in a residential setting. The principle does not preclude the possibility that in some instances, placement in a non-Indigenous setting, where arrangements are in place for the child's cultural identity to be preserved, might be the most appropriate placement for the child.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

According to the Aboriginal Child Placement Principle (Chisholm 1998) the following hierarchy of placement options should be pursued in protecting the safety and welfare of Aboriginal and Torres Strait Islander children:

- placement with the child's extended family (which includes Aboriginal and Torres Strait Islander and non-Indigenous relatives/kin)
- placement within the child's Aboriginal and Torres Strait Islander community
- placement with other Aboriginal and Torres Strait Islander people.

All jurisdictions have adopted this principle in both legislation and policy.

Nationally, at 30 June 2014, 52.9 per cent of Aboriginal and Torres Strait Islander children in out-of-home care were placed with relatives/kin (37.8 per cent with Aboriginal and

Torres Strait Islander relatives/kin and 15.1 per cent with non-Indigenous relatives/kin). A further 14.8 per cent of Aboriginal and Torres Strait Islander children in out-of-home care were placed with other Aboriginal and Torres Strait Islander carers or in Aboriginal and Torres Strait Islander residential care (figure 15.11). The proportion of Aboriginal and Torres Strait Islander children in out-of-home care at 30 June 2014 who were placed with Aboriginal and Torres Strait Islander or non-Indigenous relatives or kin or with another Aboriginal and Torres Strait Islander carer or in Aboriginal and Torres Strait Islander residential care varied across jurisdictions (figure 15.11).

As noted in box 15.15, the placement of Aboriginal and Torres Strait Islander children in out-of-home care is a proxy measure for compliance with the Aboriginal Child Placement Principle. The proxy measure reports the placement outcomes of Aboriginal and Torres Strait Islander children rather than compliance with the hierarchy of placement options to be considered when finding suitable out-of-home care environments for Aboriginal and Torres Strait Islander children. Work is underway to develop a more robust measure of compliance with the Aboriginal Child Placement Principle as part of the *National framework for protecting Australia’s children: Second three year action plan, 2012-15* (FaHCSIA 2012).

Figure 15.11 Placement of Aboriginal and Torres Strait Islander children in out-of-home care, 30 June 2014^{a, b, c}

Relative/Kin = Placed with relative/kin. Other Aboriginal and Torres Strait Islander = Placed with other Aboriginal and Torres Strait Islander carer or Aboriginal and Torres Strait Islander residential care. Other = Not placed with relative/kin, other Aboriginal and Torres Strait Islander carer or Aboriginal and Torres Strait Islander residential care. ^a See source table for detailed footnotes. ^b Excludes Aboriginal and Torres Strait Islander children living independently and those whose living arrangements were unknown. ^c Data for Tasmania and the ACT relate to a small number of Aboriginal and Torres Strait Islander children.

Source: AIHW data collection (unpublished); table 15A.24.

Out-of-home care — local placement

‘Local placement’ is an indicator of governments’ objective to provide services which meet the needs of the recipients (box 15.16).

Box 15.16 Local placement

‘Local placement’ is defined as the proportion of children in out-of-home care attending the same school that they were attending before entering out-of-home care.

A high or increasing rate of local placement is desirable.

A placement close to where a child lived prior to entering out-of-home care is considered to enhance the stability, familiarity and security of the child. It enables some elements of the child’s life to remain unchanged (for example, they can continue attending the same school and retain their friendship network). It may also facilitate family contact if the child’s parents continue to live nearby.

Local placement should be considered with other factors in the placement decision. For example, placement with a sibling or relative might preclude a local placement. Also, a child might move from a primary school to a secondary school or to a different local school at the same level.

Data collection for this indicator is under development. Data will be provided for 3 and 12 months after entering care.

Data quality information for this indicator is under development.

Out-of-home care — placement with sibling

‘Placement with sibling’ is an indicator of governments’ objective to provide services which meet the needs of the recipients (box 15.17).

Box 15.17 Placement with sibling

'Placement with sibling' is defined as the proportion of children who are on orders and in out of home care at 30 June who have siblings also on orders and in out-of-home care, who are placed with at least one of their siblings.

A high or increasing rate of placement with siblings is desirable. Placement of siblings together promotes stability and continuity. It is a long standing placement principle that siblings should be placed together, where possible, in the interests of their emotional wellbeing. Children are likely to be more secure and have a sense of belonging within their family when placed with siblings.

This is one factor among many that must be considered in the placement decision. In circumstances of sibling abuse, or when a particular child in a family has been singled out as the target for abuse or neglect, keeping siblings together may not be appropriate.

Data collection for this indicator is under development. Data were not available for the 2015 Report.

Data quality information for this indicator is under development.

Out-of-home care — children with documented case plans

'Children with documented case plans' is an indicator of governments' objective to provide services that meet the needs of the recipients (box 15.18).

Box 15.18 Children with current documented case plans

'Children with current documented case plans' is defined as the number of children who have a current documented and approved case plan as a proportion of all children who are required to have a current documented and approved case plan.

A case plan is an individualised, dynamic written plan (or support agreement) that includes information on a child in need of protection, including his or her needs, risks, health, education, living and family arrangements, goals for ongoing intervention and actions required to achieve identified goals. A case plan is usually developed between a family and an agency on the basis of an assessment process. Case planning is essential to structured and purposeful work to support children's optimal development.

A current case plan is one that has been approved and/or reviewed within the previous 12 months. Individual jurisdictions' timeframes for ongoing review may vary and reviews may be more frequent when young children or infants are involved, the child has just entered care, and certain orders are in place (for example, assessment orders). Reviews may also be required when circumstances have changed (for example, the death of a parent or carer, or placement changes) and significant new decisions are needed.

The scope of this indicator extends to children and young people (aged 0–17 years) whose care arrangements were ordered through the Children's Court and for whom parental responsibility has been transferred to the Minister/Chief Executive and who are required by jurisdictional policy/legislation to have a current documented and approved case plan.

A high or increasing rate of children with current documented case plans is desirable.

The quality of case plans, and the extent to which identified needs and actions are put into place, should also be taken into account when considering this indicator. The existence of a case plan does not guarantee that appropriate case work to meet a child's needs is occurring.

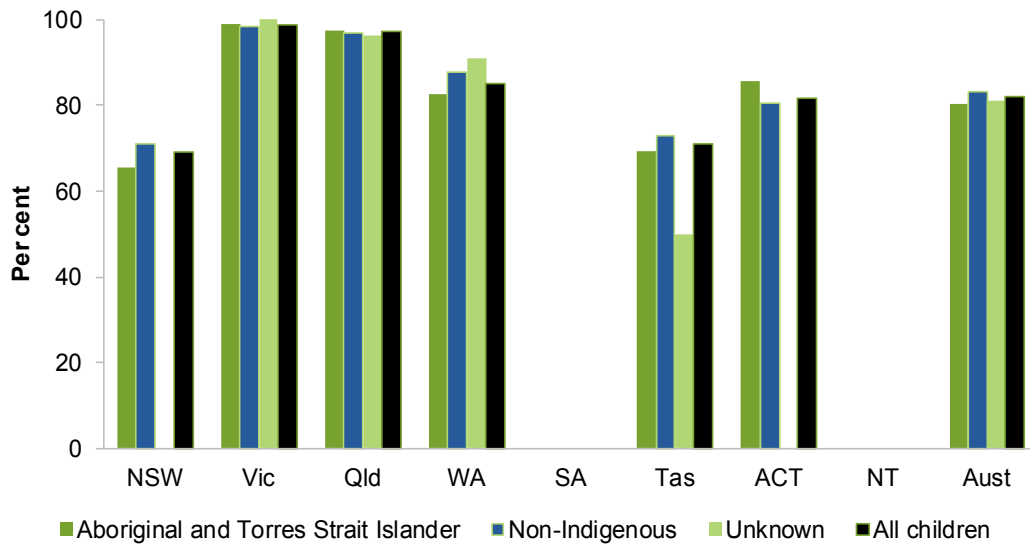

Data reported for this indicator are:

- comparable (subject to caveats) within jurisdictions over time, but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- incomplete for the current reporting period. All required 2014 data were not available for SA and the NT.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The proportion of children with current documented case plans at 30 June 2014 varied across jurisdictions (figure 15.12).

Figure 15.12 **Proportion of children with current documented case plans, 30 June 2014^{a, b, c, d}**

^a See source table for detailed footnotes. ^b Data were not available for SA and the NT. The Australian proportions comprise data for the six reporting jurisdictions only. ^c ACT unknown is zero. ^d The large populations of the eastern mainland states have a significant effect on national averages, particularly when data are not available for all jurisdictions.

Source: AIHW data collection (unpublished); table 15A.17.

Out-of-home care — client satisfaction

‘Client satisfaction’ is an indicator of governments’ objective to provide high quality services that meet the needs of recipients (box 15.19).

Box 15.19 Client satisfaction

‘Client satisfaction’ is yet to be defined. It is intended that this indicator will measure client satisfaction with the out-of-home care system.

This indicator has been identified for development and reporting in future.

Some information on jurisdictions’ development of initiatives which may assist to measure client satisfaction in the future is included in box 15.8.

Efficiency

Understanding the efficiency of child protection systems broadly — and the different components of child protection systems, such as early intervention and out-of-home care

services — enables State and Territory governments to identify key service cost drivers. Efficiency measures coupled with outcome measures ultimately enable State and Territory governments to compare the relative cost effectiveness of broad system approaches and the cost effectiveness of different components of child protection systems.

Challenges in reporting efficiency for child protection systems

Current efficiency data for child protection services have several limitations, including:

- *different systems and priorities across jurisdictions* — child protection systems in Australia have evolved independently under the auspices of State and Territory governments. This has resulted in variations in processes and emphases placed on different service delivery paradigms, such as different approaches to diversionary options
- *limitations of current information systems* — in most jurisdictions, it is difficult to identify resources directed specifically to child protection services, out-of-home care services and other support services for families. This is due in part to the historical structure of information systems and the embedding of government agencies responsible for child protection services within larger community services departments.

Table 15A.4 identifies the level of consistency in expenditure data across jurisdictions.

As a result of these limitations, cost allocations reflect the historical nature of information systems and do not necessarily provide an accurate reflection of the costs involved in provision of various child protection and out-of-home care services.

In April 2002, the Steering Committee initiated a project to improve efficiency data for a national framework of child protection and family support pathways (the ‘Pathways’ project) (box 15.20). Until this can be fully implemented, reporting on efficiency has been limited to proxy indicators (boxes 15.21 and 15.23).

Experimental data relating to the proportion of expenditure across each Pathways activity group are included in table 15.3. These data are preliminary and are subject to further refinement for future reports. Due to different internal management systems, there can be significant variation across jurisdictions in the activities or expenditures that are included in each activity group. However, for all jurisdictions, the proportion of expenditure allocated to Activity group 8 (provision of out-of-home care services) is the most significant and varies from 51.1 per cent to 70.6 per cent across jurisdictions (table 15.3).

These data reflect a combination of direct costs (those costs which can be clearly allocated by a jurisdiction to a particular activity group) and indirect costs (which form part of the overall expenditure base, but which cannot be clearly allocated to a specific activity group). Indirect allocations have been approximated by jurisdictions across the eight activity groups.

Box 15.20 The 'Pathways' project

The Pathways project developed and tested a model that will ultimately allow jurisdictions to calculate more meaningful, comparable and robust efficiency measures (the 'Pathways method'). The model is based on a top-down application of the activity based costing method. Eight national pathways have been developed as a high level representation of the services that a child protection client could receive in any jurisdiction. Each pathway consists of common activity groups which act as the 'building blocks' for each of the pathways. The aggregate cost of each activity group within the pathway will allow the unit cost (including direct and indirect expenditure) of an individual pathway to be determined.

These activity groups and pathways will provide additional utility for jurisdictions in managing the business of child protection services. Implementation of the model has the potential to improve the quality of national reporting of child protection services efficiency measures. Activity-based data can also result, over time, in measures of the cost savings associated with early intervention strategies.

The activity groups are:

| | |
|------------------|--|
| Activity group 1 | Receipt and assessment of initial information about a potential protection and support issue |
| Activity group 2 | Provision of generic family support services |
| Activity group 3 | Provision of intensive family support services |
| Activity group 4 | Secondary information gathering and assessment |
| Activity group 5 | Provision of short term protective intervention and coordination services for children not on an order |
| Activity group 6 | Seeking an order |
| Activity group 7 | Provision of protective intervention, support and coordination services for children on an order |
| Activity group 8 | Provision of out-of-home care services |

Detailed definitions of activity groups are included in section 15.6 Definitions of key terms.

Before jurisdictional reporting against the activity groups can be undertaken with confidence, further refinement of activity group definitions and counting rules is required. Development work, including further data testing in these areas will continue.

AG = Activity Group (box 15.20). ^a Data are rounded to the nearest whole number. ^b Experimental unit costs are based on jurisdictions' total expenditure for each activity group. Denominators used to calculate unit costs for AG2, AG3, AG5, and AG7 are based on clients commencing service provision throughout the financial year (as distinct from total client numbers). The use of commencement numbers might inflate reported unit costs. ^c NSW data for AG3 include a small number of children commencing intensive family support services and corresponding cost data are included in AG4. This will result in under-estimation of unit costs for AG3 and over-estimation of unit costs for AG4. Data for AG5 and AG7 are preliminary. NSW is currently reviewing/refining the methodology for calculating AG costs. ^d WA financial and activity data for AG2 do not include community sector services. ^e Tasmania's expenditure data for AGs 1, 4, 5, 6 and 7 should be interpreted with caution as these estimates are based on a staff labour time survey completed in 2010-11 which may not reflect current staff labour time allocations. ^f Jurisdictions count notifications at different points in response to a report, ranging from the point of initial contact with the source of the report to the end of a screening and decision making process. This means the number of notifications and hence the unit costs for notifications are not comparable across jurisdictions for AG 1. ^g Unit costs for AG2 have proven difficult to calculate as many jurisdictions are presently unable to capture family support service activity data (that is, the denominator). ^h Jurisdictions differ in the way notifications and investigations are defined and the requirements for conducting an investigation. ⁱ Unit costs for AG5 should be interpreted with caution due to difficulty experienced by jurisdictions extracting the number of children in scope. ^j Cost per placement night should be interpreted with caution due to the effect of different proportions of children in residential out-of-home care across jurisdictions. **na** Not available.

Source: State and Territory governments (unpublished).

Total expenditure on all child protection activities per notification, investigation and substantiation

‘Total expenditure on all child protection activities, per notification’, ‘total expenditure on all child protection activities, per investigation’, and ‘total expenditure on all child protection activities, per substantiation’ are reported as proxy indicators of governments’ objective to maximise the benefit to the community through the efficient use of public resources (box 15.21).

Box 15.21 Total expenditure on all child protection activities per notification, investigation and substantiation

‘Total expenditure on all child protection activities per notification, investigation and substantiation’ is defined by three measures:

- total expenditure on all child protection activities divided by the number of notifications
- total expenditure on all child protection activities divided by the number of investigations
- total expenditure on all child protection activities divided by the number of substantiations.

Low or decreasing expenditure per notification/investigation/substantiation can suggest more efficient services but may indicate lower quality or different service delivery models.

These indicators are proxy indicators and need to be interpreted with care. Because each of these proxy indicators is based on total expenditure on child protection activities, they do not represent, and cannot be interpreted as, unit costs for notifications, investigations or substantiations. These proxy indicators cannot be added together to determine overall cost of child protection services.

More comprehensive and accurate efficiency indicators would relate expenditure on particular child protection activities to a measure of output of those activities. Work is underway to develop a national activity-based costing method, the Pathways project, which will allow this type of reporting from existing information systems (box 15.20). Experimental data using the Pathways method are included in table 15.3. The following proxy data will be replaced by Pathways unit cost data when the Pathways method is refined and implemented nationally.

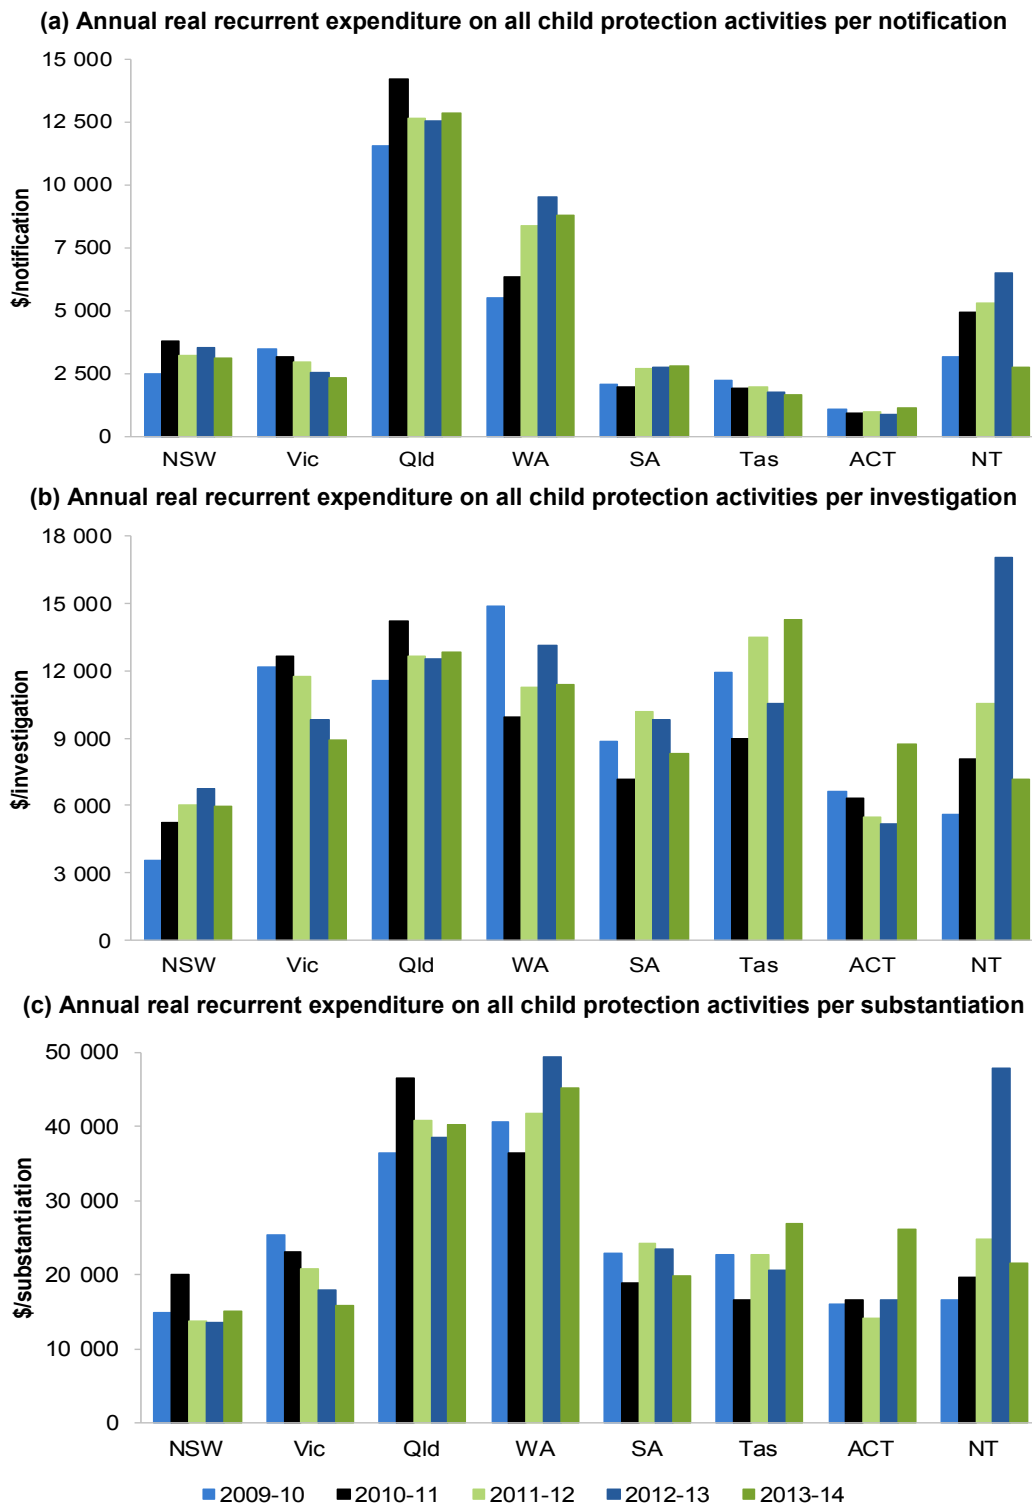

Data reported for this indicator are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Total expenditure on all child protection activities per notification, per investigation and per substantiation from 2009-10 to 2013-14 varied across jurisdictions (figure 15.13).

Figure 15.13 Child protection efficiency indicators (2013-14 dollars)^{a, b}

^a See source table for detailed footnotes. ^b Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Source: AIHW data collection (unpublished); State and Territory governments (unpublished); table 15A.2.

Out-of-home care expenditure per placement night

‘Out-of-home care expenditure per placement night’ is an indicator of governments’ objective to maximise the availability and quality of services through the efficient use of public resources (box 15.22).

Box 15.22 Out-of-home care expenditure per placement night

‘Out-of-home care expenditure per placement night’ is defined as total real recurrent expenditure on out-of-home care services divided by the total number of placement nights in out-of-home care.

Low or decreasing expenditure per placement night can suggest more efficient services but may indicate lower service quality or different service delivery models. Further, in some cases, efficiencies may not be able to be realised due to remote geographic locations that limit opportunities to reduce overheads through economies of scale.

Data reported for this indicator are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete for the current reporting period. All required 2013-14 data were available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Out-of-home care expenditure per placement night varied across jurisdictions (figure 15.14).

Figure 15.14 **Real out-of-home care expenditure per placement night (2013-14 dollars)^{a, b, c}**

^a See source table for detailed footnotes. ^b Caution should be used when interpreting results due to the variety of activities included in out-of-home care services. ^c Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Source: AIHW data collection (unpublished); State and Territory governments (unpublished); table 15A.29.

Total expenditure on all children in residential and non-residential out-of-home care per child in residential and non-residential out-of-home care

‘Total expenditure on all out-of-home care services per child in out-of-home care, by residential and non-residential care’ are reported as proxy indicators of governments’ objective to maximise the benefit to the community through the efficient use of public resources (box 15.23).

Box 15.23 Total expenditure on children in residential and non-residential out-of-home care per child in residential and non-residential out-of-home care

Total expenditure on children in residential and non-residential out-of-home care per child in residential and non-residential out-of-home care is defined by three measures:

- total expenditure on residential out-of-home care divided by the number of children in residential out-of-home care at 30 June
- total expenditure on non-residential out-of-home care divided by the number of children in non-residential out-of-home care at 30 June
- total expenditure on all out-of-home care divided by the number of children in all out-of-home care at 30 June.

Low or decreasing expenditure per child in care can suggest more efficient services but may indicate lower quality or different service delivery models.

These indicators are proxy indicators and need to be interpreted with care as they do not represent a measure of unit costs. Expenditure per child in care at 30 June overstates the cost per child because significantly more children are in care during a year than at a point in time. In addition, the indicator does not reflect the length of time that a child spends in care.

Data reported for these measures are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- incomplete for the current reporting period. All required 2013-14 data were not available for NSW, Queensland, and the NT for the measures of total expenditure on residential out-of-home care and non-residential out-of-home care.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Total expenditure on residential care and non-residential care for the period 2009-10 to 2013-14, per child in residential care and non-residential care at 30 June, varied across jurisdictions (figures 15.15(a) and 15.15(b)). Total expenditure on all out-of-home care per child in care at 30 June for 2009-10 to 2013-14 also varied across jurisdictions (figure 15.15(c)).

Figure 15.15 Out-of-home care efficiency indicators, at 30 June (2013-14 dollars)^{a, b, c}

(a) Annual real recurrent expenditure on residential out-of-home care per child in residential care

(b) Annual real expenditure on non-residential out-of-home care per child in non-residential care

(c) Annual real expenditure on all out-of-home care per child in out-of-home care at 30 June

^a See source table for detailed footnotes. ^b Time series financial data are adjusted to 2013-14 dollars using the GGFC chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details. ^c NSW, Queensland, and the NT could not disaggregate expenditure on out-of-home care.

Source: AIHW data collection (unpublished); State and Territory governments (unpublished); table 15A.3.

Outcomes

Outcomes are the impact of services on the status of an individual or group (while outputs are the services delivered) (see chapter 1, section 1.5).

Improved safety — substantiation rate after decision not to substantiate

‘Improved safety’ is an indicator of governments’ objective to reduce the risk of harm to children by appropriately assessing notifications of possible child protection incidents (box 15.24).

Box 15.24 Improved safety

‘Improved safety’ is defined by two measures:

- substantiation rate after a decision not to substantiate, defined as the proportion of children who were the subject of an investigation in the previous financial year that led to a decision not to substantiate, and who were later the subject of a substantiation within 3 or 12 months of the initial decision not to substantiate. The year reported relates to the year of the initial decision not to substantiate
- substantiation rate after a prior substantiation, defined as the proportion of children who were the subject of a substantiation in the previous financial year, who were subsequently the subject of a further substantiation within the following 3 or 12 months. The year reported relates to the year of the original substantiation.

A low or decreasing rate for these measures is desirable. However, reported results can be affected by the finalisation of investigations, factors beyond the control of child protection services, or a change in circumstances after the initial decision not to substantiate was made. A demonstrable risk of harm might not have existed in the first instance. In addition, this indicator does not distinguish between subsequent substantiations which are related to the initial notification (that is, the same source of risk of harm) and those which are unrelated to the initial notification (that is, a different source of risk of harm). This indicator partly reveals the extent to which an investigation has not succeeded in identifying the risk of harm to a child who is subsequently the subject of substantiated harm. It also provides a measure of the adequacy of interventions offered to children to protect them from further harm. This indicator should be considered with other outcome indicators.

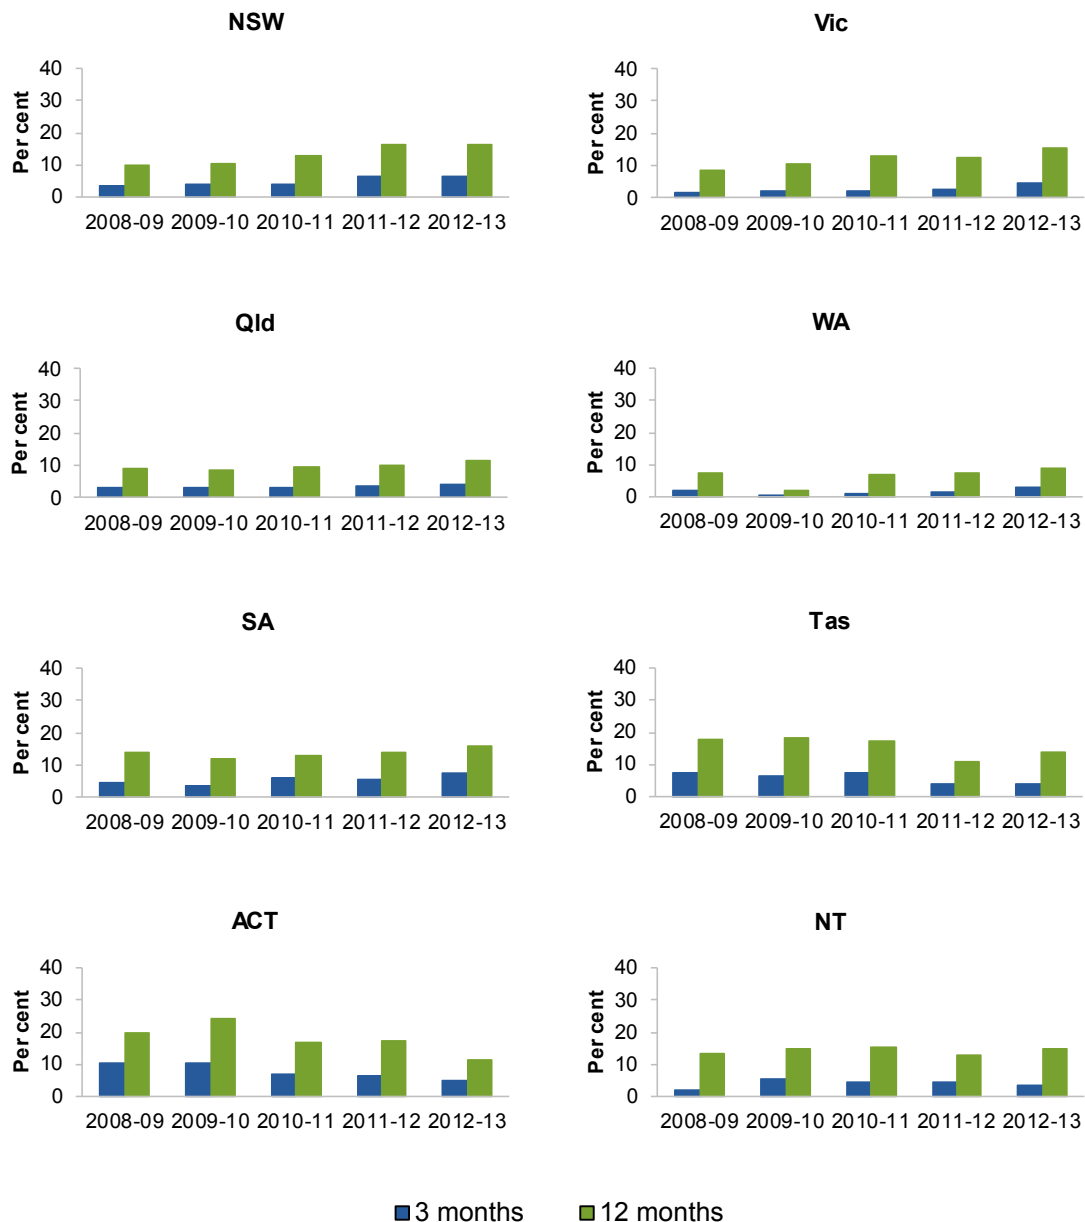

Data reported for these measures are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete for the current reporting period. All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The proportion of substantiations that occurred within 3 and 12 months of a decision not to substantiate are provided in figure 15.16. The proportion of substantiations that occurred within 3 and 12 months of a prior substantiation are provided in figure 15.17.

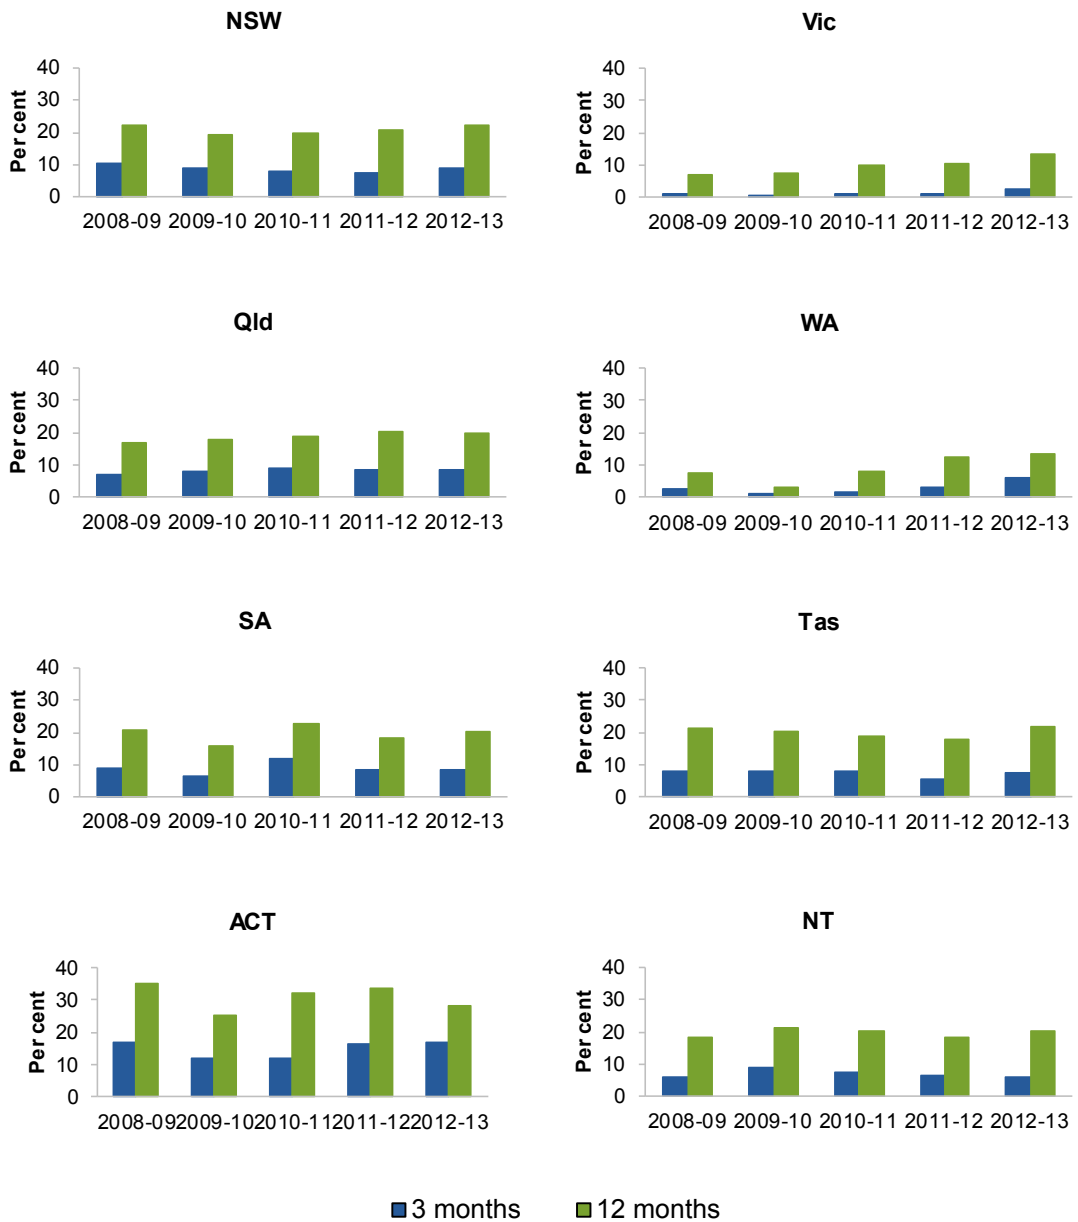

Figure 15.16 Improved safety — substantiation rate within 3 and/or 12 months after a decision not to substantiate^{a, b}

^b See source tables for detailed footnotes. ^b Data are not comparable across jurisdictions because definitions of substantiation vary significantly. Consequently, rates cannot be compared across jurisdictions.

Source: AIHW data collection (unpublished); table 15A.10.

Figure 15.17 Improved safety — resubstantiation rate within 3 or 12 months of a prior substantiation^{a, b}

^c See source table for detailed footnotes. ^b Data are not comparable across jurisdictions because definitions of substantiation vary significantly. Consequently, rates cannot be compared across jurisdictions.

Source: AIHW data collection (unpublished); table 15A.11.

Improved education

‘Improved education’ is an indicator of governments’ objective to maximise children’s life chances by ensuring children in care have their educational needs met (box 15.25).

Box 15.25 Improved education

‘Improved education’ is defined as proportion of children on guardianship and custody orders to the Chief Executive/Minister achieving national benchmarks in reading and numeracy, compared with all children. Only children on orders in government schools are reported.

A high or increasing rate of children on guardianship and custody orders achieving national benchmarks in reading and numeracy is desirable.

Factors outside the control of child protection services have an influence on the educational outcomes of children on guardianship and custody orders, and care should be exercised when interpreting results. Specifically, children in the child protection system often have high needs have often experienced significant disadvantage (for example, family stress, trauma and violence, mental illness and disability).

It is also important to note that children exempted from NAPLAN testing are recorded as being below the national minimum benchmarks in reading and numeracy. Experimental data indicate that children on guardianship and custody orders are exempted from NAPLAN testing at significantly higher rates than the general student population, which will contribute to poorer reported NAPLAN results for children on orders than the general student population.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- incomplete for the current reporting period. All required 2012 data were not available for NSW, Victoria, WA, Tasmania, the ACT and the NT.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Tables 15A.12–14 provide data on the proportion of children in years 3, 5 and 7 on guardianship or custody orders (attending government schools) achieving national reading and numeracy benchmarks in 2003, 2004, 2005 and 2006 relative to all children (attending government and non-government schools). The proportion of children on guardianship or custody orders achieving national reading and numeracy benchmarks in 2003, 2004, 2005 and 2006 varied significantly across jurisdictions. However, with few exceptions, the proportion of children on orders achieving national reading and numeracy benchmarks was less — at times significantly less — than for all students.

Data contained in tables 15A.12–14 were sourced from a pilot study conducted by the AIHW. Data were not available for all jurisdictions. State and Territory governments are currently working with the AIHW on a national project to link data from the CP NMDS to National Assessment Program — Literacy and Numeracy (NAPLAN) data, which will improve reporting for this indicator. NAPLAN testing is conducted each year for all students across Australia in years 3, 5, 7 and 9. All students in the same year level are

assessed on the same test items in the assessment domains of reading, writing, language conventions (spelling, grammar and punctuation) and numeracy.

In 2012, an experimental collection was commenced by the Child Protection and Youth Justice Working Group (CPYJWG) to source aggregate counts of the number of year 5 children on guardianship and custody orders who achieved at or above the national minimum standards in the NAPLAN domains 'reading' and 'numeracy', as well as the NAPLAN participation rates of children in these categories.

Experimental data for 2010 and 2011 were available for Queensland and SA, for children under custody or guardianship orders to the Chief Executive for a minimum of two years at the time of the test in government and non-government schools (Queensland) and children under the guardianship of the Minister in government schools (SA). These data were published in the 2013 and 2014 Reports. In this edition, equivalent experimental data for 2012 were also available for Queensland and SA. These data indicate that the proportion of year 5 children on orders achieving at or above the national minimum standards in the NAPLAN domains 'reading' and 'numeracy' are significantly lower than the results for all students in year 5. In 2012:

- 54.1 per cent of year 5 students on orders in Queensland and 60.3 per cent of year 5 students on orders in SA achieved at or above the national minimum standard in the NAPLAN domain 'reading', compared with 91.6 per cent of all year 5 students (and 89.1 and 90.7 for Queensland and SA respectively)
- 52.3 per cent of year 5 students on orders in Queensland and 55.9 per cent of year 5 students on orders in SA achieved at or above the national minimum standard in the NAPLAN domain 'numeracy', compared with 93.3 per cent of all year 5 students (and 91.7 for both Queensland and SA) (ACARA 2012; Queensland and SA governments unpublished).

It is important to take student participation rates into account when analysing NAPLAN data. Participation rates are calculated as all assessed and exempt students as a percentage of the total number of students in the year level, including students who were absent or withdrawn. In 2012:

- the participation rates for year 5 students on orders in the NAPLAN 'reading' domain was 94.0 per cent in Queensland and 88.5 per cent in SA, compared with 95.9 per cent of all year 5 students (and 94.9 and 94.8 for Queensland and SA respectively)
- the participation rates for year 5 students on orders in the NAPLAN 'numeracy' domain was 94.0 per cent in Queensland and 90.1 per cent in SA, compared with 95.5 per cent of all year 5 students (and 94.5 and 94.4 for Queensland and SA respectively) (ACARA 2012; Queensland and SA governments unpublished).

The experimental collection will assist the CPYJWG to identify the type of education data that would be meaningful to report in future, and methodological issues that need to be accounted for in educational outcomes reporting for children on orders. Detailed

information on NAPLAN testing can be found in chapter 4 School education of this Report.

Box 15.26 notes forthcoming research into the educational outcomes beyond school of people from out-of-home care backgrounds.

Box 15.26 Out-of-home care educational outcomes research

The National Centre for Student Equity in Higher Education (the National Centre) at Curtin University has commenced a study into university access and achievement of people from out-of-home care backgrounds. The lead researchers on this project note that to date, there has been little Australian analysis of the progression of people from care into higher education, or of potential policies that might increase their aspirations, access and educational success. This is in contrast to the United Kingdom where children from care are a recognised equity group whose higher education outcomes are closely monitored and where institutional policies exist to support their participation.

The National Centre will be investigating these issues in collaboration with Mackillop Family Services and Berry Street. The project is scheduled to conclude in February 2015, at which time a project report will be made publicly available.

Source: National Centre for Student Equity in Higher Education (NCSEHE) (2014).

Improved health and wellbeing of the child

‘Improved health and wellbeing of the child’ is an indicator of governments’ objective to maximise children’s life chances by ensuring children in care have their health and wellbeing needs met (box 15.27).

Box 15.27 Improved health and wellbeing of the child

‘Improved health and wellbeing of the child’ is yet to be defined.

Good health and wellbeing are considered vital ingredients for optimising children’s life chances. Therefore, ensuring the health and wellbeing of children in the child protection system is considered a high priority.

This indicator has been identified for development and reporting in future.

Safe return home

‘Safe return home’ is an indicator of governments’ objective to remove the risk of harm to the child while maintaining family cohesion (box 15.28).

Box 15.28 Safe return home

‘Safe return home’ is yet to be defined.

For children who cannot be protected within their family and are removed from home, often the best outcome is when effective intervention to improve their parents’ skills or capacity to care for them enables them to return home.

This indicator has been identified for development and reporting in future.

Permanent care

‘Permanent care’ is an indicator of governments’ objective to provide appropriate care for children who cannot be safely reunified with their families (box 15.29).

Box 15.29 Permanent care

‘Permanent care’ is yet to be defined.

Appropriate services are those that minimise the length of time before stable, permanent placement is achieved.

This indicator has been identified for development and reporting in future.

15.4 Future directions in child protection and out-of-home care services performance reporting

Improving national child protection data

The Standing Council on Community and Disability Services Advisory Council (SCCDSAC), now disbanded, was overseeing a number of national projects to address gaps in child protection reporting and to improve the comparability of child protection data. Such projects included: implementing a linked data set to measure educational outcomes for children on orders; developing a linked data collection to report on the relationships between child protection and youth justice; and the development of new carer-related indicators, including carer retention, foster carer numbers and safe reunification. It is expected that these projects, along with the successful implementation of a child based unit-record data collection for all jurisdictions, will improve child protection reporting.

New arrangements to govern child welfare and family services data and information requirements include the establishment of a Children and Families Data Network (CAFDaN) reporting to the Children and Families Secretaries’ Group (CAFS).

State and Territory governments are also currently working with the AIHW on a national project to link data from the CP NMDS to NAPLAN data, which will improve reporting for the educational outcomes indicator. It is anticipated that a project report will be finalised in 2015 and data will be available for future reports.

COAG developments

National framework for protecting Australia's children 2009–2020

On 30 April 2009, COAG endorsed *Protecting Children is Everyone's Business: National Framework for Protecting Australia's Children 2009–2020* (the National Framework) (FaHCSIA 2008). The National Framework is intended to deliver a more integrated response to protecting Australia's children, and emphasises the roles of government, the non-government sector, and the community in promoting the safety and wellbeing of children. The Second Action Plan 2012–15 under the National Framework was released in 2012. It prioritises early intervention, prevention and collaboration with mental health, domestic and family violence, drug and alcohol, education, health and other services (FaHCSIA 2012).

The Report's child protection and out-of-home care performance indicator framework already includes and reports upon several National Framework performance indicators. In addition, the Steering Committee has previously identified developments for the Report's child protection and out-of-home care performance indicator framework which are complementary to many of the measures in the National Framework. In further developing the Report's child protection and out-of-home care performance indicator framework, the Steering Committee will align with applicable National Framework developments.

National standards for out-of-home care

Under the National Framework, Australian governments have committed to implementing National Standards for Out-of-Home Care (the National Standards). The National Standards relate to areas affecting the outcomes and experiences of children in out-of-home care, including: health; education; case planning; connection to family; transitioning from care; training and support for carers; belonging and identity; and stability and safety. The Steering Committee will keep a watching brief on the development of performance indicators for the National Standards and align with applicable National Standard developments.

15.5 Jurisdictions' comments

This section provides comments from each jurisdiction on the services covered in this chapter.

New South Wales Government comments

Children, young people and their families, not systems, are at the centre of NSW's child protection responses. NSW remains focused on:

- increasing the proportion of children and young people in safe and stable homes
- helping families earlier and with better services so their children are not taken into care
- providing more children at risk of significant harm with a face-to-face response
- improving the outcomes of our most vulnerable children and young people in care
- improving the safety of Aboriginal children and young people with child protection concerns.

In 2014, NSW commenced the *Safe Home for Life* reforms. These reforms will see an investment of \$500 million over four years by the NSW Government to improve the effectiveness of the child protection system in NSW.

The *Child Protection Legislative Amendment Act 2014* was passed by Parliament on 26 March 2014 and is the first step towards a less legalistic, process driven child protection system.

We have expanded the *Practice First* model of child protection. *Practice First* increases the time caseworkers spend directly with families and focuses on building genuine and responsive relationships with children, families and other agencies to reduce the number of children being re-reported as being at risk of significant harm. The model is now operating in 24 Community Services Centres.

In 2013-14 NSW invested \$243.8 million for targeted earlier intervention for vulnerable children, young people and families. Early intervention programs aim to support children and families as early as possible to address factors that place the safety of children at risk, and to prevent them entering out-of-home care (OOHC).

NSW continued to progress the transition of statutory OOHC to the non-government organisation (NGO) sector, to better support children in the Minister's parental responsibility, and their carers. In 2013-14 the care arrangements of 2061 children and young people in OOHC were transitioned to NGOs.

The NSW Government has implemented two social benefit bonds in partnership with the Benevolent Society and UnitingCare Burnside to support at risk children. The bonds are an innovative, Australian first, approach to raising private capital to support children and young people in OOHC to be safely restored to their families or to prevent them from entering care. The UnitingCare Burnside Social Benefit Bond has improved supports for parents of children in or at risk of entering OOHC and has delivered a 7.5 per cent return to investors in the first year.

Victorian Government comments

“

There have been significant amendments to Victoria's Children, Youth and Families Act 2005 in 2014. The most significant changes relate to provisions which govern case planning and court orders. The amendments are due for implementation on or before 1 March 2016 and introduce a new range of protection orders closely aligned with a permanency planning hierarchy and timelines.

- Where a child enters out-of-home care, reunification will be pursued for 12 months, except where it is clearly unachievable.
- If a child has not been reunified with their parents after 12 months, but there is compelling evidence that reunification may occur a 12 month extension may be granted.
- Beyond these timelines, if out-of-home care is still required the court may vest full parental rights in the Secretary, who will then be able to make the most appropriate long term or permanent care arrangements for the child.
- The Aboriginal Child Placement Principle will continue to apply, and a preference for kinship placements for all children (where safe) is stated in the legislation.

”

Queensland Government comments

“

The Queensland Child Protection Commission of Inquiry report *Taking Responsibility: A Roadmap for Queensland Child Protection* was released on 1 July 2013. On 16 December 2013, the Queensland Government committed to implementing the Inquiry's reform roadmap by accepting all of the report's recommendations, 115 in full and six in principle. The Queensland Government committed \$406 million additional investment over five years to implement the reforms that will help vulnerable children, young people and families, including the prioritisation of the needs of Aboriginal and Torres Strait Islander families.

The primary focus of this funding will be on early intervention and support services with additional investments of:

- \$51.9 million allocated to the Community Based Intake and Referral System (Recommendation 4.5)
- \$195.1 million to Intensive Family Support and Domestic and Family Violence Services (Recommendation 5.4)
- \$16.5 million to post-care services for young people (Recommendation 9.2)

The \$4 million Fostering Families two-year trial is the first family support program to target neglect. Commencing in January 2013, it provides intensive, in-home and out-of-hours family support services to at risk Queensland families with a focus on developing practical skills in the family home to improve parenting skills and family functioning. Fostering Families is currently being trialled in three sites: Brisbane South, Toowoomba/Darling Downs and Maryborough/Hervey Bay, all of which are operating at capacity. Initial results from the trial are positive, with support through the program also decreasing re-reporting rates of child protection concerns to the department. The department is proposing to extend these services for a further three years.

The Helping Out Families initiative continued in 2013–14 to provide support services to vulnerable families at risk of entering or re-entering the statutory system who do not currently require tertiary intervention. An evaluation of this initiative, completed in June 2014, demonstrated benefits including: improved outcomes for families (if families engaged with an Intensive Family Support service for seven months or longer, more than two-thirds experienced reduced risk factors for child abuse or neglect) and reduced risk of entry or re-entry to the child protection system. The findings of the evaluation are being used to inform government investment in new models of intensive family support.

In 2013–14, Queensland continued to streamline quality standards for human services, after the introduction in February 2013 of an organisation level licensing process for non-government organisations (NGOs) licensed under the *Child Protection Act (Qld) 1999*. The new process enables NGOs to spend more time on service delivery and less time on paperwork. At 30 June 2014, 13 organisations were each granted an organisational level licence, previously they collectively held 41.

”

Western Australian Government comments

“

In 2013-14, the practice of the Department for Child Protection and Family Support (the Department) is based on the *Signs of Safety Child Protection Practice Framework* and is oriented to child participation and work with families in an inclusive and evidence based approach that builds safety around the child with support networks to enable children to remain at home, where possible.

For those children who are in care, the *Foster Care Partnership Practice Framework* guides the Department to work with carers based on the ethos of mutual respect and joint decision-making. The Department's *Residential Care (Sanctuary) Framework* provides a theoretical and practical base to guide care for children whose trauma severely impacts their behaviour and development.

The *Aboriginal Services Framework* provides direction to continually improve its work with Aboriginal children and families with an overall goal to reduce the number of Aboriginal children coming into care.

Demand for child protection services continues to grow, demonstrated by a 25 per cent increase in child protection notifications in the last two years. Effective case practice using Signs of Safety has contributed to slowing the rate of children in care to 6.7 growth between 30 June 2013 and 30 June 2014.

The Department maintains a focus on strong partnerships with the community sector, foster carers and across government agencies. Key highlights include:

- In December 2013, the electronic exchange of incident notifications from WA Police was successfully integrated into the Department's client system, enabling more timely responses to children exposed to family violence.
- The Department, in partnership with the community sector, has commenced an Out-Of-Home Care Five Year Strategic Plan. This work is occurring alongside the national out-of-home care standards and learnings from the Royal Commission into Institutional Responses to Child Sexual Abuse.
- The recruitment and retention of foster carers remains a priority. The foster carer recruitment campaign has seen over 120 new general foster carers approved.
- In line with Delivering Community Services in Partnership Policy, out-of-home care placements in the community service sector have grown by an average of 16 per cent in the last three years.
- Contact centres are being established to enhance the frequency and quality of contact arrangements and to assist in reunifying children with their families.
- With the successful integration of the Family Support Network in Armadale, two more networks were established in Mirrabooka and in the Midwest (Geraldton). The networks aim to reduce demand on child protection services, improve integration and effectively meet the needs of at risk families.

”

South Australian Government comments

“

SA continued to implement the redesign of child protection services within the jurisdiction, with Solution Based Casework as its practice model.

A new process for protective intervention work in the areas of family preservation and reunification was commissioned. The emphasis is on working with vulnerable families to increase their strengths and resilience to care for their children. This will enable more children to remain safe in their own homes.

A specialising approach to care and protection service delivery was finalised. Specialising hubs were created in some metropolitan locations with specialising teams across other metropolitan and country offices. Hubs and teams are based on the functions of Assessment and Support, Protective Intervention, and Guardianship.

All Families SA supervisors and senior practitioners have undertaken and passed the Solution Based Casework Qualifying Exam and a specific suite of tools for the application of Solution Based Casework in Guardianship has been provided for implementation. A final certification procedure has been developed to provide certification guidance for all eligible Families SA delivery and functional staff.

The roll-out of the Solution Based Casework model including training with funded community service provider partners has commenced.

The *Families SA Service Plan* was released in 2014 and outlines changes to the delivery of child protection services through the provision of practical assistance to families to minimise their future contact with the child protection system. The plan aligns with the Department for Education and Child Development *Strategic Plan 2014–2017* through the strategic priority *Improve and integrate child safety*.

The Parliament of SA passed the *Statutes Amendment (Assessment of Relevant History) Act 2013* in November 2013. The Act makes changes to the child safe environments provisions of the *Children's Protection Act 1993*.

SA is reviewing and updating child safe environments and resources to support organisations in developing a child safe and child friendly environment, adopting a preventative approach to child abuse and neglect and ensuring relevant history assessments are conducted for all people working with children in prescribed positions.

New *Health Standards for Children and Young People under Guardianship of the Minister* were developed with child protection and health services. These standards incorporate national policy developments in both sectors, including the *National Out of Home Care Standards* and the *National Clinical Assessment Framework*. Agreed roles, responsibilities and standards are specified to guide workers in health and child protection to work together to improve health outcomes and opportunities in life for children and young people under Guardianship.

”

Tasmanian Government comments

“

A number of initiatives during 2013-14 have been planned and/or implemented to improve practice and service provision in the child protection and out-of-home care areas in Tasmania.

Implementation of the Signs of Safety approach, supporting a consistent and comprehensive risk assessment, which is child centred and family focussed, commenced across Children and Youth Services in 2012–13, with training, practice development and system review occurring throughout 2013-14 to support the ongoing implementation.

The Out of Home Care Reform Project commenced in late-2013, and has focused on reviewing service provision across the out-of-home care continuum, with a view to realigning service delivery and out-of-home care options to meet better the needs of children. This project is also examining the interconnection of services required to support children and young people in the out-of-home care system in Tasmania.

Amendments to the *Children, Young Persons and Their Families Act 1997* reflect the Government's response to the first stage recommendations of the Legislative Amendment Review Reference Committee (LARRC), established by the previous Government to advise it on the Principal Act. The Committee provided a detailed report on the need for amendments to some 21 areas of the Act. The LARRC report provided detailed advice on the preferred policy direction to support the amendments. These amendments are aimed at a less adversarial way of working with families, which aligns and supports the Signs of Safety approach. The commencement dates for the majority of the amendments are still being finalised.

The Advocacy for Children in Tasmania Committee (ACTC) was established as a result of one of the LARRC recommendations, which was to conduct a second stage process to clarify the expectations of the role, function and powers of the Commissioner for Children. The ACTC made 15 recommendations relating to advocacy services for Tasmanian children, including the function and role of the Commissioner. One of these recommendations was the development of standalone legislation, this has been endorsed by Cabinet and drafting instructions are currently being prepared.

Children and Youth Services entered into a three year funding agreement with the Australian Red Cross Society for the provision of an advocacy service specifically for parents and families involved with the Child Protection Service. The new alliance brings with it the opportunity to build on our commitment to working in partnership with families. The service will be available in the Southern region from 1 December 2014.

”

Australian Capital Territory Government comments

“

A key priority for the ACT Government is to maintain and continually improve a responsive and high performing child protection and out-of-home care system. Reforms in the ACT incorporate strategies to implement recommendations from reviews undertaken by the ACT Public Advocate in 2011 and 2012 and a performance audit by the ACT Auditor-General in 2013. These include:

- Progression of the development of the *Out of Home Care Strategy 2015–2020*. Key reforms include a renewed focus on diverting children and young people from entering care, speedy reunification of children and parents wherever possible, and new and enhanced services to improve outcomes for children and young people in care.
- Establishment of the Trauma Recovery Centre, Melaleuca Place, which supports children from birth to 12 years who have experienced trauma and are current clients of statutory services.
- Improved services and supports for kinship carers, including engaging specialist services to provide therapeutic services for children, young people and carers in their care environment.
- Enhanced early intervention services and supports for pregnant women as well as for young adults who have left care.
- Development of a dual referral system, the Child, Youth and Family Gateway, as a point of contact for information, initial support and engagement with vulnerable children, young people and their families.
- Commenced development of a service model to engage suitable Aboriginal and Torres Strait Islander community members to provide independent advice regarding the placement, cultural planning and transition from care planning for Aboriginal and Torres Strait Islander children and young people in out-of-home care.
- Implementation of the Integrated Management System (IMS) in Care and Protection Services (CPS). The IMS aligns the strategic direction, policies and procedures, risk management and compliance activities of CPS.
- Commencement of the Integrated Statutory Services project that examines how the Office for Children, Youth and Family Support (OCYFS) can combine activities performed in child protection and youth justice areas to offer better outcomes for children, young people and their families.
- Commenced the trial of Viewpoint Interactive as a tool for eliciting the views and wishes of children and young people in out of home care.
- Commenced the development of a Child Health Passport for children and young people in care. The Child Health Passport will move with the child or young person and will ensure that carers have access to key health information about the child or young person in their care.

”

Northern Territory Government comments

“

The 2013-14 financial year has been marked by a system that continues to experience significant growth. The number of child protection notifications received by the Northern Territory Department of Children and Families (DCF) increased by 30 per cent, with the number of children in out-of-home care increasing by 25 per cent.

In response to continued growth in demand for services, DCF implemented a number of key reforms designed to enhance its corporate governance and improve the organisational accountability for performance. Key foundational documents focussing on practice performance and client outcomes were established. Changes were designed to improve operational accountability and performance, by connecting work units with shared outcomes and providing higher levels of executive management of key functional areas.

In November 2013, the DCF organisational structure was amended to introduce the Out of Home Care and Professional Practice Divisions. These changes were designed to improve operational accountability and performance, by connecting work units with shared outcomes and providing higher levels of executive management of key functional areas.

The formation of an Out of Home Care Division increased the focus on the Department's recruitment and support of kinship and foster carers, placement decision making and operational management of residential care. Key changes included establishing a centralised placement process, awarding a panel contract to deliver residential care services for young people aged 12 to 18 years, and amending a new care plan template and procedure to streamline the care planning processes and emphasise engagement with children in order to achieve better child protection outcomes.

In January 2014, DCF launched its new Strategic Plan. The Plan focuses the Department on its core objectives as a child protection agency and establishes strategic priorities to 2016-17. A range of legislative amendments including the Charter of Rights for Children in Out of Home Care also took effect in January 2014. The Charter was introduced to provide clearer and stronger statements of the quality of service children in care must receive. The Charter binds DCF and care providers to improved quality of care.

DCF also launched its Child Protection Framework and Standards of Professional Practice in April 2014, which both emphasise the importance of consistent decision making and encourage practitioners to meet key practice benchmarks. The Standards of Professional Practice set out the essential requirements for delivering effective, professional and accountable care and protection to vulnerable children.

”

15.6 Definitions of key terms

Activity Group 1 (pathways)

Receipt and assessment of initial information about a potential protection or support issue

Activities that are typically associated with receipt and assessment of initial information including receipt and recording of information, review of department databases, initial assessment of information and decisions about the appropriate response. This activity can also include consultation, with possible provision of advice. Activities by non-government organisations (NGO) may be included if appropriate.

Activity Group 2 (pathways)

Provision of generic family support services

Activities that are typically associated with provision of lower level family support services at various stages including identification of family needs, provision of support services and diversionary services, some counselling and active linking of the family to support networks. Services are funded by government but can be delivered by either the relevant agency or a NGO. This bundle of services does not involve planned follow-up by the relevant agency after initial service delivery. The services will be delivered under voluntary arrangements between the relevant agency and family. Clients may receive these services more than once.

Activity Group 3 (pathways)

Provision of intensive family support services

Activities that are typically associated with provision of complex or intensive family support services including provision of therapeutic and in-home supports such as counselling and mediation, modelling of positive parenting strategies, referrals to intensive support services that may be provided by NGOs, advocacy on behalf of clients and intensive support for a family in a residential setting. This includes protection and treatment support services. These services may be provided if diversionary services are inappropriate to the case and may lead to statutory services being provided to the client.

Activity Group 4 (pathways)

Secondary information gathering and assessment

Activities that are typically associated with secondary information gathering and assessment are currently counted as 'investigations' in the Report on Government Services. As part of this activity group a decision may be made to substantiate or not substantiate. Information gathering activities include:

- sighting the child
- contacting people with relevant information about the child or family (for example, teachers, police, support services)
- interviewing the child, sibling(s) and parents
- observing family interactions
- obtaining assessments of the child and/or family
- conducting family group conferences
- liaising with agencies providing services to the child and family
- recording a substantiation or non-substantiation decision
- case conferences with partners and contributors in the investigation and assessment process.

Activity Group 5 (pathways)

Provision of short-term protective intervention and coordination services for children not on an order

Activities that are typically associated with provision of short-term protective intervention and coordination services including:

- working with the family to address protective issues
- developing networks of support for the child
- monitoring and reviewing the safety of the child
- monitoring and reviewing family progress against case planning goals
- case conferences with agencies providing services to the child and/or family, internal discussions and reviews
- specialist child-focused therapeutic support.

Activity Group 6 (pathways)

Seeking an order

Activities that are typically associated with seeking orders (court orders or voluntary/administrative orders) including:

- preparing applications for the order
- preparing reports for the court
- obtaining assessment reports to submit to the court
- informing parties to the court proceedings, including parents, the child, and lawyers
- informing and briefing legal counsel or internal court groups
- going through internal pre-court review processes
- attending court
- conducting family group conferences.

Activity Group 7 (pathways)

Provision of protective intervention, support and coordination services for children on an order

Activities that are typically associated with provision of longer-term protective intervention and coordination services including:

- monitoring the child or young person's progress and development (for example, social development and education progress) and undertaking activities that facilitate progress and development
- meeting any specific requirements of any court order
- reviewing appropriateness of the order for the circumstances of the child or young person. This usually occurs at intervals established by the court or in legislation
- reporting back to court
- long term cases involving out-of-home care.

Activity Group 8 (pathways)

Provision of out-of-home care services

Activities that are typically associated with provision of out-of-home care services including:

- finding suitable placement(s) for the child
- assisting the child or young person to maintain contact with his/her family
- in some cases, staff payments for recruiting and training carers
- assessing suitability of potential kinship carers
- assisting the child or young person to maintain contact with their family
- working to return the child home
- assisting the child or young person as they prepare to leave care as the end of the order approaches.

Care and protection orders

Care and protection orders are legal orders or arrangements which give child protection departments some responsibility for a child's welfare. The scope of departmental involvement mandated by a care and protection order is dependent on the type of order, and can include:

- responsibility for overseeing the actions of the person or authority caring for the child
- reporting or giving consideration to the child's welfare (for example, regarding the child's education, health, religion, accommodation and financial matters).

Types of care and protection orders:

- Finalised guardianship or custody orders – involve the transfer of legal guardianship to the relevant state or territory department or non-government agency. These orders involve considerable intervention in a child's life and that of his or her family, and are sought only as a last resort. Guardianship orders convey responsibility for the welfare of a child to a guardian (for example, regarding a child's education, health, religion, accommodation and financial matters). Guardianship orders do not necessarily grant the right to the daily care and control of a child, or the right to make decisions about the daily care and control of a child, which are granted under custody orders. Custody orders generally refer to orders that place children in the custody of the state or territory, or department responsible for child protection or non-government agency. These orders usually involve the child protection department being responsible for the daily care and requirements of a child, while his or

her parent retains legal guardianship. Custody alone does not bestow any responsibility regarding the long-term welfare of the child.

- Finalised third party parental responsibility orders – transfer all duties, powers, responsibilities and authority parents are entitled to by law, to a nominated person(s) considered appropriate by the court. The nominated person may be an individual such as a relative or an officer of a state or territory department. Third party parental responsibility may be ordered when a parent is unable to care for a child, and as such parental responsibility is transferred to a relative. ‘Permanent care orders’ are an example of a third party parental responsibility order and involve the transfer of guardianship to a third party carer. It can also be applied to the achievement of a stable arrangement under a long-term guardianship order to 18 years without guardianship being transferred to a third party. These orders are only applicable in some jurisdictions.
- Finalised supervisory orders – give the department responsible for child protection some responsibility for a child’s welfare. Under these orders, the department supervises and/or directs the level and type of care that is to be provided to the child. Children under supervisory orders are generally under the responsibility of their parents and the guardianship or custody of the child is unaffected. Finalised supervisory orders are therefore less interventionist than finalised guardianship orders but require the child’s parent or guardian to meet specified conditions, such as medical care of the child.
- Interim and temporary orders – generally cover the provision of a limited period of supervision and/or placement of a child. Parental responsibility under these orders may reside with the parents or with the department responsible for child protection. Orders that are not finalised (such as an application to a court for a care and protection order) are also included in this category, unless another finalised order is in place.
- Administrative arrangements – are agreements with relevant child protection departments, which have the same effect as a court order in transferring custody or guardianship. These arrangements can also allow a child to be placed in out-of-home care without going through the courts.

Children are counted only once, even if they are on more than one care and protection order.

| | |
|---|--|
| Child | A person aged 0–17 years (including, at times, unborn children). |
| Child at risk | A child for whom no abuse or neglect can be substantiated but where there are reasonable grounds to suspect the possibility of prior or future abuse or neglect, and for whom continued departmental involvement is considered warranted. |
| Child concern reports | Reports to departments responsible for child protection regarding concerns about a child, where there is no indication that a child may have been, or is at risk of being, harmed through abuse or neglect. This may include concerns about a child’s welfare related to the quality of his or her home environment or the standard of care that he or she is receiving. |
| Children in out-of-home care during the year | The total number of children who were in at least one out-of-home care placement at any time during the year. A child who is in more than one placement is counted only once. |
| Comparability | Data are considered comparable if, (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data. |
| Completeness | Data are considered complete if all required data are available for all jurisdictions that provide the service. |

| | |
|--|--|
| Dealt with by other means | A notification that is responded to by means other than an investigation, such as the provision of advice or referral to services. This category can also include notifications where the decision to investigate has not been reached (that is, notifications 'in process'). |
| Exited out-of-home care | Where a child does not return to care within 60 days. |
| Family based care | Home-based care (see 'Out-of-home care'). |
| Family group homes | Family group homes are care settings that provide care to children in a departmentally or community sector agency provided home. These homes have live-in, non-salaried carers who are reimbursed and/or subsidised for the provision of care. |
| Foster care | Care of a child who is living apart from his or her natural or adoptive parents in a private household, by one or more adults who act as 'foster parents' and are paid a regular allowance by a government authority or non-government organisation for the child's support. The authorised department or non-government organisation provides continuing supervision or support while the child remains in the care of foster parents. Foster parents are chosen from a list of people registered, licensed or approved as foster parents by an authorised department or non-government organisation. |
| Foster parent | Any person (or such a person's spouse) who is being paid a foster allowance by a government or non-government organisation for the care of a child (excluding children in family group homes). |
| Guardian | Any person who has the legal and ongoing care and responsibility for the protection of a child. |
| Aboriginal and Torres Strait Islander person | Person of Aboriginal or Torres Strait Islander descent who identifies as being an Aboriginal or Torres Strait Islander and is accepted as such by the community with which he or she lives. |
| Investigation | An investigation of child abuse and neglect that involves identifying harm or risk of harm to the child, determining an outcome and assessing protective needs. It includes the interviewing or sighting of the subject child where practicable. |
| Investigation finalised | Where an investigation is completed and an outcome of 'substantiated' or 'not substantiated' is recorded by 31 August. |
| Investigation in process | Where an investigation is commenced but an outcome is not recorded by 31 August. |
| Investigation closed – no outcome possible | Where an investigation is commenced but is not able to be finalised in order to reach the outcome of 'substantiated' or 'not substantiated'. These files would be closed for administrative purposes. This may happen in instances where the family has relocated. |
| Length of time in continuous out-of-home care | The length of time for which a child is in out-of-home care on a continuous basis. Any break of 60 days or more is considered to break the continuity of the placement. Where a child returns home for less than 60 days and then returns to the former placement or to a different placement, this does not affect the length of time in care. Holidays or authorised absences (less than 60 days) in a placement do not break the continuity of placement. |
| Non-respite care | Out-of-home care for children for child protection reasons. |
| Notification | Contact with an authorised department by persons or other bodies making allegations of child abuse or neglect, or harm to a child. Notifications can be counted at different points in the response to a report, ranging from the point of initial contact with the source of the report to the end of a screening and decision making process. |
| Other relative | A grandparent, aunt, uncle or cousin, whether the relationship is half, full, step or through adoption, and can be traced through or to a person whose parents were not married to each other at the time of the child's birth. This category includes members of Aboriginal communities who are accepted by that community as being related to the child. |

| | |
|-------------------------------|--|
| Out-of-home care | <p>Overnight care, including placement with relatives (other than parents) where the government makes a financial payment. Includes care of children in legal and voluntary placements (that is, children on and not on a legal order) but excludes placements solely funded by disability services, psychiatric services, youth justice facilities and overnight child care services.</p> <p>There are five main out-of-home care placement types:</p> <ul style="list-style-type: none"> • Residential care – where placement is in a residential building with paid staff. • Family group homes – provide care to children in a departmentally or community sector agency provided home. These homes have live-in, non-salaried carers who are reimbursed and/or subsidised for the provision of care. • Home-based care – where placement is in the home of a carer who is reimbursed (or who has been offered but declined reimbursement) for expenses for the care of the child. This is broken down into three subcategories: (1) <i>relative/kinship care</i> – where the caregiver is a relative (other than parents), considered to be family or a close friend, or is a member of the child or young person’s community (in accordance with their culture) who is reimbursed (or who has been offered but declined reimbursement) by the State/Territory for the care of the child. For Aboriginal and Torres Strait Islander children, a kinship carer may be another Aboriginal and Torres Strait Islander person who is a member of their community, a compatible community or from the same language group; (2) <i>foster care</i> – where the care is authorised and carers are reimbursed (or were offered but declined reimbursement) by the state/territory and supported by an approved agency. There are varying degrees of reimbursement made to foster carers; (3) <i>other</i> – home-based care which does not fall into either of the above categories. • Independent living – including private board and lead tenant households. • Other – includes placements that do not fit into the above categories and unknown living arrangements. This includes boarding schools, hospitals, hotels/motels and defence force. |
| Relatives/kin | <p>People who are family or close friends, or are members of a child or young person’s community (in accordance with their culture) who are reimbursed (or who have been offered but declined reimbursement) by the State/Territory for the care of a child. For Aboriginal and Torres Strait Islander children, a kinship carer may be another Aboriginal and Torres Strait Islander person who is a member of their community, a compatible community or from the same language group.</p> |
| Respite care | <p>Respite care is a form of out-of-home care that is used to provide short-term accommodation for children and young people where the intention is for the child to return to their prior place of residence. Respite placements include: <i>respite from birth family</i>, where a child is placed in out-of-home care on a temporary basis for reasons other than child protection (for example, the child’s parents are ill or unable to care for them on a temporary basis; or as a family support mechanism to prevent entry into full time care, as part of the reunification process, as a shared care arrangement); <i>respite from placement</i>, where a child spends regular, short and agreed periods of time with another carer other than their primary carer.</p> |
| Stability of placement | <p>Number of placements for children who exited out-of-home care and did not return within 60 days. Placements exclude respite or temporary placements lasting less than 7 days. Placements are counted separately where there is:</p> <ul style="list-style-type: none"> • a change in the placement type — for example, from a home-based to a facility-based placement • within placement type, a change in venue or a change from one home-based placement to a different home-based placement. <p>Each placement should only be counted once. A return to a previous placement is not included as a different placement. A return home is not counted as a placement, although if a child returns home for 60 days or more they are considered to have exited care.</p> |
| Substantiation | <p>Notification for which an investigation concludes there is reasonable cause to believe that the child has been, is being or is likely to be abused, neglected or otherwise harmed. It does not necessarily require sufficient evidence for a successful prosecution and does not imply that treatment or case management is, or is to be, provided.</p> |

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (b) Population data used to derive rates are revised to the ABS' final 2011 Census rebased estimates.
- (c) Refer to table 15A.4 for information on the comparability of expenditure data.
- (d) Numbers may not sum due to rounding.
- (e) Expenditure on family support services was introduced in the 2013 Report.
- (f) For child protection services, prior to 2009-10, expenditure per child related to children aged 0-16 years in the residential population. From 2009-10 onwards, expenditure per child relates to children aged 0-17 years in the residential population.
- (g) NSW: The movement in expenditure for intensive family support services between 2011-12 and 2012-13 is mainly due to the movement and reclassification of previously identified early intervention services (Brighter Futures) to statutory child protection activities (Strengthening Families) and overhead re-allocations due to the change in mix across all the programs.

Table 15A.1 State and Territory Government real recurrent expenditure on child protection and out-of-home care services (2013-14 dollars) (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l), (m)

| <i>Unit</i> | <i>2004-05</i> | <i>2005-06</i> | <i>2006-07</i> | <i>2007-08</i> | <i>2008-09</i> | <i>2009-10</i> | <i>2010-11</i> | <i>2011-12</i> | <i>2012-13</i> | <i>2013-14</i> |
|--|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| (h) Victoria: Expenditure for 2004-05 includes additional funding for Aboriginal Family Decision Making, Adolescent Medication and Diversion and Foster Care Initiatives and data revisions. Over the past four years significant additional funding has been provided to Victorian 'Family Services'. Client data relating to clients who received intensive support from these services were not able to be provided for earlier years but are included in 2007-08 onwards. The increase in client numbers reflects the accumulated increase over recent years. The reduction in out-of-home care salary expenses in 2010-11 is due to the conversion of internally delivered residential care services in the North West Metropolitan region to externally managed services. Child protection services, IFSS, FSS and OOH data for 2012-13 and 2013-14 are not comparable to data for earlier years as following a major restructure of the department in 2012-13, the methodology used for attributing internal costs changed. This applied particularly to departmental management and support costs where the composition of all services changed significantly, in 2013-14. 2012-13 data have been revised to align with these changes and to provide data for the new expense categories introduced in 2013-14. Total expenditure on all services for 2012-13 have not changed and total services expenditure for 2012-13 and 2013-14 are comparable with those of previous years. | | | | | | | | | | |
| (i) Queensland: Expenditure from 2004-05 onwards reflects full absorption costing on an accrual accounting basis. | | | | | | | | | | |
| (j) WA: Due to a new method of expenditure reporting, expenditure data for 2011-12 are not comparable to expenditure data for previous years. Child protection services, IFSS and FSS data for 2012-13 and 2013-14 are not comparable to data for earlier years as in 2013-14, some services previously considered to be IFSS were re-allocated to child protection services and FSS to be consistent with unit counting rules. 2012-13 data have been revised to be consistent with 2013-14. | | | | | | | | | | |
| (k) SA: Expenditure data were recast from 2008-09 due to the inclusion of expenditure previously incorrectly omitted. The significant increase in out-of-home care expenditure in 2009-10 was the result of growth in the alternative care system. Family Support Services data were not available for any year so the totals for SA and Australia are understated. | | | | | | | | | | |
| (l) Tasmania: In 2012-13, the allocation of Targeted Youth Support Services (TYSS) was reviewed, and TYSS was found to better fit the IFSS definition, the value of the reallocation from FSS to IFSS is \$1.4 million. Payroll tax is excluded from salaries and wages, this is a decrease of \$1.09 million from the previous year. A restructure in regional management led to a decrease in cost of \$275 000. The total decrease in salaries and wages attributable to these two items is \$1.37 million. The proportional cost reduction in OOH services is \$196 000. A service provider in the South of Tasmania has seen a significant increase in the use of their foster carers, the total increase in payments is \$1.2 million – increased reliance on this provider is the cost driver for non-residential payments to NGO's. A combination of increased numbers of children in care (including those transitioned to third party guardianship who are still funded) and indexation is the cost driver for the increase in OHC non-salary non-residential OOH costs. The calculation methodology for allocation of umbrella costs has been altered and the total departmental overhead allocated to Children and Youth Services has reduced by \$1.1 million following significant internal restructuring of the department. This has led to a decrease in the reported umbrella costs. | | | | | | | | | | |

Table 15A.1 **State and Territory Government real recurrent expenditure on child protection and out-of-home care services (2013-14 dollars) (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l), (m)**

| | <i>Unit</i> | <i>2004-05</i> | <i>2005-06</i> | <i>2006-07</i> | <i>2007-08</i> | <i>2008-09</i> | <i>2009-10</i> | <i>2010-11</i> | <i>2011-12</i> | <i>2012-13</i> | <i>2013-14</i> |
|---------|--|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| (m) NT: | In years prior to 2013-14, a grant program with Catholic Care NT was reported in the IFSS category. In 2013-14 the agreement was modified to be more general so has been relocated in reporting to the FSS category. All NGO funded programs include an element of intensive support with families, however this is on a voluntary basis. The decrease in child protection expenditure and increases in OOHC and family support expenditure relate to a methodology change in how the agency measures its associated costs to each category. Predominantly, the changes relate to the separation of case work between child protection activities and OOHC case management. In the past case workers have been allocated to child protection. There was also an element of child protection expenditure which was reallocated to family and parent support through the methodology review. | | | | | | | | | | |

TABLE 15A.2

Table 15A.2 **State and Territory Government real recurrent expenditure on child protection services, per notification, per investigation and per substantiation (2013-14 dollars) (a), (b), (c), (d), (e)**

| | <i>Unit</i> | <i>2004-05</i> | <i>2005-06</i> | <i>2006-07</i> | <i>2007-08</i> | <i>2008-09</i> | <i>2009-10</i> | <i>2010-11</i> | <i>2011-12</i> | <i>2012-13</i> | <i>2013-14</i> |
|----|-------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|
| NT | \$ | 24 985.08 | 21 848.76 | 16 824.18 | 17 502.92 | 19 953.48 | 16 618.53 | 19 647.55 | 24 758.30 | 47 796.83 | 21 577.72 |

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (b) These data need to be interpreted with care. These data are based on total expenditure on child protection activities, they do not represent and cannot be interpreted as unit costs for notifications, investigations or substantiations. These data cannot be added together to determine the overall cost of child protection services.
- (c) Refer to table 15A.4 for information on the comparability of expenditure data.
- (d) 2006-07 data for some jurisdictions for 'annual real expenditure per investigation' and 'annual real expenditure per notification' may not be strictly comparable with previous years, due to the introduction of a new investigation category 'Investigation closed - no outcome possible' in 2006-07. Cases where an investigation was closed and where no outcome was possible may previously have been recorded as 'dealt with by other means' or 'investigations in process'.
- (e) Refer to tables 15A.1 and 15A.5 for detailed footnotes.
- (f) In Queensland, all notifications are required to be investigated. As such, the annual real recurrent expenditure on all child protection activities per notification is equivalent to the annual real recurrent expenditure on all child protection activities per investigation from 2005-06 onwards.

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (b) Refer to table 15A.4 for information on the comparability of expenditure data.
- (c) Numbers may not sum due to rounding.
- (d) Non-residential out-of-home care services includes family group homes.
- (e) These data need to be interpreted with care because they do not represent and cannot be interpreted as unit cost measures. Expenditure per child in care at 30 June overstates the cost per child because significantly more children are in care during a year than at a point in time. In addition, these data do not reflect the length of time that a child spends in care.
- (f) Data relating to annual real expenditure per child in out-of-home care should be interpreted with caution due to the effect of different proportions of children in residential out-of-home care across jurisdictions.
- (g) Victoria: OOHC data for 2012-13 and 2013-14 are not comparable to data for earlier years as following a major restructure of the department in 2012-13, the methodology used for attributing internal costs changed. This applied particularly to departmental management and support costs where the composition of OOHC services changed significantly, in 2013-14. 2012-13 data have been revised to align with these changes and to provide data for the new expense categories introduced in 2013-14.

Table 15A.3 State and Territory Government real recurrent expenditure on out-of-home care services (2013-14 dollars) (a), (b), (c), (d), (e), (f), (g)

Table 15A.5 Child protection notifications, investigations and substantiations by Indigenous status (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k), (l), (m)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|-----|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|
| (a) | Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported. | | | | | | | | |
| (b) | If a child is the subject of more than one notification, investigation or substantiation, each of these is counted. | | | | | | | | |
| (c) | Investigations relate to notifications received during the financial year. If the investigation was completed by 31 August it is classified as finalised. If the investigation was not completed by 31 August it is classified as not finalised. | | | | | | | | |
| (d) | The definition of an investigation includes interviewing or sighting the child where practicable. | | | | | | | | |
| (e) | Prior to 2006-07, the category 'investigations in process' was called 'investigations not finalised'. | | | | | | | | |
| (f) | 'Investigation closed – no outcome possible' includes cases where an outcome of substantiated or not substantiated could not be reached, but where the file may be closed for administrative reasons. Prior to 2006-07, these cases may previously have been recorded as 'Dealt with by other means'. | | | | | | | | |
| (g) | 'Dealt with by other means' includes notifications that were responded to by means other than an investigation, such as referral to family services or provision of advice. Prior to 2006-07, some of the cases recorded as 'dealt with by other means' may have been cases where the investigation was closed with no outcome possible. Dealt with by other means also includes cases that were previously reported as 'no investigation possible/no action'. | | | | | | | | |
| (h) | NSW: Data for 'notifications investigated', 'notifications resolved without investigations' and 'notifications dealt with by other means' for 2011-12 to 2013-14 are not comparable with previous years. The counting rules changed for 2011-12 data to better account for recent practice changes. Data are not comparable with those of other jurisdictions. NSW has a differential investigation response whereby an investigation can be undertaken over two stages (stage 1 – information gathering; stage 2 – assessment). | | | | | | | | |
| (i) | Victoria: If a case is open following the first notification, no further notifications concerning the child are recorded. During 2006-07, Victoria introduced a major new data system, which was progressively rolled out across the State. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data from 2006-07 onwards may not be fully comparable with data from previous years. | | | | | | | | |
| (j) | Queensland: The category 'investigation closed - no outcome possible' is considered to be a finalised investigation. This includes notifications where there was insufficient information to enable an assessment outcome of substantiated or unsubstantiated i.e. the family was unable to be identified, located or has moved overseas and the investigation is therefore considered closed. 2006-07: Notification figures for Queensland are affected by a change in recording practice. From March 2007, any new child protection concerns received by the department that relate to an open notification or investigation and assessment are recorded as an additional concern and linked to the open notification/investigation and assessment. Previously, any new child protection concerns received by the department were recorded as an additional notification. 2011-12: Additional staff focussed on investigations and assessments were deployed across Queensland. This resulted in a decrease in the number of investigations not yet finalised, and an increase in the number of investigations with a finalised outcome of substantiated, unsubstantiated or no investigation and assessment outcome. | | | | | | | | |
| (k) | WA: A safety and wellbeing assessment (investigation) is counted as 'finalised' if it is approved, otherwise it is counted as 'in process'. | | | | | | | | |
| (l) | SA: During 2009-10, SA implemented new service and reporting arrangements. Therefore, data for 2009-10 are not fully comparable to previous years' data. | | | | | | | | |

|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|

(m) Tasmania: A change was made to the business processes for recording notifications in February 2008. New contacts made about similar concerns during an open notification/investigation period, within 6 weeks of the first contact, were added to the notification as a 'case note'. Case notes are not included in the count of notifications and hence comparison between values from 2007-08 to 2008-09 should be made with caution.

(n) NT: Number of notifications involving children of unknown Indigenous status totals include 1 client for whom Indigenous status was not recorded (no client record).

na Not available. .. Not applicable. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from *Child protection Australia* data collection for data prior to 2012-13.

| Children discharged from orders | 2 225 | 2 032 | 2 118 | 255 | 884 | 156 | 122 | 301 |

- (a) Prior to 2009-10, the category 'non-Indigenous' included children whose Indigenous status was unknown or not stated. In 2009-10, a separate category 'children of unknown Indigenous' status was introduced.
- (b) NSW: Data do not include children on finalised supervisory orders. NSW is working to improve the way it counts admissions to care and protection orders and does not currently strictly adhere to the national counting rules.
- (c) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with previous years data. Data for 2006-07 are based on an extract from the new child protection system which only contains information relating to open cases and/or cases commenced after 1 July 2000. As the earliest history that can be traced back for a client is to 1 July 2000, if a child had been admitted to an order prior to 1 July 2000 they may be counted as admitted for the first time in 2006-07.
- (d) Queensland: Previous admissions to care and protection orders in other jurisdictions could not be counted. During 2012-13, reporting on children subject to an order continued under Section 99 of the Child Protection Act 1999 was enhanced. When a child is subject to an order granting custody or guardianship to the chief executive or to a member of the child's family, Section 99 allows for the original order to continue until an application is decided by the court for an extension or for another order. Previously, some children subject to orders continued under Section 99 were not included in the count. As a result, the number of children discharged from orders has decreased and is not comparable to previous years.
- (e) WA admissions and discharges data for 2013-14 are not comparable to previous years due to a change in methodology in 2013-14.
- (f) NT: Due to a data misinterpretation, the figure provided for the number of children admitted to orders in 2006-07 is likely to be an underestimation of the true number and thus should be treated with caution.

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from *Child protection Australia* data collection for data prior to 2012-13.

(a) Prior to 2009-10, the category 'non-Indigenous' included children whose Indigenous status was unknown or not stated. In 2009-10, a separate category 'children of unknown Indigenous' status was introduced.

(b) NSW: Data do not include children on finalised supervisory orders.

Table 15A.7 Number of children on care and protection orders by type of order and Indigenous status, at 30 June (a), (b), (c), (d), (e), (f)

| (c) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, child protection data for 2006-07 onwards may not be fully comparable with previous years data. Prior to 2013-14 Third party parental responsibility orders were included in Finalised guardianship or custody orders and a small minority of Victoria's interim and temporary orders were reported. | | | | | | | | |
| (d) Queensland: From 2008, data for the category 'third party parental responsibility orders' are reported separately. Previously, these were counted as a subset of 'guardianship or custody orders'. | | | | | | | | |
| (e) WA: Children on care applications are included in the category 'interim and temporary orders'. Specifically, in WA, the application for a care and protection order to be issued for a child is counted as an interim order for national reporting purposes. However, no order is actually issued during this stage. It is thus not valid to compare the number of orders on a percentage basis. Implementation of the Children and Community Services Act 2004 in March 2006 required the legal status of children in care to be reviewed and Protection Orders were sought for a number of children already in care but not under care and protection orders, for 2006 onwards. In 2006-07, the number of children on orders included 24 children who were placed on Enduring Parental Responsibility orders. | | | | | | | | |
| (f) NT: Third party parental responsibility data are not captured for NT. | | | | | | | | |

- (a) Data on the number of notifications by Indigenous status should be interpreted with care. These data are collected very early in the child protection process and often before the agency has full knowledge of the child's family circumstances. As a result of this lack of full knowledge and the other inherent difficulties in identifying Indigenous status, these data are not considered reliable.
- (b) Prior to 2009-10, rates of children in notifications, investigations and substantiations were calculated as the number of children aged 0–16 years in each category (including children whose ages were not stated) divided by the estimated population of children aged 0–16 years at 31 December, multiplied by 1000. For Aboriginal and Torres Strait Islander children, the June projections for two years were averaged to obtain a population figure for December of the relevant year. For 2009-10 onwards, rates of children in notifications, investigations and substantiations are calculated as the number of children aged 0-17 years in each category (including children whose ages were not stated) divided by the estimated population of children aged 0-17 years at 31 December, multiplied by 1000.
- (c) Rates of non-Indigenous children on care and protection orders were calculated as the number of children aged 0–17 years (including children whose ages were not stated) who were on a care and protection order at 30 June, divided by the estimated population aged 0–17 at 31 March, multiplied by 1000. Rates of Aboriginal and Torres Strait Islander children on care and protection orders were calculated as the number of children aged 0-17 years (including children whose ages were not stated) who were on a care and protection order at 30 June, divided by the estimated population aged 0-17 at 30 June using 'Series B', Experimental estimates and projections, Aboriginal and Torres Strait Islander Australians, 1991 to 2021 (cat. no. 3238.0).
- (d) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (e) Rates are not able to be calculated for children of unknown Indigenous status as corresponding population data are not available.
- (f) NSW: See table 15A.5 for detailed footnotes.
- (g) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with previous years data.

Table 15A.8 Children in notifications, investigations and substantiations and on care and protection orders, per 1000 children in the target population, and by Indigenous status (a), (b), (c), (d), (e), (f), (g), (h), (i), (j), (k)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (h) Queensland: During 2011-12, additional staff focussed on investigations and assessments were deployed across Queensland. This resulted in a decrease in the number of investigations not yet finalised, and an increase in the number of investigations with a finalised outcome of substantiated, unsubstantiated or no investigation and assessment outcome. | | | | | | | | | |
| (i) WA: The number of notifications increased between 2005-06 and 2006-07 as all Concern for Child Wellbeing reports are now classified as a notification. Previously, only those that were followed by an investigation were counted as a notification. Implementation of the Children and Community Services Act 2004 in March 2006 required the legal status of children in care to be reviewed and Protection Orders were sought for a number of children already in care but not under care and protection orders. Children on care applications are included in the category 'interim and temporary orders'. Specifically, in WA, the application for a care and protection order to be issued for a child is counted as an interim order for national reporting purposes. However, no order is actually issued during this stage. It is thus not valid to compare the number of orders on a percentage basis. | | | | | | | | | |
| (j) SA: Includes in 'notifications' only those reports which have met the criteria for a reasonable suspicion of child abuse or neglect. | | | | | | | | | |
| (k) Tasmania: The proportions of notifications, finalised investigations and substantiations for children of unknown Indigenous status impacts the reliability of these data. As such, any comparisons of the Indigenous status breakdown between years should be made with caution. | | | | | | | | | |

na Not available. – Nil or rounded to zero.

Table 15A.10 Children who were the subject of a decision not to substantiate during the year and who were also the subject of a subsequent substantiation within 3 and/or 12 months (a), (b), (c), (d), (e), (f)

This table has changed since the Report release in January 2015.

See errata at <http://www.pc.gov.au/research/recurring/report-on-government-services/2015/community-services>.

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|

- (a) See notes to source tables for a description of how the data were defined and collected.
- (b) Jurisdictions are now providing the denominator for this indicator (denominator is all children who were the subject of an investigation and a decision not to substantiate). Previously the denominator was derived by the AIHW. Data in this Report may therefore differ from previous Reports.
- (c) Proportions are calculated on the basis of all children who were the subject of an investigation and a decision not to substantiate in a given year.
- (d) NSW: In 2003-04, NSW was unable to provide data due to the introduction of a new client information system. Following the NSW Keep Them Safe reforms, the 2010-11 data reflect the first full year of reporting under legislative changes to the NSW Children and Young Persons (Care and Protection) Act 1998, proclaimed on 24 January 2010. This includes raising the reporting threshold from 'risk of harm' to the new 'risk of significant harm'. NSW data for 2012-13 have been revised and differ from those in the 2014 Report. Data for 'notifications investigated', 'notifications resolved without investigations' and 'notifications dealt with by other means' for 2011-12 to 2013-14 are not comparable to previous years. The counting rules changed for 2011-12 data to better account for recent practice changes therefore NSW data are not comparable with those of other jurisdictions. NSW has a differential investigation response whereby an investigation can be undertaken over two stages (stage 1 - information gathering; stage 2 - assessment).
- (e) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with previous years data.
- (f) NT: Data from 2012-13 onwards have been derived from the AIHW NMDS, which does not include investigations which relate to notifications received prior to 1 July 2012.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

Table 15A.11 Children who were the subject of a substantiation during the year and who were also the subject of a subsequent substantiation within 3 and/or 12 months (a), (b), (c), (d), (e)

This table has changed since the Report release in January 2015.

See errata at <http://www.pc.gov.au/research/recurring/report-on-government-services/2015/community-services>.

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|-----|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|
| (a) | Jurisdictions have provided the denominator (all children who were the subject of a substantiation) for this indicator since 2012-13. Previously the denominator was derived by the AIHW. Data in this Report may therefore differ from the 2013 and earlier Reports. | | | | | | | | |
| (b) | As a proportion of all children who were the subject of a substantiation. | | | | | | | | |
| (c) | NSW: In 2003-04, NSW was unable to provide data due to the introduction of a new client information system. Following the NSW Keep Them Safe reforms, the 2010-11 data reflect the first full year of reporting under legislative changes to the NSW Children and Young Persons (Care and Protection) Act 1998, proclaimed on 24 January 2010. This includes raising the reporting threshold from 'risk of harm' to the new 'risk of significant harm'. NSW data for 2012-13 have been revised and differ from those in the 2014 Report. Data for 'notifications investigated', 'notifications resolved without investigations' and 'notifications dealt with by other means' for 2011-12 to 2013-14 are not comparable to previous years. The counting rules changed for 2011-12 data to better account for recent practice changes therefore NSW data are not comparable with those of other jurisdictions. NSW has a differential investigation response whereby an investigation can be undertaken over two stages (stage 1 - information gathering; stage 2 - assessment). | | | | | | | | |
| (d) | Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, the Victorian child protection data may not be fully comparable with previous years data. | | | | | | | | |
| (e) | NT: Data from 2012-13 onwards have been derived from the AIHW NMDS, which does not include investigations which relate to notifications received prior to 1 July 2012. | | | | | | | | |

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

| Tasmania (e) | 86.8 (71.9–95.6) | 94.1 (92.8–95.4) | 48.7 (32.4–65.2) | 88.5 (86.7–90.3) |
| ACT (e) | na | na | na | na |

(a) Benchmark calculations for children on guardianship/custody orders include only government school students, whereas all students calculations include government school and non-government school students.

(b) Benchmark calculations for children on guardianship/custody orders exclude students who were exempt from the tests, whereas all student calculations include exempted students and these students are reported as falling below the benchmark.

Table 15A.12 **Proportion of children on guardianship/custody orders achieving the national reading and numeracy benchmarks, Year 3 level (per cent) (a), (b), (c), (d)**

| <i>Reading</i> | | <i>Numeracy</i> | |
|---------------------------|---------------------|---------------------------|---------------------|
| <i>Children on orders</i> | <i>All students</i> | <i>Children on orders</i> | <i>All students</i> |

- (c) The methods used to calculate percentages and confidence intervals of children who are on guardianship/custody orders who have achieved national benchmark achievement levels is not the same as the method used by MCEETYA to report all student results. Confidence intervals have been calculated for children on guardianship/custody orders using the exact 95 per cent confidence limits, which have been approximated to an F distribution. For the all students estimates, the methods used by MCEETYA for calculating confidence intervals involve specifically developed software, accounting for some sources of error in the measurement and estimation process, and are reliant on having data for large cohorts of students.
- (d) Data for 2003 are available for six jurisdictions (Victoria, Queensland, WA, SA, Tasmania and the ACT). Data for 2004-2006 are available for five jurisdictions (Victoria, Queensland, WA, SA and Tasmania).
- (e) Care should be taken when interpreting the results for Tasmania and the ACT, as the number of children on guardianship/custody orders in these jurisdictions is very small.

(a) Benchmark calculations for children on guardianship/custody orders include only government school students, whereas all students calculations include government school and non-government school students.

(b) Benchmark calculations for children on guardianship/custody orders exclude students who were exempt from the tests, whereas all student calculations include exempted students and these students are reported as falling below the benchmark.

Table 15A.14 Proportion of children on guardianship/custody orders achieving the national reading and numeracy benchmarks, Year 7 level (per cent) (a), (b), (c), (d)

| <i>Reading</i> | | <i>Numeracy</i> | |
|---------------------------|---------------------|---------------------------|---------------------|
| <i>Children on orders</i> | <i>All students</i> | <i>Children on orders</i> | <i>All students</i> |

- (c) The methods used to calculate percentages and confidence intervals of children who are on guardianship/custody orders who have achieved national benchmark achievement levels is not the same as the method used by MCEETYA to report all student results. Confidence intervals have been calculated for children on guardianship/custody orders using the exact 95 per cent confidence limits, which have been approximated to an F distribution. For the all students estimates, the methods used by MCEETYA for calculating confidence intervals involve specifically developed software, accounting for some sources of error in the measurement and estimation process, and are reliant on having data for large cohorts of students.
- (d) Data for 2003 are available for six jurisdictions (Victoria, Queensland, WA, SA, Tasmania and the ACT). Data for 2004-2006 are available for five jurisdictions (Victoria, Queensland, WA, SA and Tasmania).
- (e) Care should be taken when interpreting the results for Tasmania and the ACT, as the number of children on guardianship/custody orders in these jurisdictions is very small.

(a) Caution should be used when interpreting results as jurisdictions count notifications at different points in response to a report, and have different policies and protocols governing the type of response to a notification.

(b) NSW: Data were not available prior to 2011-12.

(c) Tasmania: There are issues with the recording of the date commenced for the measure 'response times to commence investigations'. In the current system, the 'date investigation commenced' defaults to the date referred for investigation. This date is often not updated to reflect the actual date commenced which means the number of days to commence investigations is often understated.

na Not available.

(a) Caution should be used when interpreting results as jurisdictions count notifications at different points in response to a report, and have different policies and protocols governing the type of response to a notification.

(b) NSW: Data were not available prior to 2011-12.

(c) NT: Prior to 2013-14 data have included investigations closed as 'no possible outcome'. Data from 2013-14 are not comparable to prior years data. Data from 2013-14 onwards have been derived from AIHW Child Protection NMDS which does not include investigations which relate to a notification received prior to 1 July 2012.

na Not available.

(a) These data were collected for the first time for the 2011-12 reporting period. Data are experimental and subject to further review and refinement in future reports.

(b) Data are not comparable across jurisdictions as policies and legislation varies regarding timeframes within which children are required to have case plans prepared.

(c) NSW: in November 2012, a new case plan record data item was included on the information system, resulting in more accurate data capture post-November 2012. Consequently, 2012-13 data contain a combination of new and old recording procedures. Accuracy issues with recording procedures prior to November 2012 affected the case plans of 373 children and young people (CYP). A sample of these case plans were read in detail in order to provide a reliable estimate of this cohort of CYP for the overall NSW figure for 2012-13. NSW procedures state that a case plan is to be developed for a CYP within 30 days of the CYP entering care, therefore CYP who have been in care for less than 30 days are excluded from the base count.

(d) SA: data are not available due to recording issues.

(e) Tasmania: a child with a populated case plan has not been counted as having a 'documented case plan' if the case plan was not approved or if the review date was overdue.

(f) ACT: data for 2013-14 are not comparable with ACT data for earlier years due to data entry issues during a period of change.

(g) NT: data are not available due to recording issues.

na Not available.

- (a) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (b) The scope for out-of-home care was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer.
- (c) Rates for non-Indigenous children were calculated as the number of children aged 0–17 years (including those whose age was not stated) in out-of-home care at 30 June, divided by the estimated population aged 0–17 at 31 March, multiplied by 1000. Rates for Indigenous children were calculated as the number of children aged 0-17 years (including those whose age was not stated) in out-of-home care at 30 June, divided by the estimated population aged 0-17 at 30 June using 'Series B', Experimental estimates and projections, Aboriginal and Torres Strait Islander Australians, 1991 to 2021 (cat. no. 3238.0).

Table 15A.18 **Children in out-of-home care: number and rate per 1000 children aged 0–17 years by Indigenous status (a), (b), (c), (d), (e), (f), (g), (h)**

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (d) Rates were calculated as the number of children aged 0–17 years (including those whose age was not stated) in at least one out of home care placement during the year, divided by the estimated population aged 0–17 at 31 December, multiplied by 1000. For Indigenous children, the June projections for two years were averaged to obtain a population figure for December of the relevant year. Rates could not be calculated for children of unknown Indigenous status as corresponding population data were not available. | | | | | | | | | |
| (e) NSW: Payments are made to relative/kin carers as well as foster carers. Relative/kin carers may care for children who are not on an order. | | | | | | | | | |
| (f) Victoria: The foster care category includes children on permanent care orders where carers are in receipt of foster care payment and children in individually tailored home-based arrangements. During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid-2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data from previous years. | | | | | | | | | |
| (g) Tasmania: The scope for out-of-home care was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer. Tasmania is not able to adhere to this definition of out-of-home care. However, the number of carers declining a financial payment is likely to be low. The number of children in out-of-home care as at 30 June 2007 is not comparable to that reported for previous years for Tasmania because of exclusion of a cohort of children who did not meet the definition of out-of-home care. | | | | | | | | | |
| (h) NT: Improvement in data quality in 2008-09 resulted in a more accurate count of children in out of home care. The number of children reported to be in out-of-home care in 2007-08 was likely to be undercounted. | | | | | | | | | |

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

- (a) Family group homes are included as part of residential care. However, in this table they have been disaggregated.
- (b) The scope for out-of-home care was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer.
- (c) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (d) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data from previous years.
- (e) WA: WA reported children in family group homes separately to residential care for the first time in 2005. A small number of children are placed with externally managed foster carers who are also their relative and have been recorded in the foster care category in 2007.
- (f) SA: In 2005-06 children who were in residential care were incorrectly categorised as being in family group homes.
- (g) Tasmania: The number of children in out-of-home care as at 30 June 2007 is not comparable to that reported for previous years because of exclusion of a cohort of children who did not meet the definition of out-of-home care.

| (h) | <p>NT: Data from 2013-14 onwards has been derived from the AIHW Child Protection National Minimum Data Set (CP NMDS). Prior year data include unfunded kinship care places in the count of relative/kinship care and data from 2013-14 are not comparable with data for 2012-13 and earlier years. In addition, in the NT's client information system, the majority of children in a relative/kinship placement are captured in the foster care placement type. In 2013-14 approximately 40 per cent of children in the 'foster care' category are placed in a relative/kinship household.</p> <p>na Not available. .. | Another type of order | – | 122 | 2 | – | 60 | 1 | 1 | .. |
| Not on an order | 1 293 | 717 | 637 | 253 | 98 | 9 | 2 | .. |
| Total all children | 9 230 | 4 394 | 5 657 | 1 829 | 1 329 | 576 | 342 | 324 |

- (a) 'On a care and protection order' includes children on guardianship or custody orders or arrangements; and those on interim or temporary orders. 'On another type of order' includes offence orders or other orders that are not care and protection orders.
- (b) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (c) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data from previous years. In 2013-14 the number of children reported as on an order increased and the number not on an order decreased as a result of improved processing.
- (d) Tasmania: Tasmania is not able to adhere to the definition of OOHC introduced in 2007-08 to include children in care where a financial payment has been offered but has been declined by the carer. However, the number of carers declining a financial payment is likely to be very low. The number of children in out-of-home care as at 30 June 2007 is not comparable to that reported for previous years for Tasmania because of exclusion of a cohort of children who did not meet the definition of out-of-home care.

na Not available. .. Not applicable. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

- (a) This indicates the length of time a child has been in out-of-home placement on a continuous basis at 30 June. A return home of less than 7 days is not counted as a break in the continuity of placement.
- (b) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (c) Victoria: During 2006-07, Victoria introduced a major new data system, rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data for previous years.
- (d) Queensland: Prior to 2008, Queensland was not able to report on the length of time in continuous out-of-home care placement, instead reporting on the length of time in the current out-of-home care placement. From 2008 data refer to the length of time in continuous out-of-home care and is therefore not comparable with previous years. Only limited data were available for 2006-07 due to the transition to a new information management system.
- (e) Tasmania: Tasmania was unable to distinguish between respite and non-respite care prior to 2010-11. Both types of placement are included if they satisfy the general definition of out-of-home care (OOHC). The number of children in OOHC as at 30 June 2007 is not comparable to that reported for previous years for Tasmania because of exclusion of a cohort of children who did not meet the definition of OOHC.
- (f) NT: Respite and non-respite care data for 2004-05 to 2007-08 are unable to be distinguished between reliably so both types of placement are included if they satisfy the definition of OOHC. A change in the counting algorithm for 2008-09 resulted in a more accurate distribution in the length of time in OOHC compared with 2007-08. In addition, improvement in data quality in 2008-09 resulted in a more accurate count of children in OOHC. The number of children in OOHC reported in 2007-08 was likely to be undercounted. Data from 2013-14 onwards have been derived from the AIHW Child Protection National Minimum Data Set (CP NMDS) and are not comparable with prior years data.

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

Table 15A.22 Children who exited out-of-home care during the year by Indigenous status and length of time spent in out-of-home care (number) (a), (b), (c), (d), (e)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|
| (a) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported. | | | | | | | | |
| (b) Exits from out-of-home care are defined as occasions when children leave care and do not return within 60 days. Placement breaks which do not exceed 7 days are not counted as exits. | | | | | | | | |
| (c) NSW: Prior to 2004-05, separate data on children who exited care provided by non government organisations were not available. Estimated figures were provided for these children exiting care. | | | | | | | | |
| (d) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with previous years data. | | | | | | | | |
| (e) Tasmania: The number of children in out-of-home care as at 30 June 2007 is not comparable to that reported for previous years for Tasmania because of exclusion of a cohort of children who did not meet the definition of out-of-home care. | | | | | | | | |

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

- (a) The percentage of children in out-of-home care (OOHC) placed with relatives or kin was calculated using as the denominator the total number of children in OOHC placement, by Indigenous status, at 30 June where the placement type was known.
- (b) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (c) The scope for OOHC was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer.
- (d) NSW: Payments may be made to relative/kin carers where children are not on an order.
- (e) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data for previous years.
- (f) WA: A small number of children are placed with externally managed foster carers who are also their relative and have been recorded in the foster care category in 2007.

Table 15A.23 **Children in out-of-home care placed with relatives/kin by Indigenous status, 30 June (a), (b), (c), (d), (e), (f), (g), (h)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(g) Tasmania: The scope for OOHC was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer. Tasmania is not able to adhere to the definition of OOHC introduced in 2007-08 to include children in care where a financial payment has been offered but has been declined by the carer. However, the number of carers declining a financial payment is likely to be very low. The number of children in OOHC as at 30 June 2007 is not comparable to that reported for previous years for Tasmania because of exclusion of a cohort of children who did not meet the definition of OOHC.

(h) NT: due to a stringent assessment process in the NT, kinship carers are registered as foster carers. Due to system limitations, data reported for the NT for this measure do not provide a realistic view of children placed with relatives/kin (refer to table 15A.24). Improvement in data quality in 2008-09 resulted in a more accurate count of children in out-of-home care. The number of children in out-of-home care reported in 2007-08 was likely to be undercounted. Due to realignment of placement types to ensure better data integrity, data for the financial year 2012-13 may not be comparable with data provided for previous financial years.

na Not available. - Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

(a) The denominator for calculating the proportion of children excludes Indigenous children living independently and those whose living arrangements were unknown.

Table 15A.24 Aboriginal and Torres Strait Islander children in out-of-home care by relationship of caregiver, 30 June (a), (b), (c), (d), (e), (f), (g), (h), (i), (j)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (b) | Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported. | | | | | | | | | |
| (c) | The scope for out-of-home care was expanded in 2007-08 to include children in care where a financial payment was offered but was declined by the carer. | | | | | | | | | |
| (d) | Residential care includes family group homes. | | | | | | | | | |
| (e) | Victoria: During 2006-07, Victoria introduced a major new data system, which was progressively rolled out across the State. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data for previous years. | | | | | | | | | |
| (f) | Queensland: There may be some children in the category residential care/independent living who had Indigenous caregivers in facility-based care. | | | | | | | | | |
| (g) | WA: A small number of children may be placed with externally managed foster carers who are also their relative and have been recorded in the foster care category. | | | | | | | | | |
| (h) | SA: During 2012-13, SA changed databases, which resulted in a data recording issue leading to an undercount of children placed in compliance with the Aboriginal Child Placement Principle. Due to these data issues, 2012-13 child protection data for this indicator for this indicator are likely to be incorrect and cannot be reliably compared with data for previous years. | | | | | | | | | |
| (i) | Tasmania: Data relate to a small number of Aboriginal and Torres Strait Islander children. | | | | | | | | | |
| (j) | NT: Children placed with family members have been included in the 'Aboriginal and Torres Strait Islander relative/kin' category. Improvement in data quality in 2008-09 resulted in a more accurate count of children in OOHC. The number of children in OOHC reported in 2007-08 was likely to be undercounted. Due to realignment of placement types to ensure better data integrity, data for 2012-13 may not be comparable with data for previous years. In 2013-14 data for this indicator were provided by the NT in aggregate form. As such there are small differences in totals for this indicator (<2 per cent) when compared with other OOHC tables. | | | | | | | | | |

na Not available. ... Not applicable. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

- (a) The percentage of children under 12 years in home-based placements was calculated using as the denominator the total number of children under 12 years old in out-of-home care placement, by Indigenous status, at 30 June where placement type was known.
- (b) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (c) Victoria: During 2006-07, Victoria introduced a major new data system, which was progressively rolled out across the State. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data for previous years.

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

- (a) For number of different placements, only new placements in which the child had previously not been placed were counted as separate placements.
- (b) This table includes all children exiting care who had been in care for 1 month or more and who had been on a care and protection order at some point in the six months prior to exiting care.
- (c) Victoria: During 2006-07, Victoria introduced a major new data system, which will be rolled out across the State by mid 2008. In parallel, the Children, Youth and Families Act 2005 which commenced in April 2007, introduced new service pathways and processes in Victorian Child Protection and Family Services to support earlier intervention and prevention for vulnerable children and their families. Due to these new service and data reporting arrangements, Victorian child protection data for 2006-07 onwards may not be fully comparable with data for previous years.
- (d) WA: Data for 2010-11 onwards are not available as these data cannot be extracted from WA's aggregate child protection data system.
- (e) Tasmania: Prior to September 2010, data for respite placements were unable to be identified and excluded. Results for 'total children exiting care' for 2011-12 to 2013-14 should not be compared with prior years as respite placements are now excluded from the count of placements. Exclusion of this placement type was not possible in previous years due to system limitations.

na Not available. – Nil or rounded to zero.

Source: State and Territory Governments (unpublished) for 2012-13 and 2013-14 data; AIHW (unpublished), derived from Child protection Australia data collection for data prior to 2012-13.

(a) NSW: Could not provide data for this indicator prior to 2010-11. For all years, the numerator provided for this measure (i.e., the number of children in care who were the subject of a substantiation and the person believed responsible was in the household providing out-of-home care (OOHC)) excludes children who are in government authorised and funded OOHC placements where the OOHC placement is facilitated by a non-government organisation (NGO) and children who were victims of allegations which were finalised after left OOHC. The denominator for this measure (i.e., all children aged 0-17 in at least one care placement during the year) encompasses all children in OOHC (including children in government authorised and funded OOHC placements where the OOHC placement is facilitated by an NGO). This affects the reported rate (i.e., a lower rate is derived than would be the case if the numerator and denominator aligned). Therefore, NSW data are narrower than the scope of the national counting rule and should not be compared with other jurisdictions' data.

Table 15A.27 **Children in out-of-home care by whether they were the subject of a child protection substantiation and the person believed responsible was living in the household providing out-of-home care (a), (b), (c), (d), (e), (f)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|
| (b) Victoria: Quality of care concerns can range from minor quality issues through to possible physical or sexual abuse. All reports are treated seriously at the outset of the process and the best interests of the child or young person are considered paramount. Substantiated abuse may involve physical, emotional or sexual abuse, neglect (including medical neglect). An allegation of abuse may not be substantiated if at any stage during the investigation process insufficient evidence is found to support the allegation. Substantiated quality of care concerns encompass completed investigations where quality of care concerns are substantiated and action is taken in response. Data up to and including 2011-12 are not comparable to data for 2012-13 and 2013-14 due to the recent implementation of a new quality of care database. Previously published data for 2012-13 have been revised for this Report and differ from those in the 2014 Report. | | | | | | | | | |
| (c) Queensland: Data are not comparable with other jurisdictions or across the time-series due to changes in policy and recording as follows for 2006-07 only limited data were available due to the transition to a new information management system. 2007-08 Queensland commenced reporting on Matter of Concern substantiations which refer to those children in the custody or guardianship of the Chief Executive and placed in accordance with Section 82(1) of the Child Protection Act 1999. 2008-09: The Queensland denominator now counts the number of children aged 0-17 years who were in at least one out-of-home care placement during the year and who were also subject to a child protection order granting custody or guardianship to the Chief Executive. This reflects the group of children who could be subject to a Matter of Concern substantiation in accordance with Queensland legislation and policy. 2011-12: Prior to 2011-12 reporting, a system issue with the Integrated Client Management System was identified whereby some matter of concern substantiations recorded since 2009 were not being transferred for corporate reporting. Data for 2011-12 onward are therefore not comparable to previous years. 2013-14: Queensland data are reported in accordance with the department's new policy 'Responding to concerns about the standards of care' introduced in July 2013 and are not directly comparable with previous years. Queensland's data comprise children subject to a harm report substantiation, which refer only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. Queensland's consideration of 'the person believed responsible' relates to overall harm or risk of harm to the child in care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment; another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified. The department does not report on whether harm was the result of the actions or inactions of the child's carer or staff member of a care service or whether harm or risk of harm was not as a result of their actions or inactions i.e., there was no indication that the carer, staff member or care service has not met the standards of care required under the Child Protection Act 1999. | | | | | | | | | |
| (d) WA: Data do not include substantiations relating to relatives of foster carers or other children in the household. | | | | | | | | | |
| (e) Tasmania: Data are not able to separately identified as to whether the person responsible was living in the household or visiting. | | | | | | | | | |
| (f) NT: Data for this measure are not available as the NT data system does not identify the person responsible/perpetrator. | | | | | | | | | |

na Not available. – Nil or rounded to zero.

Table 15A.28 **Children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect (a), (b), (c), (d)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> |
|-----|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|
| (a) | Data were introduced in the 2013 Report for the 2011-12 reporting period. | | | | | | | | |
| (b) | NSW: In 2011-12, NSW data were not comparable to data supplied by other jurisdictions because NSW data encompassed a more inclusive set of substantiated issues, for example, children who absconded from out-of-home care (OOHC) placements and reported incidents of self harm. In addition, NSW has a significantly lower threshold for investigating notifications relating to children in care compared with children in the general population. In NSW, data for children in care who were the subject of a notification, which was substantiated are not available. NSW has made changes to its source system which, subject to quality assurance, will enable submission of data for 2015-16. | | | | | | | | |
| (c) | Victoria: Data were not available for Victoria, as the Victorian Child Protection Service does not record the required data for children who are in OOHC. | | | | | | | | |
| (d) | Queensland: For 2012-13 data comprise Matter of Concern substantiations, which refer to children in the custody or guardianship of the Chief Executive and placed in accordance with Section 82(1) of the Child Protection Act 1999. 2013-14 data are reported in accordance with the department's new policy 'Responding to concerns about the standards of care' introduced in July 2013 and are not directly comparable with previous years. Data comprise children subject to a harm report substantiation, which refer only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment; another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified. | | | | | | | | |

- (a) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See Chapter 2 (sections 2.5-6) for details.
- (b) The service must average at least 4 hours of service provision per week for a specified short-term period (usually less than six months).
- (c) The Australian figure for total real expenditure represents the sum of figures for those jurisdictions able to provide data. The Australian figure for real expenditure per child represents the sum of expenditure for those jurisdictions able to provide data divided by the number of children aged 0-17 years commencing intensive family support services. In previous reports, data were divided by the sum of the residential population for the target group.
- (d) NSW: The movement in expenditure for intensive family support services between 2011-12 and 2012-13 is mainly due to the movement and reclassification of previously identified early intervention services (Brighter Futures) to statutory child protection activities (Strengthening Families) and overhead re-allocations due to the change in mix across all the programs.
- (e) WA: Due to a new method of expenditure reporting, expenditure data for 2011-12 are not comparable to expenditure data for previous years. IFSS data for 2012-13 and 2013-14 are not comparable to data for earlier years as in 2013-14, some services previously considered to be IFSS were re-allocated to child protection services and FSS to be consistent with unit counting rules. 2012-13 data have been revised to be consistent with 2013-14.
- (f) Tasmania: Intensive family support services activity data were not available for Tasmania for the periods 2009-10 to 2011-12.

Table 15A.30 **Intensive family support services: total real recurrent expenditure, number of children aged 0-17 years commencing intensive family support services and real recurrent expenditure per child (2013-14 dollars) (a), (b), (c), (d), (e), (f), (g), (h)**

| Unit | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(g) ACT: IFSS data were not available for 2009-10 due to a change in data systems during the counting period. The data system was undergoing subsequent refinements so 2010-11 data should be treated with caution.

(h) NT: Financial data for children commencing IFSS were not separately available for 2013-14 and have been included in data for children commencing family support services.

na Not available.

- (a) The service must average at least 4 hours of service provision per week for a specified short-term period (usually less than six months).
- (b) Prior to 2009-10, children of unknown Indigenous status were reported in the non-Indigenous status category. For 2009-10 onwards, a separate unknown Indigenous status category is reported.
- (c) NSW: Data for 2011-12 and 2013-14 include children and young people supported through the Strengthening Families program, which is within the statutory child protection spectrum. In 2013-14, limited data were available for some services.
- (d) Tasmania: Intensive family support services activity data are not available for 2009-10 to 2011-12.
- (e) ACT: IFSS data were not available for 2009-10 due to a change in data systems during the counting period. The data system was undergoing subsequent refinements so 2010-11 data should be treated with caution.

- (a) The service must average at least 4 hours of service provision per week for a specified short-term period (usually less than six months).
- (b) NSW: Data for 2011-12 and 2012-13 include children and young people supported through the Strengthening Families program, which is within the statutory child protection spectrum. In 2013-14, limited data were available for some services.
- (c) WA: Data for 2013-14 include five children aged 18 and over.
- (d) Tasmania: IFSS activity data were not available for 2009-10 to 2011-12.
- (e) ACT: IFSS data were not available for 2009-10 due to a change in data systems during the counting period. The data system was undergoing subsequent refinements so 2010-11 data should be treated with caution.

na Not available. – Nil or rounded to zero.

(a) Prior to 2012-13, Aboriginal and Torres Strait Islander and non-Indigenous population data were supplied by AIHW derived from ABS data sources. For 2012-13 onwards, population data were sourced directly from the ABS.

(a) Population data used to derive rates are revised to the ABS' final 2011 Census rebased estimates and projections. Population data for All Australians for all years are estimates. Population data for Aboriginal and Torres Strait Islander Australians up to and including 2011 are estimates and for 2012 onwards are projections. See chapter 2 (tables 2A.1-2 and 2A.12-13) for details.

(b) Prior to 2009-10, the rates of children subject to notifications, investigations and substantiations were calculated for children aged 0-16 years, while the rates of children on care and protection orders and in out-of-home care were calculated for children aged 0-17 years. From the 2009-10 period onwards, all child protection data are reported for the age range 0-17 years and therefore, only 0-17 year old population data are collected.

.. Not applicable.

(a) Prior to 2012-13, Aboriginal and Torres Strait Islander and non-Indigenous population data were supplied by AIHW derived from ABS data sources. For 2012-13 onwards, population data were sourced directly from the ABS.

(a) Population data used to derive rates are revised to the ABS' final 2011 Census rebased estimates and projections. Population data for All Australians for all years are estimates. Population data for Aboriginal and Torres Strait Islander Australians up to and including 2011 are estimates and for 2012 onwards are projections. See chapter 2 (tables 2A.1-2 and 2A.12-13) for details.

(b) Indigenous rates for 2008-09 onwards were calculated using June data from 'Series B', Experimental estimates and projections, Aboriginal and Torres Strait Islander Australians, 1991 to 2021 (cat. no. 3238.0).

(c) Prior to 2009-10, the rates of children subject to notifications, investigations and substantiations were calculated for children aged 0-16 years, while the rates of children on care and protection orders and in out-of-home care were calculated for children aged 0-17 years. From the 2009-10 period onwards, all child protection data are reported for the age range 0-17 years.

.. Not applicable.

Data quality information — Child protection services, chapter 15

Data quality information

Data quality information (DQI) was prepared for the first time for the 2011 Report on Government Services. DQI provides information against the seven Australian Bureau of Statistics data quality framework dimensions, for a selection of performance indicators in the Child protection services chapter. DQI for additional indicators will be progressively introduced in future reports.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI are available for the following performance indicators:

| | |
|---|----|
| Effectiveness, child protection services — Response times | 2 |
| Effectiveness, child protection services — Substantiation rate | 4 |
| Effectiveness, out-of-home care services — Safety in out-of-home care | 6 |
| Effectiveness, out-of-home care services — Stability of placement | 9 |
| Effectiveness, out-of-home care services — Children aged under 12 years in home-based care | 11 |
| Effectiveness, out-of-home care services — Placement with extended family | 12 |
| Effectiveness, out-of-home care services — Placement in accordance with the Aboriginal Child Placement Principle | 13 |
| Effectiveness, child protection services — Children with current documented case plans | 15 |
| Outcomes, child protection services — Improved safety | 17 |
| Outcomes, child protection services — Improved education, health and wellbeing of the child | 19 |
| Efficiency, child protection services — Total expenditure on all child protection activities per notification, investigation and substantiation | 21 |
| Efficiency, out-of-home care — Out-of-home care expenditure per placement night | 23 |
| Efficiency, out-of-home care — Total expenditure on all children in residential care and non-residential care per child in residential and non-residential out-of-home care | 24 |

CHILD PROTECTION AND OUT-OF-HOME CARE SERVICES

Effectiveness, child protection services — Response times

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|---|--|
| Element Indicator | Effectiveness — Child protection services This indicator comprises two measures: <ul style="list-style-type: none">• Response time to commence investigation.• Response time to complete investigation. |
| Measure (computation) | <u>Definition:</u> <ul style="list-style-type: none">• The proportion of investigations commenced, by time taken to commence investigation (time categories: up to 7 days; 8 to 14 days; 15 to 21 days; 22 to 28 days; 29 days or more), within the reference period.• The proportion of investigations completed, by time taken to complete investigation (time categories: 28 days or less; 29 to 62 days; 63 to 90 days; more than 90 days), within the reference period. <u>Numerators:</u> <ul style="list-style-type: none">• Total number of investigations commenced within each time category (i.e., up to 7 days; 8 to 14 days; 15 to 21 days; 22 to 28 days; 29 days or more), within the reference period, regardless of the date of notification.• Total number of investigations completed within each time category (i.e., 28 days or less; 29 to 62 days; 63 to 90 days; more than 90 days), within the reference period, with an outcome of substantiated or not substantiated recorded by 31 August. <u>Denominators:</u> <ul style="list-style-type: none">• Total number of investigations commenced within the reference period.• Total number of finalised investigations within the reference period. <u>Computation:</u> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <u>Numerators:</u> <p>Australian Institute of Health and Welfare (AIHW), '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> <u>Denominators:</u> <p>AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> |
| <u>Data Quality Framework Dimensions</u> | |
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the timeliness of governments' responses to notifications of possible harm or risk of harm to children. Response times to complete investigations are calculated by reference to the total number of finalised investigations. A finalised investigation is an investigation that is complete by 31 August (as distinct from one that is still 'in process' at this date). |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are affected by comparability issues resulting from different policy and legislative requirements across jurisdictions which stipulate the time required for commencing and completing investigations (both of which are based on the seriousness of the presenting child protection concern). In addition, jurisdictions |

| | |
|-------------------------|---|
| | record notifications at different stages in response to a report. There is greater consistency within jurisdictions over time. |
| Coherence | As noted above, the data items used to construct this performance indicator are affected by comparability issues arising from different child protection policy and legislation across states and territories. |
| Accessibility | Data are published in the Steering Committee for the Review of Government Service Provision's (SCRGSP) Report on Government Services (Report). |
| Interpretability | Further technical details are available in the AIHW manual ' <i>Child protection notifications, investigations and substantiations, Australia: Data collection standards & counting rules</i> ' at www.aihw.gov.au/child-protection/ . |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • Caution should be used when interpreting results as jurisdictions count notifications at different points in response to a report, and have different policies and protocols governing the type and timeliness of response to a notification. |
|-----------------------------|---|

Effectiveness, child protection services — Substantiation rate

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — Child protection services |
| Indicator | Substantiation rate |
| Measure (computation) | <p><u>Definition:</u> The proportion of finalised investigations where harm or risk of harm was confirmed.</p> <p><u>Numerator:</u> Total number of finalised child protection investigations, for notifications received in the reference year, that were substantiated (that is, where harm or risk of harm was confirmed).</p> <p><u>Denominators:</u> Total number of finalised child protection investigations of notifications received in the reference year.</p> <p><u>Computation:</u> Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u> AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> <p><u>Denominator:</u> AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | <p>Data are reported by Australian State and Territory governments and provide information on the rates of finalised investigations that were substantiated over time. The indicator attempts to assess the extent to which child protection services are targeting investigations to those notifications where a substantive child abuse or neglect incident has occurred or is at risk of occurring.</p> <p>It is important to note that this indicator is not a measure of the rate of child abuse and neglect in the community, or a measure of the extent to which governments are detecting child abuse and neglect in the community (i.e., without a national incidence or prevalence study, it is not possible to estimate these figures). Instead, it is a measure of the extent to which governments target investigations to cases that warrant such intervention, thus avoiding undesirable stress to families in circumstances where investigations are not warranted.</p> <p>The proportion of investigations substantiated is calculated by reference to the total number of finalised investigations. A finalised investigation is an investigation that is complete by 31 August (as distinct from one that is still 'in process' at this date).</p> |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are affected by comparability issues resulting from different substantiation criteria across jurisdictions (i.e., legislation and policy documents which define thresholds for substantiation vary across jurisdictions, such as whether 'risk of harm' or 'significant risk of harm' is required in order to substantiate). However, there is greater consistency within jurisdictions over time. |
| Coherence | As noted above, the data items used to construct this performance indicator are affected by comparability issues arising from different child protection legislation, policy and practice across states and territories. |

Accessibility Data are published in the Steering Committee for the Review of Government Service Provision's (SCRGSP) Report on Government Services (Report). The numerator and denominator are also published separately in the AIHW publication '*Child protection Australia*' (CPA), however, the derived rate is not published in CPA.

Interpretability Further technical details are available in the AIHW manual '*Child protection notifications, investigations and substantiations, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

Key data gaps/issues The Steering Committee notes the following issues:

- The proportion of investigations resulting in substantiation vary significantly across jurisdictions. In part, these differences are the result of differences in the availability and capacity of diversionary and family support services; differences in what is substantiated; and threshold differences in the point at which child protection services determine there has been harm/abuse or that there is a risk of harm/abuse (Holzer and Bromfield, 2008).
- The proportion of investigations resulting in substantiation also vary within jurisdictions over time. Factors that contribute to these variations include: the introduction of risk assessment frameworks/instruments; changes to the threshold for substantiation (e.g., in January 2010, NSW legislation was amended to change the threshold for recording a substantiation from 'risk of harm' to 'risk of *significant* harm'); and other practice changes (e.g., from March 2005, Qld required all notifications to be investigated and from March 2014, WA required all notifications of children under the age of five to be investigated and all high priority notifications to proceed directly to investigation).

Effectiveness, out-of-home care services — Safety in out-of-home care

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — Out-of-home care services |
| Indicator | Safety in out-of-home care |
| Measure (computation) | <p><u>Definition:</u></p> <p>This indicator comprises two measures:</p> <ul style="list-style-type: none">• the proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect (that is, regardless of the perpetrator), during the reference year• the proportion of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household providing out-of-home care, during the reference year. <p><u>Numerators:</u></p> <ul style="list-style-type: none">• Total number of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect (that is, regardless of the perpetrator), during the reference year.• Total number of children in out-of-home care who were the subject of a substantiation and the person believed responsible was in the household, during the reference year. <p><u>Denominators:</u></p> <p>For both measures the denominator is: total number of children aged 0-17 in at least one out-of-home care placement during the reference year.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>Data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, '<i>Child protection: Out-of-home care collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory administrative data systems. |
| Relevance | <p>Data are reported by Australian State and Territory governments and provide information on the safety of children in out-of-home care, based on the rate of substantiations each year concerning these children. At present, not all jurisdictions are providing these data.</p> <p>While these data are affected by comparability issues as noted below, this is the only indicator of its kind reported nationally. The safety of children in care is of critical importance to government and the community and is a reflection of the extent to which governments are fulfilling their duty of care to children and young people.</p> |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are affected by comparability issues noted in relation to the 'substantiation rate' indicator. Jurisdictions possess different policies and legislation which establish the thresholds at which substantiations should be recorded. In addition, it is understood that child protection services possess higher standards or expectations of care by departmentally endorsed carers. Therefore, incidents or issues that might not give rise to a substantiation when involving a child's birth parents, might result in a substantiation when involving a child's foster or residential carer. Different investigative processes employed by jurisdictions regarding |

registered carers might also create differences in reported rates. Also, it is possible that the count of children subject to a substantiation while in out-of-home care could pertain to an historical experience of abuse while in care, which has only been reported in the reference period (i.e., it does not concern the current carer or care setting).

Coherence

These data are affected by comparability issues as noted above. In addition, jurisdictions' compliance with the counting rules for this indicator impact on the comparability of reported data. However, data are considered relatively comparable within jurisdictions over time (notwithstanding that numbers reported for this indicator are small and thus potentially more volatile than other indicators).

Accessibility

Data are published in this Report.

Interpretability

Further technical details are available in the AIHW manual '*Child protection: out-of-home care, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- The broader measure, 'the proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect (that is, regardless of the perpetrator), during the reference year', is under continued refinement and development. Caution should be exercised when interpreting data for this measure.
- There are differences across jurisdictions in the proportion of children in out-of-home care who were the subject of a substantiation where the person responsible was living in the household providing out-of-home care. In part, these differences are explained by differences in the procedures jurisdictions employ for investigating and recording matters of concern when children are in out-of-home care and differences in the application of the counting rules for this indicator. For example:
 - In NSW, the numerator provided for this measure (i.e., the number of children in care who were the subject of a substantiation and the person believed responsible was in the household providing out-of-home care) excludes children who are in government authorised and funded out-of-home care placements where the out-of-home care placement is facilitated by a non-government organisation (NGO). However, the denominator for this measure (i.e., all children aged 0-17 in at least one care placement during the year) encompasses all children in out-of-home care (including children in government authorised and funded out-of-home care placements where the out-of-home care placement is facilitated by an NGO). This affects the reported rate (i.e., a lower rate is derived than would be the case if the numerator and denominator aligned).
 - In Victoria, investigations undertaken in relation to quality of care concerns encompass allegations or concerns about the quality of care provided for children, relating to home-based carers or members of their family, kinship carers, residential care staff or other care staff. These data include investigations which were commenced during the relevant financial year for children and young people who, at the time of the incident, were current clients of the child protection program and who were residing in either home-based care (including lead tenant, residential care or kinship care). Substantiated quality of care concerns encompass completed investigations where quality of care concerns were substantiated and action was taken in response.
 - In Queensland, 2013-14 data are reported in accordance with the department's new policy 'Responding to concerns about the standards of care' introduced in July 2013 and are not directly comparable with previous years. Data comprise children subject to a harm report substantiation, which refer only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. Queensland's consideration of 'the person believed responsible' relates to overall harm or risk of harm to the child in care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment;

another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified. It does not report on whether harm was the result of the actions or inactions of the child's carer or staff member of a care service or whether harm or risk of harm was not as a result of their actions or inactions i.e., there was no indication that the carer, staff member or care service has not met the standards of care required under the Child Protection Act 1999. Therefore, Queensland's data are broader than the scope of the national counting rule and should not be compared to other jurisdictions' data.

- In WA, data include children who have been harmed by foster carers and workers in placement services. Children harmed by relatives of foster carers or other children in care are not included.
- The NT cannot provide data for this measure as the NT data system does not identify the person responsible/perpetrator.
- There are also differences across jurisdictions in the proportion of children in out-of-home care who were the subject of a substantiation of sexual abuse, physical abuse, emotional abuse or neglect (that is, regardless of the perpetrator). In part, these differences are explained by differences in the procedures jurisdictions employ for investigating and recording matters of concern when children are in out-of-home care and differences in the application of the counting rules for this indicator. For example:
 - NSW data for the 2011-12 reporting period were not comparable to data supplied by other jurisdictions because NSW data encompassed a more inclusive set of substantiated issues, for example, children who absconded from out-of-home care placements and reported incidents of self-harm.
 - Queensland's data from 2013-14 are reported in accordance with the department's new policy 'Responding to concerns about the standards of care' introduced in July 2013 and are not directly comparable with previous years. Data comprise children subject to a harm report substantiation, which refer only to children in the custody or guardianship of the chief executive and who are placed in out-of-home care. For substantiated harm outcomes, the harm or risk of harm may have involved the actions or inactions of a carer; staff member of a care service; another adult who resides in, or frequents the care environment; another child (in specific circumstances only); or in some instances harm may be substantiated and the person responsible was unable to be identified.
 - NSW and Victoria did not provide data for this measure for the 2012-13 or 2013-14 reporting period. NSW advised that available data were not considered suitable for publication. Victoria advised that data were not available as the Victorian Child Protection Service does not record the required data for children in out-of-home care.

Effectiveness, out-of-home care services — Stability of placement

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|---|--|
| Element | Effectiveness — Out-of-home care services |
| Indicator | Stability of placement |
| Measure (computation) | <p><u>Definition:</u></p> <p>Indicator - The proportion of children who had 1 or 2 placements during a period of continuous out-of-home care. Comprising sub-measures:</p> <p>(1) Proportion of children on a care and protection order exiting out-of-home care after less than 12 months, who had 1 or 2 placements.</p> <p>(2) Proportion of children on a care and protection order exiting out-of-home care after 12 months or more, who had 1 or 2 placements.</p> <p><u>Numerators:</u></p> <p>(1) Number of children on a care and protection order exiting out-of-home care after less than 12 months, who had 1 or 2 placements.</p> <p>(2) Number of children on a care and protection order exiting out-of-home care after 12 months or more, who had 1 or 2 placements.</p> <p><u>Denominators:</u></p> <p>(1) All children on a care and protection order exiting out-of-home care after less than 12 months.</p> <p>(2) All children on a care and protection order exiting out-of-home care after 12 months or more.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>AIHW, 'Child protection: Out-of-home care collection', data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, 'Child protection: Out-of-home care collection', data supplied by jurisdictions.</p> |
| <u>Data Quality Framework Dimensions</u> | |
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the placement stability experienced by young people in out-of-home care. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | <p>These data are comparable across jurisdictions. However, data are collected only for children who are on orders and who exit care during the reference year. There are limitations to counting placement stability using a cohort of children on exit from care rather than longitudinally tracking a cohort of children on their entry into care (or all children in care during the reference year): an exit cohort is biased to children who stayed a relatively short time in care and thus were more likely to have experienced fewer placements.</p> <p>Exits from out-of-home care are defined as occasions when children leave care and do not return within 60 days. Placement breaks which do not exceed 7 days are not counted as exits.</p> |
| Coherence | The data items used to construct this performance indicator are reported by all jurisdictions and are considered comparable. |
| Accessibility | Data are published in this Report. |

Interpretability Further technical details are available in the AIHW manual '*Child protection: out-of-home care, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

**Key data
gaps/issues**

The Steering Committee notes the following issues:

- While these data are comparable across jurisdictions, the data are biased towards children who have stayed only a relatively short time in care (i.e., an exit cohort). Ideally, stability of care would be measured for all children in care (i.e., number of placements all children in care have experienced).

Effectiveness, out-of-home care services — Children aged under 12 years in home-based care

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — Out-of-home care services |
| Indicator | Children aged under 12 years in home-based care |
| Measure (computation) | <p><u>Definition:</u></p> <p>The number of children aged under 12 years in home-based care, as a proportion of all children aged under 12 years in out-of-home care, at 30 June.</p> <p><u>Numerators:</u></p> <p>Total number of children aged under 12 years in home-based care, at 30 June.</p> <p><u>Denominators:</u></p> <p>Total number of children aged under 12 years in out-of-home care, at 30 June.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>AIHW, '<i>Child protection: Out-of-home care collection</i>', data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, '<i>Child protection: Out-of-home care collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the rates of children under 12 years of age in out-of-home care who are in a home-based placement (for example, in foster or kinship care and distinct from residential care arrangements). It is generally considered desirable to place children, particularly young children, in home-like environments as they will generally make better development progress and have more ready access to normal childhood experiences in family settings than in institutional settings. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | The data are reported as comparable across jurisdictions. |
| Coherence | The data items used to construct this performance indicator are reported by all jurisdictions and are considered comparable. |
| Accessibility | Data are published in this Report. |
| Interpretability | Further technical details are available in the AIHW manual ' <i>Child protection: out-of-home care, Australia: Data collection standards & counting rules</i> ' at www.aihw.gov.au/child-protection/ . |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • These data are a robust count of children under 12 years of age in home-based care. In future, it might also be appropriate to analyse the placement types of older children. |
|-----------------------------|---|

Effectiveness, out-of-home care services — Placement with extended family

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — Out-of-home care services |
| Indicator | Placement with extended family |
| Measure (computation) | <p><u>Definition:</u></p> <p>The proportion of children in out-of-home care who are placed with relatives or kin, at 30 June.</p> <p><u>Numerators:</u></p> <p>Total number of children in out-of-home care who are placed with relatives or kin, at 30 June.</p> <p><u>Denominators:</u></p> <p>Total number of children in out-of-home care, at 30 June.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>AIHW, 'Child protection: Out-of-home care collection', data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, 'Child protection: Out-of-home care collection', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the extent to which young people in out-of-home care are living with relatives or kin. Where safe and appropriate, it is considered desirable to place children in out-of-home care with relatives and kin to enhance a child's feelings of familiarity and family connectedness. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | The data are reported as comparable across jurisdictions. |
| Coherence | The data items used to construct this performance indicator are reported by all jurisdictions and are considered comparable. |
| Accessibility | Data are published in this Report and in CPA. |
| Interpretability | Further technical details are available in the AIHW manual 'Child protection: out-of-home care, Australia: Data collection standards & counting rules' at www.aihw.gov.au/child-protection/ . |

Data Gaps/Issues Analysis

| | |
|-----------------------------|--|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none">• These data are a robust count of children in out-of-home care who are placed with extended family. |
|-----------------------------|--|

Effectiveness, out-of-home care services — Placement in accordance with the Aboriginal Child Placement Principle

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — Out-of-home care services |
| Indicator | Placement in accordance with the Aboriginal Child Placement Principle |
| Measure (computation) | <p><u>Definition:</u></p> <p>The proportion of Indigenous children placed with the child's extended family, Indigenous community or other Indigenous people, as a proportion of all Indigenous children in out-of-home care, at 30 June.</p> <p><u>Numerators:</u></p> <p>(1) Number of Indigenous children placed with relatives/kin at 30 June.</p> <p>(2) Number of Indigenous children placed with other Indigenous carer or Indigenous residential care, at 30 June.</p> <p>(3) Number of Indigenous children not placed with relative/kin, other Indigenous carer or Indigenous residential care, at 30 June.</p> <p><u>Denominators:</u></p> <p>Total number of Indigenous children in care at 30 June (excluding Indigenous children living independently and those whose living arrangements were unknown).</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>AIHW, '<i>Child protection: Out-of-home care collection</i>', data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, '<i>Child protection: Out-of-home care collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the care placements of Indigenous young people. This indicator does not actually assess the process departments employed in seeking out certain care placements, rather it reports on Indigenous placement outcomes. Technically, therefore, this is a proxy indicator, as the ACPP sets out a sequence of steps that should be followed in seeking out certain placements, not just the desirability of final placement settings. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | The data are reported as comparable across jurisdictions. However, for all jurisdictions these data are proxy data for compliance with the ACPP (i.e., the indicator measures placement outcome rather than whether the ACPP process was complied with in determining placement outcome). Notwithstanding that this measure is a proxy indicator of compliance with the ACPP, it is an important measure of the placement outcomes achieved for Indigenous children. |
| Coherence | The data items used to construct this performance indicator are reported by all jurisdictions and are considered comparable. |
| Accessibility | Data are published in this Report and CPA. |

Interpretability Further technical details are available in the AIHW manual '*Child protection: out-of-home care, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

**Key data
gaps/issues**

The Steering Committee notes the following issues:

- These data are a proxy for compliance with the Aboriginal Child Placement Principle (i.e., these data report on the placement outcomes of Indigenous children rather than whether the sequence of steps contained within the Aboriginal Child Placement Principle were followed).

Effectiveness, child protection services — Children with current documented case plans

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|--|---|
| Element Indicator Measure (computation) | <p>Effectiveness — Child protection services</p> <ul style="list-style-type: none">• Children with current documented case plans <p><u>Definition:</u> The number of children who have a current documented and approved case plan, as a proportion of all children who are required to have a current documented and approved case plan, at 30 June.</p> <p><u>Numerators:</u> Number of children aged 0-17 years who are required to have a current documented and approved case plan who have a current documented and approved case plan, at 30 June.</p> <p><u>Denominators:</u> Number of children aged 0-17 years required to have a current documented and approved case plan, at 30 June.</p> <p><u>Computation:</u> Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u> AIHW, '<i>National out-of-home care standards</i>', data supplied by jurisdictions.</p> <p><u>Denominators:</u> AIHW, '<i>National out-of-home care standards</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | <p>Data are reported by Australian State and Territory governments and provide information on the number of children who have a current documented and approved case plan. A high or increasing rate of children with documented case plans is desirable.</p> <p>A case plan is an individualised, dynamic written plan (or support agreement) that includes information on the circumstances explaining why the child is considered to be in need of protection, the goal of ongoing intervention and outcomes and actions required to achieve the goals. A case plan is usually developed between the person and agency as a result of an assessment process and usually includes:</p> <ul style="list-style-type: none">• goals and objectives• planned measures/actions• needs assessment (including: health, education, therapeutic social/cultural support)• family/relatives/kin contact arrangements• living/accommodation arrangements. <p>Case planning is essential to structured and purposeful work to support children's optimal development.</p> <p>A current case plan is one that has been initiated and completed with approval, or reviewed and approved, within the previous 12 months. Individual jurisdictions' timeframes for ongoing review may vary and reviews may be more frequent when young children or infants are involved, a child has just entered care, and certain orders are in place (for example, assessment orders). Reviews may also be required when circumstances have changed (for example, the death of a parent or carer and placement changes) and significant new decisions are needed.</p> <p>The scope of this indicator extends to children and young people (aged 0-17 years) whose care arrangements were ordered through the Children's Court and for whom parental responsibility has been transferred to the Minister/Chief Executive and who</p> |

are required by jurisdictional policy/legislation to have a current documented and approved case plan.

If a child has had more than one case plan review during the 12 month period, the relevant date is that of the most recent review during the 12 month period.

The quality of case plans, and the extent to which identified needs and actions are put into place, should also be taken into account when considering this indicator. The existence of a case plan does not guarantee that appropriate case work to meet a child's needs is occurring.

Timeliness

The most timely data (i.e., data for the most recent financial year) are reported.

Accuracy

Data are affected by comparability issues resulting from different policy and legislative requirements across jurisdictions which stipulate the timeframes within which children are required to have case plans prepared.

Coherence

As noted above, the data items used to construct this performance indicator are affected by comparability issues arising from different child protection policy and legislation across states and territories.

Accessibility

Data are published in the Steering Committee for the Review of Government Service Provision's (SCRGSP) Report on Government Services (Report).

Interpretability

Further technical details are available in '*National out-of-home care standards data collection: Technical specifications*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Data were collected for the first time for this indicator for the 2012 reporting period. Data are experimental and subject to further review and refinement.
- Data were not available for all jurisdictions for the 2014 reporting period. Data were not available for SA or the NT.

Outcomes, child protection services — Improved safety

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Outcomes — Child protection services |
| Indicator | Improved safety |
| Measure (computation) | <p><u>Definition:</u></p> <p>This indicator comprises two measures:</p> <ul style="list-style-type: none"> • Substantiation rate after a decision not to substantiate, within the reference period. • Substantiation rate after a prior substantiation, within the reference period. <p><u>Numerators:</u></p> <ul style="list-style-type: none"> • The number of children who were the subject of a substantiation who had also been the subject of an investigation that resulted in a decision not to substantiate in the previous 3 and 12 months. • The number of children who were the subject of a substantiation who had also been the subject of a substantiation within the previous 3 and 12 months. <p><u>Denominators:</u></p> <ul style="list-style-type: none"> • The number of children who were not subject to a substantiation in the reference year. • The number of all children who were the subject of a substantiation. <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> <p><u>Denominator:</u></p> <p>AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the extent to which government effectively reduces the risk of harm to children by appropriately assessing notifications of child protection concerns. |
| Timeliness | The most timely data are reported. However, because a full 12 months needs to lapse before data can be collected for this indicator, current year data concern the financial year prior. |
| Accuracy | Data reported for these measures are not directly comparable across jurisdictions. Data are affected by comparability issues resulting from different substantiation criteria across jurisdictions (i.e., legislation and policy documents which define thresholds for substantiation vary across jurisdictions, such as whether 'risk of harm' or 'significant risk of harm' is required in order to substantiate). There is greater consistency within jurisdictions over time. However, the proportion of investigations resulting in substantiation can also vary within jurisdictions over time. Factors that contribute to these variations include: the introduction of risk assessment frameworks/instruments; changes to the threshold for substantiation (e.g., in January 2010, NSW legislation was amended to change the threshold for recording a substantiation from 'risk of harm' to 'risk of <i>significant</i> harm'); and other practice changes (e.g., from March 2005, Qld required all notifications be investigated). |

Coherence As noted above, the data items used to construct this performance indicator are affected by comparability issues arising from different child protection legislation, policy and practice across states and territories.

Reported results can also be affected by the finalisation of investigations, factors beyond the control of child protection services, or a change in circumstances after the initial decision not to substantiate was made. For example, a demonstrable risk of harm might not have existed in the first instance. In addition, this indicator does not distinguish between subsequent substantiations which are related to the initial notification (that is, the same source of risk of harm, such as physical abuse) and those which are unrelated to the initial notification (that is, a different source of risk of harm for the subsequent substantiation, such as neglect).

Accessibility Data are published in the SCRGSP's Report on Government Services (Report).

Interpretability Further technical details are available in the AIHW manual '*Child protection: out-of-home care, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/.

Data Gaps/Issues Analysis

Key data gaps/issues The Steering Committee notes the following issues:

- Caution should be used when interpreting results due to the comparability issues noted above.

Outcomes, child protection services — Improved education

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|---|--|
| Element | Outcomes — child protection services |
| Indicator | Improved education |
| Measure (computation) | <p><u>Definition:</u></p> <p>The proportion of children on guardianship and custody orders to the Chief Executive/Minister achieving national benchmarks in reading and numeracy, compared to all children.</p> <p><u>Numerators:</u></p> <ul style="list-style-type: none"> • Total number of children on guardianship and custody orders to the chief executive who achieved national benchmarks in reading and numeracy. • Total number of all children who achieved national benchmarks in reading and numeracy. <p><u>Denominators:</u></p> <ul style="list-style-type: none"> • Total number of children on guardianship and custody orders to the chief executive who participated in national testing. • Total number of all children who participated in national testing. <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator:</u></p> <p>There are two sources of data for this indicator. Most recent data are provided directly by jurisdictions participating in the experimental aggregate educational outcomes data collection for this Report (Queensland and SA). These data are reported in the text of chapter 15 of this Report.</p> <p>Historical data are also available in chapter 15 attachment tables. These data were derived from a pilot study on the educational outcomes of children in the child protection system (AIHW, <i>'Educational outcomes of children on guardianship or custody orders: A pilot study (stage 2)'</i>, data supplied by jurisdictions).</p> <p><u>Denominator:</u></p> <p>There are two sources of data for this indicator. Most recent data are provided directly by jurisdictions participating in the experimental aggregate educational outcomes data collection for this Report (Queensland and SA). These data are reporting in the text of chapter 15 of this Report.</p> <p>Historical data are also available in chapter 15 attachment tables. These data were derived from a pilot study on the educational outcomes of children in the child protection system (AIHW, <i>'Educational outcomes of children on guardianship or custody orders: A pilot study (stage 2)'</i>, data supplied by jurisdictions).</p> |
| <u>Data Quality Framework Dimensions</u> | |
| Institutional environment | <p>Current, experimental aggregate educational outcomes data were sourced directly from participating jurisdictions (Queensland and SA).</p> <p>Historical data were sourced from State and Territory administrative data systems and compiled by the AIHW.</p> |
| Relevance | Data are reported by Australian State and Territory governments and provide information on the educational outcomes of children in the child protection system who are attending government schools. In contrast, all student calculations include both government and non-government schools. |
| Timeliness | At present, current data are only available for jurisdictions participating in the experimental aggregate educational outcomes data collection for this Report (Queensland and SA). Historical data (published in chapter 15 attachment tables) are only available for the period 2003-06, for selected jurisdictions: Victoria, Queensland, WA, SA, Tasmania and the ACT (for 2003 only). |

| | |
|-------------------------|--|
| Accuracy | <p><u>Current experimental data</u></p> <p>Data are comparable across jurisdictions but are incomplete and only available for selected jurisdictions.</p> <p>Children exempted from NAPLAN testing are recorded as being below the national minimum benchmarks in reading and numeracy. Experimental data indicate that children on guardianship and custody orders are exempted from NAPLAN testing at significantly higher rates than the general student population, which will contribute to poorer reported NAPLAN results for children on orders than the general student population.</p> <p><u>Historical pilot data</u></p> <p>Data are comparable across jurisdictions but are incomplete and only available for selected jurisdictions for the period 2003-2006.</p> <p>Benchmark calculations for children on guardianship/custody orders exclude students who were exempt from the tests, whereas all student calculations include exempted students and these students are reported as falling below the benchmark.</p> <p>The methods used to calculate percentages and confidence intervals of children who are on guardianship/custody orders who have achieved national benchmark achievement levels is not the same as the method used by MCEETYA to report all student results. Confidence intervals have been calculated for children on guardianship/custody orders using the exact 95 per cent confidence limits, which have been approximated to an F distribution. For the all students estimates, the methods used by MCEETYA for calculating confidence intervals involve specifically developed software, accounting for some sources of error in the measurement and estimation process, and are reliant on having data for large cohorts of students.</p> |
| Coherence | <p>Current experimental data and historical pilot data are considered comparable. However, they relate to children in government schools only and are only available for selected jurisdictions.</p> <p>Historical pilot data were collected prior to the introduction of the National Assessment Program – Literacy and Numeracy (NAPLAN) tests, so should not be compared with later years of NAPLAN test data that may be published elsewhere.</p> |
| Accessibility | <p>Data are published in the SCRGSP's Report on Government Services and in the AIHW publication '<i>Educational outcomes of children on guardianship and custody orders: A pilot study</i>' (2007).</p> |
| Interpretability | <p>Further technical details are available in the AIHW publication '<i>Educational outcomes of children on guardianship and custody orders: A pilot study</i>' (2007).</p> |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • Current experimental data are incomplete. The Steering Committee considers the measurement of the educational outcomes of children in the child protection system to be a high priority. It is anticipated that the CPYJWG, in conjunction with relevant parallel groups, will prioritise the development of an ongoing national collection to routinely monitor the educational outcomes of children on orders. • Historical pilot data are dated and incomplete. As above, the Steering Committee expects that work will continue to develop national reporting on this high priority issue. |
|-----------------------------|---|

Efficiency, child protection services — Total expenditure on all child protection activities per notification, investigation and substantiation

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element Indicator | Efficiency — Child protection services <ul style="list-style-type: none"> • Total expenditure on all child protection activities per notification, investigation and substantiation. |
| Measure (computation) | <p><u>Definition:</u> This indicator is defined by three measures:</p> <ul style="list-style-type: none"> • Total expenditure on all child protection activities throughout the financial year, divided by the number of notifications • Total expenditure on all child protection activities throughout the financial year, divided by the number of investigations • Total expenditure on all child protection activities throughout the financial year, divided by the number of substantiations. <p><u>Numerator:</u> Total expenditure on all child protection activities throughout the financial year.</p> <p><u>Denominators:</u> The denominator for each measure varies:</p> <ul style="list-style-type: none"> • Measure 1: the number of notifications received throughout the reference year • Measure 2: the number of notifications that required investigation throughout the reference year • Measure 3: the number of notifications received throughout the reference year that were investigated with an outcome of substantiated <p><u>Computation:</u> Expressed in dollar figures. Calculation is: (Numerator ÷ Denominator).</p> |
| Data source/s | <p><u>Numerators:</u> Expenditure data are supplied by Australian State and Territory governments.</p> <p><u>Denominators:</u> AIHW, '<i>Notifications, investigations and substantiations collection</i>', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>Activity data are sourced from State and Territory administrative data systems and compiled by the AIHW.</p> <p>Financial data are sourced from State and Territory administrative data systems and provided directly to the RGSP Secretariat.</p> |
| Relevance | <p>Data are reported by Australian State and Territory governments and provide information on the efficiency of service delivery. Low or decreasing expenditure per notification/investigation/substantiation can suggest more efficient services, but may indicate lower quality or different service delivery models.</p> <p>These indicators are proxy indicators and need to be interpreted with care. Given each of these proxy indicators is based on total expenditure on child protection activities, they do not represent, and cannot be interpreted as, unit costs for notifications, investigations or substantiations. These proxy indicators cannot be added together to determine overall cost of child protection services.</p> <p>Child protection activities undertaken by government that fall within the scope of the expenditure data include:</p> <ul style="list-style-type: none"> • receiving and responding to allegations of child abuse and neglect, including investigation and assessment • initiating formal statutory intervention to secure the safety of children or young people, including applying to the court for protective orders • ensuring the ongoing safety of children by working with families to resolve protective concerns. |

More comprehensive and accurate efficiency indicators would relate expenditure on particular child protection activities to an output measure of those activities. Work is underway to develop a national activity-based costing method, the Pathways project, which will allow this type of reporting from existing information systems.

In some cases, efficiencies might not be able to be realised due to remote geographic locations that limit opportunities to reduce overheads through economies of scale.

Timeliness

The most timely data (i.e., data for the most recent financial year) are reported.

Accuracy

Data are affected by comparability issues resulting from different policy and legislative requirements across Australian jurisdictions.

Jurisdictions count notifications at different points in the response to a report, ranging from the point of initial contact with the source of the report to the end of a screening and decision making process. This means the number of notifications is not strictly comparable across jurisdictions. Notifications are subsequently investigated based on the policies and practices in each jurisdiction.

An investigation is the process whereby the relevant department obtains more detailed information about a child who is the subject of a notification and makes an assessment about the harm or risk of harm to the child, and his or her protective needs. Not all notifications are investigated in all jurisdictions. For example, if a determination is made that a child and family are better served by family support services rather than a child protection response, children and families might be referred to diversionary and support services. Once it has been decided that an investigation is required, the investigation process is similar across jurisdictions. An investigation determines whether a notification is substantiated or not substantiated.

A substantiation is the outcome of an investigation where harm or risk of harm, abuse or risk of abuse, is confirmed. The legal definition of harm or risk of harm, abuse or risk of abuse, are similar across jurisdictions. However, there can be differences in practice, including different thresholds for recording a substantiation related to risk of harm, which impact on the comparability of these data.

The national *Child protection services financial data manual* stipulates that the full cost to government of providing child protection services, including all resources consumed in providing a service, should be reported. Types of costs included in the financial data are staffing and salary expenses, usage charges on land and buildings, corporate overheads, and grants to non-government organisations to deliver services.

Time series expenditure data are deflated so comparisons over time can be made in real terms.

Coherence

As noted above, the data items used to construct this performance indicator are affected by comparability issues arising from different child protection policy and legislation across states and territories.

Accessibility

Data are published in the Steering Committee for the Review of Government Service Provision's (SCRGSP) Report on Government Services (Report).

Interpretability

Further technical details are available in the AIHW manual '*Child protection notifications, investigations and substantiations, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/ and the Steering Committee's '*Child protection services financial data manual*'.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Once national unit cost data are able to be derived using the Pathways activity based costing method, it is anticipated that these proxy measures will be replaced by more robust unit cost efficiency data.

Efficiency, out-of-home care — Out-of-home care expenditure per placement night

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

Efficiency, out-of-home care — Total expenditure on all children in residential care and non-residential care per child in residential and non-residential out-of-home care

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Efficiency — Out-of-home care services |
| Indicator | <ul style="list-style-type: none"> • Total expenditure on all children in residential care and non-residential care per child in residential and non-residential out-of-home care |
| Measure (computation) | <p><u>Definition:</u> This indicator is defined by three measures:</p> <ul style="list-style-type: none"> • Measure 1: Total expenditure on residential out-of-home care during the financial year, divided by the number of children in residential out-of-home care at 30 June. • Measure 2: Total expenditure on non-residential out-of-home care during the financial year, divided by the number of children in non-residential out-of-home care at 30 June. • Measure 3: Total expenditure on all out-of-home care during the financial year, divided by the number of children in all out-of-home care at 30 June. <p><u>Numerators:</u> The numerator for each measure varies:</p> <ul style="list-style-type: none"> • Measure 1: Total recurrent expenditure on residential out-of-home care services during the financial year. • Measure 2: Total recurrent expenditure on non-residential out-of-home care services during the financial year. • Measure 3: Total recurrent expenditure on all out-of-home care services during the financial year. <p><u>Denominators:</u> The denominator for each measure varies:</p> <ul style="list-style-type: none"> • Measure 1: Number of children in residential out-of-home care at 30 June. • Measure 2: Number of children in non-residential out-of-home care at 30 June. • Measure 3: Number of children in all out-of-home care at 30 June. <p><u>Computation:</u> Expressed in dollar figures. Calculation is: (Numerator ÷ Denominator).</p> |
| Data source/s | <p><u>Numerators:</u> Expenditure data are supplied by Australian State and Territory governments.</p> <p><u>Denominators:</u> AIHW, 'Out-of-home care collection', data supplied by jurisdictions.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory administrative data systems and compiled by the AIHW. |
| Relevance | <p>Data are reported by Australian State and Territory governments and provide information on the efficiency of out-of-home care service delivery. Low or decreasing expenditure per child in care can suggest more efficient services but may indicate lower quality or different service delivery models.</p> <p>These indicators are proxy indicators and need to be interpreted with care as they do not represent a measure of unit costs. Expenditure per child in care at 30 June overstates the cost per child because significantly more children are in care during a year than at a point in time. In addition, the indicator does not reflect the length of time that a child spends in care.</p> <p>Residential out-of-home care comprises care placements in residential buildings with paid staff. These facilities are mainly used for children who have complex needs.</p> <p>Non-residential out-of-home care comprises home-based care where placement is in the home of a carer who is reimbursed (or who has been offered but declined</p> |

reimbursement) for expenses related to the care of a child. Home-based care includes relative/kinship care and foster care.

Timeliness

The most timely data (i.e., data for the most recent financial year) are reported.

Accuracy

Data are affected by comparability issues resulting from different inclusions in out-of-home care expenditure across jurisdictions.

The national *Child protection services financial data manual* stipulates that the full cost to government of providing out-of-home care services, including all resources consumed in providing a service, should be reported.

Time series expenditure data are deflated so comparisons over time can be made in real terms.

Coherence

As noted above, the data items used to construct this performance indicator are affected by comparability issues.

Accessibility

Data are published in the Steering Committee for the Review of Government Service Provision's (SCRGSP) Report on Government Services (Report).

Interpretability

Further technical details are available in the AIHW manual '*Out-of-home care, Australia: Data collection standards & counting rules*' at www.aihw.gov.au/child-protection/ and the Steering Committee's '*Child protection services financial data manual*'.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Not all jurisdictions are able to disaggregate out-of-home care expenditure by residential and non-residential service costs. Data for all three measures are reported for Victoria, WA, SA, Tasmania and the ACT. Data for measure 3 *only* are reported for NSW, Queensland and the NT
- Once national unit cost data are able to be derived using the Pathways activity based costing method, it is anticipated that these proxy measures will be replaced by more robust unit cost efficiency data.

Attachment tables

Attachment tables are identified in references throughout this chapter by a '16A' prefix (for example, table 16A.1). A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the Review website at www.pc.gov.au/gsp.

Youth justice services aim to assist individuals and families who are in crisis or experiencing difficulties that hinder personal or family functioning, to promote community safety, and to reduce youth offending.

This chapter reports on:

- *Community-based youth justice supervision* — community-based youth justice supervision is an alternative to detention, where a sentenced order or unsentenced order (such as conditional bail) are served in the community. Most young people under youth justice supervision are supervised in the community.
- *Detention-based youth justice supervision* — detention-based youth justice supervision involves young people serving their sentence in a custodial environment.
- *Group conferencing* — group conferences are decision-making forums that aim to minimise the progression of young people into the youth justice system, and provide restorative justice. Typically, a group conference involves the young offender(s) and victim(s) and their families, police and a youth justice agency officer, all of whom

attempt to agree on a course of action required of the young offender/s to make amends for his or her offence/s.

Improvements to the reporting of youth justice services in this edition include:

- all jurisdictions now reporting ‘group conferencing outcomes’ by Indigenous status compared with seven previously
- seven jurisdictions now reporting on ‘absconds from unescorted leave’ (although rates are still unavailable for some jurisdictions as the number of periods of unescorted leave data remain incomplete) compared with six previously
- seven jurisdictions now reporting on ‘assaults in custody’ compared with six previously (although data by Indigenous status are still unavailable for some jurisdictions)
- six jurisdictions now reporting on ‘case plans prepared’ for community-based orders compared with five previously and seven jurisdictions for detention-based orders compared with six previously
- all jurisdictions now reporting on ‘completion of community-based orders’ compared with seven previously.

16.1 Profile of youth justice services

Service overview

Youth justice systems are responsible for attending to young people who have committed or allegedly committed an offence while considered by law to be a juvenile (predominantly aged 10–17 years). In so doing, youth justice systems aim to promote community safety and reduce youth offending, by assisting young people to address their offending behaviour and take responsibility for the effect of their behaviour on victims and the wider community.

The youth justice system in each State and Territory comprises:

- police, who are usually a young person’s first point of contact with the system, and are typically responsible for administering the options available for diverting young people from further involvement in the youth justice system
- courts (usually a special children’s or youth court), where matters relating to the charges against young people are heard. The courts are largely responsible for decisions regarding bail, remand and sentencing
- statutory youth justice agencies, which are responsible for the supervision and case management of young people on a range of legal and administrative orders, and for the provision of a wide range of services intended to reduce and prevent crime

-
- non-government and community service providers, who may work with youth justice agencies to provide services and programs for young people under supervision.

The majority of young people who come into contact with the youth justice system do not become clients of statutory youth justice agencies. Instead, young people are diverted through a range of mechanisms, including contact with police (who have the authority to issue warnings, formal cautions and infringement notices for minor offences) and the courts (which can issue non-supervised orders for minor offences).

This chapter reports on services provided by statutory youth justice agencies that are responsible for the supervision and case management of young people who have committed or allegedly committed an offence.

Roles and responsibilities

Responsibility for the provision of youth justice services in Australia resides with State and Territory governments. The relevant department in each State and Territory responsible for funding and/or providing youth justice services in 2013-14 is listed in box 16.1. Each jurisdiction has its own legislation that determines the policies and practices of its youth justice system. While this legislation varies in detail, its intent is similar across jurisdictions.

Legislation in all jurisdictions (except Queensland) requires that the offence giving rise to youth justice involvement be committed while a young person is aged between 10–17 years (in Queensland, it is 10–16 years). However, youth justice agencies might continue their involvement with these young people after they reach adulthood, for example, where young people turn 18 years of age while on an order. In five jurisdictions, there is no upper age limit for youth justice involvement (Victoria, Queensland, WA, SA, and Tasmania). In NSW, the ACT and the NT, the upper age limits for youth justice involvement are 21.5 years, 21 years, and 18 years, respectively.

The Australasian Juvenile Justice Administrators (AJJA) is responsible for national coordination of youth justice services and was previously a sub-group of the Standing Council on Community and Disability Services Advisory Council (SCCDSAC). Decisions by the Council of Australian Governments (COAG) in late 2013 led to the dissolution of the SCCDSAC and consequently changes in AJJA's governance. Currently, AJJA is in the process of determining governance arrangements.

Box 16.1 Government departments responsible for the delivery of youth justice services

| | |
|-----|---|
| NSW | Department of Attorney General and Justice |
| Vic | Department of Human Services |
| Qld | Department of Justice and Attorney-General |
| WA | Department of Corrective Services |
| SA | Department for Communities and Social Inclusion |
| Tas | Department of Health and Human Services |
| ACT | Community Services Directorate |
| NT | Department of Correctional Services |

Diversion of young offenders

In all jurisdictions, police have responsibility for administering options for diverting young people who have committed (or allegedly committed) relatively minor offences from further involvement in the youth justice system. Diversionary options include warnings (informal cautions), formal cautions, and infringement notices. Responsibility for administering the diversionary processes available for more serious offences lies with youth justice authorities, courts and in some cases, other agencies. Comparable and complete national data are yet to become available to illustrate the nature or level of diversion undertaken by Australian jurisdictions. However, Police services (chapter 6) provides data on the number of young people who are diverted by police, as a proportion of all young offenders formally dealt with by police (table 6.2).

Size and scope

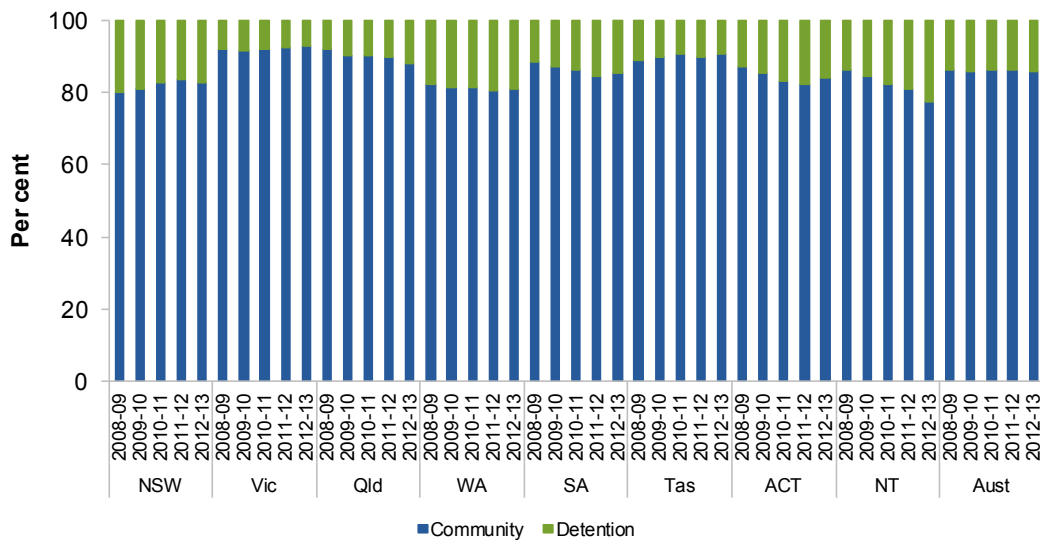

Youth justice data sources

Data in the following section of the chapter are sourced from the Juvenile Justice National Minimum Data Set (JJ NMDS), which is maintained by the Australian Institute of Health and Welfare (AIHW) and contains information on all young people under youth justice supervision. For consistency across jurisdictions, the section sources JJ NMDS data for young people under supervision aged 10–17 years. The remaining information in the chapter is sourced directly from State and Territory governments and reports on all young people subject to youth justice supervision (that is, including those young people 18 years and older who remain on an order).

Clients of youth justice agencies

Most young people who are supervised by youth justice agencies are on community-based orders, which include supervised bail, probation and parole. During 2012-13, 10 940 young people aged 10–17 years experienced youth justice supervision in Australia (AIHW 2014). Nationally, 85.5 per cent of young people aged 10–17 years who were supervised by youth justice services on an average day during 2012-13 were in the community, with the remainder in detention (figure 16.1). These data do not include young people aged 10–17 years who were supervised in the adult correctional system or young people over 17 years of age who continue to be supervised by youth justice agencies.

Figure 16.1 **Daily average proportion of youth justice clients aged 10-17 years supervised in the community and in detention centres^a**

^a Refer to table 16A.4 for detailed footnotes.

Source: Australian Institute of Health and Welfare (AIHW) 2014, *Youth justice in Australia 2012–13*, Bulletin 120, Canberra; WA and NT governments (unpublished); table 16A.4.

Youth justice detention

The daily average number of young people aged 10–17 years in youth justice detention centres decreased from 819 to 789 between 2011-12 and 2012-13 (table 16A.4). The daily average rate of detention of young people aged 10–17 years per 100 000 in the population aged 10–17 years decreased from 36.4 per 100 000 in 2011-12 to 34.9 per 100 000 in 2012-13, with rates varying across jurisdictions (figure 16.2).

Figure 16.2 **Daily average rate of detention of young people aged 10–17 years, per 100 000 young people aged 10–17 years^a**

^a Refer to table 16A.4 for detailed footnotes.

Source: AIHW 2014, *Youth justice in Australia 2012–13*, Bulletin 120, Canberra; WA and NT governments (unpublished); table 16A.4.

Nationally, on an average day, females comprised 10.5 per cent of the total population of youth justice detention centres during 2012-13, while males comprised 89.5 per cent of the youth justice detention population (table 16A.7).

Community-based supervision

As outlined above, the majority of young offenders are supervised in the community. Nationally, the daily average number of young people aged 10–17 years supervised in the community decreased from 5124 to 4681 between 2011-12 and 2012-13 (table 16A.4). The daily average rate of young people aged 10–17 years supervised in the community per 100 000 in the population aged 10–17 years decreased from 226.8 per 100 000 in 2011-12 to 207.2 per 100 000 in 2012-13, with rates varying across jurisdictions (figure 16.3).

Figure 16.3 **Daily average rate of community-based supervision of young people aged 10–17 years, per 100 000 young people aged 10–17 years^a**

^a Refer to table 16A.4 for detailed footnotes.

Source: AIHW 2014, *Youth justice in Australia 2012–13*, Bulletin 120, Canberra; WA and NT governments (unpublished); table 16A.4.

Nationally, on an average day, females comprised 19.4 per cent of the total population of young people supervised in the community during 2012-13, while males comprised 80.6 per cent (table 16A.8).

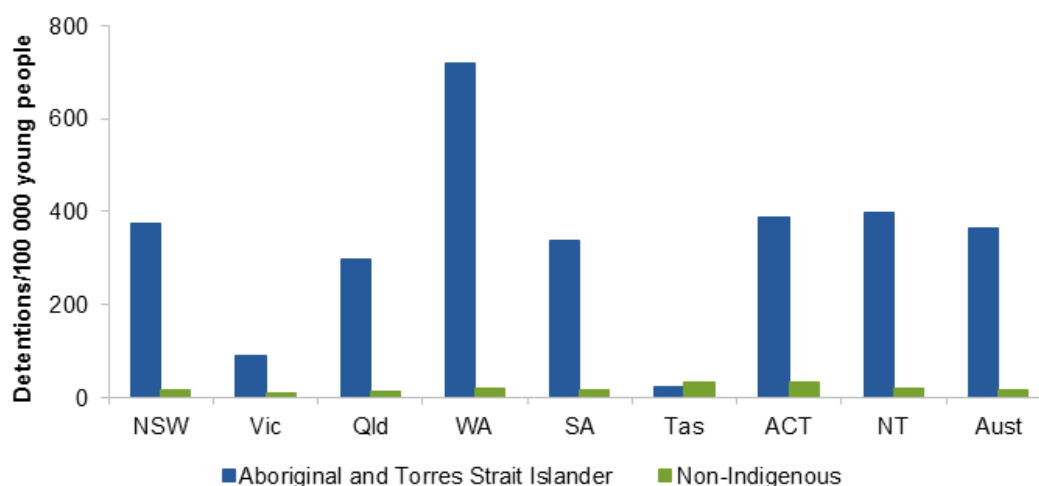

Numbers and rates of young Aboriginal and Torres Strait Islander people subject to youth justice supervision

The daily average number of Aboriginal and Torres Strait Islander people aged 10–17 years detained in youth justice detention centres was 454 in 2012-13, compared with 329 non-Indigenous people aged 10–17 years (table 16A.9). Nationally, the daily average detention rate for Aboriginal and Torres Strait Islander people aged 10–17 years in 2012-13 was 364.4 per 100 000 Aboriginal and Torres Strait Islander people aged 10–17 years, compared with 15.4 per 100 000 non-Indigenous young people (table 16A.9).

In 2011, the House of Representatives Standing Committee on Aboriginal and Torres Strait Islander Affairs released the report *Doing Time — Time for Doing: Indigenous youth in the criminal justice system*, which highlighted that, although 20 years have passed since the *Royal Commission into Aboriginal Deaths in Custody Report* (Commonwealth of Australia 1991), the incarceration rate of Aboriginal and Torres Strait Islander people, including Aboriginal and Torres Strait Islander youth, has worsened (Commonwealth of Australia 2011). Aboriginal and Torres Strait Islander young people are far more likely to come into contact with the criminal justice system and to be incarcerated than non-Indigenous young

people. The over-representation of Aboriginal and Torres Strait Islander people aged 10–17 years in detention across jurisdictions in 2012-13 is shown in figure 16.4.

Figure 16.4 Average daily rate of detention of Aboriginal and Torres Strait Islander young people and non-Indigenous young people aged 10–17 years, per 100 000 young people aged 10-17 years, 2012–13^{a, b}

^a Data should be interpreted with caution, particularly for jurisdictions with small Aboriginal and Torres Strait Islander populations. The Aboriginal and Torres Strait Islander and non-Indigenous rate ratio in table 16A.11 should also be taken into account. ^b Refer to table 16A.9 for detailed footnotes.

Source: AIHW 2014, *Youth justice in Australia 2012–13*, Bulletin 120, Canberra; WA and NT governments (unpublished); table 16A.9.

Aboriginal and Torres Strait Islander young people are also over-represented in community-based supervision (figure 16.5). The daily average number of Aboriginal and Torres Strait Islander young people aged 10–17 years supervised in the community was 1975 in 2012-13, compared with 2506 non-Indigenous young people aged 10–17 years (table 16A.10). Nationally, the daily average rate of Aboriginal and Torres Strait Islander young people aged 10–17 years subject to community-based supervision in 2012-13 was 1585.7 per 100 000 Aboriginal and Torres Strait Islander young people aged 10–17 years, compared with 117.4 per 100 000 non-Indigenous young people aged 10–17 years (table 16A.10).

Figure 16.5 **Average daily rate of Aboriginal and Torres Strait Islander young people and non-Indigenous young people aged 10–17 years subject to community supervision, per 100 000 young people aged 10–17 years, 2012-13^{a, b}**

^a Data should be interpreted with caution, particularly for jurisdictions with small Aboriginal and Torres Strait Islander populations. The Aboriginal and Torres Strait Islander and non-Indigenous rate ratio in table 16A.11 should also be taken into account. ^b Refer to table 16A.10 for detailed footnotes.

Source: AIHW 2014, *Youth justice in Australia 2012–13*, Bulletin 120, Canberra; WA and NT governments (unpublished); table 16A.10.

Funding

The youth justice expenditure data included in this Report are based on the total costs incurred by governments in supervising young offenders of any age, where the offence giving rise to youth justice supervision was committed while the young person was aged 10–17 years. Total recurrent expenditure on detention-based supervision, community-based supervision and group conferencing was approximately \$673 million across Australia in 2013-14. Detention-based supervision accounted for the majority of government expenditure (60.8 per cent, or \$409 million). Nationally, in 2013-14, recurrent expenditure on youth justice services per child in the population aged 10–17 years (as distinct from per youth justice client, which is reported as a performance indicator in section 16.3) was \$297 (figure 16.6).

The population of all children aged 10–17 years is used in figure 16.6 to calculate a per head of population cost, as this age range notionally represents the potential population of youth justice agencies' clients. The 10–17 year age range is considered the potential population of youth justice agencies' clients, as legislation in all jurisdictions (except Queensland) requires that the offence giving rise to youth justice involvement be committed while a young person is aged between 10–17 years (in Queensland, it is 10–16 years). However, youth justice agencies often continue their involvement with

young people after they reach adulthood; for example, where young people turn 18 years of age while on a supervision order. This is particularly so in Victoria, where young people aged 18 years or older are detained in youth justice facilities through the dual track system and comprise approximately 47 per cent of the total youth justice client cohort.

It is an objective of the Steering Committee to report comparable estimates of costs. Ideally, the full range of costs to government would be determined on a comparable basis across jurisdictions. Where full costs cannot be calculated, costs should be estimated on a consistent basis across jurisdictions. It is expected that the quality and comparability of youth justice expenditure data will be improved over time. At present, there are differences across jurisdictions in the calculation of youth justice expenditure. Tables 16A.1 to 16A.3 identify the level of consistency across jurisdictions. Table 16A.1 provides an overview of total government expenditure on youth justice services. Table 16A.2 provides more detailed information on the various components of government expenditure (for example, expenditure on salaries, overheads and capital costs).

Figure 16.6 Recurrent expenditure on youth justice services (comprising detention-based and community-based supervision and group conferencing), per young person aged 10–17 years in the population, 2013-14^a

^a Refer to tables 16A.1 to 16A.3 for detailed footnotes and explanations of the consistency of expenditure data across states and territories.

Source: State and Territory governments (unpublished); table 16A.1.

16.2 Framework of performance indicators for youth justice services

The performance indicator framework for youth justice services is based on a set of shared government objectives (box 16.2).

Box 16.2 Objectives for youth justice services

Youth justice services aim to contribute to a reduction in the frequency and severity of youth offending, recognise the rights of victims and promote community safety. Youth justice services seek to achieve these aims by:

- assisting young people to address their offending behaviour and take responsibility for the effect their behaviour has on victims and the wider community
- enabling the interests and views of victims to be heard
- contributing to the diversion of young offenders to alternative services
- recognising the importance of the families and communities of young offenders, particularly Aboriginal and Torres Strait Islander communities, in the provision of services and programs
- providing services that are designed to rehabilitate young offenders and reintegrate them into their community.

Youth justice services should be provided in an equitable, efficient and effective manner.

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of youth justice services (figure 16.7). The performance indicator framework shows which data are comparable in the 2015 Report. For data that are not considered directly comparable, the text includes relevant caveats and supporting commentary. Chapter 1 discusses data comparability and data completeness from a Report-wide perspective (section 1.6).

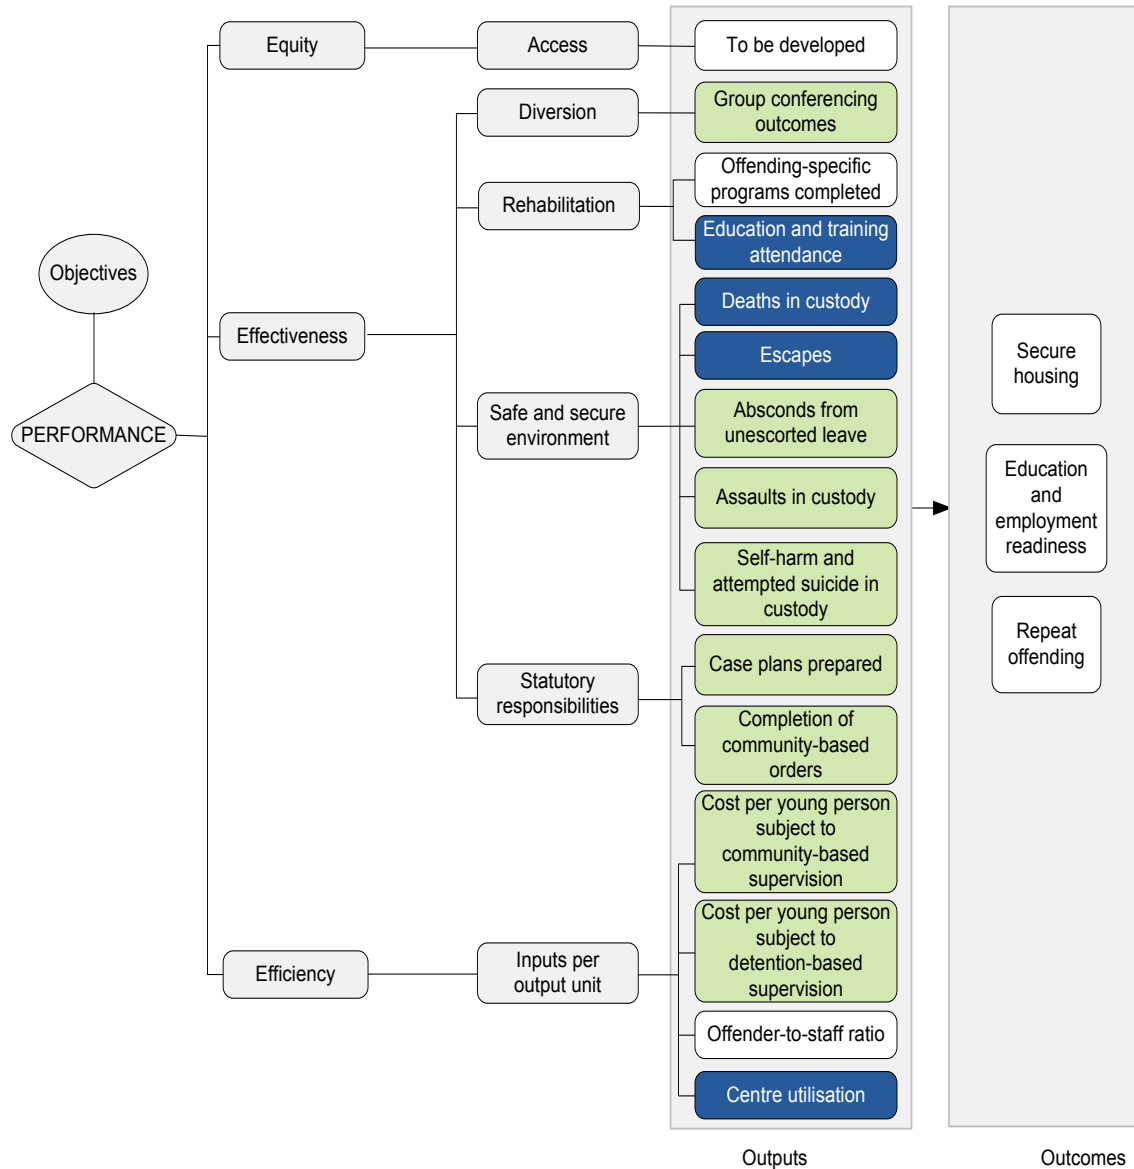

The Report's statistical context chapter contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics, including age profile, geographic distribution of the population, income levels, education levels, tenure of dwellings and cultural heritage (including Aboriginal and Torres Strait Islander and ethnic status) (chapter 2).

The performance data that follow report on all young people under the supervision of youth justice agencies, including those aged 18 years and over where the offence that gave rise to youth justice involvement was committed while the young person was aged 10–17 years (or 10–16 years in Queensland).

Data quality information (DQI) is being progressively introduced for all indicators in the Report. The purpose of DQI is to provide structured and consistent information about quality aspects of data used to report on performance indicators. DQI in this Report cover the seven dimensions in the ABS' data quality framework (institutional environment,

relevance, timeliness, accuracy, coherence, accessibility and interpretability) in addition to dimensions that define and describe performance indicators in a consistent manner, and note key data gaps and issues identified by the Steering Committee. All DQI for the 2015 Report can be found at www.pc.gov.au/gsp/reports/rogs/2015.

Figure 16.7 Youth justice services performance indicator framework

Key to indicators*

- Text Most recent data for all measures are comparable and complete
- Text Most recent data for at least one measure are comparable and complete
- Text Most recent data for all measures are either not comparable and/or not complete
- Text No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the chapter

16.3 Key performance indicator results for youth justice services

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see chapter 1, section 1.5).

Equity and access

Equity and access indicators are a key area for development in future reports. These will be indicators of governments' objective to ensure that all clients have fair and equitable access to services on the basis of relative need and available resources. These indicators are under development.

Effectiveness

Diversion — group conferencing outcomes

'Group conferencing outcomes' is an indicator of governments' objective to divert young people from the youth justice system and address their offending needs (box 16.3).

Box 16.3 **Group conferencing outcomes**

'Group conferencing outcomes' is defined as the number of young people who receive group conferencing and who as a result reach an agreement, as a proportion of all young people who receive group conferencing.

Typically, a group conference involves the young offender and victim (or victims) and their families, police and a youth justice agency officer, all of whom attempt to agree on a course of action required of the young offender to make amends for his or her offence. Group conferences are decision-making forums that aim to minimise the progression of young people into the youth justice system, and provide restorative justice.

Data for this indicator should be interpreted with caution as the provision of group conferencing differs across jurisdictions in relation to: (a) its place in the court process (for example, whether young people are referred by police before court processes begin, or by the court as an alternative to sentencing), (b) the consequences for young people if they do not comply with the outcome plans of a conference, and (c) eligibility.

A high or increasing rate for this indicator is desirable.

Data reported for this indicator are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- complete for the current reporting period. All required 2013-14 data were available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, in 2013-14, 92.9 per cent of all concluded group conferences resulted in an agreement, with proportions varying across jurisdictions (figure 16.8).

Figure 16.8 **Proportion of young people who receive group conferencing and reach an agreement, by Indigenous status, 2013-14^{a, b, c}**

^a Victoria counts the number of group conferences resulting in an agreement, as a proportion of all concluded group conferences, as distinct from young people who receive group conferencing and reach an agreement. ^b Refer to table 16A.13 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.13.

Rehabilitation — offending-specific programs completed

‘Offending-specific programs completed’ is an indicator of governments’ objective to provide program interventions that are designed to rehabilitate young offenders and reintegrate them into their community (for example, the Changing Habits and Reaching Targets program, drug counselling programs and sex offender treatment programs) (box 16.4).

Box 16.4 Offending-specific programs completed

‘Offending-specific programs completed’ is defined as the percentage of young people who completed an offending-specific program while completing a supervised sentenced order (whether a community-based order or a detention order) as a proportion of all young people completing a supervised sentenced order who were assessed as requiring an offending-specific program to address their criminogenic behaviour.

A high or increasing rate of offending-specific programs completed is desirable.

Data are not yet available for this indicator. This indicator has been identified for development and reporting in future.

Box 16.5 provides information regarding offending-specific programs in operation in each jurisdiction.

Box 16.5 Offending-specific programs

NSW NSW uses the Youth Level of Service/Case Management Inventory (YLS/CMI) risk assessment tool and the Changing Habits and Reaching Targets (CHART) offending behaviour program on a state-wide basis. NSW also provides specific offence-based intervention programs. The Violence Offender Program (VOP) addresses the criminogenic needs of violent offenders, thereby reducing their offending behaviours, contact with the justice system and rates of recidivism. The Sexual Offending Program (SOP) provides comprehensive, individualised assessment for adolescents convicted of offences of a sexual nature, as well as individual and group interventions. The Alcohol and Other Drug (AOD) Program aims to address the needs of clients whose pattern of alcohol and other drug use is related to their offending behaviour. 'DthinaYuwali' is an Aboriginal-specific staged AOD program based on the relationship between substance use and pathways to offending. The Intensive Supervision Program (ISP) focuses on juveniles who commit serious and/or repeat offences, or whose severe antisocial behaviour increases their likelihood of offending. ISP is based on the Multisystemic Therapy Model that has delivered significant reductions in the long-term rates of re-offending in WA, New Zealand, the United States, Canada and nine countries throughout Europe. 'Our Journey To Respect' is a tertiary violence prevention program for Aboriginal young offenders aimed at motivating and helping young people to make changes to violent behaviours.

Vic Victoria offers a range of offending-specific programs in conjunction with a comprehensive individualised case planning framework (including assessment and client service planning). 'Changing Habits and Reaching Targets' (CHART) is a structured intervention program which challenges offending behaviour. CHART is used as part of casework intervention with individuals or in small groups. The 'Male Adolescent Program for Positive Sexuality' is an intensive individual, group and family treatment program for young people found guilty of sexual offences. Victoria has introduced a new violence reduction program aimed at reducing the likelihood of future violent offending by young people. The Adolescent Violence Intervention Program (AVIP) is a multi-modular Cognitive Behavioural Therapy intervention that targets factors that research consistently shows are associated with violence in young people. The 'Motor Vehicle Offending Program' is provided in conjunction with the Transport Accident Commission and Road Trauma Support Unit. It addresses specific behaviours related to motor vehicle offences.

Box 16.5 (continued)

- Qld** In the Queensland youth justice system, a young person's risk, needs and protective factors are assessed using the Youth Level of Service Case Management Inventory (YLS-CMI) to determine both suitability for programs and to assess outcomes. Youth Justice delivers two state-wide offence-focused programs to young offenders in regional service centres throughout Queensland and in youth detention. The programs are Changing Habits and Reaching Targets (CHART) and Aggression Replacement Training (ART). Additionally, Queensland's two youth detention centres and 17 youth justice service centres deliver a range of tailored programs to young offenders. This includes programs targeted at improving offender health and wellbeing, adventure interventions, cultural and spiritual programs; and reintegration and transition programs, such as financial literacy, parenting skills and driver education program programs. The programs delivered to young people align with the Queensland Youth Justice Intervention Framework. This framework details an evidence-based process for the development, implementation and evaluation of programs. Under the framework, youth justice supervises court orders and conditional bail programs, provides offence-focused programs, and delivers needs-based case management and referral to education, health and other support services which are delivered primarily through government and non-government organisations. As part of ongoing renewal of Queensland's youth justice system, programs will continue to be subject to review and/or new programs developed to maintain evidence-based responses for reducing offending and re-offending by young people.
- WA** WA offers a range of offending-specific programs to address the needs of young offenders. Programs are run on an as needs basis according to suitability criteria for specific programs. Examples of the offending-specific programs provided in WA include: 'Healthy Relationships', which explores adolescent relationships and issues such as sexism, stereotypes and consent; 'Protective Behaviours', which examines safety warning signs and discusses who young people can turn to for help; 'Drumbeat', a therapeutic program which incorporates music; and other conflict, parenting and sex education programs. These programs can be conducted in community settings, but are most commonly conducted in custodial settings.

(continued on next page)

Box 16.5 (continued)

SA SA's youth justice system provides rehabilitation and treatment programs for young people through Youth Justice Psychology Services (YJPS). These are integrated with case management services. Specific services include the provision of clinical/forensic psychological assessments to assist case planning and case management and the delivery of individual therapeutic intervention and group-based rehabilitation programs. The PLUS+ program is an intensive, group-based, criminogenic treatment program based upon cognitive-behavioural principles delivered by YJPS. The primary objective of the program is to help young people acquire, develop and apply a series of social problem-solving, interpersonal, and self-control skills that will enable them to better manage potential difficulties in their lives and to avoid future reoffending. YJPS prioritises young people who are at high risk of re-offending and who have been convicted of serious offences. A range of rehabilitation and support programs are offered to young people who are under the supervision of either community-based or custodial Youth Justice. Rehabilitation programs currently offered include Ignition, Changing Habits and Reaching Targets (CHART), Systematic Training for Anger Reduction (STAR), and drug and alcohol intervention through Drug and Alcohol Services SA (DASSA). In collaboration with sector and community partners Youth Justice offers a range of developmental, health and social integration programs including D-Stress and the Step Out Mentoring Program. SA acknowledges the important role culture plays in the positive growth and development of Aboriginal and Torres Strait Islander young people within their family, cultural community and wider community. Aboriginal young people and their families are provided with access to a range of cultural support services and Aboriginal programs delivered by Aboriginal-specific service providers including Metropolitan Aboriginal Youth and Family Services (MAYFS) Warpulaiendi programs and Child and Adolescent Mental Health Services' (CAMHS) Journey to Respect program.

Tas Tasmania utilises the Youth Level of Service/Case Management Inventory risk assessment tool and the Changing Habits and Reaching Targets (CHART) offending behaviour program. The tools support a modular and structured approach to working with young people who are at a high risk of reoffending. Tasmania also sources expertise from a range of government, non-government and private services to provide offending-specific programs to young people based on their assessed risk and need. The community-based Targeted Youth Support Service provides intensive case management and interventions for vulnerable young people and their families. The target groups for this service are young people identified as having significant and/or multiple risk issues and without intensive support, young people known to child protection, and young people at risk of entry and/or escalation within the youth justice system. U-Turn is a motor vehicle offending program which involves engaging participants with a history of motor vehicle theft in 'hands on' mechanical training while addressing life skills and personal development. Save the Children runs the Transition from Detention Program to assist young people to reintegrate back into the community in Southern Tasmania as well as the Supporting Young People on Bail Program which supports young people placed on Court Bail in Southern Tasmania.

(continued on next page)

Box 16.5 (continued)

ACT The ACT's main offending-specific program is Changing Habits and Reaching Targets (CHART), which is designed specifically for young people assessed as moderate to high-risk of re offending. This behaviour program is used by youth justice staff as part of their casework intervention either with individuals or with small groups of two to three clients. CHART is evidence-based and is informed by the 'What Works' approach to offender rehabilitation. This approach is characterised by the application of five basic principles of good practice for effective interventions: risk, needs, responsiveness, program integrity and professional discretion.

NT The NT provides a number of offending-specific programs to assist young people and inmates in contact with the criminal justice system. Programs offered in the NT include: sex offender treatment programs; violent offender treatment programs; the Safe, Sober, Strong Program; and the Family Violence Program. These programs are offered to inmates in adult correctional centres and youth detention centres. The programs are facilitated by psychologists and social workers with experience in these areas. The Intensive Alcohol and Drug Program is facilitated and run by non-government organisations. In addition, individual treatment programs are provided to inmates and young people with an identified need for specific treatment programs. The programs are based on cognitive behavioural therapy. A 'hands on' approach, as distinct from a 'classroom style' approach, has been adopted in facilitating these programs to reflect cultural differences, language difficulties and lower literacy levels which inmates or youth detainees in these programs may experience. The NT adult correctional and youth justice systems have a disproportionately high number of Aboriginal and Torres Strait Islander people in custody or detention. Accordingly, input has been provided by an Indigenous Torres Strait Islander Consultative Committee and from Indigenous employees attached to the Offender Services, Programs and Indigenous Affairs Division to ensure programs are relevant and appropriate.

Source: State and Territory governments (unpublished).

Rehabilitation — education and training attendance

'Education and training attendance' is an indicator of governments' objective to provide program interventions in education and training to rehabilitate young offenders and increase their chances of successfully re-integrating into the community (box 16.6).

Box 16.6 Education and training attendance

'Education and training attendance' is defined by two measures:

- the number of young people of compulsory school age in detention attending an education course, as a percentage of all young people of compulsory school age in detention
- the number of young people not of compulsory school age in detention attending an education or training course, as a percentage of all young people not of compulsory school age in detention.

Compulsory school age refers to specific State and Territory governments' requirements for a young person to participate in school, which are based primarily on age (see chapter 4 School education for further information). Education or training course refers to school education or an accredited education or training course under the Australian Qualifications Framework.

A high or increasing percentage of young people attending education and training is desirable.

Exclusions include young people not under youth justice supervision (for example, in police custody) and young people whose situation might exclude their participation in education programs (including young people who are: on temporary leave such as work release, medically unable to participate, in isolation, or on remand or sentenced for fewer than 7 days).

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 98.8 per cent of young people of compulsory school age in detention were attending an education course in 2013-14, while 99.8 per cent of young people in detention not of compulsory school age were attending an accredited education or training course (figure 16.9). Proportions varied across jurisdictions.

Figure 16.9 Proportion of young people in detention attending an accredited education or training course, by Indigenous status, 2013-14^a

(a) Proportion of young people of compulsory school age in detention attending an accredited education or training course

(b) Proportion of young people not of compulsory school age in detention attending an accredited education or training course

^a Refer to table 16A.15 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.15.

Safe and secure environment — deaths in custody

‘Deaths in custody’ is an indicator of governments’ objective to ensure that youth justice agencies provide a safe and secure environment for young people in custody (box 16.7).

Box 16.7 **Deaths in custody**

'Deaths in custody' is defined as the number of young people who died while in custody.

A zero or decreasing deaths in custody rate is desirable.

The scope of this indicator is restricted to those young people who died while in the legal and/or physical custody of a youth justice agency and those who died in, or en route to, an external medical facility as a result of becoming ill or being injured in custody (even if not escorted by youth justice agency workers).

Data reported for this indicator are:

- comparable across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

No young people died while in the legal or physical custody of an Australian youth justice agency in 2013-14 (table 16A.14).

Safe and secure environment — escapes

'Escapes' is an indicator of governments' objective to ensure that youth justice agencies provide a safe and secure environment for young people in custody, and the community (box 16.8).

Box 16.8 Escapes

'Escapes' is defined by two measures:

- the number of escapes from a youth justice detention centre, as a proportion of all young people in custody
- the number of escapes during periods of escorted movement, as a proportion of all periods of escorted movement.

An escape from a youth justice detention centre is defined as a breach of a secure perimeter or defined boundary of a youth justice detention centre by a young person under the supervision of the centre.

A period of escorted movement is defined as a period of time during which a young person is in the custody of the youth justice agency while outside a detention centre. The period of escorted movement ends when the young person is returned to the detention centre, or is no longer in the legal or physical custody of the youth justice agency. An escape from an escorted movement is defined as the failure of a young person to remain in the custody of a supervising youth justice worker or approved service provider during a period of escorted movement. An escape is counted each time a young person escapes. For example, if a young person escapes three times in a counting period, three escapes are recorded. If three young people escape at the same time, three escapes are recorded.

A zero or decreasing escape rate is desirable.

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions and over time
- incomplete for the current reporting period. Data for WA and the NT for 2013-14 were not available for the measure escapes during periods of escorted movement.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, there were 8 escapes from youth justice detention in 2013-14, which was equivalent to 0.2 escapes per 10 000 custody nights in 2013-14 (table 16.1). The number of escapes from detention varied across jurisdictions.

Table 16.1 Number and rate of escapes from youth justice detention centres, by Indigenous status, 2013-14^a

| | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |
|---------------------------------------|-----|-----|-----|----|----|-----|-----|-----|------|

| Unknown | – | – | – | – | – | – | – | – | – |
| Total | – | 0.2 | – | – | – | 7.0 | – | 2.3 | 0.2 |

^a Refer to table 16A.16 for detailed footnotes. – Nil or rounded to zero.

Source: State and Territory governments (unpublished); table 16A.16.

Nationally, there were 8 escapes from escorted movements in 2013-14, which was equivalent to 12.9 escapes per 10 000 escorted movements in 2013-14 (table 16A.16). The number of escapes from escorted movements varied across jurisdictions.

Safe and secure environment — absconds from unescorted leave

‘Absconds from unescorted leave’ is an indicator of governments’ objective to appropriately manage young people while they are in the legal custody of a youth justice detention centre. Management of young people includes the provision of appropriate assessment, planning and supervision to enable young people to undertake unescorted temporary leave from detention centres. Unescorted leave may be undertaken for the purposes of providing rehabilitation interventions and activities such as education, training and employment (box 16.9).

Box 16.9 Absconds from unescorted leave

‘Absconds from unescorted leave’ is defined as the number of young people who have unescorted temporary leave and fail to return to custody, as a proportion of all young people who have unescorted temporary leave.

A zero or low, or decreasing rate of absconds from unescorted leave is desirable.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- incomplete for the current reporting period. Denominator data for 2013-14 for this indicator (number of periods of unescorted leave) were not available for SA.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

No young people absconded from unescorted leave in 2013-14 (table 16A.17).

Safe and secure environment — assaults in custody

‘Assaults in custody’ is an indicator of governments’ objective to provide a custodial environment that is safe and secure in order to rehabilitate young offenders and reintegrate them into their community (box 16.10).

Youth justice agencies have a heightened duty of care to young people in detention, because of their age and vulnerability. The duty of care required for young people is greater than might be the case in adult custodial facilities. In discharging their duty of care to young people in detention, youth justice agencies aim to create safe and secure environments in which typical adolescent development can occur and in which young people can socialise with others in a positive and constructive way prior to their release back into their families and communities.

Box 16.10 Assaults in custody

‘Assaults in custody’ is defined by two measures:

- the rate of detainees and staff (by Indigenous status) who are seriously assaulted (that is, sustain an injury that requires overnight hospitalisation and any act of sexual assault) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody
- the rate of detainees and staff (by Indigenous status) who are assaulted (that is, sustain an injury, but do not require hospitalisation) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody.

Injuries resulting from a range of actions are captured as part of reporting for this indicator. Types of injuries include bruises, cuts or lacerations, open wounds, fractured or broken bones or teeth, burns or scalds, poisoning, dislocations and sprains, and concussions. Types of actions that constitute assaults include intentional acts of direct infliction of force and violence (for example, fist fights) and intentional acts of indirect and non-confrontational force or violence (for example, administering illicit drugs or poison, spiking food or drink, and setting traps). The extent to which jurisdictions include counts of minor injuries in the assaults measure differs.

A zero or low, or decreasing assaults in custody rate is desirable.

Data reported for these measures are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- incomplete for the current reporting period. All required 2013-14 data were not available for WA for any measure and NSW was unable to disaggregate staff injuries data by Indigenous status.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 9 detainees were reported as injured in custody due to a serious assault in 2013-14 (table 16.2). Nationally, 1 staff member was reported as injured due to a serious assault in 2013-14 (table 16.3). The proportions of young people and staff injured in custody due to a serious assault varied across jurisdictions.

Safe and secure environment — self-harm and attempted suicide in custody

'Self-harm and attempted suicide in custody' is an indicator of governments' objective to provide a custodial environment that is safe and secure in order to rehabilitate young offenders and reintegrate them into their community (box 16.11).

Box 16.11 **Self-harm and attempted suicide in custody**

'Self-harm and attempted suicide in custody' is defined by four measures:

- the number of incidents of self-harm or attempted suicide in custody requiring hospitalisation
- the number of incidents of self-harm or attempted suicide in custody not requiring hospitalisation
- the number of detainees who self-harmed or attempted suicide in custody requiring hospitalisation
- the number of detainees who self-harmed or attempted suicide in custody not requiring hospitalisation.

An incident of self-harm or attempted suicide is counted each time a young person self-harms or attempts suicide. For example, if one young person self-harms or attempts suicide three times in a counting period, three incidents are recorded. Therefore, the number of incidents of self-harm or attempted suicide and the number of detainees who self-harm or attempt suicide will differ when one detainee has self-harmed on two or more occasions, as each occasion will be counted as a separate incident.

Types of self-inflicted incidents that constitute self-harm include poisoning by drugs, alcohol, gases and vapours, hanging, strangulation, suffocation, drowning or submersion in water, burning, cutting, jumping from a high place, jumping or lying in front of a moving object, and electrocution.

A zero or low, or decreasing self-harm and attempted suicide in custody rate is desirable.

Data reported for these measures are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- incomplete for the current reporting period. Data for 2013-14 were not available for WA.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 12 detainees in 17 separate incidents were reported as having self-harmed or attempted suicide in custody requiring hospitalisation in 2013-14. Proportions varied across jurisdictions (tables 16.6 and 16.7).

Table 16.6 Number and rate of detainees who self-harmed or attempted suicide in custody requiring hospitalisation, by Indigenous status, 2013-14^{a, b, c}

Statutory responsibilities — case plans prepared

‘Case plans prepared’ is an indicator of governments’ objective to ensure that youth justice agencies support young people to minimise the likelihood of re-offending by addressing their offending-related needs (box 16.12).

Box 16.12 Case plans prepared

‘Case plans prepared’ is defined as the number of eligible young people who had a documented case plan prepared or reviewed within 6 weeks of commencing:

- a sentenced detention order, as a proportion of all young people commencing a sentenced detention order
- a sentenced community-based order, as a proportion of all young people commencing a sentenced community-based order.

An eligible young person is one who is serving a sentenced order that requires case management.

A high or increasing rate of case plans prepared is desirable.

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions and over time
- incomplete for the current reporting period. All required 2013-14 data were not available for WA and SA for community-based orders and SA for detention-based orders.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 90.1 per cent of case plans were prepared within 6 weeks of commencing a sentenced community-based order in 2013-14 (figure 16.10(a)). Nationally, 96.9 per cent of case plans were prepared within 6 weeks of commencing a sentenced detention order in 2013-14 (figure 16.10(b)). Proportions varied across jurisdictions.

Figure 16.10 Proportion of case plans prepared within 6 weeks of commencing sentenced detention orders and sentenced community-based orders, by Indigenous status, 2013-14^{a, b, c, d}

(a) Proportion of case plans prepared within 6 weeks of commencing a sentenced community-based order

(b) Proportion of case plans prepared within 6 weeks of commencing a sentenced detention order

^a Data were not available for WA or SA for community-based case plans. ^b Data were not available for SA for detention-based case plans. ^c In the NT, case plans for young people on community-based orders are prepared within 8 weeks of order commencement. Community-based data for the NT have been manually collated and data integrity cannot be assured. ^d Refer to table 16A.22 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.22.

Statutory responsibilities — completion of community-based orders

‘Completion of community-based orders’ is an indicator of governments’ objective to rehabilitate young offenders (box 16.13).

Box 16.13 Completion of community-based orders

‘Completion of community-based orders’ is defined as the proportion of sentenced community-based supervision orders successfully completed. An order is counted as successfully completed where the earliest order expiry date or the order termination date is reached and breach is neither pending nor finalised.

A high or increasing proportion of orders successfully completed is desirable. However, where offenders are non-compliant and pose a risk, breach action (an unsuccessful completion) may be warranted. As a result, a completion rate less than 100 per cent may not necessarily indicate poor performance, and may reflect appropriate supervision of young people on community-based supervision orders.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 79.6 per cent of community-based orders were successfully completed in 2013-14. The proportion of community-based orders successfully completed varied across jurisdictions (figure 16.11).

Figure 16.11 Proportion of community-based orders successfully completed, by Indigenous status, 2013-14^{a, b}

^a Refer to table 16A.21 for detailed footnotes.

Efficiency

Cost per young person subject to community-based supervision

‘Cost per young person subject to community-based supervision’ is an indicator of governments’ objective to provide youth justice services in an efficient manner (box 16.14).

Box 16.14 Cost per young person subject to community-based supervision

'Cost per young person subject to community-based supervision' is defined as total expenditure on community-based supervision per day, divided by the number of young people subject to community-based supervision on an average day.

A low or decreasing unit cost is desirable as it suggests more efficient resource management.

However, efficiency indicators cannot be interpreted in isolation and should be considered in conjunction with effectiveness indicators. A low cost per young person subject to community-based supervision could reflect less investment in rehabilitation programs to address a young person's offending needs, or less intensive case management of young people on community-based supervision orders. Unit costs are also affected by differences in the profile of young offenders, geographic dispersion and other factors that limit opportunities to reduce overheads through economies of scale.

The average daily costs of supervising young offenders are significantly higher than the equivalent unit costs for adult offenders. This is likely to be explained by more extensive supervision requirements when working with minors and the more limited opportunity for economies of scale in smaller youth justice systems.

Data reported for this indicator are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, in 2013-14, the cost per day, per young person subject to community-based supervision on an average day was \$104. The cost per day, per young person subject to community-based supervision on an average day varied across jurisdictions (figure 16.12).

Figure 16.12 **Cost per day, per young person subject to community-based supervision on an average day, 2013-14^{a, b, c}**

^a Data are not comparable and need to be interpreted with caution. ^b Unit costs presented in this Report are not necessarily comparable to local unit costs reported in jurisdiction-specific annual reports due to different methods of calculation. ^c Refer to table 16A.23 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.23.

Cost per young person subject to detention-based supervision

‘Cost per young person subject to detention-based supervision’ is an indicator of governments’ objective to provide youth justice services in an efficient manner (box 16.15).

Box 16.15 Cost per young person subject to detention-based supervision

'Cost per young person subject to detention-based supervision' is defined as total expenditure on detention-based supervision per day, divided by the number of young people subject to detention-based supervision on an average day.

A low or decreasing unit cost is desirable as it suggests more efficient resource management.

However, efficiency indicators cannot be interpreted in isolation and should be considered in conjunction with effectiveness indicators. A low cost per young person subject to detention-based supervision could reflect less investment in rehabilitation programs to address a young person's offending needs, or less intensive case management of young people on detention-based supervision orders. Unit costs are also affected by differences in the profile of young offenders, geographic dispersion and other factors that limit opportunities to reduce overheads through economies of scale.

The average daily costs of supervising young offenders are significantly higher than the equivalent unit costs for adult offenders. This is likely to be explained by more extensive supervision requirements when working with minors and the more limited opportunity for economies of scale in smaller youth justice systems.

Data reported for this indicator are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, in 2013-14, the cost per day, per young person subject to detention-based supervision was \$1207. The cost per day, per young person subject to detention-based supervision varied across jurisdictions (figure 16.13).

Figure 16.13 **Cost per day, per young person subject to detention-based supervision on an average day, 2013-14^{a, b, c}**

^a Data are not comparable and need to be interpreted with caution. ^b Unit costs presented in this Report are not necessarily comparable to local unit costs reported in jurisdiction-specific annual reports due to different methods of calculation. ^c Refer to table 16A.24 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.24.

Offender-to-staff ratio

‘Offender-to-staff ratio’ is an indicator of governments’ objective to provide youth justice services in an efficient manner (box 16.16).

Box 16.16 Offender-to-staff ratio

‘Offender-to-staff ratio’ is defined by two measures:

- the number of young people requiring community-based supervision relative to the number of community based staff
- the number of young people in detention relative to the number of detention centre staff.

The number of offenders relative to the number of staff provides a measure of efficient resource management by youth justice agencies. A high or increasing ratio (that is, a higher number of offenders per staff member) suggests more efficient resource management. However, this indicator needs to be interpreted with caution, as a low or decreasing offender-to-staff ratio may result in more effective performance, particularly with high risk young offenders who possess significant offence-related needs. Further, in some cases, efficiencies may not be possible due to remote geographic locations that limit opportunities to reduce overheads through economies of scale.

Data are not yet available for this indicator. Development work for this indicator is underway.

Centre utilisation

‘Centre utilisation’ is an indicator of governments’ objective to provide youth justice services in an efficient manner (box 16.17).

Box 16.17 Centre utilisation

‘Centre utilisation’ is defined as the number of detainees in all detention centres as a proportion of the number of permanently funded beds.

Detention centres operating at higher or increasing capacities is desirable from an efficient resource management perspective. However, detention centres operating at or above capacity might be ineffective due to the consequences for rehabilitation when centres are overcrowded. Centres also need to make provision for separately detaining various classes of young offenders (for example, males and females, offenders requiring different security levels, offenders of different ages, and young people on remand and young people who have been sentenced). In order to make provision for separately detaining various classes of young people, detention centres require utilisation rates that are below full capacity.

Centre utilisation also reflects the efficient use of publicly funded resources. Centres that are built at a point in time need to be able to justify significant under use, if that occurs in future years, where that under use cannot reasonably be explained by the need to make provision for detaining different classes of young offenders.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/gsp/reports/rogs/2015.

Nationally, 74.3 per cent of centre capacity (that is, permanently funded beds) was utilised in 2013-14. Proportions varied across jurisdictions (figure 16.14).

Figure 16.14 Centre utilisation rate^a

^a Refer to table 16A.25 for detailed footnotes.

Source: State and Territory governments (unpublished); table 16A.25.

Outcomes

Outcomes are the impact of services on the status of an individual or group (while outputs are the services delivered) (see chapter 1, section 1.5).

Selected outcome indicator concepts for youth justice services have been identified. Data are not yet available to enumerate these concepts. However, over time, definitions and counting rules will be developed for reporting in future.

Secure housing

‘Secure housing’ is an indicator of governments’ objective to provide services that are designed to rehabilitate young offenders and reintegrate them into their community (box 16.18).

Box 16.18 Secure housing

‘Secure housing’ is defined as the proportion of young people who exit youth justice detention to a stable, permanent housing arrangement.

Ensuring young people have suitable, stable accommodation is a critical factor in preventing offending and reoffending. Accommodation is vital for young people to maintain attendance at school, gain employment, engage with health services and benefit from programs to address their offending needs. Securing stable housing is a core component of reintegrating young people into the community post-detention. Lack of suitable housing options can contribute to overuse of custodial supervision orders (Supervised Release Review Board, Western Australia, 2012; Patel, 2004).

Data are not yet available for this indicator. This indicator has been identified for development and reporting in future.

Education and employment readiness

‘Education and employment readiness’ is an indicator of governments’ objective to provide services that are designed to rehabilitate young offenders and reintegrate them into their community (box 16.19).

Box 16.19 Education and employment readiness

‘Education and employment readiness’ is defined as a young person’s readiness for education or work at the conclusion of youth justice supervision.

Research has shown that effectively helping young people involved in the youth justice system to be self-sufficient and productive community members post-supervision requires strategies to address young people’s developmental needs, including equipping them with life skills, such as education and an attachment to the workforce (O’Sullivan et al., 2001). While many young offenders will exit the system with the desire to accomplish basic developmental tasks such as finishing school, embarking on further education or training, and finding employment, these goals can be difficult to achieve.

Participation in employment and career-focused programs while under youth justice supervision can help to prepare young offenders to transition from youth justice supervision to further education and training, and the workforce (Fields and Abrams 2010). Engagement with education or training, and employment, can assist a young person’s re-entry into the community and reduce the likelihood of further youth justice involvement (Nally et al. 2012).

Data are not yet available for this indicator. This indicator has been identified for development and reporting in future.

Repeat offending

‘Repeat offending’ is an indicator of governments’ objective to reduce the frequency and severity of youth offending, assist young people to address their offending behaviour and

take responsibility for the effect of their behaviour on victims and the wider community, and to provide services that are designed to rehabilitate young offenders and reintegrate them into their community (box 16.20).

Box 16.20 Repeat offending

'Repeat offending' is defined as the extent to which young offenders have repeat involvement with the youth justice system following a period of youth justice supervision.

Reducing youth offending and reoffending is a key goal of Australian State and Territory youth justice systems (Richards 2012). However, the measurement of repeat offending, sometimes called recidivism, is complex. Repeat offending, or recidivism, is defined as the reversion of an individual to criminal behaviour after he or she has been convicted of a prior offence. Repeat offending can be measured using a range of data elements along the youth justice continuum, including, rearrest, reconviction, and reincarceration (Richards 2012).

Measures of repeat offending should be considered in the context of other youth justice outcome indicators, as in isolation, repeat offending is an imperfect measure of youth justice system performance. Many factors are likely to influence youth offending patterns, including a young person's family environment and social circumstances. In addition, as factors that give rise to offending vary from region to region, direct comparisons of recidivism rates should not be made in isolation from the broader social context of each region.

Further, adolescence has been identified as a 'crime prone' time. As Richards (2012) notes, numerous studies have indicated that offending behaviour escalates during early adolescence, before peaking in late adolescence, and declining in early adulthood. Therefore, notwithstanding interventions provided by youth justice agencies, some degree of repeat offending is quite likely within this age group. It is also to be expected that the typical rate of youth repeat offending would be higher than that of adult offenders.

Data are not yet available for this indicator. This indicator has been identified for development and reporting in future.

State and Territory approaches to youth justice service outcomes reporting

As a first step in developing outcomes reporting for youth justice services, the CPYJWG, with the expert assistance of the JJ RIG and the AJJA, has reviewed local approaches to outcomes measurement for concepts equivalent to those agreed for national reporting purposes. The types of youth justice outcome measurement underway in each jurisdiction are summarised in box 16.21.

Box 16.21 State and Territory measurement of youth justice service outcomes

NSW The NSW Department of Attorney General and Justice annual report provides information on young people exiting youth justice who are 'living in safe and appropriate accommodation', 'participating in education, training or employment' and 'participating in community activities'. These dimensions are assessed by the relevant Juvenile Justice Officer at the time the young person exits youth justice supervision. The annual report also provides information on juvenile re-offending rates. These data are sourced from the NSW Bureau of Crime Statistics and Research. Re-offending rates are based on the number of young people who receive a subsequent conviction or conference within 12 months of their first appearance. These data are disaggregated by group conference, community-supervision order and detention order.

Vic The Victorian Department of Human Services annual report provides information on the proportion of young people in detention who participate in community re-integration activities. Repeat offending, housing, and education and employment measures are not presently reported.

Qld Queensland is introducing a youth justice renewal strategy that will implement a range of practice and service reforms to the system that aim to effectively reduce offending and reoffending. A new youth justice performance framework has been introduced that covers all aspects of youth justice service delivery, targeting clients along a continuum of children and young people at risk of entering the criminal justice system through to recidivist young offenders with long periods of involvement in the criminal justice system. Measures of re-offending are being developed to enable Queensland to monitor the effectiveness of youth justice intervention and specific rehabilitation programs.

The reforms also prioritise strong collaborative partnerships with other agencies that include more effective and coordinated responses to the housing, education, employment and training needs of young offenders, together with the development of measures to assess the effectiveness of these partnerships and activities.

WA The WA Department of Corrective Services annual report provides information on the rate of return to detention. The rate of return to detention is defined as the proportion of young people who return to sentenced detention within two years of release from sentenced detention. All returns to sentenced detention are counted, including those where a supervised release order has been cancelled or suspended. Housing and education and employment measures are not presently reported, nor does WA presently report on repeat offending for community-based supervision.

(continued on next page)

Box 16.21 (continued)

SA SA reports on four outcome indicators through its agency statement as part of the State Government budget reporting process:

- number of youth justice clients who had one or more community based orders issued
- number of youth justice clients who had one or more secure youth training centre admissions
- number of 10–12 year olds admitted to a secure youth training centre
- number of Aboriginal young people who had one or more admissions to a secure youth training centre.

Tas Tasmania links its youth justice data collection with other health and community services data collections. Tasmania links child protection and youth justice data to review common clients across these services, including analysing these clients' education attendance, living arrangements and hospital admissions. Tasmania is also undertaking a pilot project on critical incidents that links youth justice custodial data with data on hospital involvement. This project has the capacity to investigate hospital involvement prior to, during and after youth justice custodial involvement. Tasmania is keen to link youth justice data to data from other sectors (for example, offence data from courts and involvement with adult corrections), but has to date been unable to proceed with this type of data linkage due to a lack of clarity regarding the legality of linking information for these clients.

For internal reporting purposes, Tasmania measures the following outcomes:

- returns to custody: a retrospective count of young people admitted to Ashley Youth Detention Centre in the past 12 months
- returns to supervision: a prospective count of young people who commenced a new statutory order, in the 12 months following completion of a statutory order.

(continued on next page)

Box 16.21 (continued)

ACT The ACT Community Services Directorate aims to improve outcomes by providing support services to young people at risk, and support and supervision of young offenders. The ACT prepares two local reports on youth justice performance for internal reporting against budget items and for reporting to the Justice and Community Safety Directorate for inclusion in the Criminal Justice Statistical Profile, which is a historical collection of crime data containing data from ACT Policing, ACT Law Courts, ACT Corrective Services, Restorative Justice Unit, Galambany Court, Office of Children, Youth and Family Support, and Victims Support ACT. The ACT's local performance indicators have been developed to ensure consistency with national reporting.

The following outcome indicators are used to report against ACT budget items:

- recidivism of sentenced young people in custody — measured as the number of young people who have been subject to more than one final period of sentenced detention during the current and/or previous reporting year, expressed as a percentage of the total number of young people who received a period of detention within the current financial year
- recidivism of sentenced young people on community-based orders — measured as the number of young people who have been subject to more than one final supervised community-based order during the current and/or previous reporting year. This measure reflects the number of young people who received a supervised community based order within the financial year, expressed as a percentage of the total number of young people who received a supervised community based order within the financial year.

Housing and education and employment measures are not presently reported.

NT The NT currently reports on youth justice outcomes in the NT Department of Correctional Services Annual Statistics report, which includes information on the number of detainees held in custody and their demographic profile, offence types, and some performance information such as numbers of escapes. Repeat offending, housing, and education and employment measures are not presently reported. As part of the NT Youth Justice Framework development, the NT is looking to develop a new local performance reporting structure.

16.4 Future directions in youth justice performance reporting

Further development of the youth justice performance indicator framework and reporting for indicators included in the framework is being undertaken over time. Data for 12 performance indicators are included in this Report. The remaining performance indicators in the youth justice performance indicator framework will be developed for inclusion in future Reports. Preliminary work is underway to develop the 'offender-to-staff ratio'.

The AJJA is overseeing several research projects to develop national youth justice policy, research and data capabilities. Current priorities include a bail and remand study, development of a Trauma Informed Practice Guide, the development of a linked data collection to report on the relationships between child protection and youth justice, and a recidivism data collection project.

16.5 Jurisdictions' comments

This section provides comments from each jurisdiction on the services covered in this chapter.

New South Wales Government comments

“ In 2013-14, Juvenile Justice NSW saw consistently lower numbers of young people in custody, from an average of 324 per day in 2012-13 to 314 per day in 2013-14.

The agency continued to work to improve its response to Aboriginal and Torres Strait Islander people’s over-representation through the development and implementation of the Aboriginal and Torres Strait Islander Cultural Respect Framework, the second round of the Aboriginal Staff Mentoring Program and the Aboriginal and Torres Strait Islander Staff Recruitment and Retention Strategy 2011-15.

Juvenile Justice’s remand reduction (bail) services have continued to keep the numbers of young people who are on remand because they are unable to meet their bail conditions low (52 in 2013-14).

Changes to the *Bail Act 2013* introduced new reporting mechanisms under Section 28 which requires regular reporting back to the court by Juvenile Justice or FACS on the placement of young people granted bail with accommodation conditions.

Youth on Track was launched 1 July 2013 in Newcastle, Mid North Coast and Blacktown Local Area Commands. The Newcastle site was expanded to Lake Macquarie Local Area Command in April 2014. In the first 12 months of operation, 223 young people were referred to Youth on Track for case management and offending focused interventions.

The roll out of Changing Habits and Reaching Targets (CHART), a cognitive behavioural therapy program developed specifically for young offenders, has continued with over 80 per cent of young people completing their required components in the program.

A pilot program in partnership with Victim’s counselling services has been introduced to two centres providing young people with access to victims services counsellors while in custody.

Quality Assurance reviews were completed on all Juvenile Justice Centres and community offices, including Youth Justice Conferencing and court logistics.

”

Victorian Government comments

“

Victoria's youth justice initiatives and achievements for 2013-14 include:

- The establishment of Parkville College to provide a flexible curriculum that meets the individual learning needs of all young people in youth justice centres. In 2013-14 the college was extended from Parkville Youth Justice Precinct to Malmsbury Youth Justice Centre and is delivering thirty to forty hours of education per week.
- The Youth Health Rehabilitation Service (YHaRS) was appointed in January 2014 to deliver streamlined health and rehabilitation programs and services to young people supervised by the youth justice service. YHaRS provides services across the two custodial centres in Victoria, secure welfare services and those young people supervised on community based orders. Rehabilitation programs include sex offender programs, violence reduction programs and individual counselling.
- A Memorandum of Understanding (MoU) between Youth Justice and Corrections Victoria has been developed to improve the management of young people under the supervision and custody of Youth Justice and Corrections Victoria. The MoU enhances the exchange of information to inform assessment of suitability, clarifies respective and joint responsibilities, strengthens and supports collaboration between Youth Justice and Corrections Victoria and protects the safety and wellbeing of an individual transferred between the systems.
- Commencing the development of a 'best interests' case practice for use across the youth justice service to ensure consistent service delivery and the engagement of families and communities to assist in supporting young people. The youth justice case management model is also being reviewed and the youth justice case practice manual is being updated.
- The Youth Justice Community Support Service provides individualised intensive support to young people exiting youth justice centres through a consortium of community service organisations who deliver intensive support, employment, education, training, mental health, drug and alcohol, and transitional and housing support services. An evaluation was completed in March 2013 which identified ways to further strengthen the service.
- The 2012-13 Victorian State Budget provided \$54.5 million over three years to address capacity and infrastructure issues within youth justice centres. A new visitors' centre and administration building at the Parkville Youth Justice Precinct were completed in late 2013. Work is underway on the construction of a new 45 bed centre at Malmsbury Youth Justice Precinct, due for completion in 2015.

”

Queensland Government comments

“

To reduce youth offending and achieve better outcomes for young offenders, victims and the community, the Queensland Government has made a commitment to reform the youth justice system. The Government's key objectives under this reform include preventing youth crime, intervening early and changing entrenched criminal behaviour. The strategies to support these objectives will focus on:

- Systemic responses to reduce youth offending
- Reducing over-representation of Aboriginal and Torres Strait Islander young people in the youth justice system
- Investment in resources and delivery of youth justice practice and programs that address the causes of crime and change the lives of young offenders
- Responding to current and emerging trends and demands on the system; and
- Developing a competent and motivated workforce and service provider network.

Several key initiatives are currently being developed or underway to support this reform:

- Implementation of the Family Action Plan initiative which is a holistic response model to case manage young offenders and their families. The Plans enable a comprehensive and timely response from participating agencies and local organisations to identified issues negatively impacting on young offenders' and their families' lives. Early outcomes for young people and families have included decreases in substance misuse, increased engagement with education and training and improvements in attitudes and behaviour of young offenders as well as reduced contact with the justice system.
- Youth Justice service centres and detention centres working more seamlessly with existing adventure based learning facilities and associated adventure intervention programs. Enhancement of the three current programs will focus on transitional support, education and employment for young offenders.
- Renewal of Youth Justice funding to ascertain value for government investment. This includes ensuring funded agencies achieve relevant objectives and clear and quantifiable outcomes related to reducing offending and re-offending and addressing the causes of offending.
- Development of a standard risk assessment tool which will allow for better assessment of young people at risk of offending and re-offending. The tool will be suitable for use by government and non-government organisations delivering youth justice services.
- Realignment of the youth justice conferencing program to increase victim engagement across the spectrum of youth justice services.

”

Western Australian Government comments

“

The Department of Corrective Services administers the *Young Offenders Act 1994* (YOA) through its Youth Justice Services (YJS). The primary focus of YJS is the management of young people sentenced to community orders or detention for offences committed while 10-17 years of age. YJS also works to prevent and divert young people from entering the formal justice system, in line with the YOA principles that detention should only be used as a last resort.

The State's daily average detention population decreased from 181.4 to 155.5 in 2013-14, which was a decrease of 14.3 per cent compared with 2012-13. The daily average Aboriginal detainee population decreased from 127.2 to 120.9, a drop of 6.3 or 4.9 per cent. The non-Aboriginal population decreased from 54.2 to 34.6, a drop of 19.6 or 36.2 per cent.

In 2013-14, 1,786 young people were managed in the community, including 1080 Aboriginal young people and 699 non-Aboriginal young people (7 were unknown). The daily average population for young people being managed decreased by 159.0 or 12.4 per cent in 2013-14 compared to 2012-13. The decrease for both the Aboriginal and non-Aboriginal cohorts was similar.

A key achievement for 2013-14 was the establishment of the Youth Justice Board. The Board, which meets quarterly, is an advisory body that was established to help steer the formulation of a new approach to youth justice in Western Australia. Inaugural Board members were selected because their broad range of expertise and experience is needed to bring new and innovative approaches to the complex challenge of reducing youth offending. Under the guidance of the Board, the Department has commenced a review of the *Young Offenders Act 1994*. The review will specifically include the consideration of new and innovative mechanisms for the management of young people who come to the attention of the justice system.

2013-14 also saw the expansion of the Department's At Risk Management System to cover young people at the Banksia Hill Detention Centre. The At Risk Management System, which was previously in place at WA's adult prisons, improves the identification and management of young people who may be at risk of self-harm and/or suicide. It allows for the recording and monitoring of risk management plans and welfare checks to ensure that appropriate supports are put in place in a timely fashion.

The Department continues to provide Regional Youth Justice Services (RYJS) to the Midwest Gascoyne, Goldfields, Kimberley and Pilbara regions. These are aimed at diverting young people who offend away from the criminal justice system. Its Juvenile Justice Teams target young people in the early stages of offending to divert them from the formal justice system. The service also offers an extended hours bail program to locate suitable adults or alternative short term accommodation if required for young people eligible for bail in addition to providing education and counselling services and managing young people on statutory orders.

”

South Australian Government comments

“ Youth Justice in SA is administered separately to child protection and out-of-home care, and sits as a Directorate within the Department for Communities and Social Inclusion (DCSI).

The vision for DCSI, Youth Justice is that *Children and young people in the justice system are inspired to change and positively participate in their community. Our Mission is to Contribute to community safety by leading collaborative and evidence informed statutory services to children and young people in the justice system to reduce re-offending and acknowledge victims of crime.*

DCSI, Youth Justice supervises young people on a range of both sentenced and non-sentenced community based orders, including those on Home Detention. In addition, information and assessment reports are provided by DCSI, Youth Justice to the SA Youth Courts.

DCSI, Youth Justice operates the Adelaide Youth Training Centre (AYTC), a two campus one centre model. The AYTC accommodates young people serving a sentence and those awaiting their next court appearance. DCSI, Youth Justice works collaboratively with a range of stakeholders to provide onsite services to residents, including the Department for Education and Child Development and SA Health. The Department for Education and Child Development provides on-site and in-classroom education programs as well as external education and training opportunities. Child and Adolescent Mental Health Services (CAMHS), SA Dental Service and Youth Health Service, provide health and dental services within a centre-based service hub.

Youth Justice Psychology Services is a specialist state-wide service providing psychological assessment and targeted intervention to identify and address offending behaviours of young people who are subject to a Youth Justice mandate.”

Tasmanian Government comments

“

A number of initiatives during 2013-14 have been planned and/or implemented to improve practice and service provision in the youth justice system in Tasmania.

The Tasmanian Government has completed a major review of the Continuum of Care relating to youth offending and re offending. This review has considered all of the primary, secondary and tertiary intervention options that operate across the broader service system in Tasmania. A final report has been generated which includes recommendations that will assist in the development of short, medium and long term strategies to strengthen intervention options. This report is before Cabinet for consideration and is expected to be endorsed by the end of 2014.

Community Youth Justice South has developed an innovative equine therapy program, affectionately termed ‘Pat the Pony’ by the students of Gagebrook Primary School. This program is the result of collaboration between Community Youth Justice and the Gagebrook Primary School and brings together young people, under the supervision of Community Youth Justice, with at-risk students from Gagebrook. Together they work with the ponies at the school.

For those young people sentenced to Community Service Orders, the program allows them to give something back to the community. They are tasked with grooming and floating the ponies, leading them and even picking up manure. They are placed in a position of leadership where they are required to model appropriate caring behaviour to the younger students. Many of the young people on Community Service Orders are high-end intergenerational offenders who have not had the opportunity to develop pro-social relationships.

Community Youth Justice in Tasmania operates under a Quality Improvement Framework which was developed and conducted initially in 2012-13. The most recent appraisal, *Community Youth Justice Quality Appraisal 2013-14*, has built on the significant achievements and the lessons learned from the previous year’s baseline data. The quality appraisal team worked with local community youth justice staff to ascertain a rating across a number of pre-identified performance and quality indicators.

Other features of the appraisal included client and staff surveys (with statistical validity) and the development of stakeholder management plans for each community youth justice area. A quarterly reporting schedule was undertaken for standard performance indicators with a focus on quality outcomes during the appraisal period.

The *Youth Justice (Miscellaneous Amendment) Act 2012* was passed by both Houses of Parliament in 2013; the majority of these amendments were proclaimed and implemented in early 2014.

”

Australian Capital Territory Government comments

“

A number of initiatives were delivered in 2013-14 to improve practice and services and reduce the number of young people coming into contact with the youth justice system in the ACT.

The *Blueprint for Youth Justice in the ACT 2012-22* is a 10-year strategic plan to reform the youth justice system to improve outcomes for young people in the ACT. The focus of work in 2013-14 has been on strengthening prevention and diversion strategies and undertaking policy and program development.

The second Annual Progress Report 2014 was released demonstrating reduced numbers of young people coming into contact with or further involved in the youth justice system. Of the 45 initiatives in the Blueprint's three-year action plan, 14 are complete, 28 are substantially complete and three are yet to commence.

Several initiatives were delivered including:

- implementation of the Youth Justice Support and Intervention Framework, giving agencies and staff an evidence-based guide for the design and delivery of support, interventions and programs based on an assessment of a young person's risk of re-offending
- continued improvements to the single case management model across youth services, including work to strengthen cultural planning for Aboriginal and Torres Strait Islander young people on justice orders
- ongoing development of an Integrated Management System and online knowledge portal in Youth Justice Case Management to support the supervision of young people on justice orders, either in the community or in custody
- continued delivery of the After Hours Bail Support Service to assist young people in police custody by arranging suitable community-based alternatives and assisting them to comply with their bail conditions
- redevelopment of the Narrabundah House Indigenous Supported Residential Facility. The new service opened in August 2013 and provides intensive case management and support to Aboriginal and Torres Strait Islander males, aged 15 to 18 years, who are on community-based justice orders
- continued delivery of the Bendora Transition Unit at the Bimberi Youth Justice Centre to support young people to reintegrate successfully into the community. In the 2013-14 Budget, the ACT Government provided an additional \$1.96 million to support the operation of the unit over the following two financial years
- work to integrate the statutory services of Youth Justice and Care and Protection Services to allow better coordination of services to prevent children and young people who experience trauma, neglect and abuse from escalating to the youth justice system.

”

Northern Territory Government comments

“

The development of the Youth Justice Framework (the framework) has continued during the 2013-14 financial year, aided by ongoing collaboration between government, non-government and community stakeholders and the members of the framework steering committee. The framework is a fundamental component of the Department of Correctional Services' (NTDCS) commitment to the whole-of-government approach to criminal law reform known as the Pillars of Justice.

The framework identifies and articulates key strategic objectives that are to be achieved in a five year period and will provide an innovative opportunity for programs and services to be streamlined for children, young people, and their families in, or at risk of entering, the youth justice system with the aim of reducing youth offending and reoffending in the Northern Territory.

The Northern Territory has continued to roll out the youth boot camp program as an early intervention initiative targeting young people who present with a range of familial, forensic and social factors that place them at risk of entering the youth justice system. Following the evaluation of the pilot program, two providers have been jointly selected to deliver the boot camp program in 2014. Young people participate in the camps within a wilderness environment where avoidant behavioural patterns are challenged. This is followed by wrap-around case management support for participants and their families for up to three months. NTDCS is currently investigating the potential to develop a similar type program for sentenced youth.

The reform of the NT youth detention centres commenced with a review of security issues within youth detention in October 2013. The subsequent development of a new detention centre model is underway which will incorporate changes to operational practices, the staffing model, program and service delivery and facility requirements. So far, progress has included the introduction of a new uniform for youth justice officers, implementation of a pilot sport and recreation program in December 2013, commencement of a permanent youth detention workforce and the development of a Certificate III and a Certificate IV qualification for Youth Justice Officers that will be introduced early 2015.

The *Seek Employment and Education, not Detention* (SEED) strategy has been introduced, which places emphasis on young people in the youth justice system (both in detention and in the community) participating in work experience, traineeship and/or apprenticeship opportunities to develop employability, work readiness and practical skills. The pilot stage has commenced with two detainees engaged in work experience outside the detention centre. The initiative will be further enhanced in late 2014 with the objective of linking young people to rewarding and gainful opportunities that can assist them in achieving change and long term positive results.

”

16.6 Definitions of key terms

| | |
|--|--|
| Community-based youth justice supervision | Community-based youth justice supervision is an alternative to detention, where a sentenced order or unsentenced order (such as conditional bail) are served in the community. Most young people under youth justice supervision are supervised in the community. |
| Comparability | Data are considered comparable if, (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data. |
| Completeness | Data are considered complete if all required data are available for all jurisdictions that provide the service. |
| Detention-based youth justice supervision | Detention-based youth justice supervision involves young people serving their sentence in a custodial environment. |
| Group conferencing | Group conferences are decision-making forums that aim to minimise the progression of young people into the youth justice system, and provide restorative justice. Typically, a group conference involves the young offender(s) and victim(s) and their families, police and a youth justice agency officer, all of whom attempt to agree on a course of action required of the young offender/s to make amends for his or her offence/s. |
| Police caution | A police officer administering a caution, or warning, to a child instead of bringing a child before a court for the offence. |
| Pre-sentence community | Pre-sentence arrangements where the youth justice department is responsible for the case management or supervision of a young person (such as supervised or conditional bail where the youth justice department is involved with monitoring or supervising a young person). |
| Pre-sentence detention | Remanded or held in a youth justice centre or police watch house prior to appearing in court or to being sentenced. |
| Sentenced community-based supervision | Includes probation, recognisance and community service orders which are supervised or case managed by the youth justice department. May be supervision with or without additional mandated requirements, requiring some form of obligation or additional element that a young person is required to meet. This obligation could be community work such as a community service order, a developmental activity or program attendance. The youth justice department may or may not directly supervise any additional mandated requirements, but remains responsible for the overall case management of a young person. |
| Supervision period | A period of time during which a young person is continuously under youth justice supervision of one type or another. A supervision period is made up of one or more contiguous episodes. |
| Youth justice centre | A place administered and operated by a youth justice department, where young people are detained while under the supervision of the relevant youth justice department on a remand or sentenced detention episode. |
| Youth justice conference/group conference | A youth justice conference, or group conference, is a facilitated meeting resulting in a formal agreement to repair the harm caused by the offence. Participants can include the victim(s), offender(s), a youth justice agency officer, police and other key stakeholders. Referrals may be initiated by the police or the courts. |
| Youth justice department | Departments in each State and Territory that are responsible for youth justice matters. |

16.7 List of attachment tables

Attachment tables are identified in references throughout this chapter by a '16A' prefix (for example, table 16A.1). Attachment tables are available on the Review website (www.pc.gov.au/gsp).

Table 16A.1 State and Territory government real recurrent expenditure on youth justice services, (2013-14 dollars) (a), (b), (c), (d), (e), (f), (g)

| | <i>Unit</i> | <i>2009-10</i> | <i>2010-11</i> | <i>2011-12</i> | <i>2012-13</i> | <i>2013-14</i> |
|-----|---|----------------|----------------|----------------|----------------|----------------|
| (a) | See table 16A.2 and 16A.3 for further information on the comparability of these data. | | | | | |
| (b) | In Queensland, there has been an increase in user cost of capital for 2013-14 resulting from the completion of the Cleveland Youth Detention Centre Stage 1. Due to machinery of government changes, not all 2011-12 financial data were available at the time of data collection and reporting. The 2012-13 financial year was the first period where youth justice services had a dedicated budget. Therefore, 2012-13 and 2013-14 data are not comparable with data from earlier years in previous reports. | | | | | |
| (c) | In WA, Youth Justice is part of the Department of Corrective Services, which provides both Adult and Youth Corrective services, including community corrections. A major realignment of the Community Youth Justice Division occurred in 2009-10. A realignment of cost distributions across the department has been progressed so that 2011-12 expenditure data accurately reflect youth justice costs. Following an incident at Banksia Hill youth justice detention centre in January 2013, young offenders were detained at an adult facility to the end of the financial year 2012-13. The additional costs incurred by the adult facility have not been included in these data. | | | | | |
| (d) | In SA, for 2013-14 there has been a decrease in all community-based expenditure due to the Metropolitan Aboriginal Youth Family Services (MAYFS) program relocating to another division and the realignment of some services. Higher expenditure incurred in SA in 2012-13 was associated with commissioning a new youth training centre, increasing population capacity in the training centres from 82 to 96 young people and an increase in umbrella or other government department expenses as a result of new sustainment funding. The period 2011-12 includes construction and fit-out costs for the new Adelaide Youth Training Centre. Group conferencing expenditure data were not available for SA prior to 2012-13. | | | | | |
| (e) | In Tasmania in 2013-14, salary expenses have increased due to additional funds being provided for health services at Ashley Youth Detention Centre. Payroll tax ceased in October 2012. In 2011-12, administrative expenditure was calculated on the basis of a new method which encompasses more than just the salary component of administrative functions as had been done previously (costs now include items such as policy, finance support, and workforce development). In Tasmania, group conferencing is conducted by external facilitators. The costs included for group conferencing capture only the cost of the meeting; it does not include any administrative burden or work performed by youth justice agency staff in ensuring that outcomes of meetings are met. | | | | | |
| (f) | In the NT, the Department of Corporate and Information Services (DCIS) Free of Charge detention-based services expenditure in 2013-14 has decreased significantly from previous years' data as a result of NT Corrections being split from Department of Justice (now Department of Attorney General and Justice), now a standalone department. The costs incurred by other departments have also decreased significantly compared with 2012-13. A review of NT expenditure data was undertaken during 2013-14. The review showed that Group Conferencing Program funding (administered by NT Department of Correctional Services for the first time in the 2012-13 financial year) delivered in partnership with NT Police was previously reported under Community Corrections funding, and have has now been revised accordingly. The number of FTE positions associated with Group Conferencing has reduced in 2013-14 so group conferencing expenditure has decreased since 2012-13. Some of these positions have been incorporated into other non NT Police programs. Some expenditure information (for example, utilities and maintenance costs) is included for the first time in 2012-13. These costs were able to be separately identified for youth justice services following machinery of government changes in August 2012, whereby the Department of Correctional Services was established. The Youth Justice Division moved from within the Department of Justice to within the Department of Correctional Services. | | | | | |
| (g) | Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details. | | | | | |

| Total expenditure, including notional user cost of capital | | | | | | | | | | |
| Total | \$'000 | 5 612 | 1 852 | 5 596 | 34 410 | 1 874 | 144 | 631 | 4 798 | 54 917 |

- (a) Data are not comparable across jurisdictions and should be interpreted with caution. See table 16A.3 for further information on the comparability of these data.
- (b) In Victoria, departmental umbrella expenditure cannot be readily attributed to a specific program or group of clients.
- (c) In Queensland, there has been an increase in user cost of capital for 2013-14 resulting from the completion of the Cleveland Youth Detention Centre Stage 1.
- (d) In SA, for 2013-14 departmental realignment of service delivery has resulted in changes to community based expenditure. There has been an increase in umbrella or other government department expenses as a result of new sustainment funding. In 2011-12, machinery of government reporting relationships for Youth Justice and Families SA changed. As a result, costs originally covered by central funding in Families SA for preventative maintenance and breakdown are now included in Youth Justice recurrent budgets. Some operating revenues are also now with Families SA.
- (e) In Tasmania in 2013-14, salary expenses have increased due to additional funds being provided for health services at Ashley Youth Detention Centre. Payroll tax ceased in October 2012.

| (f) | <p>In the NT, the Department of Corporate and Information Services (DCIS) Free of Charge detention-based services expenditure in 2013-14 has decreased significantly from previous years' data as a result of NT Corrections being split from Department of Justice (now Department of Attorney General and Justice), now a standalone department. The costs incurred by other departments have also decreased significantly compared with 2012-13. A review of NT expenditure data was undertaken during 2013-14. The review showed that Group Conferencing Program funding (administered by NT Department of Correctional Services for the first time in the 2012-13 financial year) delivered in partnership with NT Police was previously reported under Community Corrections funding, and have has now been revised accordingly. The number of FTE positions associated with Group Conferencing has reduced in 2013-14 so group conferencing expenditure has decreased since 2012-13. Some of these positions have been incorporated into other non NT Police programs.</p> <p>na Not available. .. Not applicable.</p> | | | | | | | | | |

- (a) WA and the NT did not provide JJ NMDS data for 2008–09 to 2012-13, therefore, national totals may vary from those published in *Youth justice in Australia 2012-13* for those years due to different sources of data for WA and NT.
- (b) Rates are calculated from the number of young people on an average day rounded to whole numbers and may therefore vary from the rates published in *Youth justice in Australia 2012-13*.
- (c) Age is calculated at the start of the financial year if the first period of relevant supervision began before the start of the financial year, otherwise age is calculated at the start of the first period of relevant supervision.
- (d) Some young people may have moved between community-based supervision and detention on the same day.
- (e) Numbers may not sum due to rounding.
- (f) In Victoria, through the dual track system, young people 18-21 years of age can be supervised by the youth justice service. In 2012-13, there were 316 individuals aged 18 years or older supervised by youth justice (or 24 per cent).

- (a) Rates calculated from the number of young people on an average day may vary from the rates published in *Youth justice in Australia 2012-13* and earlier years, due to differences in rounding.
- (b) Age is calculated at the start of the financial year if the first period of relevant supervision began before the start of the financial year, otherwise age is calculated at the start of the first period of relevant supervision.
- (c) WA and the NT did not provide JJ NMDS data for 2008–09 to 2011-12, therefore, national totals may vary from those published in *Juvenile justice in Australia 2011-12* for those years due to different sources of data for WA and NT.

Source: AIHW (Australian Institute of Health and Welfare) 2014, *Youth justice in Australia 2012-13*, Bulletin no. 120, Cat. no. AUS 179, Canberra: AIHW; WA and NT governments (unpublished).

| (a) For Queensland, the time series has been affected by a change in information systems [from the Families Youth Justice (FAM-YJ) system to the Integrated Client Management System (ICMS)]. Therefore, data from the 2011-12 period onwards is not comparable with previously published data for periods up to and including the 2010-11 period. The increased number of young offenders in detention during 2012-13 and 2013-14 is due to a higher proportion on unsentenced detention. | | | | | | | | | |
| (b) Prior to 2010-11, SA was unable to exclude data concerning young people on conditional release. However, from 2010-11 onwards these data are excluded. | | | | | | | | | |

- (a) It is a requirement of the model in Victoria that all conferences reach agreement.
- (b) Due to system and legislative changes, data for 2012-13 and 2013-14 are not comparable to data from previous years. Data for 2012-13 and 2013-14 include the number of young people who receive a group conference and reach an agreement. Prior to 2012-13 Queensland counted the number of group conferences resulting in an agreement.
- (c) Data are not available for SA prior to 2012-13.
- (d) In the ACT, there are a number of group conferences for which the conference itself satisfies the needs of victims. These conferences are therefore deemed successful and the agreement is that there are no formal tasks. These have been included in the count “young people who participate in a group conference that resulted in an agreement”.
- (e) In the NT, there were overall increased apprehensions in 2013-14. A new data management system now includes those conferenced, later failed and then referred to court. Data were not previously available.

(a) Data are based on averaged quarterly attendance counts.

(b) The school leaving age changed in NSW from 15 to 17 on 1 January 2010. Data for 2012-13 were collected on 20 September 2012, 20 December 2012, 11 April 2013, and 27 June 2013. Data for 2013-14 were collected on 30 September 2013, 18 December 2013, 11 April 2014, and 27 June 2014.

(c) For 2010-11 data collection Victoria applied a more sophisticated data collection and analysis process to clearly distinguish participation in 'accredited' education from participation in other educative and rehabilitative programs (as per the counting rule). The discrepancy in results between 2009-10 and 2010-11 can be attributed to implementation of this more sophisticated data system. All young people who were not participating in an 'accredited' education/training program were engaged in other worthwhile developmental and behaviour programs (for example, Indigenous programs, programs for anger management, violence prevention, addiction, parenting and coping skills). As Victoria's dual track system allows for young people aged 18-20 to be sentenced to a youth justice facility, totals for young people in detention not of compulsory school age include adults detained in a youth justice facility. The increase in the proportion of young people engaged in education and training for 2011-12 reflects a concerted effort to ensure that all young people at the Parkville Youth Justice Precinct are engaged in a fully structured day and accessing more education through an expansion of TAFE timetables and the introduction of a new school campus in February 2012 and a revised Malmsbury TAFE timetable for 2012 which has resulted in an expanded suite of programs and increased capacity.

Table 16A.15 **Young people in detention attending education and training, by Indigenous status (a)**

| | <i>NSW</i> (b) | <i>Vic</i> (c) | <i>Qld</i> (d) | <i>WA</i> (e) | <i>SA</i> | <i>Tas</i> (f) | <i>ACT</i> (g) | <i>NT</i> (h) | <i>Aust</i> |
|-----|---|----------------|----------------|---------------|-----------|----------------|----------------|---------------|-------------|
| (d) | It is Queensland policy that all young people in detention are engaged in education and/or training. Compulsory school age category for Queensland includes young people aged 10-15 years. Non-compulsory school age category for Queensland includes young people aged 16 years and over. For Queensland, the time series has been affected by a change in information systems [from the Families Youth Justice (FAM-YJ) system to the Integrated Client Management System (ICMS)]. Therefore, data from the 2011-12 period onwards is not comparable with previously published data for periods up to and including the 2010-11 period. | | | | | | | | |
| (e) | The low rates for WA for 2012-13 can be attributed to the combination of a number of factors such as building projects, the amalgamation of Rangeview Remand Centre and Banksia Hill Detention Centre, shortage of custodial staff, a serious disruption at Banksia Hill Detention Centre during January 2013 resulting in the transfer of most detainees to Hakea Juvenile Security. Consequently, young people did not have the same education hours and opportunities as in past years. The situation has considerably improved with the return of young people to Banksia Hill Detention Centre and the employment of more youth custodial officers. Therefore, WA expects to see an improvement in the rates for 2013-14. In 2012-13, Banksia Hill Youth Education Services figures were calculated by averaging figures from the following dates: 25 September 2012, 17 December 2012, 10 May 2013 and 4 July 2013. In 2010-11, WA could not disaggregate young people in detention not of compulsory school age attending education or training by Indigenous status. As a result, only WA's total proportion of young people in detention not of compulsory school age attending education or training is included in the national total. | | | | | | | | |
| (f) | In Tasmania, data for 2012-13 were collected on 5 September 2012, 17 December 2012, 23 April 2013 and 6 June 2013. In 2013-14, data were collected on 4 September 2013, 16 December 2013, 22 April 2014 and 5 June 2014. | | | | | | | | |
| (g) | In the ACT, changes to legislation in 2010 increased compulsory school age to 17 years or Year 10 Certificate or equivalent. | | | | | | | | |
| (h) | In the NT, data for 2010-11 and 2011-12 has been revised to better align with the counting rules. | | | | | | | | |

(a) For Queensland, the time series has been affected by a change in information systems [from the Families Youth Justice (FAM-YJ) system to the Integrated Client Management System (ICMS)]. Therefore, data from the 2011-12 period onwards is not comparable with previously published data for periods up to and including the 2010-11 period.

(b) For SA, the number of periods of escorted movement undertaken is less in 2012-13 than in previous years. This may be due to stability in the population and greater provision of in-house services.

(c) Tasmania has only one youth justice detention centre with relatively small numbers in detention, therefore, Tasmania's rates may be volatile. Historical data for number of periods of escorted movements and unescorted leaves undertaken were revised in this Report and differ from those previously reported.

(d) In 2010-11, the NT could not provide the number of escorted movements undertaken hence the NT's data are excluded from the national total and rate. In 2008-09, escorted movements were not reliably recorded by Indigenous status in the NT. Therefore, all escorted movements data were recorded as unknown Indigenous status.

na Not available. .. Not applicable. – Nil or rounded to zero.

(a) The denominator for calculating rates of 'staff injured' and rates of 'staff and young people injured' has been changed to total custody nights for all categories of 'staff' and 'staff and young people' and therefore historical rates will differ from those in previous reports. The reason for this change is that staff of any Indigenous status may be injured by detainees of any Indigenous status.

(b) Victoria and SA data were not available before 2012-13. WA data are not available for any year.

(c) SA data should be used with caution due to manual extraction.

- (a) The denominator for calculating rates of 'staff injured' and rates of 'staff and young people injured' has been changed to total custody nights for all categories of 'staff' and 'staff and young people' and therefore historical rates will differ from those in previous reports. The reason for this change is that staff of any Indigenous status may be injured by detainees of any Indigenous status.
- (b) In 2012-13, data were not available for Victoria and WA. In 2013-14 data were not available for WA.
- (c) Data reported for this indicator are not comparable and need to be interpreted with caution. Methods of data collection vary across jurisdictions (for example, manual case file review compared to the collation of electronic incident reports) and jurisdictions' ability to report on this measure is dependent on relevant incidents having first been documented.
- (d) In NSW, from 2010-11, the Indigenous status of staff is not available.
- (e) Victoria is unable to report on assaults as incident reports need to be analysed individually.
- (f) SA data should be used with caution due to manual extraction.
- (g) For 2011-12, Tasmanian assaults data are for the period from 20 October 2011 to 30 June 2012. For assaults against staff in 2012-13 and 2013-14, data include injuries incurred by staff while restraining residents. Tasmanian data for assaults in custody encompass relatively minor injuries, including general soreness and minor marks resulting from physical contact. Tasmania has only one youth justice detention centre with relatively small numbers in detention and therefore results may fluctuate over time.
- (h) The ACT has only one youth justice detention centre with relatively small numbers in detention. Data were not converted to a rate per 10 000 custody nights in 2009-10 and 2010-11 due to the small number of detainees in the ACT.

na Not available. – Nil or rounded to zero. **np** Not published.

- (a) In 2009-10, data were not available for Victoria, WA and SA. In 2010-11, data were not available for WA and SA.
- (b) Data reported for this indicator are not comparable and need to be interpreted with caution. Methods of data collection vary across jurisdictions (for example, manual case file review compared to the collation of electronic incident reports) and jurisdictions' ability to report on this measure is dependent on relevant incidents having first been documented.
- (c) As Victoria's dual track system allows for young people aged 18-20 years to be sentenced to a youth justice facility, the incidents of self harm or attempted suicide include adults accommodated within a youth justice centre. Five of the young people who self harmed or attempted suicide were aged 18 years or over. The decrease observed between 2010-11 and 2011-12 is attributed to practise enhancements including a new behaviour management system, increased staff training, and new admission processes.
- (d) SA data should be used with caution due to manual extraction.
- (e) Tasmania's 2012-13 data have been revised to exclude threats of self-harm in this Report, so data will differ from those in the previous edition. For 2012-13, only young people who self-harmed or attempted suicide, rather than distinct incidents of self-harm or attempted suicide, were able to be identified for the period from September 2012 to March 2013. Tasmania has only one youth justice detention centre with relatively small numbers in detention, therefore, Tasmania's rates may be volatile.
- (f) The ACT has only one youth justice detention centre with relatively small numbers in detention. Data were not converted to a rate per 10 000 custody nights in 2009-10 and 2010-11 due to the small number of detainees in the ACT.

(a) For Queensland, the time series has been affected by a change in information systems [from the Families Youth Justice (FAM-YJ) system to the Integrated Client Management System (ICMS)]. Therefore, data from the 2011-12 period onwards is not comparable with previously published data for periods up to and including the 2010-11 period. Due to system enhancements, 2012-13 data may not be directly comparable with previous years.

(b) Tasmanian data includes young people on community service orders, who are assisted by Youth Justice to complete their hours but are not supervised by a Youth Justice Worker. Data recorded for years prior to 2011-12 has been updated for data lag.

(c) Data were not available for the ACT for 2011-12 and 2012-13 as the accuracy of the data could not be guaranteed due to data collection issues. Data were not available for the NT prior to 2011-12.

(a) In 2012-13, data were not available for NSW, SA and Tasmania.

(b) Data may not be comparable across jurisdictions due to differences in legislative requirements, for example, the order types that require case management and the procedures required to complete the case plan. There are also differences across jurisdictions regarding 'breaks' in continuous periods of supervision, which might impact on data comparability.

(c) For Queensland in 2011-12, the time series has been affected by a change in information systems [from the Families Youth Justice (FAM-YJ) system to the Integrated Client Management System (ICMS)]. Therefore, data from the 2011-12 period onwards is not comparable with previously published data for periods up to and including the 2010-11 period.

(d) WA could not disaggregate the numerator by Indigenous status for community-based orders. Therefore, a proportion is only calculated for the total number of case plans prepared and only the total figures for WA are included in the Australian total for community-based orders. For 2012-13, case plans prepared data were changed from "preparation within 6 weeks" to "preparation within 4 weeks", based on changes to internal reporting from which these data are sourced. Data for case plans prepared for detention orders excludes sentenced detention commencements on account of Breach early release order only (that is, where there is no new offence) as no new case plan is required in these instances.

(e) SA was unable to provide data on the number of case plans prepared for 2012-13 and 2013-14. A manual exercise was undertaken but did not yield reliable data. SA is currently developing tools for data extraction to enable this indicator to be reported in future.

(f) In the NT, case plans are prepared within 8 weeks. Data has been manually collated and integrity cannot be assured. The decrease in the number of sentenced detention orders commenced in 2012-13 is due to a higher proportion of youth on remand in 2012-13.

TABLE 16A.23

Table 16A.23 **Cost per young person subject to community-based supervision, (2013-14 dollars) (a), (b), (c), (d)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT (e)</i> | <i>Aust</i> |
|---|-------------|------------|------------|------------|-----------|-----------|------------|------------|---------------|-------------|
| 2013-14 | | | | | | | | | | |
| Average daily number of young people subject to community-based supervision | no. | 1439.0 | 1076.0 | 1412.0 | 723.2 | 393.0 | 196.6 | 83.0 | 175.0 | 5497.8 |
| Total recurrent expenditure on community-based supervision | \$'000 | 56 442 | 45 792 | 63 232 | 22 817 | 10 513 | 4 185 | 2 675 | 3 456 | 209 112 |
| Cost per day, per young people subject to community-based supervision on an average day | \$ | 107.39 | 116.52 | 122.61 | 86.38 | 73.24 | 58.28 | 88.24 | 54.07 | 104.14 |
| 2012-13 | | | | | | | | | | |
| Average daily number of young people subject to community-based supervision | no. | 1564.0 | 1141.6 | 1335.0 | 769.2 | 375.0 | 248.5 | 119.0 | 168.0 | 5720.3 |
| Total recurrent expenditure on community-based supervision | \$'000 | 55 015 | 45 987 | 57 620 | 21 707 | 12 119 | 4 116 | 2 292 | 3 217 | 202 074 |
| Cost per day, per young people subject to community-based supervision on an average day | \$ | 96.31 | 110.29 | 118.17 | 77.26 | 88.48 | 45.35 | 52.73 | 52.43 | 96.72 |

- (a) The number of young people under community-based supervision on an average day is calculated by summing the number of days each young person spends under supervision during the year (irrespective of age) and dividing this total by the number of days in the financial year. To derive the average daily cost per young person under community-based supervision on an average day, total recurrent expenditure on community-based supervision is divided by 365.25. This figure is then divided by the average daily number subject to community-based supervision.
- (b) Data reported for this indicator are not comparable and need to be interpreted with caution.
- (c) Unit costs presented in this Report are not necessarily comparable to local unit costs reported in jurisdiction-specific annual reports due to different methods of calculation.
- (d) Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (e) A review of NT expenditure data was undertaken during 2013-14. The review showed that Group Conferencing Program funding (administered by NT Department of Correctional Services for the first time in 2012-13) delivered in partnership with NT Police was previously reported under Community Corrections funding, and has now been revised accordingly.

| Number of permanently funded beds | no. | 431.0 | 213.0 | 184.0 | 190.0 | 96.0 | 30.0 | 40.0 | 64.0 | 1248.0 |
| Total average nightly population in detention centres | no. | 314.3 | 145.2 | 180.4 | 155.5 | 57.2 | 11.7 | 16.1 | 47.5 | 927.8 |
| Centre utilisation rate | % | 72.9 | 68.2 | 98.0 | 81.8 | 59.5 | 39.1 | 40.2 | 74.2 | 74.3 |
| 2012-13 | | | | | | | | | | |
| Number of permanently funded beds | no. | 431.0 | 213.0 | 178.0 | 190.0 | 96.0 | 30.0 | 40.0 | 64.0 | 1242.0 |
| Total average nightly population in detention centres | no. | 323.4 | 167.1 | 160.6 | 181.3 | 59.9 | 18.5 | 17.9 | 49.1 | 977.7 |
| Centre utilisation rate | % | 75.0 | 78.5 | 90.2 | 95.4 | 62.4 | 61.6 | 44.7 | 76.7 | 78.7 |
| 2011-12 | | | | | | | | | | |
| Number of permanently funded beds | no. | 483.0 | 213.0 | 178.0 | 224.0 | 82.0 | 36.0 | 40.0 | 64.0 | 1320.0 |
| Total average nightly population in detention centres | no. | 354.0 | 173.8 | 136.5 | 185.7 | 60.8 | 21.2 | 22.9 | 37.8 | 992.6 |
| Centre utilisation rate | % | 73.3 | 81.6 | 76.7 | 82.9 | 74.2 | 58.8 | 57.1 | 59.1 | 75.2 |
| 2010-11 | | | | | | | | | | |
| Number of permanently funded beds | no. | 483.0 | 216.0 | 178.0 | 224.0 | 82.0 | 36.0 | 40.0 | 64.0 | 1323.0 |
| Total average nightly population in detention centres | no. | 391.0 | 178.4 | 136.4 | 177.9 | 52.5 | 25.4 | 23.8 | 38.8 | 1024.2 |
| Centre utilisation rate | % | 81.0 | 82.6 | 76.7 | 79.4 | 64.0 | 70.6 | 59.4 | 60.6 | 77.4 |
| 2009-10 | | | | | | | | | | |
| Number of permanently funded beds | no. | 479.0 | 212.0 | 168.0 | 168.0 | 82.0 | 36.0 | 40.0 | 38.0 | 1223.0 |
| Total average nightly population in detention centres | no. | 434.5 | 173.9 | 141.5 | 167.8 | 69.6 | 27.5 | 17.5 | 28.7 | 1060.8 |
| Centre utilisation rate | % | 90.7 | 82.0 | 84.2 | 99.9 | 84.8 | 76.4 | 43.7 | 75.5 | 86.7 |

(a) Victoria's Malmsbury Youth Justice Centre consistently operates at higher utilisation rates than the Parkville Youth Justice Precinct.

(b) For WA for the 2012-13 reporting period, data exclude non-general management regression regime, admission and special purpose unit beds. These data were probably included in previous years.

Table 16A.25 **Centre utilisation**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic (a)</i> | <i>Qld</i> | <i>WA (b)</i> | <i>SA (c)</i> | <i>Tas (d)</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|----------------|------------|---------------|---------------|----------------|------------|-----------|-------------|
| (c) | Following the new build of the Adelaide Youth Training Centre in SA in 2012, the addition of permanently funded beds resulted in a decrease in the centre utilisation rate. | | | | | | | | | |
| (d) | In 2011-12, the staff portion of the detention centre budget in Tasmania includes capacity to staff the centre to supervise a minimum of 30 and a maximum of 36 young people. | | | | | | | | | |

Source: State and Territory governments (unpublished).

Data quality information — Youth justice services, chapter 16

Data quality information

Data quality information (DQI) was prepared for the first time for the 2011 Report on Government Services. DQI provides information against the seven Australian Bureau of Statistics (ABS) data quality framework dimensions, for a selection of performance indicators in the Youth justice services chapter. DQI for additional indicators will be progressively introduced in future reports.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI are available for the following performance indicators:

| | |
|--|----|
| Effectiveness, diversion — Group conferencing outcomes | 2 |
| Effectiveness, rehabilitation — Education and training attendance | 4 |
| Effectiveness, safe and secure environment — Deaths in custody | 6 |
| Effectiveness, safe and secure environments — Escapes | 8 |
| Effectiveness, safe and secure environment — Absconds from unescorted leave | 10 |
| Effectiveness, safe and secure environments — Assaults in custody | 12 |
| Effectiveness, safe and secure environments — Self-harm and attempted suicide in custody | 14 |
| Effectiveness, statutory responsibilities — Completion of community-based orders | 16 |
| Effectiveness, statutory responsibilities — Case plans prepared | 18 |
| Efficiency, input per output unit — Cost per young person subject to community-based supervision | 20 |
| Efficiency, input per output unit — Cost per young person subject to detention-based supervision | 22 |
| Efficiency, input per output unit — Centre utilisation | 24 |

YOUTH JUSTICE SERVICES

Effectiveness, diversion — Group conferencing outcomes

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — Diversion |
| Indicator | Group conferencing outcomes |
| Measure (computation) | <p><u>Definition:</u></p> <p>The number of young people who receive group conferencing and who as a result reach an agreement, as a proportion of all young people who receive group conferencing.</p> <p><u>Numerators:</u></p> <p>Total number of young people who receive group conferencing and who reach an agreement throughout the reference year.</p> <p><u>Denominators:</u></p> <p>Total number of young people who receive group conferencing throughout the reference year.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the proportion of group conferences resulting in an agreement. Group conferences are decision-making forums that aim to minimise the progression of young people into the youth justice system and provide restorative justice. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are affected by comparability issues across jurisdictions. Group conferencing differs as to its place in the court process (i.e., referral by police before court processes begin, or referrals by courts as an alternative to sentencing), the consequences for young people if they do not comply with the outcome plans of group conferences, and eligibility for group conferencing. |
| Coherence | The data items used to construct this performance indicator are affected by comparability issues as noted above. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Victoria counts the number of group conferences resulting in an agreement, as a proportion of all concluded group conferences, as distinct from young people who receive group conferencing and reach an agreement.

Effectiveness, rehabilitation — Education and training attendance

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — rehabilitation |
| Indicator | Education and training attendance |
| Measure (computation) | <p><u>Definition:</u></p> <p>The number of young people in detention of all ages who are attending appropriate and accredited education or accredited training courses as a proportion of all eligible young people in detention.</p> <p><u>Numerator:</u></p> <p>Total number of young people in detention of compulsory school age attending an education course.</p> <p>Total number of young people in detention not of compulsory school age attending an accredited education or training course.</p> <p><u>Denominator:</u></p> <p>Total number of young people in detention of compulsory school age who are eligible to attend an education course.</p> <p>Total number of young people in detention not of compulsory school age who are eligible to attend an accredited education or training course.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the proportion of young people in detention attending education and training. Attending education and training is recognised by government as a means of rehabilitating young offenders and increasing their chances of successfully re-integrating into the community. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | <p>Data are reported as comparable across jurisdictions. 'Compulsory school age' is the age at which a young person is legally required to attend school as defined in the relevant jurisdiction. There is some variation across jurisdictions in the age to which children are compulsorily required to attend school. 'Non-compulsory school age' is an age at which a young person is not legally required to be at school (that is, older than the compulsory school age). For this indicator, age in years is used to determine whether the young person is of compulsory school age.</p> <p>An accredited education or training course is that which is included in the Australian Qualification Framework (AQF). The AQF comprises national</p> |

qualifications issued in: the secondary schools sector; the vocational education and training sector (TAFE and registered private providers); and the higher education sector (mainly universities).

The denominator extends to all eligible young people in detention. Young people in detention will be excluded from this count (i.e., be ineligible for education and training attendance) in circumstances such as the following:

- temporary leave or work release
- medically unable to participate
- in isolation
- a risk assessment has resulted in exclusion from education
- attending court
- on remand or sentenced for less than 7 days.

These data are supplied by states and territories using one of two methods: (1) using daily data averaged over the number of school days in the financial year, or (2) averaging the number of young people as at the second last day of each school term or an alternative day as required.

Coherence

Data are comparable across jurisdictions.

Accessibility

Data are published in the SCRGSP's Report on Government Services.

Interpretability

Further technical details are available in the data manual '*Youth justice key performance indicators: Data collection manual for the Report on Government Services*'.

Data Gaps/Issues Analysis

Key data

The Steering Committee notes the following issues:

gaps/issues

- It might be beneficial for the CPYJWG to consider outcomes reporting on an education measure for youth justice.

Effectiveness, safe and secure environment — Deaths in custody

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — safe and secure environment |
| Indicator | Deaths in custody |
| Measure (computation) | <u>Definition:</u> The number of deaths in youth justice custody. <u>Numerator:</u> Total number of young people who died in custody. <u>Denominator:</u> Na (data are reported as whole numbers rather than rates due to very small numbers). <u>Computation:</u> Expressed as a number. |
| Data source/s | <u>Numerator:</u> State and Territory governments' administrative data systems. <u>Denominators:</u> Na |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the number of young people who died in custody as a measure of the safety of young people in custody. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are reported by all jurisdictions and are comparable across jurisdictions. Deaths in youth justice custody include young people who died: <ul style="list-style-type: none">• while in the custody of a youth justice remand or detention centre• in the process of or as the result of escaping or attempting to escape from a youth justice remand or detention centre• where there is an apparent unnatural death clearly resulting from an event that took place at the centre, wherever it occurs• where there is a death from apparently natural causes• while on escorted leave. |
| Coherence | Data are comparable across jurisdictions. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- No deaths in custody suggests a relatively safe custody environment for young people. However, these data should be interpreted in conjunction with other safety performance measures.

Effectiveness, safe and secure environments — Escapes

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — Safe and secure environment |
| Indicator | Escapes |
| Measure (computation) | <p><u>Definition:</u></p> <p>(1) The rate of escapes from a youth justice detention centre, as a proportion of all young people in custody.</p> <p>(2) The rate of escapes during periods of escorted movement, as a proportion of all periods of escorted movement.</p> <p><u>Numerators:</u></p> <p>(1) The number of escapes from youth justice detention centres throughout the reference year.</p> <p>(2) The number of escapes from periods of escorted movement throughout the reference year.</p> <p><u>Denominators:</u></p> <p>(1) Total number of custody nights in detention.</p> <p>(2) Total periods of escorted movement.</p> <p><u>Computation:</u></p> <p>Expressed as a rate per 10 000. Calculation is: (Numerator ÷ Denominator) x 10000.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the rate of escapes from detention and escorted movement. Both of these measures assess the extent to which youth justice agencies provide a safe and secure environment for young people and the community. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are reported as comparable. An escape from a youth justice detention centre is defined as the breach of a secure perimeter or defined boundary of a youth justice detention centre by a young person under the supervision of the centre. A period of escorted movement is defined as a period of time in which a young person is in the custody of the youth justice agency while outside a detention centre. The period of escorted movement ends when the young person is returned to the detention centre, or is no longer in the legal or physical custody of the youth justice agency. An escape from an escorted movement is defined as the failure of a young person to remain in the custody of a supervising youth justice worker or approved service provider during a period of escorted movement. |

| | |
|-------------------------|---|
| Coherence | These data are comparable. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|--|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • These data are a robust count of the rate of escapes from detention and the rate of escapes during periods of escorted movement. • Data for WA and the NT are not available for the number of periods of escorted movement. |
|-----------------------------|--|

Effectiveness, safe and secure environment — Absconds from unescorted leave

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — safe and secure environment |
| Indicator | Absconds from unescorted leave |
| Measure (computation) | <p><u>Definition:</u> The number of absconds from unescorted leave as a proportion of all periods of unescorted leave.</p> <p><u>Numerator:</u> Total number of absconds from unescorted leave.</p> <p><u>Denominator:</u> Total number of periods of unescorted leave.</p> <p><u>Computation:</u> Expressed as a rate per 1000. Calculation is: (Numerator ÷ Denominator) x 1000.</p> |
| Data source/s | <p><u>Numerators:</u> State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u> State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | <p>Data are reported by State and Territory governments to provide information on the proportion of unescorted leaves where young people abscond. This information is an indicator of governments' objective to appropriately manage young people while they are in the legal custody of a youth justice detention centre. Management of young people includes the provision of appropriate assessment, planning and supervision to enable them to undertake unescorted temporary leave from detention centres. Unescorted leave may be undertaken for the purposes of providing rehabilitation interventions and activities such as education, training and employment.</p> <p>Unescorted leave is leave for a young person held in custody that is authorised in writing and does not require the young person to be escorted by a youth justice worker. An abscond is a failure to return from leave, and occurs when the youth justice agency advises police of the young person's failure to return to custody.</p> |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are comparable across jurisdictions. |
| Coherence | Data are comparable across jurisdictions. However, not all jurisdictions permit unescorted leave to be undertaken. Therefore, for these jurisdictions this indicator is not applicable. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |

Interpretability Further technical details are available in the data manual '*Youth justice key performance indicators: Data collection manual for the Report on Government Services*'.

Data Gaps/Issues Analysis

Key data gaps/issues The Steering Committee notes the following issues:

- For jurisdictions in which unescorted leave is undertaken, a low or decreasing rate of absconds from unescorted leave is desirable.
- Data for SA are not available for the number of periods of unescorted leave.

Effectiveness, safe and secure environments — Assaults in custody

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|---|--|
| Element | Effectiveness — Safe and secure environment |
| Indicator | Assaults in custody |
| Measure (computation) | <p><u>Definition:</u></p> <p>(1) The rate of detainees who are seriously assaulted (that is, sustain an injury that requires overnight hospitalisation and any act of sexual assault) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody.</p> <p>(2) The rate of staff who are seriously assaulted (that is, sustain an injury that requires overnight hospitalisation and any act of sexual assault) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody.</p> <p>(3) The rate of detainees who are assaulted (that is, sustain an injury, but do not require hospitalisation) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody.</p> <p>(4) The rate of staff who are assaulted (that is, sustain an injury, but do not require hospitalisation) due to an act perpetrated by one or more detainees, as a proportion of the number of detainees in custody.</p> <p><u>Numerators:</u></p> <p>(1) Number of detainees who are seriously assaulted (that is, sustain an injury that requires overnight hospitalisation and any act of sexual assault) due to an act perpetrated by one or more detainees.</p> <p>(2) Number of staff who are seriously assaulted (that is, sustain an injury that requires overnight hospitalisation and any act of sexual assault) due to an act perpetrated by one or more detainees.</p> <p>(3) Number of detainees who are assaulted (that is, sustain an injury, but do not require hospitalisation) due to an act perpetrated by one or more detainees.</p> <p>(4) Number of staff who are assaulted (that is, sustain an injury, but do not require hospitalisation) due to an act perpetrated by one or more detainees.</p> <p><u>Denominators:</u></p> <p>Total number of custody nights in detention throughout the reference year.</p> <p><u>Computation:</u></p> <p>Expressed as a rate per 10 000. Calculation is: (Numerator ÷ Denominator) x 10000.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |
| <u>Data Quality Framework Dimensions</u> | |
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |

| | |
|-------------------------|--|
| Relevance | Data are reported by State and Territory governments to provide information on the rate of assaults in detention centres. These measures assess the extent to which youth justice agencies provide a safe and secure environment for young people and staff within detention centres. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are affected by comparability issues. Specifically, there are differences in recording practices across jurisdictions, which contribute to differences in reported rates (including a practice in some jurisdictions to record 'substantiated' assaults only). Further, there might also be differences in the threshold for recording an assault across jurisdictions. For the purpose of this indicator, an injury is defined as: bruises; cuts or lacerations; open wounds; fractured or broken bones or teeth; burns or scalds; poisoning; dislocations and sprains; and concussions. |
| Coherence | These data are affected by comparability issues as noted above. In addition, data are not provided by all states and territories. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • Data are not complete across states and territories. For assaults and serious assaults in custody, data were not available for WA. • Data reported for this indicator are not comparable and need to be interpreted with caution. Methods of data collection vary across jurisdictions (for example, manual case file review compared to the collation of electronic incident reports) and jurisdictions' ability to report on this measure is dependent on relevant incidents having first been documented. • The extent to which variable thresholds across jurisdictions affect comparability of results should be ascertained through further moderation of reported assaults data. • The ACT has only one youth justice detention centre with relatively small numbers in detention. Data are not converted to a rate per 10 000 custody nights for the periods 2009-10 to 2010-11 due to the small number of detainees in the ACT. |
|-----------------------------|---|

Effectiveness, safe and secure environments — Self-harm and attempted suicide in custody

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — Safe and secure environments |
| Indicator | Self-harm and attempted suicide in custody |
| Measure (computation) | <p><u>Definition:</u></p> <p>(1) The rate of incidents of self-harm or attempted suicide in custody requiring hospitalisation</p> <p>(2) The rate of incidents of self-harm or attempted suicide in custody that did not require hospitalisation</p> <p>(3) The rate of detainees who self-harmed or attempted suicide in custody and required hospitalisation</p> <p>(4) The rate of detainees who self-harmed or attempted suicide in custody but did not require hospitalisation.</p> <p><u>Numerators:</u></p> <p>(1) The number of incidents of self-harm or attempted suicide in custody requiring hospitalisation</p> <p>(2) The number of incidents of self-harm or attempted suicide in custody that did not require hospitalisation</p> <p>(3) The number of detainees who self-harmed or attempted suicide in custody and required hospitalisation</p> <p>(4) The number of detainees who self-harmed or attempted suicide in custody but did not require hospitalisation.</p> <p><u>Denominators:</u></p> <p>Total number of custody nights in detention throughout the reference year.</p> <p><u>Computation:</u></p> <p>Expressed as a rate per 10 000. Calculation is: (Numerator ÷ Denominator) x 10000.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the rate of self-harm and attempted suicide in detention centres. These measures assess the extent to which youth justice agencies provide a safe and secure environment for young people in detention. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are affected by comparability issues. An incident occurs when a young person: expresses an intent to self-harm or commit suicide; attempts to self-harm or commit suicide; or commits self-harm. Self-harm occurs when a young person purposely self-inflicts poisoning or injury. An attempt |

to self-harm or suicide occurs where a young person intends to purposely self-inflict poisoning, injury or death and is prevented from doing so. An intention to self-harm or commit suicide occurs when a young person (a) expresses an intent to inflict harm or death upon him or herself to staff or an apparently reliable witness, or (b) demonstrates self-destructive behaviour that indicates a risk of self-harm or suicide and that is witnessed by staff or an apparently reliable witness. There might be differences in recording practices across jurisdictions and thresholds for recording attempts and actual incidents of self-harm, which contribute to differences in reported rates.

Coherence These data are affected by comparability issues as noted above. In addition, data are not provided by all states and territories.

Accessibility Data are published in the SCRGSP's Report on Government Services.

Interpretability Further technical details are available in the data manual '*Youth justice key performance indicators: Data collection manual for the Report on Government Services*'.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Data are not available for WA.
- Data reported for this indicator are not comparable and need to be interpreted with caution. Methods of data collection vary across jurisdictions (for example, manual case file review compared to the collation of electronic incident reports) and jurisdictions' ability to report on this measure is dependent on relevant incidents having first been documented.
- The ACT has only one youth justice detention centre with relatively small numbers in detention. Data are not converted to a rate per 10 000 custody nights for the periods 2009-10 to 2010-11 due to the small number of detainees in the ACT.

Effectiveness, statutory responsibilities — Completion of community-based orders

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — safe and secure environment |
| Indicator | Completion of orders |
| Measure (computation) | <p><u>Definition:</u> The number of sentenced community-based orders successfully completed.</p> <p><u>Numerator:</u> Total number of sentenced community-based orders successfully completed.</p> <p><u>Denominator:</u> Total number of sentenced community-based orders unsuccessfully completed.</p> <p><u>Computation:</u> Expressed as a percentage. Calculation is: Numerator / (Numerator + Denominator) * 100.</p> |
| Data source/s | <p><u>Numerators:</u> State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u> State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the proportion of sentenced community-based orders successfully completed. An order is considered to be successfully completed where the earliest order expiry date or the order termination date is reached and breach is neither pending nor finalised. An order is unsuccessfully completed where a court has decided that an order was breached, irrespective of the court-ordered outcome. For example, if the court decided that the order was breached but ordered the young person to continue serving the order, the order is still considered to be an unsuccessful completion. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are reported as comparable across jurisdictions. |
| Coherence | Data are reported as comparable across jurisdictions. However, data are not reported by all jurisdictions. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- A high or increasing proportion of orders successfully completed is desirable. However, where offenders are non-compliant and pose a risk, breach action (an unsuccessful completion) may be warranted. As a result, a completion rate less than 100 per cent may not necessarily indicate poor performance, and may reflect appropriate supervision of young people on community-based supervision orders.

Effectiveness, statutory responsibilities — Case plans prepared

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — statutory responsibilities |
| Indicator | Case plans prepared |
| Measure (computation) | <p><u>Definition:</u></p> <p>The number of eligible young people who had a documented case plan prepared or reviewed within six weeks of commencing:</p> <ul style="list-style-type: none">• a sentenced detention order, as a proportion of all young people commencing a sentenced detention order• a sentenced community-based order, as a proportion of all young people commencing a sentenced community-based order. <p><u>Numerator:</u></p> <p>Total number of case plans prepared or reviewed within six weeks of commencing a sentenced community-based order.</p> <p>Total number of case plans prepared or reviewed within six weeks of commencing a sentenced detention order.</p> <p><u>Denominator:</u></p> <p>Total number of sentenced community-based orders commenced.</p> <p>Total number of sentenced detention orders commenced.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the proportion of case plans prepared in a timely fashion. Case plans are tools to assist in case management. They are formal written plans that assess a young person's risks and needs for general safety and rehabilitation for specific offending behaviours. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | Data are reported as comparable across jurisdictions. |
| Coherence | Data are reported as comparable across jurisdictions. However, data are not reported by all jurisdictions. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Data are not available for WA and SA for community-based orders. Data are not available for SA for detention-based orders.
- For case plans prepared within 6 weeks of commencing a sentenced community-based order, WA cannot disaggregate the numerator by Indigenous status. Therefore, proportions can only be calculated for the total number of case plans prepared in WA.
- In the NT, case plans are prepared within 8 weeks of commencing a sentenced community-based order.

Efficiency, input per output unit — Cost per young person subject to community-based supervision

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Efficiency — Inputs per output unit |
| Indicator | Cost per young person subject to community-based supervision |
| Measure (computation) | <p><u>Definition:</u> Total expenditure on community-based supervision per day, divided by the number of young people subject to community-based supervision on an average day.</p> <p><u>Numerators:</u> Total expenditure on community-based supervision throughout the financial year.</p> <p><u>Denominators:</u> Total number of young people subject to community-based supervision on an average day.</p> <p><u>Computation:</u> Expressed as a dollar figure/average unit cost. Calculation is: (Numerator ÷ Denominator).</p> |
| Data source/s | <p><u>Numerators:</u> State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u> State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the average unit cost of community-based supervision. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | <p>These data are comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions.</p> <p>A low or decreasing unit cost is desirable as it suggests more efficient resource management. However, efficiency indicators cannot be interpreted in isolation and should be considered in conjunction with effectiveness indicators. A low cost per young person subject to community-based supervision could reflect less investment in rehabilitation programs to address a young person's offending needs, or less intensive case management of young people on community-based supervision orders. Unit costs are also affected by differences in the profile of young offenders, geographic dispersion and other factors that limit opportunities to reduce overheads through economies of scale.</p> <p>The average daily costs of supervising young offenders are significantly higher than the equivalent unit costs for adult offenders. This is likely to be explained by more extensive supervision requirements when working with</p> |

| | |
|-------------------------|--|
| Coherence | <p>minors and the more limited opportunity for economies of scale in smaller youth justice systems.</p> <p>These data are comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions.</p> <p>The number of young people under community-based supervision on an average day is calculated by summing the number of days each young person spends under supervision during the year (irrespective of age) and dividing this total by the number of days in the financial year. To derive the average daily cost per young person under community-based supervision on an average day, total recurrent expenditure on community-based supervision is divided by 365.25. This figure is then divided by the average daily number subject to community-based supervision.</p> <p>Time series financial data are adjusted to today's dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator.</p> |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manuals ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> ' and ' <i>Youth justice financial data manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • Unit costs presented in the Report are not necessarily comparable to local unit costs reported in jurisdiction-specific annual reports due to different methods of calculation. • Youth justice expenditure data and youth justice average unit cost data are relatively new additions to the Report. As per usual Review processes, the Steering Committee anticipates that the CPYJWG and relevant parallel groups will continue to refine and improve the collection over time. |
|-----------------------------|---|

Efficiency, input per output unit — Cost per young person subject to detention-based supervision

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Efficiency — Inputs per output unit |
| Indicator | Cost per young person subject to detention-based supervision |
| Measure (computation) | <p><u>Definition:</u></p> <p>‘Cost per young person subject to detention-based supervision’ is defined as total expenditure on detention-based supervision per day, divided by the number of young people subject to detention-based supervision on an average day.</p> <p><u>Numerators:</u></p> <p>Total expenditure on detention-based supervision throughout the financial year.</p> <p><u>Denominators:</u></p> <p>Total number of young people subject to detention-based supervision on an average day.</p> <p><u>Computation:</u></p> <p>Expressed as a dollar figure/average unit cost. Calculation is: (Numerator ÷ Denominator).</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments’ administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments’ administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory governments’ administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the average unit cost of detention-based supervision. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | <p>These data are comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions.</p> <p>A low or decreasing unit cost is desirable as it suggests more efficient resource management. However, efficiency indicators cannot be interpreted in isolation and should be considered in conjunction with effectiveness indicators. A low cost per young person subject to community-based supervision could reflect less investment in rehabilitation programs to address a young person’s offending needs, or less intensive case management of young people on community-based supervision orders. Unit costs are also affected by differences in the profile of young offenders, geographic dispersion and other factors that limit opportunities to reduce overheads through economies of scale.</p> <p>The average daily costs of supervising young offenders are significantly higher than the equivalent unit costs for adult offenders. This is likely to be explained by more extensive supervision requirements when working with minors and the more limited opportunity for economies of scale in smaller youth justice systems.</p> |

Coherence These data are comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions.

The number of young people under detention-based supervision on an average day is calculated by summing the number of days each young person spends under supervision during the year (irrespective of age) and dividing this total by the number of days in the financial year. To derive the average daily cost per young person under detention-based supervision on an average day, total recurrent expenditure on detention-based supervision is divided by 365.25. This figure is then divided by the average daily number subject to detention-based supervision.

Time series financial data are adjusted to today's dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator.

Accessibility Data are published in the SCRGSP's Report on Government Services.

Interpretability Further technical details are available in the data manuals '*Youth justice key performance indicators: Data collection manual for the Report on Government Services*' and '*Youth justice financial data manual for the Report on Government Services*'.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Unit costs presented in the Report are not necessarily comparable to local unit costs reported in jurisdiction-specific annual reports due to different methods of calculation.
- Youth justice expenditure data and youth justice average unit cost data are relatively new additions to the Report. As per usual Review processes, the Steering Committee anticipates that the CPYJWG and relevant parallel groups will continue to refine and improve the collection over time.

Efficiency, input per output unit — Centre utilisation

Data quality information for this indicator has been drafted by the Child Protection and Youth Justice Working Group.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Efficiency — Inputs per output unit |
| Indicator | Centre utilisation |
| Measure (computation) | <p><u>Definition:</u></p> <p>The rate of detainees in all detention centres as a proportion of the number of permanently funded beds.</p> <p><u>Numerators:</u></p> <p>Total average nightly population in detention centres throughout the reference year.</p> <p><u>Denominators:</u></p> <p>Total number of permanently funded beds.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>State and Territory governments' administrative data systems.</p> <p><u>Denominators:</u></p> <p>State and Territory governments' administrative data systems.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Data are sourced from State and Territory governments' administrative data systems. |
| Relevance | Data are reported by State and Territory governments to provide information on the rate of centre utilisation. This indicator partially measures both efficient and effective performance. |
| Timeliness | The most timely data (i.e., data for the most recent financial year) are reported. |
| Accuracy | These data are comparable across jurisdictions. Detention centres operating at higher capacities is desirable from an efficient resource management perspective. However, detention centres operating at or above capacity might be ineffective due to the consequences for rehabilitation when centres are overcrowded. Centres also need to make provision for separately detaining various classes of young offenders. These factors require utilisation rates that are below full capacity. For these reasons, the indicator is described as possessing both efficiency and effectiveness components. |
| Coherence | These data are comparable across jurisdictions. |
| Accessibility | Data are published in the SCRGSP's Report on Government Services. |
| Interpretability | Further technical details are available in the data manual ' <i>Youth justice key performance indicators: Data collection manual for the Report on Government Services</i> '. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|--|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none">• These data are a robust count of the extent to which detention centre beds are utilised. However, it is important to consider this indicator in the context of other youth justice indicators. |
|-----------------------------|--|
