Publications enquiries

The Productivity Commission acts as the Secretariat for the Steering Committee for the Review of Government Service Provision. This report and previous editions are available from the Productivity Commission website at www.pc.gov.au.

The Steering Committee welcomes enquiries and suggestions on the information contained in this report. Contact the Secretariat by phone: (03) 9653 2100 or email: gsp@pc.gov.au

Foreword

This year marks the twentieth edition of the Report on Government Services — a remarkable milestone for a unique report providing comparative information on the performance of a wide range of government services.

The Report was commissioned in 1993 by Heads of Government (now COAG), with the first report produced in 1995. A new terms of reference issued in 2010 emphasised the dual roles of the Report in improving service delivery, efficiency and performance, and increasing accountability to governments and the public.

Improving the equity and effectiveness of the services included in the Report can affect the community in significant ways. Some services form an important part of the social welfare system (for example, social housing and child protection services), some are provided to people with specific needs (for example, aged care and disability services), and others are typically used by each person in the community at some stage during their life (for example, education and training, health services and police and emergency services). Improving the efficiency of government services can also have economic pay-offs. Governments spent over \$184 billion on the services covered by this Report, representing about 69 per cent of general government expenditure in 2013-14, around 12 per cent of Australia's gross domestic product.

The development of the comprehensive Report we have today involved the dedication and hard work of many people over many years. I commend all governments for their long-term commitment to transparency and accountability. Few exercises that rely on cooperation and consensus across governments and departments continue to thrive over two decades — and it is particularly challenging to maintain government support for a report that is often used to criticise the performance of governments. I also acknowledge the contributions of the previous chairs of the Steering Committee, Bill Scales and Gary Banks, past and present Steering Committee and working group members, and the many staff of the Productivity Commission who provided Secretariat services over the years.

Peter Harris
Chairman

January 2015

Steering Committee

This report was produced under the direction of the Steering Committee for the Review of Government Service Provision (SCRGSP). The Steering Committee comprises the following current members:

| | | |
|----------------------|--------------|---|
| Mr Peter Harris | Chairman | Productivity Commission |
| Mr Daryl Quinlivan | Acting Chair | Productivity Commission |
| Mr Mark Thomann | Aust. Govt. | Department of Finance and Deregulation |
| Ms Sam Reinhardt | Aust. Govt. | The Treasury |
| Ms Josephine Laduzko | Aust. Govt. | Department of the Prime Minister and Cabinet |
| Mr Rick Sondalini | NSW | NSW Treasury |
| Ms Michelle Dumazel | NSW | Department of Premier and Cabinet |
| Ms Katherine Whetton | Vic | Department of Premier and cabinet |
| Mr Jeremy Nott | Vic | Department of Treasury and Finance |
| Mr Chris Chinn | Qld | Department of the Premier and Cabinet |
| Ms Janelle Thurlby | Qld | Queensland Treasury |
| Ms Marion Burchell | WA | Department of the Premier and Cabinet |
| Mr Barry Thomas | WA | Department of Treasury |
| Ms Katrina Ball | SA | Department of Treasury and Finance |
| Mr Chris McGowan | SA | Department of the Premier and Cabinet |
| Ms Rebekah Burton | Tas | Department of Premier and Cabinet |
| Mr Geoffrey Rutledge | ACT | Chief Minister, Treasury and Economic Development Directorate |
| Ms Jean Doherty | NT | Department of the Chief Minister |
| Ms Linda Weatherhead | NT | Department of the Chief Minister |
| Ms Tracey Scott | NT | Department of Treasury and Finance |
| Mr Peter Harper | | Australian Bureau of Statistics |
| Mr David Kalisch | | Australian Institute of Health & Welfare |

People who also served on the Steering Committee during the production of this Report include:

| | | |
|-------------------|-------------|--|
| Ms Madonna Morton | Aust. Govt. | Department of the Prime Minister and Cabinet |
| Mr Peter Robinson | Aust. Govt. | The Treasury |
| Ms Janet Schorer | NSW | Department of Premier and Cabinet |
| Mr David Reynolds | SA | Department of Treasury and Finance |
| Ms Nicole Masters | ACT | Chief Minister's Directorate |
| Mr Leigh Eldridge | NT | Department of the Chief Minister |
| Mr Craig Graham | NT | Department of Treasury and Finance |
| Mr Bruce Michael | NT | Department of Treasury and Finance |

Glossary

| | |
|--------------------|--|
| Access | Measures how easily the community can obtain a delivered service (output). |
| Appropriateness | Measures how well services meet client needs and also seeks to identify the extent of any underservicing or overservicing. |
| Comparability | Data are considered comparable if, (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data. |
| Completeness | Data are considered complete if all required data are available for all jurisdictions that provide the service. |
| Constant prices | See ‘real dollars’. |
| Cost effectiveness | Measures how well inputs (such as employees, cars and computers) are converted into outcomes for individual clients or the community. Cost effectiveness is expressed as a ratio of inputs to outcomes. For example, cost per life year saved is a cost effectiveness indicator reflecting the ratio of expenditure on breast cancer detection and management services (including mammographic screening services, primary care, chemotherapy, surgery and other forms of care) to the number of women’s lives that are saved. |
| Current prices | See ‘nominal dollars’. |
| Descriptors | Descriptive statistics included in the Report that relate, for example, to the size of the service system, funding arrangements, client mix and the environment within which government services are delivered. These data are provided to highlight and make more transparent the differences among jurisdictions. |
| Effectiveness | Reflects how well the outputs of a service achieve the stated objectives of that service (also see program effectiveness). |

| | |
|-----------------------|---|
| Efficiency | Reflects how resources (inputs) are used to produce outputs and outcomes, expressed as a ratio of outputs to inputs (technical efficiency), or inputs to outcomes (cost effectiveness). (Also see ‘cost effectiveness’ and ‘technical efficiency’.) |
| Equity | Measures the gap between service delivery outputs or outcomes for special needs groups and the general population. Equity of access relates to all Australians having adequate access to services, where the term adequate may mean different rates of access for different groups in the community (see chapter 1 for more detail). |
| Inputs | The resources (including land, labour and capital) used by a service area in providing the service. |
| Nominal dollars | Refers to financial data expressed ‘in the price of the day’ and which are not adjusted to remove the effects of inflation. Nominal dollars do not allow for inter-year comparisons because reported changes may reflect changes to financial levels (prices and/or expenditure) and adjustments to maintain purchasing power due to inflation. |
| Output | The service delivered by a service area, for example, a completed episode of care is an output of a public hospital. |
| Outcome | The impact of the service on the status of individuals or a group, and the success of the service area in achieving its objectives. A service provider can influence an outcome but external factors can also apply. A desirable outcome for a school, for example, would be to add to the ability of the students to participate in, and interact with, society throughout their lives. Similarly, a desirable outcome for a hospital would be to improve the health status of an individual receiving a hospital service. |
| Process | Refers to the way in which a service is produced or delivered (that is, how inputs are transformed into outputs). |
| Program effectiveness | Reflects how well the outcomes of a service achieve the stated objectives of that service (also see effectiveness). |
| Quality | Reflects the extent to which a service is suited to its purpose and conforms to specifications. |
| Real dollars | Refers to financial data measured in prices from a constant base year to adjust for the effects of inflation. Real dollars allow the inter-year comparison of financial levels (prices and/or expenditure) by holding the purchasing power constant. |

Technical
efficiency

A measure of how well inputs (such as employees, cars and computers) are converted into service outputs (such as hospital separations, education classes or residential aged care places). Technical efficiency reflects the ratio of outputs to inputs. It is affected by the size of operations and by managerial practices. There is scope to improve technical efficiency if there is potential to increase the quantity of outputs produced from given quantities of inputs, or if there is potential to reduce the quantities of inputs used in producing a certain quantity of outputs.

Unit costs

Measures average cost, expressed as the level of inputs per unit of output. This is an indicator of efficiency.

Terms of Reference

The Report on Government Services

1. The Steering Committee will measure and publish annually data on the equity, efficiency and cost effectiveness of government services through the Report on Government Services (ROGS). Outputs and objectives
2. The ROGS facilitates improved service delivery, efficiency and performance, and accountability to governments and the public by providing a repository of meaningful, balanced, credible, comparative information on the provision of government services, capturing qualitative as well as quantitative change. The Steering Committee will seek to ensure that the performance indicators are administratively simple and cost effective.
3. The ROGS should include a robust set of performance indicators, consistent with the principles set out in the Intergovernmental Agreement on Federal Financial Relations; and an emphasis on longitudinal reporting, subject to a program of continual improvement in reporting.
4. To encourage improvements in service delivery and effectiveness, ROGS should also highlight improvements and innovation.
5. The Steering Committee exercises overall authority within the ROGS reporting process, including determining the coverage of its reporting and the specific performance indicators that will be published, taking into account the scope of National Agreement reporting and avoiding unnecessary data provision burdens for jurisdictions. Steering Committee authority
6. The Steering Committee will implement a program of review and continuous improvement that will allow for changes to the scope of the ROGS over time, including reporting on new service areas and significant service delivery areas that are jurisdiction-specific.
7. The Steering Committee will review the ROGS every three years and advise COAG on jurisdictions' compliance with data provision requirements and of potential improvements in data collection. It may also report on other matters, for example, ROGS's scope, relevance and usefulness; and other matters consistent with the Steering Committee's terms of reference and charter of operations. Reporting to COAG

Attachment tables

Attachment tables are identified in references throughout this sector overview by a 'FA' prefix (for example, table FA.1). A full list of attachment tables is provided at the end of this sector overview, and the attachment tables are available from the Review website at www.pc.gov.au/gsp.

F.1 Introduction

This sector overview provides an introduction to the Aged care services (chapter 13), Services for people with disability (chapter 14), Child protection services (chapter 15) and Youth justice services (chapter 16) chapters of this Report. It provides an overview of the community services sector, presenting both contextual information and high level performance information.

Major improvements in reporting on community services this year are identified in each of the service-specific community services chapters.

Policy context

Families are the principal providers of care for children, older people and people with disability (Australian Bureau of Statistics (ABS)) 2010; Australian Government 2008).

Community services aim to:

- support families to fulfil their caring roles
- provide care when families are unable to
- provide interventions when a person's needs are not able to be met within the community without special intervention.

Community services provide support to sustain and nurture the functioning of individuals, families and groups, to maximise their potential and to enhance community wellbeing (Australian Council of Social Service 2009). Although community services generally target individuals, and/or families, they can be delivered at an institutional level. Services are typically provided by government and the not-for-profit sector, but the for-profit sector also has an important role (for example, as owners of aged care facilities). Community services also contribute to the development of community infrastructure to service needs (Australian Institute of Health and Welfare (AIHW) 2005).

Sector scope

Although there is a broad understanding of the nature of community services, the sector is complex, and consistent aggregate reporting across the community services sector is not possible at this time.

Definitions of the sector vary in their scope and can change over time. Community services typically include activities that support individual and family functioning. These activities can include financial assistance and relief to people in crisis but exclude acute health care services and long term housing assistance. Some of these interventions are included elsewhere in this Report; for example, Public hospitals (chapter 11), Mental health management (chapter 12), Housing (chapter 17), and Homelessness services (chapter 18).

The definition of community services activities in this sector overview is based on the National Classification of Community Services developed by the Australian Institute of Health and Welfare (AIHW 2003) (box F.1). The scope of the sector overview is therefore somewhat broader than the four service-specific chapters in this section of the Report (Aged care services, Services for people with disability, Child protection services and Youth justice services).

Box F.1 Community services activities

Community services activities include:

Personal and social support — providing support for personal or social functioning in daily life. Such activities promote the development of personal skills for successful functioning as individuals, family members and members of the wider community. Personal and social support activities include: the provision of information, advice and referral; personal, social and systemic advocacy; counselling; domestic assistance; provision of services that enable people to remain in their homes; disability services and other personal assistance services. The purpose of such support is to enable individuals to live and function in their own homes or normal places of residence.

Support for children, families and carers — seeking to promote child and family welfare by supporting families and protecting children from abuse and neglect or harm through statutory intervention.

Training, vocational rehabilitation and employment — assisting people who are disadvantaged in the labour market by providing training, job search skills, help in finding work, placement and support in open employment or, where appropriate, supported employment.

Financial and material assistance — enhancing personal functioning and facilitate access to community services, through the provision of emergency or immediate financial assistance and material goods.

Residential care and supported accommodation — providing special purpose residential facilities, including accommodation in conjunction with other types of support, such as assistance with necessary day-to-day living tasks and intensive forms of care such as nursing care.

Youth justice services — dealing with young people and people with intellectual and psychiatric disabilities on court orders that involve correctional and rehabilitative supervision and the protection of public safety, through corrective arrangements and advice to courts and releasing authorities.^a

Service and community development and support — providing support aimed at articulating and promoting improved social policies; promoting greater public awareness of social issues; developing and supporting community based activities, special interest and cultural groups; and developing and facilitating the delivery of quality community services. Activities include the development of public policy submissions, social planning and social action, the provision of expert advice, coordination, training, staff and volunteer development, and management support to service providers.

^a This Report uses the term ‘youth justice’ to refer to detention and community-based supervision services for young people who have committed or allegedly committed an offence while considered by law to be a juvenile (chapter 16).

Source: AIHW (2003); State and Territory governments (unpublished).

Other definitions of community services have even broader scope and include activities such as the provision of income support and concessions, advocacy, public transport and emotional support.

Profile of the community services sector

This section examines the size and scope of the community services sector and the role of government in providing community services. Detailed profiles for the services within the community services sector are reported in chapters 13, 14, 15 and 16, and cover:

- size and scope of the individual service types
- funding and expenditure.

Roles and responsibilities

The Australian, State and Territory governments have major roles in the provision of community services. These roles are based on mandates to ensure basic rights and an acceptable standard of living, and a requirement to protect and support vulnerable people in society.

Local governments are also funders and providers of community services (AIHW 2005). However, community services funded solely by local government are not included in this Report.

Government involvement in community services includes:

- providing services directly to clients
- funding non-government community service providers (which then provide services to clients)
- legislating for, and regulating, government and non-government providers
- undertaking strategic planning, policy development and administration
- undertaking monitoring and evaluation of community services' programs.

The roles and funding arrangements for community services vary across service areas and programs:

- statutory child protection, out-of-home care services, intensive family support services and youth justice services are funded and delivered primarily by State and Territory governments, with some non-government sector involvement, particularly in the delivery of out-of-home care services. Family support and early intervention (assessment and referral) services are funded by State and Territory governments and services are delivered primarily by non-government organisations
- specialist disability services, excluding employment services, are funded primarily by State and Territory governments (with some Australian Government contribution) and are delivered primarily by State and Territory governments and the non-government sector. Employment services are funded and provided primarily by the Australian Government. The Australian Government and host jurisdictions are responsible for the cost of the National Disability Scheme (NDIS)

-
- residential aged care and places provided under the Home Care Packages Program are funded primarily by the Australian Government and services are delivered primarily by the non-government sector
 - the funding and program responsibilities for Home and Community Care (HACC) services across states and territories (except in Victoria and WA) are split — the Australian Government funds services for older people and State and Territory governments fund services for younger people. HACC services for older people and younger people are jointly funded by the Australian and Victorian governments in Victoria and the Australian and WA governments in WA. Services are delivered by a combination of local government, non-government community organisations, religious or charitable bodies, State and Territory government agencies, and private (for profit) organisations.

Effective regulation of non-government agencies (through licensing, accreditation and quality assurance) enables agencies to provide services within a framework of agreed standards. For example, the accreditation of residential aged care services.

Expenditure

Community services expenditure

Estimates of community services expenditure are influenced by the scope of the services to be included. The following broad estimates of community services expenditure provide context for material included in the relevant chapters of this Report.

Australia's welfare 2013 (AIHW 2013) analyses community services expenditure incurred by governments, non-government organisations and individual households in providing services to assist members of the community with special needs (families and children, older people, people with disability and other disadvantaged groups). It estimates that:

- welfare expenditure broadly comprises spending on welfare services and cash payments. In 2010-11, welfare expenditure was estimated to be \$119.4 billion, \$90.0 billion (75 per cent) of this was in cash payments while \$29.4 billion (25 per cent) was for welfare services (AIHW 2013)
- over the decade to 2010-11, the percentage of gross domestic product spent annually on welfare ranged from 8.4 per cent to 9.6 per cent. The exception was the 10.4 per cent recorded in 2008-09, which coincided with the Australian Government's Economic Security Strategy in response to the global financial crisis (AIHW 2011)
- of the \$90.0 billion in cash payments, \$36.3 billion was for older people and \$25.5 billion was for families and children. The average amount spent by governments on welfare service per Australian resident in 2010-11 was \$1308 (AIHW 2011).

Community Services Australia, 2008-09 (ABS 2010) provides data on community services expenditure incurred by governments and non-government organisations (for-profit and not-for-profit) in providing services to assist members of the community with special needs, including personal and social support, residential care and other social assistance services. These data apply to organisations engaged in providing a wide variety of social support services directly to clients, including (but not limited to), welfare services, disabilities assistance and the operation of adult day care centres.

Community Services Australia estimates that, during 2008-09, \$25.2 billion was spent on direct community services activities and a further \$4.0 billion on non-direct and related community services activities. The majority of services were provided by the not-for-profit sector, which received most of its funding from government. Total expenditure on direct activities comprised \$13.8 billion by not-for-profit organisations, \$6.7 billion by for-profit organisations, \$3.8 billion by Australian, State and Territory governments and \$0.9 billion by local government. In addition, Australian, State and Territory governments provided funding of \$9.5 billion to other private organisations and self-employed contractors for the direct provision of community services:

- Personal and social support comprises activities relating to information, advice and referral, individual and family support, independent and community living support, and support in the home. During 2008-09, total expenditure on personal and social support was \$5.9 billion, which accounted for 24 per cent of all direct community services expenditure. Not-for-profit organisations received the majority of this (\$4.3 billion). The main components of personal and social support expenditure were \$1.6 billion for individual and family support, \$1.5 billion for support in the home, and \$1.5 billion for other personal and social support.
- Direct expenditure on residential care across the community services sector was \$12.6 billion in 2008-09. Not-for-profit organisations had the largest allocation with \$7.2 billion, followed by for-profit organisations with \$3.3 billion, and government organisations with \$2.0 billion. Aged and disability care was the most significant activity within residential care, accounting for \$10.3 billion of total expenditure. The main components of this were high level care (\$6.8 billion or 66 per cent), and low level care (\$3.5 billion or 34 per cent). Not-for-profit organisations accounted for \$3.3 billion (48 per cent) of the high level care expenditure and \$2.5 billion (73 per cent) of the low level care expenditure.

Community services expenditure included in this Report

The following analysis relates only to expenditure on programs reported in the community services' chapters of this Report (box F.2).

Box F.2 Major programs included in community services' expenditure in the Report

The major programs reported on include:

- aged care services — aged care assessment, residential care and community care, including Home and Community Care (HACC) services
- services for people with disability — specialist disability services
- child protection services — child protection, out-of-home care, family support services and intensive family support services
- youth justice services — community and detention-based supervision and group conferencing.

Each chapter includes more detailed analysis of expenditure items reported.

Recurrent expenditure included in the Report

Total Australian, State and Territory government recurrent expenditure on community services covered by this Report was estimated to be \$27.4 billion in 2013-14 (table F.1). This was equivalent to 1.7 per cent of GDP in that year, and 9.8 per cent of total government outlays (table F.1 and ABS 2014).

Between 2009-10 and 2013-14, real government recurrent expenditure on these services increased by \$6.0 billion or 27.4 per cent. The largest proportional increase in real expenditure was on child protection services, which increased by 29.6 per cent between 2009-10 and 2013-14. Part of this increase is explained by the addition from 2011-12 onwards of expenditure data for family support services. The largest absolute dollar increase for a particular service between 2009-10 and 2013-14 was \$2.7 billion for aged care services (table F.1).

Table F.1 Real government recurrent expenditure on community services (2013-14 dollars)^{a, b, c, d, e}

ACS = Aged care services. SPWD = Services for people with disability. CPS = Child protection services. YJS = Youth justice services. ^a For aged care services and services for people with disability, Australian Government expenditure not allocated to a State or Territory is included in the totals (\$895 million in services for people with disability). ^b Collection and reporting methods may vary across jurisdictions and services, therefore, these data need to be interpreted with care. ^c See box F.2 for the major programs included in expenditure for each service. More detailed expenditure data can be found in the relevant chapters of the Report. ^d Totals may not add due to rounding. ^e Expenditure for aged care does not include capital expenditure. ^f Population at 31 December 2013. For child protection services and youth justice services, recurrent expenditure per person is calculated using population data for children 0–17 years (child protection) and 10–17 years (youth justice).

Source: Australian, State and Territory governments (unpublished); tables 13A.5, 14A.6, 15A.1 and 16A.1.

Size and scope

Current data on the size and scope of the community services sector are limited. The ABS survey of community services collected data on the number of organisations that provided community services in 2009. Almost 11 000 organisations were providing community services. These included 5809 not-for-profit organisations, 4638 for-profit organisations and 520 government organisations (ABS 2010).

Social and economic factors affecting demand for services

In general, relatively disadvantaged members of the community live shorter lives and have higher rates of illness and disability than those whose circumstances are advantageous. For

example, higher levels of education and income are associated with lower prevalence of risk factors to health such as smoking and obesity, and better health outcomes generally (AIHW 2010).

Disadvantage also limits the extent to which individuals and families can participate in society. Economic participation conveys financial, health and social benefits to individuals, households and families and is central to population welfare. Economic participation can be described as a person's engagement in education and employment, and access to economic resources including income and wealth. The various aspects of economic participation are inter-related, and are also associated with positive social and health outcomes (AIHW 2011).

Child protection and youth justice services

No single factor can predict whether a child will require child protection services. Factors commonly associated with child protection involvement include: early child bearing, parental alcohol and drug use, family violence, adult mental illness, social isolation, children with health, disability or behavioural problems, and families under financial stress (families who are reliant on pensions and benefits are overrepresented in the child protection system) (Bromfield and Holzer 2008; Allen Consulting Group 2003).

Similarly, no single factor can predict which children will come into contact with the justice system or be subject to youth justice supervision. A range of factors are associated with youth justice system involvement, including a young person's lack of maturity, his or her propensity to take risks and susceptibility to peer influence, intellectual disability, mental illness, and entrenched socioeconomic disadvantage (Richards 2011).

Disability services

The Productivity Commission report (PC 2011a) into the disability care and support sector describes the sector as underfunded, unfair, fragmented, and inefficient, which gives people with disability little choice and no certainty of access to appropriate supports. The disability sector reflects social barriers such as prejudice, out-of-date practices, and poorly designed infrastructure. On 13 February 2011, the Council of Australian Governments (COAG) formally endorsed the National Disability Strategy 2010–2020. The Strategy outlines a ten-year national policy framework to improve the lives of people with disability, promote participation, and create a more inclusive society. It guides public policy across governments and aims to bring about change in all mainstream and specialist services and programs, as well as community infrastructure, to ensure they are accessible and responsive to the needs of people with disability. This change is important to ensuring that people with disability have the same opportunities as other Australians — a quality education, access to health care, a job where possible and access to buildings, transport and social activities.

Aged care services

The ageing population is one of the key factors that will affect the demand for aged care services over the next 35 years. The number of people aged 65 years or over is expected to more than double increasing from 14.7 per cent of the total population in June 2014 (table 13A.1) to 25.3 per cent by 2047 (PC 2011b). An even bigger relative increase (around four times) in the number of people aged over 85 years is anticipated. This age cohort are the main users of aged care services (PC 2011b).

Future challenges include increasing numbers of older people who are likely to require care (by 2050 it is estimated the 3.5 million Australians will use aged care services), expectations of care and a relative decrease in the number of informal carers (PC 2011b). The Australian Government's aged care reform package, announced during 2012, includes a focus on increased consumer choice and control; more affordable and easier access to a full range of services; improved and expanded home care, support and residential care; better information; and more sustainable financing arrangements.

Additional challenges facing the aged care sector include significant shifts in the type of care demanded, due to reduced access to carers and family support caused by changes in social and economic circumstances (NHHRC 2009).

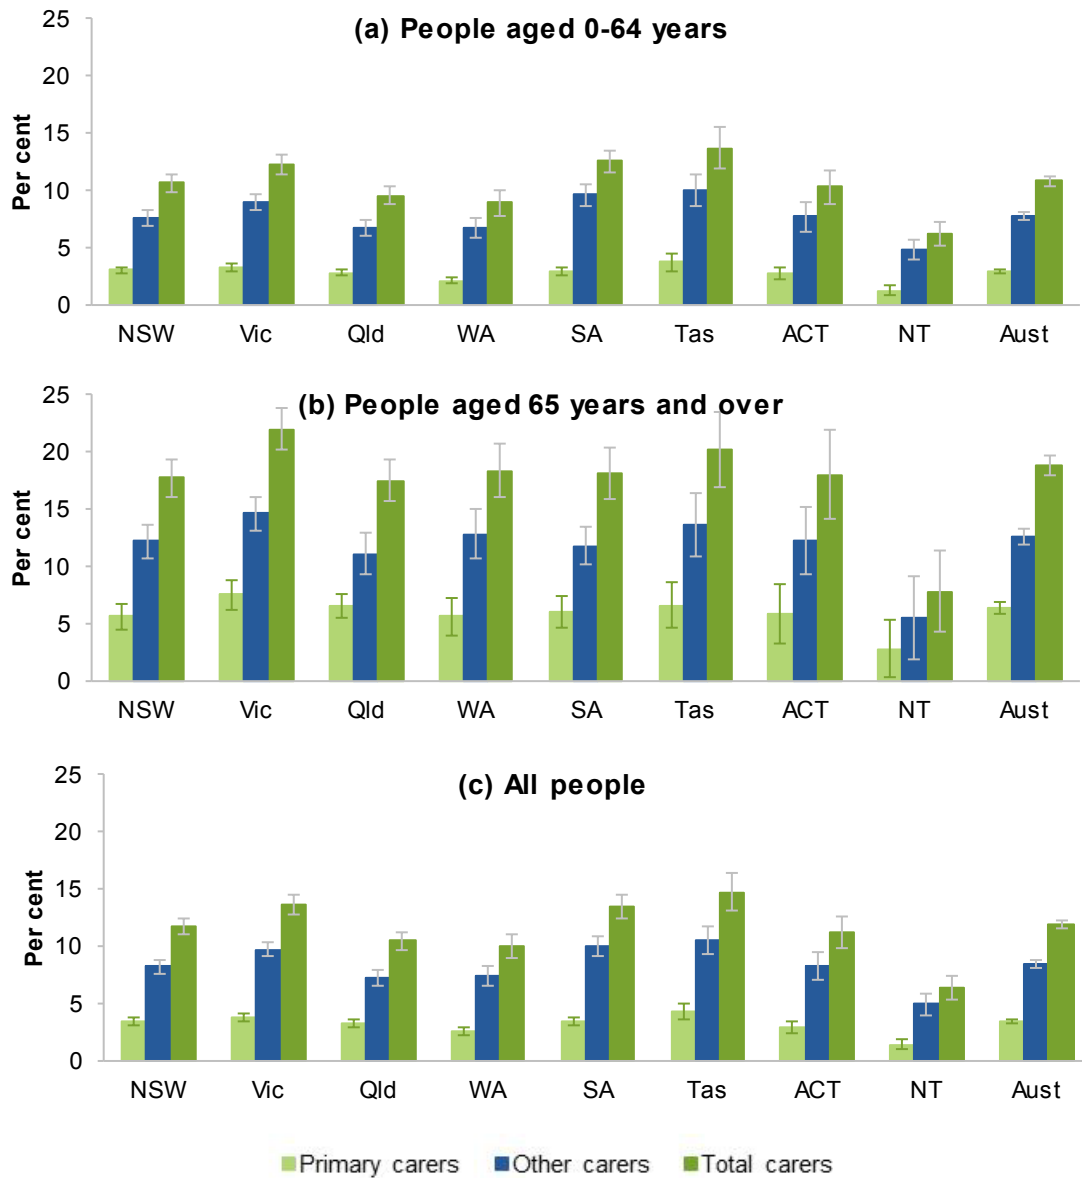

The role of carers across Australia

Informal carers play a vital role in supporting people in need to remain in the community. Carers enable older people to age in their homes and support people with disability and long-term health conditions to remain in their communities (ABS 2008).

The National Carer Strategy was launched by the Australian Government in August 2011 and gave effect to the *Carer Recognition Act 2010*. It forms part of the Australian Government's National Carer Recognition Framework. The strategy aims to ensure that carers are valued and respected and that they have rights, choices, opportunities and capabilities to participate in economic, social and community life. All State and Territory governments have committed to identifying initiatives and activities that complement the strategy, or identify areas that can be worked on cooperatively. Annual Progress Reports outline the progress that has been made since the Strategy's introduction.

In 2012, there were 2.7 million carers across Australia, around 769 800 of whom were primary carers (table FA.1). This equates to approximately 3.4 per cent of the Australian population being providers of primary care. The ABS defines primary carers as carers providing ongoing assistance for at least six months in one or more core activities of communication, mobility or self-care. Figure F.1 presents the proportion of the Australian population who are carers, disaggregated by jurisdiction, age and carer type.

Figure F.1 **Proportion of the Australian population who are carers, by jurisdiction, age, and carer type, 2012^{a, b, c, d}**

^a A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted. ^b Other carers comprises carers who are not primary carers. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate. ^d The Survey of Disability, Ageing and Carers (SDAC) is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

Source: ABS (2013), *Disability, Ageing and Carers, Australia: Summary of findings*, Cat. no. 4430.0, Canberra; table FA.1.

Chapter 14 includes further information on carers, including the labour force participation of primary carers and the proportion of primary carers who report a need for further assistance in their caring roles. Detailed ABS surveys provide additional information on carers such as the reasons carers take on their caring roles, the way carers use their time, and the self-reported effects of undertaking caring roles (including, for example, the effects on social participation, carer wellbeing, and carer financial stress) (ABS 2014).

Service-sector objectives

The overarching service sector objectives in box F.3 draw together the objectives from each of the specific services detailed in this Report. More detailed objectives can be found in chapters 13 (Aged care services), 14 (Services for people with disability), 15 (Child protection services) and 16 (Youth justice services).

Box F.3 Objectives for community services

The overarching objective of the community services' sector is to ensure that older people, people with disability and vulnerable children are supported or assisted and have the opportunity to fully participate in the community.

The specific objectives of the services that comprise the community services' sector are summarised below:

- Aged care services (chapter 13) aim to promote the wellbeing and independence of frail older people and their carers through the funding and delivery of care services that are accessible, appropriate to needs, high quality, efficient, and person-centred.
- Services for people with disability (chapter 14) aim to enhance the quality of life experienced by people with disability by assisting them to live as valued and participating members of the community.
- Child protection services (chapter 15) aim to support families to care for their children and to protect children who are at risk of harm.
- Youth justice services (chapter 16) aim to contribute to a reduction in the frequency and severity of youth offending, recognise the rights of victims, and promote community safety.

Source: Chapters 13, 14, 15 and 16.

F.2 Sector performance indicator framework

This sector overview is based on a sector performance indicator framework (figure F.2). This framework is made up of the following elements:

- Sector objectives — three sector objectives are a précis of the key objectives of the community services sector (box F.3)
- Sector-wide indicators — sector-wide indicators are high level indicators which cut across community services

-
- Service-specific indicators — information from the service-specific performance indicator frameworks that relate to community services. Discussed in more detail in chapters 13, 14, 15 and 16, the service-specific frameworks provide comprehensive information on the equity, effectiveness and efficiency of these services.

This sector overview provides an overview of relevant performance information. Chapters 13, 14, 15 and 16 and their associated attachment tables provide more detailed information.

Figure F.2 Community services performance indicator framework

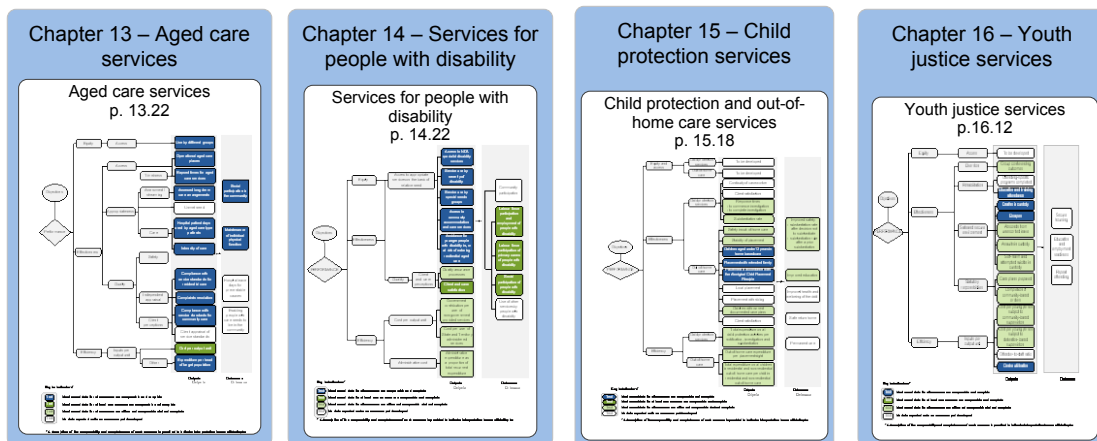

Sector objectives

Sector-wide indicators

Service-specific performance indicator frameworks

Sector-wide indicators

This section includes high level indicators of community services' outcomes. Many factors are likely to influence these outcomes — not solely the performance of government services. However, these outcomes inform the development of appropriate policies and the delivery of government services.

Wellbeing of older people

'Wellbeing of older people' is an indicator of governments' objective to promote the wellbeing and independence of older people (box F.4).

Box F.4 Wellbeing of older people

'Wellbeing of older people' is defined as overall life satisfaction of older people and is measured by the proportion of people aged 65 years or over who were at least satisfied with their lives.

A high proportion of people who are at least satisfied with their lives is desirable.

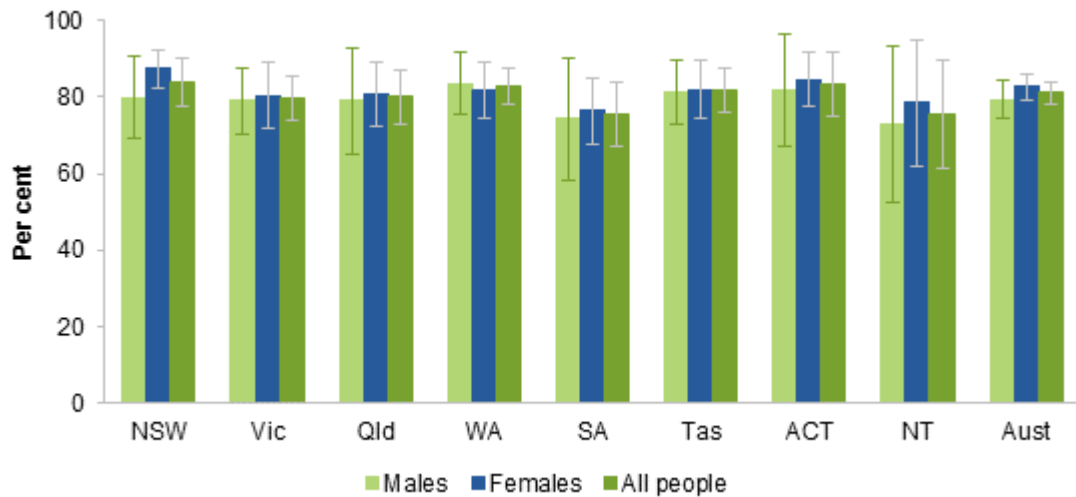

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions for 2010
- complete (subject to caveats) for the current reporting period. All required data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2010, 83.3±3.5 per cent of people aged 65–74 years were mostly satisfied with their lives, 77.3±6.6 per cent of people aged 75–84 years were mostly satisfied with their lives and 82.2±6.3 per cent of people aged 85 years and over were mostly satisfied with their lives (table FA.2). Figure F.3 illustrates the proportion of people aged 65 years and over who were mostly satisfied with their lives, by jurisdiction and sex.

Figure F.3 **Proportion of people aged 65 years and over who were mostly satisfied with their lives, by jurisdiction and sex, 2010^{a, b, c, d}**

^a People who felt delighted, pleased or mostly satisfied with their lives as a proportion of all people who provided a response to overall life satisfaction. ^b Excludes those who did not provide a response or did not know how they felt. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate. ^d Data for the NT need to be interpreted with care as very remote areas were excluded from the General Social Survey. This translates to over 20 per cent of the NT population.

Source: ABS (unpublished), *General Social Survey 2010*, Cat. no. 4159.0, Canberra; table FA.2.

Independence of older people

‘Independence of older people’ is an indicator of governments’ objective to promote the wellbeing and independence of older people (box F.5).

Box F.5 Independence of older people

‘Independence of older people’ is defined as participation in the community by older people and is measured by the number of people living in households aged 65 or over who participated in social or community activities away from home in the past three months divided by the number of people aged 65 years or over living in households.

A high proportion of people aged 65 years or over who participated in the community is desirable.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions for 2012
- complete (subject to caveats) for the current reporting period. All required 2012 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2012, among people aged 65 years or over living in households, the proportion of people who participated in social or community activities away from home in the past 3 months was 93.2±0.7 per cent (figure F.4).

Figure F.4 Proportion of all people living in households aged 65 years or over, who participated in social or community activities away from home in the past three months, 2012^{a, b}

^a Error bars represent the 95 per cent confidence interval associated with each point estimate. ^b The SDAC is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

Source: ABS unpublished, Survey of Disability, Ageing and Carers 2012; table FA.3.

Quality of life of people with disability

‘Quality of life of people with disability’ is an indicator of governments’ objective for people with disability to have an enhanced quality of life and participate as valued members of the community (box F.6).

Box F.6 Quality of life of people with disability

'Quality of life of people with disability' is defined as overall life satisfaction of people with disability, and is measured by the number of people with disability who were at least mostly satisfied with their lives, divided by the total number of people with a mild, moderate, severe or profound disability who provided a response.

A high proportion of people with disability who were at least mostly satisfied with their lives is desirable.

Overall life satisfaction is a summary subjective indicator of wellbeing. A number of circumstances may influence overall life satisfaction, such as health, education, employment, income, personality, family and social connections, civil and human rights, levels of trust and altruism, and opportunities for democratic participation (Diener 1984; Stutzer and Frey 2010).

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions for 2010
- complete (subject to caveats) for the current reporting period. All required 2010 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2010, 68.9±2.1 per cent of people with disability or long-term health condition were at least mostly satisfied with their lives (figure F.5).

Figure F.5 Proportion of people with disability or long-term health condition who were at least mostly satisfied with their lives, by sex and by jurisdiction, 2010^{a, b, c}

^a Excludes those who did not provide a response or did not know how they felt. ^b Error bars represent the 95 per cent confidence interval associated with each point estimate. ^c Data for the NT need to be interpreted with care as very remote areas were excluded from the General Social Survey. This translates to over 20 per cent of the NT population.

Source: ABS (unpublished), *General Social Survey 2010*, Cat. no. 4159.0, Canberra; table FA.4.

Participation of people with disability and their carers in the community

‘Participation of people with disability and their carers in the community’ is an indicator of governments’ objective for people with disability and their carers to participate as valued members of the community and have an enhanced quality of life (box F.7).

Box F.7 Participation of people with disability and their carers in the community

‘Participation of people with disability and their carers in the community’ is defined as social and community participation of people with disability and their carers and is measured by:

- the proportion of people with disability and their carers who participated in social or community activities (away from home or at home) in the past three months
- the proportion of primary carers who participated in social or community activities (away from home and without the recipient of care) in the past three months.

A high proportion of people with disability and their carers who participated in social or community activities is desirable.

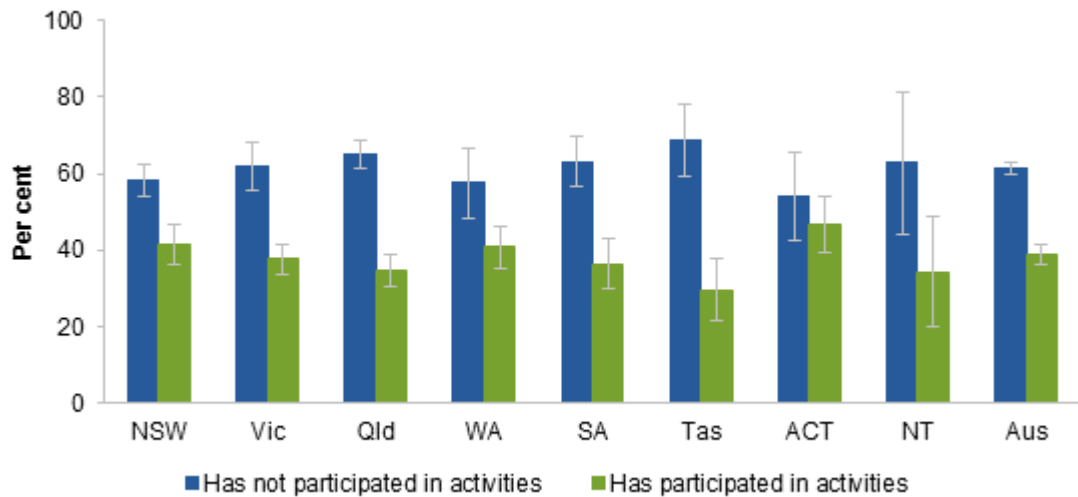

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions for 2012 but a break in series means that data for 2009 and earlier years are not comparable to data for 2012
- complete (subject to caveats) for the current reporting period. All required 2012 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally in 2012, 39.0±2.6 per cent of primary carers participated in social or community activities away from home and without the recipient of care in the past three months. 61.3±1.7 per cent of primary carers did not participate in social or community activities away from home without the recipient of care in the past three months (figure F.6).

Figure F.6 **Proportion of primary carers who participated in social or community activities away from home and without the recipient of care in the past three months, 2012^{a, b, c}**

^a A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include persons aged 15 years and over. People aged 15 to 17 years were only interviewed personally if parental permission was granted. ^b Error bars represent the 95 per cent confidence interval associated with each point estimate. ^c The SDAC is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

Source: ABS Survey of Disability, Ageing and Carers 2012; table FA.5.

Jobless families with children as a proportion of all families

‘Jobless families with children as a proportion of all families’ is an indicator of governments’ objective to ensure positive family environments for Australia’s children and young people (box F.8).

A reduction in the number of jobless families is important, as there are many costs to the country of family joblessness, including:

- the direct costs of lost national output and supporting families who are not participating in the workforce
- the indirect costs of reduced labour market attachment of children from jobless families, poorer health outcomes, and reduced income and overall wellbeing arising from joblessness (Australian Government 2011).

Box F.8 **Jobless families with children**

'Jobless families with children' is defined as the number of families without jobs who have children as a proportion of all families. Family is defined as two or more people, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering, and who are usually resident in the same household. The basis of a family is formed by identifying the presence of a couple relationship, lone parent-child relationship or other blood relationship. Some households will, therefore, contain more than one family (ABS 2005).

Jobless families with children is reported for three measures:

- jobless families as a proportion of all families
- jobless families with dependants (including children aged under 15 years) as a proportion of all families with dependants (including children aged under 15 years)
- jobless families with children aged under 15 years as a proportion of all families with children aged under 15 years.

A low or decreasing number of jobless families as a proportion of all families is desirable.

Data reported for this indicator are:

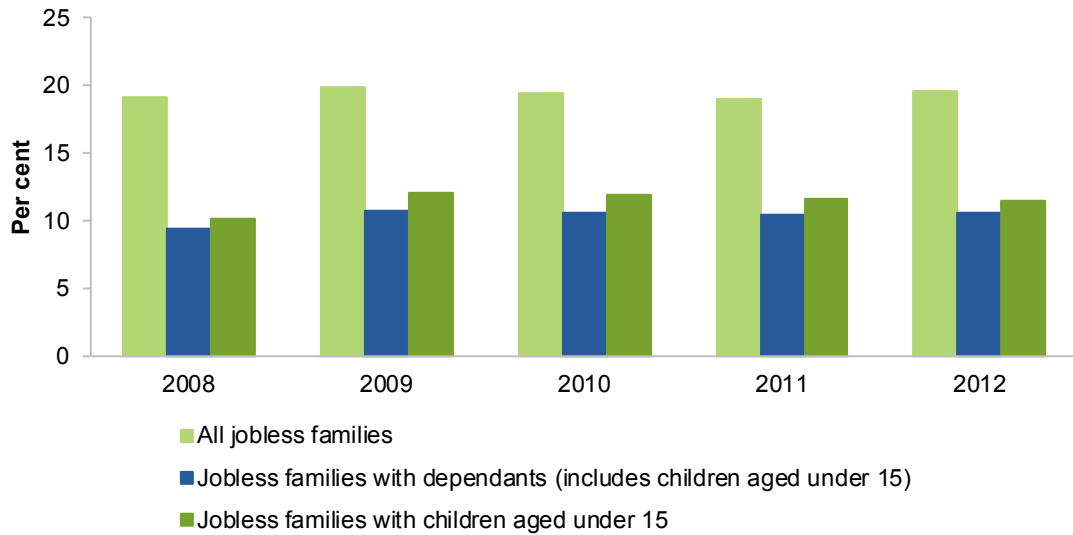

- comparable (subject to caveats) for 2012
- complete (subject to caveats) for the current reporting period. 2013 data were not available for reporting this year.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, 19.5 per cent of all families were jobless at 30 June 2012 (figure F.7). This is an increase of 0.5 percentage points from 30 June 2011 (19.0 per cent) (attachment FA.6).

Nationally at 30 June 2012, 10.6 per cent of jobless families had dependants (including children under 15) while 11.5 per cent of jobless families had children aged under 15 (figure F.7).

Figure F.7 **Proportion of jobless families, at 30 June**

Source: ABS, *Labour Force, Australia: Labour Force Status and Other Characteristics of Families, June 2012*, Cat. no. 6224.0.55.001; table FA.6.

Improving child development

‘Improving child development’ is an indicator of governments’ objective to ensure that Australia’s children and young people are safe and well (box F.9).

Box F.9 **Improving child development**

'Improving child development' is defined as the proportion of children who are developmentally vulnerable on one or more Australian Early Development Census (AEDC) domains.

A low or decreasing proportion of children who are developmentally vulnerable on one or more AEDC domains is desirable.

The AEDC is a population measure of young children's development as they enter school. A population measure places the focus on all children in the community and therefore the AEDC reports on early childhood development across the whole community. Every three years, teachers complete a checklist for children in their first year of full-time school. The checklist measures five key areas, or domains, of early childhood development:

- physical health and wellbeing
- social competence
- emotional maturity
- language and cognitive skills (school-based)
- communication skills and general knowledge.

These areas are closely linked to the predictors of good adult health, education and social outcomes.

The next data collection for the AEDC will take place from May to July 2015, with results expected to be available in 2016.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2012 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2012, 22.0 per cent of children were developmentally vulnerable on one or more Australian Early Development Census (AEDC) domain/s, while 10.8 per cent of children were developmentally vulnerable on two or more AEDC domains (figure F.8).

Figure F.8 **Proportion of children who are developmentally vulnerable, 2012**

Service-specific performance indicator frameworks

This section summarises information from the Aged care services' service-specific indicator framework in chapter 13, the Services for people with disability service-specific indicator framework in chapter 14, the Child protection service-specific indicator framework in chapter 15 and the Youth justice service-specific indicator framework in chapter 16.

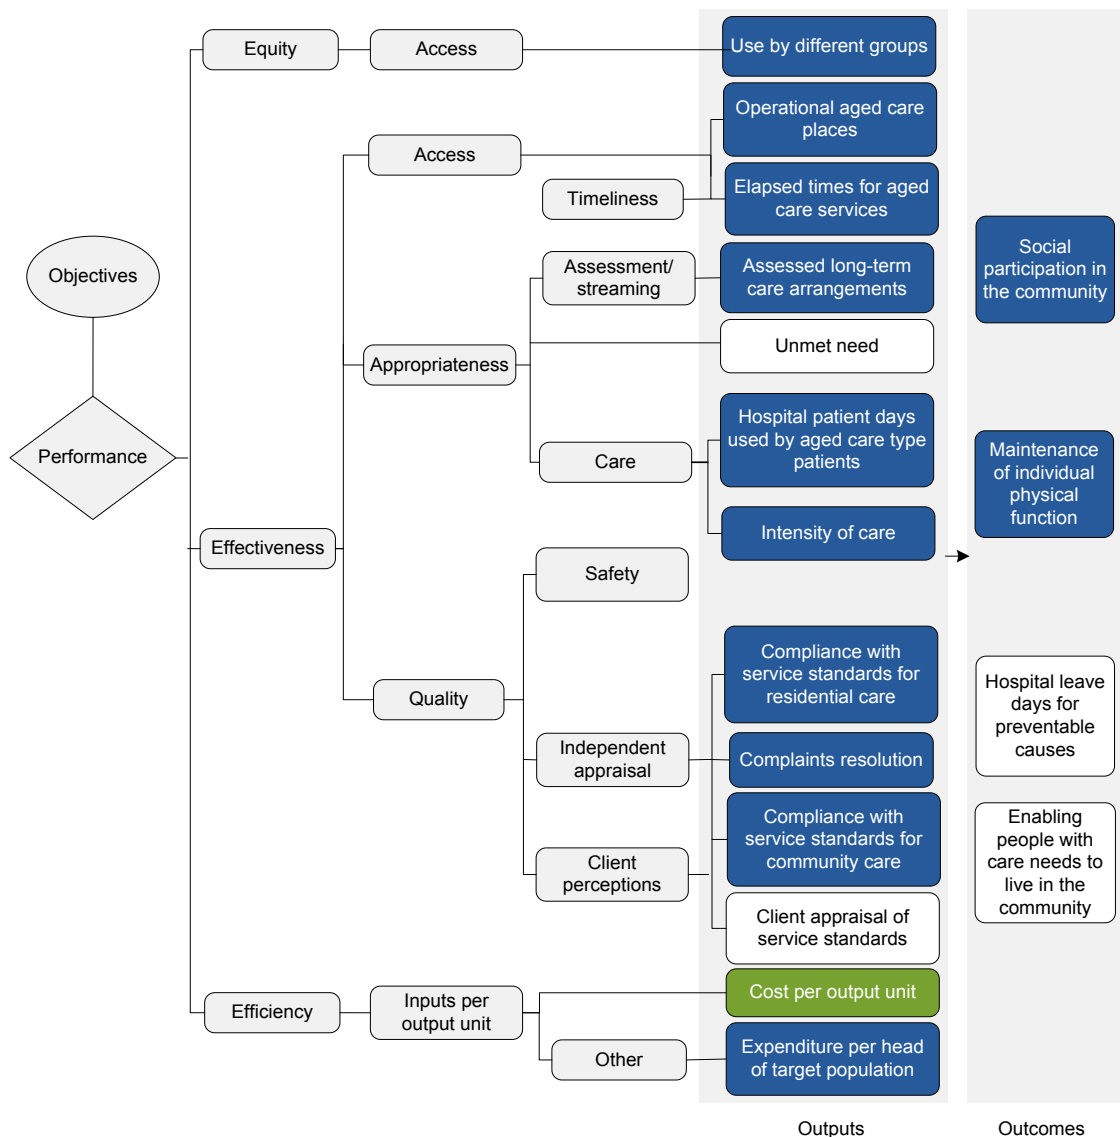

Additional information is available to assist the interpretation of these results:

- indicator interpretation boxes, which define the measures used and indicate any significant conceptual or methodological issues with the reported information (chapters 13, 14, 15 and 16)
- caveats and footnotes to the reported data (chapters 13, 14, 15 and 16 and attachments 13A, 14A, 15A and 16A)
- additional measures and further disaggregation of reported measures, for example, by Indigenous status, remoteness, language background, sex and age (chapters 13, 14, 15 and 16 and attachments 13A, 14A, 15A and 16A)
- data quality information (DQI) for many indicators (chapters 13, 14, 15 and 16 DQI).

Aged care services

The performance indicator framework for aged care services is presented in figure F.9. This framework provides comprehensive information on the equity, effectiveness, efficiency and the outcomes of aged care services.

Figure F.9 **Aged care services performance indicator framework**

Key to indicators*

- Text Most recent data for all measures are comparable and complete
- Text Most recent data for at least one measure are comparable and complete
- Text Most recent data for all measures are either not comparable and/or not complete
- Text No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the chapter

An overview of aged care performance indicator results are presented in table F.3. Information to assist the interpretation of these data can be found in the indicator interpretation boxes in chapter 13 and the footnotes in attachment 13A.

F.3 Cross-cutting and interface issues

Community services pathways

Although this Report discusses three areas of community services in separate chapters, it is recognised that there are many linkages between different community services. Governments are increasingly emphasising the need for integrated, client centred community services.

Many community services are linked by the provision of different services to individuals at different stages of life. Other services are not as strictly, or not at all, age-specific, and some individuals may receive multiple services at the same time — for example, a child who is in receipt of youth justice services together with homelessness, child protection or

disability services. Disability services can continue throughout an individual's lifetime and overlap with the provision of aged care services.

The sequence of interventions or services can be referred to as 'pathways' of community service provision. However, there is a paucity of information on the patterns of access by individuals to the range of community services, either concurrently or in succession over a lifetime. A greater understanding of the links between the use of various community services, the nature of these links, and whether interventions in one area of service provision result in reduced need for other services, will help to inform government social policy.

Examples of relevant research include:

- a cohort study carried out in Queensland, which found a correlation between contact with child protection services and the youth justice system. Of the 24 255 children born in 1983 or 1984 who had a contact with one or more of child protection services, police cautioning or children's courts, 6.2 per cent had both a child protection services contact and a children's court appearance. These 1500 children represented 28.7 per cent of those with a children's court appearance and 15.7 per cent of those with a child protection history (Stewart, Dennison and Hurren 2005)
- data linkage projects being undertaken by the AIHW involving the linkage of available homelessness data, youth justice data and child protection data. These projects involve analysing the characteristics and pathways of children and young people who are involved in these sectors
- a longitudinal study of Aboriginal and Torres Strait Islander children (*Footprints In Time*) into the links between early childhood experiences and later life outcomes for Aboriginal and Torres Strait Islander children, covering areas such as health, culture, education, housing and family relationships (FaHCSIA 2008)
- the Australian Community Sector Survey (ACSS) is an annual national survey which collects data about the non-government, non-profit community services and welfare sector (Australian Council of Social Service 2011).

In September 2009, the Australian Government launched the Australian Institute for Population Ageing Research (AIPAR), based at the University of New South Wales. The AIPAR brings together cross-disciplinary research on the issue of population ageing to inform economic and social policy. The AIPAR also maintains a 'Longevity Index' to track the extent to which Australians are able to maintain their living standards over their lifetime (UNSW 2009).

On 30 April 2009, COAG endorsed *Protecting Children is Everyone's Business: National Framework for Protecting Australia's Children 2009–2020* (the National Framework). The National Framework emphasises that protecting children should be seen as a community and cross-sector responsibility. The National Framework is intended to deliver a more integrated response to protecting Australia's children and emphasises the role of government, the non-government sector, and the community in achieving these aims. The

Second Action Plan 2012–15 was released in 2012. It prioritises early intervention, prevention and collaboration with mental health, domestic and family violence, drug and alcohol, education, health and other services. As reporting for the National Framework progresses, the Steering Committee will further consider the suitability of some of the high-level, cross-sector performance indicators in the National Framework for inclusion in the Community services sector overview in future Reports.

There are also links between community services and other government services. Access to effective community services can influence outcomes for clients of education, health, housing and justice sector services. In turn, access to these other service areas can affect community services outcomes.

A recent report, *Children and young people at risk of social exclusion* (AIHW 2012), presents findings from analysis of linked client data across three service areas: homelessness, youth justice, and child protection. This analysis revealed that people with involvement in one of these three services are more likely to be involved in another of these services than the general population. For example:

- approximately 15 per cent of young people under youth justice supervision received specialist homelessness support the year before their most recent period of supervision, and 8 per cent received specialist homelessness support in the year after their most recent period of youth justice supervision. Approximately 6 per cent of children who were the subject of a child protection notification received specialist homelessness support in the year prior to the notification, and 7 per cent received specialist homelessness support in the year after their most recent substantiated notification. These figures are in stark contrast to the general population, where approximately 1 per cent of people aged 10 and older receive specialist homelessness support in a year, and approximately 2 per cent receive specialist homelessness support as an accompanying child in a year
- approximately 10 per cent of adult specialist homelessness clients had a history of youth justice supervision, compared to approximately 1 per cent of the general population aged 16 or 17 years (the peak age for youth justice supervision).

The results of this analysis highlight the extent of multiple-sector involvement across these service areas. Further analysis of pathways through these services, and common factors giving rise to contact with these services, is likely to assist governments in targeting prevention and rehabilitation activities.

The community services and health sectors are closely related and their effective interaction assists the provision of services in both sectors. The disability sector is also closely linked to health services by the needs of clients, as people with disability tend to have a larger number of poor health conditions than the general population (AIHW 2006). Other links, such as the role of medical and other health professional staff as a source of child protection notifications, also reinforce the importance of the relationship between community services and health.

Basic community care services across the community services sector

Data are reported in the Aged care services chapter for people aged 65 years and older and Aboriginal and Torres Strait Islander Australians aged 50–64 years. Data are reported in the Services for people with disability chapter for people aged 64 years and under and Aboriginal and Torres Strait Islander Australians aged 49 years and under.

Box F.10 Basic Community Care / Home and Community Care services

Under the National Health Reform Agreement (NHRA), the Australian Government has:

- full policy and funding responsibility for aged care services (for people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years), including basic community care services (delivered under the Commonwealth Home and Community Care (HACC) program)
- funding responsibility for specialist disability services delivered under the National Disability Agreement (NDA) for people aged 65 years or over and for Aboriginal and Torres Strait Islander people aged 50–64 years.

Under the NHRA the State and Territory governments have:

- full policy and funding responsibility for specialist disability services for people aged under 65 years and for Aboriginal and Torres Strait Islander people aged 49 years or under, including Basic Community Care (BCC)
- funding responsibility for packaged community care and residential care delivered through aged care programs to people aged 64 years or under, except for Aboriginal and Torres Strait Islander people aged 50–64 years.

In Victoria and WA, basic community care continues to be delivered under HACC as a joint Australian and State governments' funded program. The Australian Government and the Victorian and WA governments have maintained bilateral agreements for that purpose.

Housing

Livable Housing Australia (LHA) is a not-for-profit organisation established to encourage Australians constructing new homes to comply with design standards to meet the changing needs of home occupants across their lifetime. LHA promotes greater understanding of the value of universal housing design practices and has developed guidelines to help guide the residential and building industry and all levels of government. The Livable Housing Design guidelines seek to raise national awareness about the benefits of designing homes for everyone, irrespective of their abilities.

The housing industry, the disability and the ageing sectors are working towards having all new homes built to reflect the new standards by 2020. They have also committed to a strategic plan that provides a pathway over the next decade to work towards this target. The Australian Government is investing \$1 million to drive this innovative partnership with the building and property sectors to promote universal housing design.

F.4 Future directions in performance reporting

This community services sector overview will continue to be developed in future reports.

The Aged care services, Service for people with disability, Child protection services and Youth justice services chapters contain a service-specific section on future directions in performance reporting.

F.5 List of attachment tables

Attachment tables are identified in references throughout this appendix by an 'FA' prefix (for example, table FA.1). Attachment tables are available on the Review website (www.pc.gov.au/gsp).

| | |
|------------|--|
| Table FA.1 | Number of carers living in households, by jurisdiction and age, 2012 |
| Table FA.2 | Proportion of people who were at least satisfied with their lives, by age, 2010 (per cent) |
| Table FA.3 | Number and proportion of all people living in households aged 65 years and over, type of social or community activities participated in away from home in the past three months, 2012 ('000) |
| Table FA.4 | Overall life satisfaction of people with disability or a long-term health condition, by sex and by jurisdiction, 2010 (per cent) |
| Table FA.5 | Number and proportion of primary carers who participated in social or community activities away from home and without the recipient of care in the past 3 months, 2012 |
| Table FA.6 | Jobless families, at June |
| Table FA.7 | Proportion of children who are developmentally vulnerable according to Australian Early Development Census (AEDC) data |

FA Community Services— attachment

Un sourced information was obtained from the Australian, State and Territory governments.

Data in this Report are examined by the Aged Care Working Group, Disability Services Working Group and the Child Protection and Youth Justice Working Group but have not been formally audited by the Secretariat.

Data reported in the attachment tables are the most accurate available at the time of data collection. Historical data may have been updated since the last edition of RoGS.

This file is available in Adobe PDF format on the Review web page (www.pc.gov.au/gsp).

(a) Data in italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Data with RSEs over 50 per cent are not published.

(b) The proportions reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(c) A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted.

(d) The SDAC is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

(e) Other carers comprises carers who are not primary carers.

(a) Data in italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Data with RSEs over 50 per cent are not published.

(b) Persons who felt Delighted, Pleased or Mostly satisfied with their lives as a proportion of all people who provided a response to overall life satisfaction.

(c) Excludes those who did not provide a response or did not know how they felt.

(d) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(e) Data for the NT need to be interpreted with care as very remote areas were excluded from the General Social Survey. This translates to over 20 per cent of the NT population.

TABLE FA.3

Table FA.3 **Number and proportion of all people living in households aged 65 years and over, type of social or community activities participated in away from home in the past three months, 2012 ('000) (a),(b), (c), (d)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|-------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|--------------------|
| Other activity not specified elsewhere | % | 4.4 ± 1.0 | 4.3 ± 0.9 | 5.0 ± 1.1 | 5.9 ± 1.8 | 5.3 ± 1.5 | 6.5 ± 2.2 | 7.5 ± 2.9 | 4.9 ± 3.6 | 4.8 ± 0.5 |
| Total participated in an activity away from home | % | 93.4 ± 0.9 | 94.0 ± 1.0 | 91.5 ± 1.8 | 94.1 ± 1.5 | 94.4 ± 1.6 | 92.0 ± 2.1 | 95.5 ± 1.4 | 84.5 ± 5.9 | 93.2 ± 0.7 |
| Did not participate in any social or community activities away from home | % | 6.1 ± 1.2 | 5.6 ± 1.2 | 7.8 ± 1.8 | 5.5 ± 1.7 | 5.2 ± 1.3 | 7.1 ± 2.4 | 3.1 ± 1.8 | 13.2 ± 5.7 | 6.2 ± 0.6 |
| Does not leave home | % | 0.6 ± 0.4 | 0.3 ± 0.4 | 0.8 ± 0.5 | 0.8 ± np | 0.5 ± np | 1.2 ± np | – | – | 0.7 ± 0.2 |
| Total persons | % | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 | 100.0 ± 0.0 |

(a) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(b) Components of social and community activities are not mutually exclusive and therefore may not add up to total.

(c) The random adjustment of estimates, by perturbation, for the purpose of maintaining confidentiality, may result in the sum of components not equalling the total, or subtotal. In these cases, the difference between the sum of components and its total will be small and will not impact the overall information value of the estimate for the total or any individual component.

(d) The SDAC is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

| Estimate | no. | 251.8 ± 23.4 | 217.8 ± 21.4 | 151.4 ± 14.9 | 61.3 ± 8.8 | 56.0 ± 6.6 | 21.4 ± 3.7 | 10.8 ± 2.2 | 2.1 ± 0.7 | 769.8 ± 35.6 |
| Has not participated in social or community activities without the recipient of care in the past 3 months | | | | | | | | | | |
| Estimate | %. | 58.2 ± 4.3 | 61.9 ± 6.5 | 65.2 ± 3.6 | 57.5 ± 9.1 | 63.1 ± 6.6 | 68.5 ± 9.4 | 54.1 ± 11.7 | 62.8 ± 18.7 | 61.3 ± 1.7 |
| Has participated in social or community activities without the recipient of care in the past 3 months | | | | | | | | | | |
| Estimate | %. | 41.6 ± 5.3 | 37.7 ± 4.0 | 34.6 ± 4.3 | 40.8 ± 5.5 | 36.5 ± 6.7 | 29.6 ± 8.1 | 46.7 ± 7.3 | 34.4 ± 14.5 | 39.0 ± 2.6 |

(a) Data in italics indicates a relative standard error (RSE) of between 25 per cent and 50 per cent.

(b) A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted.

(c) The random adjustment of estimates, by perturbation, for the purpose of maintaining confidentiality, may result in the sum of components not equalling the total, or subtotal. In these cases, the difference between the sum of components and its total will be small and will not impact the overall information value of the estimate for the total or any individual component.

(d) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

(e) The SDAC is not conducted in very remote areas. This has a small impact on estimates, except for the NT where such persons make up a relatively large proportion of the population.

Table FA.6 **Jobless families, at June (a), (b), (c)**

| | Unit | 2008 | 2009 | 2010 | 2011 | 2012 |
|---|------|---------|---------|---------|---------|---------|
| All jobless families in Australia | | | | | | |
| All jobless families | '000 | 1 150.6 | 1 219.4 | 1 218.0 | 1 218.3 | 1 255.7 |
| Jobless families with dependants (includes children under 15) | '000 | 258.4 | 302.4 | 303.8 | 308.2 | 315.3 |
| Jobless families with children under 15 | '000 | 231.7 | 278.1 | 278.3 | 275.3 | 276.4 |
| All families in Australia | | | | | | |
| All families | '000 | 6 010.5 | 6 151.1 | 6 270.6 | 6 399.9 | 6 448.3 |
| All families with dependants (includes children under 15) | '000 | 2 763.9 | 2 799.5 | 2 871.8 | 2 937.4 | 2 980.6 |
| All families with children under 15 | '000 | 2 268.5 | 2 302.4 | 2 335.6 | 2 367.0 | 2 398.8 |
| Jobless families as a proportion of all families | | | | | | |
| All jobless families | % | 19.1 | 19.8 | 19.4 | 19.0 | 19.5 |
| Jobless families with dependants (includes children under 15) | % | 9.3 | 10.8 | 10.6 | 10.5 | 10.6 |
| Jobless families with children under 15 | % | 10.2 | 12.1 | 11.9 | 11.6 | 11.5 |

(a) All families includes: Other families, Couple families and One parent families with or without dependants.

(b) All families with dependants includes: Couple families and one parent families with children under 15 years, and families with children 15 to 24 years attending school or full-time tertiary education.

(c) Jobless family is a family where no person usually resident in the family was employed. This includes dependants. Families with labour force status not determined and Other families are not included in the estimates of jobless families.

Data quality information — Community services sector overview F

Data Quality Information

Data quality information (DQI) for the Community services sector overview was prepared for the first time for the 2015 Report on Government Services. DQI provides information against the seven Australian Bureau of Statistics (ABS) data quality framework dimensions, for sector-wide performance indicators in the Community services sector overview.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI are available for the following performance indicators:

| | |
|---|----|
| Wellbeing of older people | 2 |
| Independence of older people | 5 |
| Quality of life of people with disability | 8 |
| Participation of people with disability and their primary carers in the community | 11 |
| Jobless families | 15 |
| Improving child development | 18 |

Wellbeing of older people

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Sector-wide indicator |
| Indicator | Wellbeing of older people. |
| Measure (computation) | <p><u>Definition:</u></p> <p>Wellbeing of older people is defined as the overall life satisfaction of older people, measured as the proportion of people aged 65 years or over who were at least mostly satisfied with their lives.</p> <p><u>Numerators:</u></p> <p>The number of people aged 65 years or over who felt delighted, pleased or mostly satisfied with their lives.</p> <p><u>Denominators:</u></p> <p>All people who provided a response to overall life satisfaction (i.e., the denominator excludes respondents who did not provide a response or who did not know how they felt).</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Bureau of Statistics, <i>General Social Survey 2010</i>, cat. no. 4159.0, Canberra.</p> <p><u>Denominators:</u></p> <p>Australian Bureau of Statistics, <i>General Social Survey 2010</i>, cat. no. 4159.0, Canberra.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>The General Social Survey (GSS) is collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, which cover this collection, please see ABS Institutional Environment (www.abs.gov.au/Ausstats/abs@.nsf/Latestproducts/4402.0Quality%20Declaration0June%202011?opendocument&tabname=Notes&prodno=4402.0&issue=June%202011&num=&view=).</p> |
| Relevance | <p>Wellbeing of older people is an indicator of governments' objective to promote the wellbeing and independence of older people.</p> <p>Overall life satisfaction is a summary measure of subjective wellbeing against a scale ranging from delighted to terrible. It measures a person's perceived level of life satisfaction in general and doesn't take into account specific illnesses or problems the person may have. For the purpose of this indicator, people who were at least mostly satisfied with their lives are defined as those who said they were delighted, pleased or mostly satisfied. Respondents who did not provide a response or who did not know how they felt have been excluded from the denominator. This group accounts for 0.3 per cent of the older people population.</p> |
| Timeliness | <p>The indicator is enumerated by data from the GSS. The most recently available GSS data are from 2010. The 2010 GSS is the third in the series, with the first GSS conducted in 2002, and again in 2006. The ABS 2010 GSS collected information for the first time about how people aged 18 years and over felt about their life as a whole using a scale of delighted, pleased, mostly satisfied, mixed, mostly dissatisfied, unhappy and terrible. It is planned to repeat the survey at regular</p> |

| | |
|---|--|
| | <p>intervals (currently four-yearly). Each cycle of the GSS collects comparable information to allow for analysis of changes over time. A cyclical component is also included to collect additional information on emerging or important topics of social concern. The cyclical component of the 2010 GSS included new topics relating to social inclusion, such as experience of homelessness and financial resilience and exclusion.</p> |
| Accuracy | <p>Sample and response rate: The GSS was designed to provide reliable estimates at the national level and for each State and Territory. For the 2010 cycle, the standard sampling methodology was adapted in order to provide better estimates of people experiencing disadvantage. The initial sample for the survey consisted of approximately 19 576 private dwellings. This number was reduced to approximately 17 158 dwellings due to the loss of households which had no residents in scope for the survey and where dwellings proved to be vacant, under construction or derelict. Of the eligible dwellings, 87.6 per cent responded fully (or adequately) which yielded a total sample from the survey of 15 028 dwellings.</p> <p>Scope and coverage: Information on the scope and coverage for GSS is available in <i>General Social Survey: User Guide, Australia, 2010</i> (cat. no. 4159.0.55.002). Only people who were usual residents of private dwellings in Australia were covered by the GSS. The GSS was conducted in both urban and rural areas in all states and territories, except for very remote parts of Australia. This exclusion is unlikely to impact on national estimates, and will only have a minor impact on any aggregate estimates that are produced for individual states and territories, except the NT where the excluded population accounts for over 20 per cent of people.</p> <p>Reliability of estimates: All sample surveys are subject to sampling and non-sampling error. For more information relating to the GSS, refer to the publication <i>General Social Survey: Summary Results, Australia, 2010</i>. The Report includes information on the relative standard errors (RSEs) of estimates published from the GSS. RSEs indicate the reliability of an estimate. RSEs show the size of the error relative to the estimate. The higher the RSE, the less confidence there is that the estimate from the sample is close to the true value of the population mean. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.</p> |
| Coherence | <p>The numerator and denominator are sourced from the same collection, with the numerator being a subset of the denominator population.</p> |
| Accessibility | <p>A range of data drawn from the GSS are available on the ABS website. Additional data can be accessed from the ABS. Costs are associated with additional data and vary depending on the type of request. See <i>General Social Survey: Summary Results, Australia, 2010</i> for an overview of results from the GSS. Results from the 2010 GSS is also available in the form of:</p> <ul style="list-style-type: none"> • a sub-set of tables in a spreadsheet format for each State and Territory (subject to standard error and confidentiality constraints and excluding time series tables) • a number of supplementary themed publications • a Confidentialised Unit Record File (CURF). <p>Other information from the survey is available on request, subject to confidentiality and sampling variability constraints.</p> |
| Interpretability | <p>Further technical details are available on the ABS website: www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4159.0Explanatory%20Notes12010?OpenDocument.</p> <p>Information is available to aid interpretation of GSS data in the publication, <i>General Social Survey: User Guide, Australia, 2010</i> on the ABS website. Detailed explanatory notes and a glossary are also included in <i>General Social Survey: Summary Results, Australia, 2010</i> to provide information on the terminology, classifications and other technical aspects associated with these statistics.</p> |
| <u>Data Gaps/Issues Analysis</u> | |
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • data reported for this indicator are considered comparable (subject to caveats) across jurisdictions for 2010 • GSS 2014 (currently in enumeration) asks respondents to rate their overall life |

satisfaction on a scale from 0–10 which will affect comparability with 2010 data.

Independence of older people

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Sector-wide indicator |
| Indicator | Independence of older people and their carers. |
| Measure (computation) | <p><u>Definition:</u></p> <p>Independence of older people is defined as the proportion of people living in households aged 65 years or over who participated in social or community activities away from home in the past three months.</p> <p><u>Numerators:</u></p> <p>The number of people living in households aged 65 years or over who participated in social or community activities away from home in the past three months.</p> <p><u>Denominators:</u></p> <p>The number of people aged 65 years or over living in households.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Bureau of Statistics, <i>Survey of Disability, Ageing and Carers 2012</i>, cat. no. 4430.0, Canberra</p> <p><u>Denominators:</u></p> <p>Australian Bureau of Statistics, <i>Survey of Disability, Ageing and Carers 2012</i>, cat. no. 4430.0, Canberra</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>The Survey of Disability, Ageing and Carers (SDAC) is collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, which cover this collection, please see ABS Institutional Environment (www.abs.gov.au/Ausstats/abs@.nsf/Latestproducts/4402.0Quality%20Declaration%20June%202011?opendocument&tabname=Notes&prodno=4402.0&issue=June%202011&num=&view=).</p> |
| Relevance | <p>Independence of older people is an indicator of governments' objective to promote the wellbeing and independence of older people.</p> <p>The SDAC collected information from three target populations:</p> <ul style="list-style-type: none">• people with disability• older people (i.e. those aged 65 years and over)• people who care for persons with disability, long-term health conditions or older people. <p>In 2012, the definition of an older person changed to 65 years and over, from 60 years and over in the 2009 survey. The increase of age for older persons was driven by social factors such as increases in life expectancy and changes to aged care policy and the retirement age.</p> <p>Older people's social and community activities participated in away from home in the past three months include:</p> <ul style="list-style-type: none">• Visited relatives or friends• Went to restaurant or club• Church activities• Voluntary activities• Performing Arts group activity |

| | |
|-------------------------|---|
| | <ul style="list-style-type: none"> • Art or craft group activity • Other special interest group activities • Other activity not specified elsewhere. |
| Timeliness | The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013. Results from the 2012 survey were released in November 2013. |
| Accuracy | <p>Sample and response rate: The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings. The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.</p> <p>Scope and coverage: Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for the Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Indigenous communities. As such, it is important to interpret NT estimates in light of these areas being excluded from scope.</p> <p>For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as around 10 per cent of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys. The SDAC also excludes people in gaols and correctional institutions.</p> <p>Reliability of Estimates: All sample surveys are subject to sampling and non-sampling error. For more information relating to the SDAC, refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The Report includes information on the Relative Standard Errors (RSEs) of estimates published from the SDAC. RSEs indicate the reliability of an estimate. RSEs show the size of the error relative to the estimate. The higher the RSE, the less confidence there is that the estimate from the sample is close to the true value of the population mean. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has an RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.</p> |
| Coherence | The numerator and denominator are sourced from the same collection, with the numerator being a subset of the denominator population. |
| Accessibility | <p>A range of data drawn from the SDAC are available on the ABS. Additional data can be accessed from the ABS. Costs are associated with additional data and vary depending on the type of request.</p> <p>See Disability, Ageing and Carers, Australia: Summary of Findings, 2012 for an overview of results from the SDAC. Results from the 2012 SDAC are also available in the form of:</p> <ul style="list-style-type: none"> • a sub-set of tables in a spreadsheet format for each State and Territory (subject to standard error and confidentiality constraints and excluding time series tables) • a number of supplementary themed publications • a Confidentialised Unit Record File (CURF) • a TableBuilder product. <p>Other information from the survey is available on request – see further information in the Quality Declarations - Summary.</p> |
| Interpretability | Confidentiality: To minimise the risk of identifying individuals in aggregate statistics, |

in the 2012 SDAC a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals. The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012, on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Further technical details are available on the ABS website: www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4430.0Quality%20Declaration02012?opendocument&tabname=Notes&prodno=4430.0&issue=2012&num=&view=

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- data reported for this indicator are considered comparable (subject to caveats) across jurisdictions for 2012. Note, however, that:
 - in the SDAC 2012, the definition of an older person changed to 65 years and over, from 60 years
 - social and community participation related data items were updated in SDAC 2012, although, social and community activities participated in away from home in the past three months for older people were not affected.
- data reported for this indicator are complete for the current reporting period.

Quality of life of people with disability

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Sector-wide indicator |
| Indicator | Quality of life |
| Measure (computation) | <p><u>Definition:</u></p> <p>Quality of life people with disability is defined as overall life satisfaction of people with disability or long-term health condition, and is measured as the proportion of people with disability or long-term health condition who were at least mostly satisfied with their lives.</p> <p><u>Numerators:</u></p> <p>The number of people aged 18 years and over with disability or a long-term health condition who were at least mostly satisfied with their lives.</p> <p><u>Denominators:</u></p> <p>The total number of people aged 18 years and over with a disability or long-term health condition who provided a response to this survey item (i.e., the denominator excludes respondents who did not provide a response or who did not know how they felt).</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Bureau of Statistics, <i>General Social Survey 2010</i>, cat. no. 4159.0, Canberra.</p> <p><u>Denominators:</u></p> <p>Australian Bureau of Statistics, <i>General Social Survey 2010</i>, cat. no. 4159.0, Canberra.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>The General Social Survey (GSS) is collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, which cover this collection, please see ABS Institutional Environment (www.abs.gov.au/Ausstats/abs@.nsf/Latestproducts/4402.0Quality%20Declaration0June%202011?opendocument&tabname=Notes&prodno=4402.0&issue=June%2011&num=&view=).</p> |
| Relevance | <p>Quality of life people with disability is an indicator of governments' objective for people with disability and their carers to have an enhanced quality of life and participate as valued members of the community.</p> <p>Overall life satisfaction is a summary measure of subjective wellbeing against a scale ranging from delighted to terrible. It measures a person's perceived level of life satisfaction in general and doesn't take into account specific illnesses or problems the person may have. For the purpose of this indicator, people who were at least mostly satisfied with their lives are defined as those who said they were Delighted, Pleased or Mostly Satisfied.</p> <p>Respondents who did not provide a response or who did not know how they felt have been excluded from the denominator. This group accounts for 0.5 per cent of people with disability or long-term health condition.</p> <p>A disability or long-term health condition exists if a limitation, restriction, impairment, disease or disorder, had lasted, or was likely to last for at least six months, and which restricted everyday activities. For further details on the definition of disability or long-term health condition in the GSS, refer to the Glossary in General Social</p> |

| | |
|-------------------------|--|
| | Survey: Summary Results, Australia, 2010. |
| Timeliness | The indicator is enumerated by data from the GSS. The most recently available GSS data are from 2010. The 2010 GSS is the third in the series, with the first GSS conducted in 2002, and again in 2006. The ABS 2010 GSS collected information for the first time about how people aged 18 years and over felt about their life as a whole using a scale of Delighted, Pleased, Mostly Satisfied, Mixed, Mostly Dissatisfied, Unhappy and Terrible. It is planned to repeat the survey at regular intervals (currently four-yearly). Each cycle of the GSS collects comparable information to allow for analysis of changes over time. A cyclical component is also included to collect additional information on emerging or important topics of social concern. The cyclical component of the 2010 GSS included new topics relating to social inclusion, such as experience of homelessness and financial resilience and exclusion. |
| Accuracy | <p>Sample and response rate: The GSS was designed to provide reliable estimates at the national level and for each State and Territory. For the 2010 cycle, the standard sampling methodology was adapted in order to provide better estimates of people experiencing disadvantage. The initial sample for the survey consisted of approximately 19 576 private dwellings. This number was reduced to approximately 17 158 dwellings due to the loss of households which had no residents in scope for the survey and where dwellings proved to be vacant, under construction or derelict. Of the eligible dwellings, 87.6 per cent responded fully (or adequately) which yielded a total sample from the survey of 15 028 dwellings.</p> <p>Scope and coverage: Information on the scope and coverage for GSS is available in General Social Survey: User Guide, Australia, 2010 (cat. no. 4159.0.55.002). Only people who were usual residents of private dwellings in Australia were covered by the GSS. The GSS was conducted in both urban and rural areas in all states and territories, except for very remote parts of Australia. This exclusion is unlikely to impact on national estimates, and will only have a minor impact on any aggregate estimates that are produced for individual states and territories, except the NT where the excluded population accounts for over 20 per cent of persons.</p> <p>Reliability of Estimates: All sample surveys are subject to sampling and non-sampling error. For more information relating to the GSS, refer to the publication General Social Survey: Summary Results, Australia, 2010. The Report includes information on the Relative Standard Errors (RSEs) of estimates published from the GSS. RSEs indicate the reliability of an estimate. RSEs show the size of the error relative to the estimate. The higher the RSE, the less confidence there is that the estimate from the sample is close to the true value of the population mean. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has a RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.</p> |
| Coherence | The numerator and denominator are sourced from the same collection, with the numerator being a subset of the denominator population. |
| Accessibility | <p>A range of data drawn from the GSS are available on the ABS website. Additional data can be accessed from the ABS. Costs are associated with additional data and vary depending on the type of request.</p> <p>See General Social Survey: Summary Results, Australia, 2010 for an overview of results from the GSS. Results from the 2010 GSS is also available in the form of:</p> <ul style="list-style-type: none"> • a sub-set of tables in a spreadsheet format for each State and Territory (subject to standard error and confidentiality constraints and excluding time series tables) • a number of supplementary themed publications • a Confidentialised Unit Record File (CURF). <p>Other information from the survey is available on request, subject to confidentiality and sampling variability constraints.</p> |
| Interpretability | <p>Further technical details are available on the ABS website: www.abs.gov.au/AUSSTATS/abs@.nsf/Lookup/4159.0Explanatory%20Notes12010?OpenDocument.</p> <p>Information is available to aid interpretation of GSS data in the publication, General Social Survey: User Guide, Australia, 2010 on the ABS website. Detailed Explanatory Notes and a Glossary are also included in General Social Survey: Summary Results, Australia, 2010 to provide information on the terminology,</p> |

classifications and other technical aspects associated with these statistics.

Data Gaps/Issues Analysis

**Key data
gaps/issues**

The Steering Committee notes the following issues:

- data reported for this indicator are considered comparable (subject to caveats) across jurisdictions for 2010.
- GSS 2014 (currently in enumeration) asks respondents to rate their overall life satisfaction on a scale from 0-10 which will affect comparability with 2010 data.

Participation of people with disability and their primary carers in the community

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Sector-wide indicator |
| Indicator | Participation of people with disability and their primary carers in the community. |
| Measure (computation) | <p><u>Definition:</u></p> <p>Participation of people with disability and their primary carers in the community is defined by two measures:</p> <ol style="list-style-type: none">1. the proportion of people with disability who participated in social or community activities (away from home or at home) in the past three months2. the proportion of primary carers who participated in social or community activities away from home and without the recipient of care in the past three months. <p><u>Numerators:</u></p> <ol style="list-style-type: none">1. The number of people with disability who participated in social or community activities (away from home or at home) in the past three months2. The number of primary carers who participated in social or community activities away from home and without the recipient of care in the past three months. <p><u>Denominators:</u></p> <ol style="list-style-type: none">1. Total number of people with disability who participated in the survey2. Total number of primary carers who participated in the survey. <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Bureau of Statistics, <i>Survey of Disability, Ageing and Carers 2012</i>, cat. no. 4430.0, Canberra</p> <p><u>Denominators:</u></p> <p>Australian Bureau of Statistics, <i>Survey of Disability, Ageing and Carers 2012</i>, cat. no. 4430.0, Canberra</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>The SDAC is collected, processed, and published by the Australian Bureau of Statistics (ABS). The ABS operates within the framework of the <i>Census and Statistics Act 1905</i> and the <i>Australian Bureau of Statistics Act 1975</i>. These ensure the independence and impartiality of the ABS, and the confidentiality of respondents. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, which cover this collection, please see ABS Institutional Environment (www.abs.gov.au/Ausstats/abs@.nsf/Latestproducts/4402.0Quality%20Declaration0June%202011?opendocument&tabname=Notes&prodno=4402.0&issue=June%202011&num=&view=)</p> |
| Relevance | <p>Participation of people with disability and their primary carers in the community is an indicator of governments' objective for people with disability and their carers to participate as valued members of the community and have an enhanced quality of life. The SDAC contains the most comprehensive and accurate measure of disability produced by the ABS, using 125 questions to collect information on any conditions people may have, whether these conditions cause restrictions, and the nature and severity of any restrictions.</p> <p>A range of social and community participation data are collected in the SDAC from persons aged 5 years and over with disability. Persons who reported one or more instances of social or community participation in the specified timeframes are included in this indicator.</p> <p>Social and community activities participated in at home in the past three months</p> |

include:

- Visits from family or friends
- Telephone calls with family or friends
- Art or craftwork (for or with other people)
- Church or special community activities
- Voluntary work (including advocacy).

Social and community activities participated in away from home in the past three months include:

- Visited relatives or friends
- Went to restaurant or club
- Church activities
- Voluntary activities
- Performing Arts group activity
- Art or craft group activity
- Other special interest group activities
- Other activity not specified elsewhere.

The SDAC collects information about primary carers and non-primary carers of people with disabilities. A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more of the core activities of mobility, self-care or communication. The assistance has to be ongoing, or likely to be ongoing, for at least six months. In this survey, primary carers only include persons aged 15 years and over. Persons aged 15 to 17 years were only interviewed personally if parental permission was granted.

Social and community activities participated in, without the recipient of care, away from home in the past three months include:

- Visited relatives or friends
- Went to restaurant or club
- Church activities
- Voluntary activities
- Performing Arts group activity
- Art or craft group activity
- Other special interest group activities
- Other activity not specified elsewhere
- Participated in one or more of these activities.

Timeliness

The ABS conducts the SDAC every three years. The most recent SDAC was conducted from August 2012 to March 2013. Results from the 2012 survey were released in November 2013.

Accuracy

Sample and Response Rate: The SDAC is conducted in all states and territories, excluding very remote areas, and includes people in both private and non-private dwellings (including cared-accommodation establishments). Dwellings in each State and Territory were selected at random using a multi-stage area sample. After sample loss, the 2012 SDAC sample included approximately 27 400 private dwellings, 1 000 health establishments and 500 other non-private dwellings. The 2012 SDAC response rate for private dwellings was 89.8 per cent, and for establishments was 87.5 per cent. SDAC data are weighted to account for non-response.

Scope and coverage: Information on the scope and coverage for SDAC is available in the publication Explanatory Notes (paragraphs 7 and 8) for the Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The SDAC excludes very remote areas and discrete Aboriginal and Torres Strait Islander communities from its estimates. This exclusion has minimal impact on Australia level estimates if making inferences about the population at large. However, the NT has a significant proportion of the population in very remote areas and/or Indigenous Communities. As such it is important to interpret NT estimates in light of these areas being excluded from scope.

For the first time in 2012, SDAC has excluded a small number of private dwellings that are in Collection Districts where the population contribution of an Indigenous Community exceeds 75 per cent within the CD, but the private dwellings themselves are outside the community. This exclusion has minimal impact on Australia level estimates. However, it could have an impact on NT estimates, as around 10 per cent

of NT households that were previously included are now excluded. As such, estimates in the 2012 publication are not comparable to the 2009 survey. Estimates displayed as proportions are comparable with previous surveys. The SDAC also excludes people in gaols and correctional institutions.

Reliability of Estimates: All sample surveys are subject to sampling and non-sampling error. For more information relating to the Survey of Disability, Ageing and Carers, please refer to the publication Disability, Ageing and Carers, Australia: Summary of Findings, 2012. The Report includes information on the Relative Standard Errors (RSEs) of estimates published from the SDAC. RSEs indicate the reliability of an estimate. RSEs show the size of the error relative to the estimate. The higher the RSE, the less confidence there is that the estimate from the sample is close to the true value of the population mean. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has an RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.

Coherence

The numerator and denominator are sourced from the same collection, with the numerator being a subset of the denominator population.

Accessibility

A range of data drawn from the SDAC are available on the ABS. Additional data can be accessed from the ABS. Costs are associated with additional data and vary depending on the type of request.

See Disability, Ageing and Carers, Australia: Summary of Findings, 2012 for an overview of results from the SDAC. Results from the 2012 SDAC are also available in the form of:

- a sub-set of tables in a spreadsheet format for each State and Territory (subject to standard error and confidentiality constraints and excluding time series tables)
- a number of supplementary themed publications
- a Confidentialised Unit Record File (CURF)
- a TableBuilder product.

Other information from the survey is available on request – see further information in the Quality Declarations - Summary.

Interpretability

Confidentiality: To minimise the risk of identifying individuals in aggregate statistics, in the 2012 SDAC a technique is used to randomly adjust cell values. This technique is called perturbation. Perturbation involves small random adjustment of the statistics and is considered the most satisfactory technique for avoiding the release of identifiable statistics while maximising the range of information that can be released. These adjustments have a negligible impact on the underlying pattern of the statistics.

After perturbation, a given published cell value will be consistent across all tables. However, adding up cell values to derive a total will not necessarily give the same result as published totals. The introduction of perturbation in publications ensures that these statistics are consistent with statistics released via services such as Table Builder.

Information is available to aid interpretation of SDAC data in the publication, Disability, Ageing and Carers, Australia: Summary of Findings, 2012, on the ABS website. Detailed Explanatory Notes, a Technical note on Data Quality, and a Glossary are also included to provide information on the terminology, classifications and other technical aspects associated with these statistics.

Further technical details are available on the ABS website: www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4430.0Quality%20Declaration02012?opendocument&tabname=Notes&prodno=4430.0&issue=2012&num=&view=

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- data reported for this indicator are considered comparable (subject to caveats) across jurisdictions for 2012. Note, however, that:
 - in 2012, the identification process for possible primary carers changed to only require a carer to provide the most informal assistance for core activities overall, regardless of whether they were the secondary provider of this assistance. This change was found to increase the number of possible primary carers identified, although the overall number of primary carers identified was not affected
 - in 2009, primary carers who were not aged and did not have a disability

(i.e., those aged between 15 and 59 years of age, without disability) were not asked about their social and community participation without the person they cared for. The 2012 survey was developed to collect this information, allowing for a comparison of participation, without the recipient of care, across the whole primary carer population. Data for indicator 1 (people with disability) are considered comparable between 2009 and 2012.

- data reported for this indicator are complete for the current reporting period.

Jobless families

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Sector-wide indicator |
| Indicator | Jobless families with children as a proportion of all families |
| Measure (computation) | <p><u>Definition:</u></p> <p>Jobless families is defined as the number of families without jobs as a proportion of all families. The jobless rate is reported for three measures:</p> <ol style="list-style-type: none">1. jobless families, as a proportion of all families2. jobless families with dependants (including children aged under 15 years), as a proportion of all families with dependants (including children aged under 15 years)3. jobless families with children aged under 15 years, as a proportion of all families with children aged under 15 years. |

A jobless family is a family where no persons in the family aged 15 years or over are employed. This includes dependants. In a jobless family, all of the family members are either unemployed and/or not in the labour force. Families that have no employed members but do have members that are classified as undetermined in the scope of the labour force survey, such as members of the permanent Australian defence force, are not included in the number of jobless families.

Numerators:

1. Number of jobless families
2. Number of jobless families with dependants (including children aged under 15 years)
3. Number of jobless families with children aged under 15 years.

Denominators:

1. Total number of families
2. Total number of families with dependants (including children aged under 15 years)
3. Total number of families with children aged under 15 years.

Computation:

Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.

Data source/s

Numerators:

Australian Bureau of Statistics, *Labour Force, Australia: Labour Force Status and Other Characteristics of Families*, June 2012, cat. no. 6224.0.55.001.

Denominators:

Australian Bureau of Statistics, *Labour Force, Australia: Labour Force Status and Other Characteristics of Families*, June 2012, cat. no. 6224.0.55.001.

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | Data are sourced from the Australian Bureau of Statistics. For information on the institutional environment of the ABS, including the legislative obligations of the ABS, which cover this collection, please see ABS Institutional Environment (www.abs.gov.au/Ausstats/abs@.nsf/Latestproducts/4402.0Quality%20Declaration0June%202011?opendocument&tabname=Notes&prodno=4402.0&issue=June%2011&num=&view=) |
| Relevance | <p>Jobless families with children as a proportion of all families is an indicator of governments' objective to ensure positive family environments for Australia's children and young people.</p> <p>Family is defined as two or more people, one of whom is at least 15 years of age, who are related by blood, marriage (registered or de facto), adoption, step or fostering, and who are usually resident in the same household. The basis of a family is formed by identifying the presence of a couple relationship, lone parent-child relationship or other blood relationship. Some households will, therefore, contain</p> |

| | |
|-------------------------|--|
| | more than one family. |
| Timeliness | The <i>Labour Force Status and Other Characteristics of Families</i> is produced annually, based on <i>Labour Force, Australia</i> data. |
| Accuracy | <p><i>Labour Force Status and Other Characteristics of Families</i>, is produced from data collected in the June 2012 Labour Force Survey. It includes detailed family data not featured in the monthly <i>Labour Force, Australia</i> (cat. no. 6202.0) or <i>Labour Force Australia, Detailed — Electronic Delivery</i> publications.</p> <p>As these products are all based on data collected in the Labour Force Survey, the Explanatory Notes of publication <i>Labour Force, Australia</i> are relevant to all three publications. Additional information is provided in <i>Labour Statistics: Concepts, Sources and Methods</i>.</p> <p>The Labour Force Survey in 2012 was based on a sample of private dwellings (approximately 29 000 houses, flats etc) and non-private dwellings, such as hotels and motels. The sample covers about 0.33 per cent of the Australian civilian population aged 15 years or over. The Labour Force Survey is designed primarily to provide estimates of key labour force statistics for the whole of Australia and, secondarily, for each State and Territory.</p> <p>The Labour Force Survey is a sample survey. All sample surveys are subject to sampling and non-sampling error. The Report includes information on Relative Standard Errors (RSEs) of estimates. RSEs indicate the reliability of an estimate. RSEs show the size of the error relative to the estimate. The higher the RSE, the less confidence there is that the estimate from the sample is close to the true value of the population mean. Where an estimate or proportion has a RSE between 25 per cent and 50 per cent, the estimate or proportion is annotated to indicate that it is subject to a high RSE and should be used with caution. Where an estimate or proportion has an RSE above 50 per cent, the estimate or proportion is annotated to indicate that it is not reliable for general use, and the RSE is not published.</p> |
| Coherence | <p>The ABS has been conducting the Labour Force Survey each month since February 1978. While seeking to provide a high degree of consistency and comparability over time by minimising changes to the survey, sound survey practice requires careful and continuing maintenance and development to maintain the integrity of the data and the efficiency of the collection.</p> <p>The changes which have been made to the Labour Force Survey have included changes in sampling methods, estimation methods, concepts, data item definitions, classifications, and time series analysis techniques. In introducing these changes the ABS has generally revised previous estimates to ensure consistency and coherence with current estimates. For a full list of changes made to the Labour Force Survey see chapter 20 in <i>Labour Statistics: Concepts, Sources and Methods</i> (cat. no. 6102.0.55.001).</p> <p><i>Labour Force Status and Other Characteristics of Families</i> data are based on data collected via the Labour Force Survey and population data collected as part of Australian Demographic Statistics (cat. no. 3101.0). Since the most recently released ERP estimates lag the current time period for labour force survey estimates by nine months, the population benchmarks for the Labour Force Survey are created by projecting forward three quarters past the most recently released quarterly ERP estimates.</p> <p>Every five years, the ERP series are revised to incorporate additional information available from the latest Census. Labour Force Survey population benchmarks, and the estimates, are revised following this five-yearly revision in the ERP. The process of incorporating the revised population benchmarks is referred to as 'rebasings'. From the January 2014, labour force estimates have been compiled using population benchmarks based on the results of the 2011 Census. Revisions were made to historical Labour Force estimates from June 1991 to December 2013. However the estimates in this indicator have not been rebased and therefore do not reflect the latest revisions to labour force released in February 2014.</p> |
| Accessibility | A range of data drawn from the Labour Force Survey are available on the ABS website. Additional data can be accessed from the ABS. Costs are associated with additional data and vary depending on the type of request. |
| Interpretability | Further technical details are available on the ABS website: www.abs.gov.au/ausstats/abs@.nsf/exnote/6224.0.55.001/ |
| | <u>Data Gaps/Issues Analysis</u> |
| Key data | The Steering Committee notes the following issues: |

gaps/issues

- data are comparable (subject to caveats) for 2012
- 2013 data were not available for reporting this year.
- disaggregation of this indicator by State and Territory is a priority.

Improving child development

Data quality information for this indicator has been drafted by the Report's community service working groups.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Sector-wide indicator |
| Indicator | Improving child development |
| Measure (computation) | <p><u>Definition:</u></p> <p>Improving child development is defined as the proportion of children who are developmentally vulnerable on one or more Australian Early Development Census (AEDC).</p> <p><u>Numerators:</u></p> <p>The number of children who are developmentally vulnerable on one or more AEDC domains.</p> <p><u>Denominators:</u></p> <p>Total number of children who participated in the AEDC.</p> <p><u>Computation:</u></p> <p>Expressed as a percentage. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | Department of Education, <i>Australian Early Development Index</i> . |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | AEDC data are reported by teachers in the first year of full time school. It is a national collection of all children in the first year of primary school. |
| Relevance | <p>Improving child development is an indicator of governments' objective to ensure that Australia's children and young people are safe and well. Data are available on the basis of specific AEDC local communities, as well as state level.</p> <p>The AEDC is a population measure of young children's development as they enter school. A population measure places the focus on all children in the community and therefore the AEDC reports on early childhood development across the whole community. Every three years, teachers complete a checklist for children in their first year of full-time school. The checklist measures five key areas, or domains, of early childhood development.</p> |
| Timeliness | Data are collected every three years. The most recent data were collected between May and July 2012. |
| Accuracy | <p>Teachers completed a checklist for each child in the first year of school. This was a census, which assessed almost 290 000 children.</p> <p>Some AEDC items, particularly items requiring teachers to know about a child's experiences outside school (such as a child's fluency in his or her second language and a child's early childcare and education experiences) recorded high 'don't know' rates among teachers.</p> |
| Coherence | The numerator and denominator are from the same collection. |
| Accessibility | <p>Summary data are available on the AEDC website: www.aedc.gov.au/data</p> <p>Additional, unpublished data can be requested from the AEDC Data Manager, as long as requests meet the requirements of the AEDC data protocol. This is on a fee for service basis. The AEDC data protocol details the requirements for public release of data.</p> |
| Interpretability | User guides and explanatory material are available on the AEDC website: www.aedc.gov.au/ |

Data Gaps/Issues Analysis

| | |
|-----------------------------|--|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none">• the five AEDC domains include: language and cognitive skills; physical health and wellbeing; social competence; emotional maturity and communication skills and general knowledge. These domains are all interrelated aspects of child development• data reported for this indicator are comparable (subject to caveats) across |
|-----------------------------|--|

jurisdictions and over time

- data reported for this indicator are complete for the current reporting period.

13 Aged care services

CONTENTS

| | |
|---|-------|
| 13.1 Profile of aged care services | 13.2 |
| 13.2 Framework of performance indicators | 13.20 |
| 13.3 Key performance indicator results | 13.23 |
| 13.4 Future directions in performance reporting | 13.71 |
| 13.5 Jurisdictions' comments | 13.73 |
| 13.6 Definitions of key terms | 13.83 |
| 13.7 List of attachment tables | 13.86 |
| 13.8 References | 13.89 |

Attachment tables

Attachment tables are identified in references throughout this chapter by a '13A' prefix (for example, table 13A.1). A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the Review website at www.pc.gov.au/gsp.

The aged care system comprises all services specifically designed to meet the care and support needs of older people living in Australia. This chapter focuses on government funded residential and community care for older people and services designed for the carers of older people. Some government expenditure on aged care is not reported, but continual improvements are being made to the coverage and quality of the data.

Improvements to the reporting of aged care services in this edition include:

- addition of a measure on 'access to Transition Care services by Indigenous status' for the 'use by different groups' indicator
- improved reporting on the 'compliance with service standards for community care' indicator to revise the measure to report on 'the proportion of reviews of community aged care services that met all expected outcomes under each of the Home Care Common Standards'
- development of the 'social participation in the community' indicator to report three measures, 'the estimated proportions of older people (aged 65 years or over) who:

-
- participated in social or community activities away from home in the last three months’
 - ‘had face-to-face contact with family or friends not living in the same household in the last week, month or three months’
 - ‘did not leave home or did not leave home as often as they would like’
 - improving, simplifying and streamlining the attachment table set
 - data quality information (DQI) available for the first time for a further two measures ‘use by different groups — access by veterans’ and ‘hospital patient days used by aged care type patients – proportion of completed hospital separations for which the length of stay was 35 days or longer’.

In addition to these improvements, reporting on aged care services this year has been revised to reflect program changes for community and flexible aged care. From 1 August 2013, the new Home Care Packages Program replaced the former community and flexible packaged care programs — Community Aged Care Packages (CACPs), Extended Aged Care at Home (EACH) packages, and EACH Dementia (EACH-D) packages.

Older Australians are also users of other government services covered in this Report, including primary and community health services (chapter 10), public hospitals (chapter 11), specialised mental health services (chapter 12), disability services (chapter 14), and housing assistance (chapter 17). Understanding the relationship between the health system and the aged care system is of particular importance (sector overview E and chapters 10–12), given that people aged 65 years or over account for around 50 per cent of all patient days in public hospitals (AIHW 2013). Interactions between health and aged care services are critical for the performance of both systems; for example, the number of operational residential aged care places can affect demand for public hospital beds, and throughput of older patients in acute and sub-acute care has a substantial effect on the demand for residential and community aged care.

13.1 Profile of aged care services

Service overview

Services for older people are provided on the basis of frailty or disability. Government funded aged care services covered in this chapter include:

- information and assessment services that seek to ensure that older people who may need aged care, and their carers, know about and can access the appropriate support services to meet these needs — services include those provided under the Commonwealth Respite and Carelink Centres and the Aged Care Assessment Program (ACAP)

-
- residential care services, which provide supported accommodation for older people who are unable to continue living independently in their own homes, services include permanent and respite high and low level care
 - community care services, which provide home based care and assistance to help older people remain, or return to, living independently in the community as long as possible — services include those provided under the Home Care Packages Program, Home and Community Care (HACC), and the Department of Veterans' Affairs (DVA) Veterans' Home Care (VHC) and Community Nursing programs
 - community care respite services which provide support to carers to allow them a break from their usual care arrangements, including HACC respite and centre based day care services and services provided under the National Respite for Carers Program (NRCP)
 - services provided in mixed delivery settings, which are designed to provide flexible care or specific support:
 - flexible care services address the needs of care recipients in ways other than that provided through mainstream residential and community care — services are provided under the Transition Care Program (TCP), Multi-Purpose Service (MPS) Program, Aged Care Innovative Pool and National Aboriginal and Torres Strait Islander Flexible Aged Care Program
 - specific support services address particular needs such as those identified under the Community Visitors Scheme and the National Aged Care Advocacy Program.

The formal publicly funded services covered represent only a small proportion of total assistance provided to older people. Extended family and partners are the largest source of emotional, practical and financial support for older people. Around 85 per cent of older people living in the community in 2012 who required help with self-care, mobility or communication received assistance from the informal care network of family, friends and neighbours (Australian Bureau of Statistics [ABS] unpublished, *Survey of Disability, Ageing and Carers 2012*, Cat. no. 4430.0). Many people receive assistance from both formal aged care services and informal sources. Older people also purchase support services in the private market, and these services are not covered in this chapter.

Roles and responsibilities

The *Aged Care Act 1997*, together with the accompanying Aged Care Principles, are the main regulatory instruments establishing the aged care framework, although some services are provided outside of the Act. Key provisions covered include service planning, user rights, eligibility for care, funding, quality assurance and accountability (Productivity Commission 2010). During 2013, a package of bills amending the *Aged Care Act 1997* was passed into law to implement some major reforms to the aged care system (see box 13.21). The 2011 *National Health Reform Agreement* also defines Australian, State and Territory governments' roles and responsibilities that apply across the aged care

and disability services systems (for more details see the Community services sector overview F).

The funding, regulation and policy oversight of aged care services are predominantly the role of the Australian Government, although all three levels of government are involved. Services are largely delivered by non-government organisations, although State, Territory and local governments deliver some aged care services.

Information and assessment

The ACAP is the main program in this category reported on in this chapter. Aged Care Assessment Teams (ACATs)¹ assess and approve clients as eligible for residential and home care services. An ACAT approval is mandatory for admission to Australian Government subsidised residential care (including respite), to receive Home Care or enter the TCP. People can also be referred by an ACAT to other services, such as those funded by the HACC program (although a referral under the ACAP is not mandatory for receipt of these other services).

The Australian Government has oversight of policy and guidelines, and engages State and Territory governments to operate ACATs who undertake the assessments. State and Territory governments are responsible for the day to day operation and administration of ACATs. The scope and practice of ACATs differ across and within jurisdictions, partly reflecting the service setting and location (for example, whether the team is attached to a hospital or a community service) and this has an effect on program outputs.

Residential care services

The Australian Government is responsible for most of the policy oversight and regulation of Australian Government subsidised residential aged care services, including:

- control over the number of subsidised residential care places through the provision ratio
- requirements that regulate the nature of the subsidised residential care places offered; for example services are expected to meet regional targets for places for concessional, assisted and supported residents and the number of extra service places are restricted
- accreditation of the service, certification of facilities and the ongoing monitoring of quality of care through the complaints scheme.

State, Territory and local governments may also have a regulatory role in areas such as work health and safety, workers compensation requirements, building standards, and fire prevention and firefighting measures. Industrial relations arrangements and outcomes vary between and within jurisdictions.

¹ In Victoria, an ACAT is referred to as an Aged Care Assessment Service (ACAS). Where this Report refers to an ACAT, it intends the Victorian term ACAS to be read as interchangeable.

Religious and private for-profit organisations are the main providers of residential care. At June 2014, they accounted for 26.4 per cent and 37.4 per cent respectively of all Australian Government subsidised residential aged care places. Community-based organisations and charitable organisations accounted for a further 13.6 per cent and 17.4 per cent respectively. State and local governments provided the remaining 5.1 per cent (figure 13.1).

Figure 13.1 Ownership of operational residential places, June 2014^{a, b, c}

^a Community-based residential services provide a service for an identifiable community, based on locality or ethnicity and not for financial gain. ^b Charitable residential services provide a service for the general community or an appreciable section of the public, not for financial gain. ^c Data exclude the flexible places provided under the Multi-Purpose Service (MPS) Program, Aged Care Innovative Pool and the National Aboriginal and Torres Strait Islander Flexible Aged Care Program.

Source: Department of Social Services (DSS) (unpublished); table 13A.15.

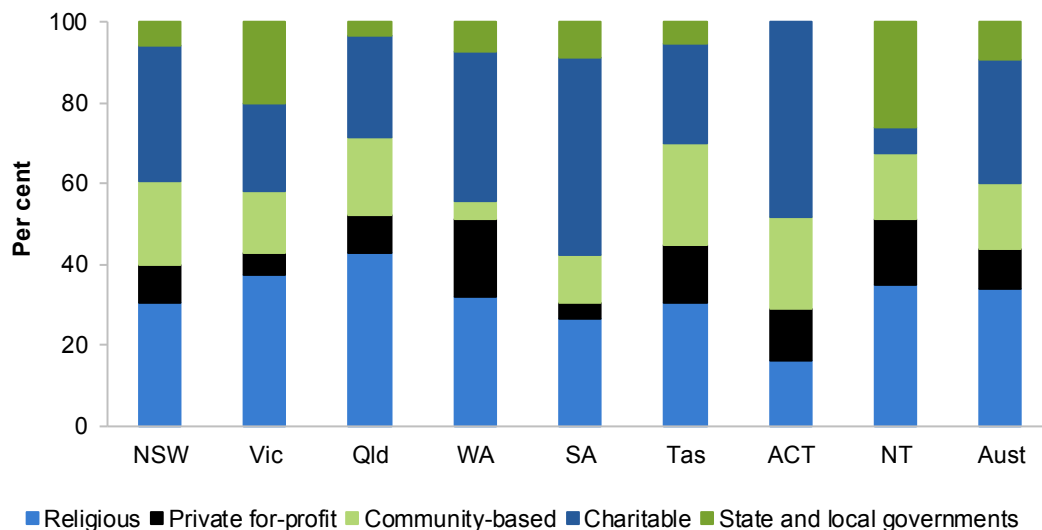

Community care services

The main community care programs reported in this chapter are the HACC, Home Care, DVA VHC and Veterans' Community Nursing.

The Australian Government has full financial and operational responsibility for HACC services for older people, except in Victoria and WA where it is a joint Australian Government and State governments' program administered under the *Home and Community Care Review Agreement 2007*. HACC service providers vary from small community-based groups to large charitable and public sector organisations.

The Australian Government is responsible for the policy oversight and regulation of the Home Care Packages Program. Religious and charitable organisations are the main providers of Australian Government subsidised Home Care places (figure 13.2).

Figure 13.2 **Operational Home Care places, by provider type, June 2014^{a, b, c}**

^a Community based organisations provide a service for an identifiable community based on location or ethnicity, not for financial gain. ^b Charitable organisations provide a service for the general community or an appreciable section of the public, not for financial gain. ^c Data exclude the flexible home care places in the following programs: MPS, Aged Care Innovative Pool and the National Aboriginal and Torres Strait Islander Flexible Aged Care Program.

Source: DSS (unpublished).

The Australian Government is also primarily responsible for policy oversight and provision of the VHC and Community Nursing programs for veterans and war widows/widowers. These services are delivered by organisations contracted by DVA.

Services provided in mixed delivery setting

Two categories of services are defined in this Report as being provided in mixed delivery settings: flexible care and specific support services.

Flexible care services

Flexible care services comprise those provided under the *Aged Care Act 1997* (TCP, MPS and innovative care places) and the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, which is administered outside of the *Aged Care Act 1997*.

- The TCP was established to assist older people in regaining physical and psychosocial functioning following an episode of inpatient care, to maximise independence and to help avoid premature entry to residential aged care. Services are delivered to patients in their own homes or in dedicated, home like residential facilities for a period of up to 12 weeks. To be eligible, patients must have been assessed by an ACAT as having the

potential to benefit from Transition Care, be eligible for residential aged care, and they must begin to receive Transition Care directly on discharge from hospital. The TCP is jointly funded by the Australian, State and Territory governments. Its implementation is overseen by the Transition Care Working Group, which includes representatives from all State and Territory governments and the Australian Government. State and Territory governments, as approved providers, develop their own service delivery models within the framework of the Program.

- The MPS Program is a joint initiative between the Australian Government and State and Territory governments, which aims to deliver flexible and integrated health and aged care services to small rural and remote communities. Some health, aged and community care services may not be viable in a small community if provided separately. Australian Government aged care funding is combined with State and Territory governments' health services funding. Services are primarily located in small rural hospital settings, where the MPS providers are State governments (DoHA 2012).
- The Aged Care Innovative Pool supports the development and testing of flexible models of service delivery in areas where mainstream aged care services might not appropriately meet the needs of a location or target group. At the beginning of each financial year, the Australian Government's Minister for Ageing determines the flexible care subsidy rates for the Innovative Pool pilots.
- Under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program the Australian Government funds organisations to provide quality, flexible, culturally appropriate aged care to older Aboriginal and Torres Strait Islander people close to home and community. Flexible Aged Care services can deliver a mix of residential and community aged care services to meet the needs of the community. Services funded under this Program operate outside the regulatory framework of the *Aged Care Act 1997*.

Specific support services

A range of programs designed to meet the specific support needs of older people across care settings are funded and operate outside the regulatory framework of the *Aged Care Act 1997*. The Day Therapy Centre Program, for example, provides a wide range of therapy services to older people living in the community and to residents of Australian Government funded residential aged care facilities. The Australian Government is responsible for the funding and oversight of most of these programs.

Funding

Recurrent expenditure on aged care services reported in this chapter was \$14.8 billion in 2013-14 (table 13.1). Table 13.1 does not include all Australian, State and Territory government expenditure on caring for older people, for example, the experimental estimates of expenditure on non-HACC post-acute packages of care (table 13A.10) and

funding provided for older people in specialist disability services, and Australian, State or Territory government capital expenditure are excluded (table 13A.11). Data on Australian, State and Territory governments' expenditure per person in the aged care target population by program, jurisdiction and over time are in table 13A.5.

Table 13.1 Recurrent expenditure on aged care services, 2013-14 (\$ million)

| Residential care services ^b | 3 342.8 | 2 637.8 | 1 821.4 | 859.1 | 941.5 | 253.5 | 93.7 | 26.5 | 9 976.3 |
| Community care services ^c | 1 063.7 | 1 028.9 | 744.8 | 480.2 | 288.2 | 98.8 | 60.3 | 36.4 | 3 801.2 |
| Services provided in mixed delivery settings ^d | 291.4 | 191.8 | 139.0 | 73.8 | 97.9 | 19.6 | 12.2 | 27.4 | 853.0 |
| Total | 4 739.8 | 3 888.3 | 2 727.3 | 1 425.8 | 1 338.7 | 375.4 | 167.7 | 91.9 | 14 754.9 |

^a Assessment and information services include only Australian Government expenditure on the Aged Care Assessment Program (ACAP), additional Council of Australian Governments (COAG) funding for Aged Care Assessment Teams (ACATs), Commonwealth Respite and Carelink Centres and Carers Information and Support. ^b Residential care services include Department of Social Services (DSS) and Department of Veterans' Affairs (DVA) (including payroll tax supplement) and State and Territory governments' expenditure and funding. ^c Community care services include Home and Community Care (HACC), Home Care, National Respite for Carers Program (NRCP), Veterans' Home Care (VHC), DVA Community Nursing and Assistance with Care and Housing for the Aged. Expenditure on HACC in Victoria and WA is an estimate of that spent on older people under the HACC Review Agreement. ^d Services provided in mixed delivery settings include MPS, Transition Care Program (TCP), National Aboriginal and Torres Strait Islander Flexible Aged Care Program and other flexible care and services directed at Workforce and Quality, and Ageing and Service Improvement.

Source: DSS (unpublished); Department of Veterans' Affairs (DVA) (unpublished); State and Territory governments (unpublished); table 13A.4.

Assessment and information services

In 2013-14, the Australian Government provided funding of \$99.7 million nationally for the ACAP (table 13A.6). Australian Government ACAP expenditure per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years was \$28 nationally during 2013-14 (table 13A.6). State and Territory governments also contribute funding for the ACAP, but this expenditure is not available for reporting. Aged care assessment program activities and expenditure for 2012-13 and costs per assessment for 2004-05 to 2012-13 are reported in table 13A.57. Expenditure on other access and information services was \$24.7 million in 2013-14 (table 13A.6).

Residential care services

The Australian Government provides most of the recurrent funding for residential aged care services. State and Territory governments provide funding for residential aged care for younger people and places provided by some public sector organisations. Residents provide most of the remaining service revenue, with some income derived from charitable sources and donations.

Total recurrent government expenditure on residential aged care was \$10.0 billion in 2013-14 (table 13A.5). Australian Government expenditure (including payroll tax supplement) on residential aged care was \$9.8 billion in 2013-14, comprising DSS expenditure of \$8.5 billion and DVA expenditure of \$1.3 billion (table 13A.7). State and Territory governments' expenditure was \$252.9 million from four categories of residential care expenditure/funding: adjusted subsidy reduction supplement (\$18.8 million), enterprise bargaining agreement supplement (\$147.0 million), rural small nursing home supplement (\$18.9 million) and funding of younger people in residential aged care (excluding for Victoria and WA) (\$68.2 million) (tables 13A.7 and 13A.10).

Australian Government basic subsidy

The Australian Government annual basic subsidy for each occupied place varies according to clients' levels of dependency. Each permanent resident has a dependency level for each of three domains (activities of daily living, behaviours and complex health care). At 30 June 2014, the average annual subsidy per residential place, including the Conditional Adjustment Payment (CAP), was \$51 078 nationally (table 13A.16). The amount of CAP payable in respect of a resident is calculated as a percentage of the basic subsidy amount (8.75 per cent since 2008-09). Detailed data on the dependency levels of permanent residents categorised by the proportion of high and low care places provided are shown in table 13A.16. A veteran with a service related mental health condition can also receive a Veterans' supplement for additional care needs.

Capital expenditure

Capital expenditure on aged care services in 2013-14 is summarised in table 13A.11. The Australian Government provided \$26.1 million in 2013-14 for the Rural and remote building fund. State governments also provided \$6.0 million in 2013-14 for capital expenditure on residential aged care services (table 13A.11). These capital funds are in addition to the total recurrent expenditure reported in table 13.1.

Community care services

Changing government policies over the past decade — shifting the balance of care away from the more intensive types of residential care towards community-based care — have

meant that the HACC, Home Care and DVA VHC and Community Nursing programs have become increasingly important components of the aged care system.

Total government expenditure on community care services for older people in 2013-14 was \$3.8 billion (table 13A.4). Expenditure on HACC, Home Care, NRCP and DVA community nursing comprised most of this expenditure (table 13.2).

Table 13.2 Governments' expenditure on selected community aged care programs, 2013-14 (\$million)

| | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |

| VHC | 28.7 | 19.7 | 18.5 | 8.0 | 7.0 | 3.8 | 1.6 | 0.1 | 87.4 |

HACC = Home and Community Care. NRCP = National Respite for Carers Program. VHC = Veterans' Home Care ^a HACC aged care expenditure is the estimated funding from the Australian Government on all people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50-64 years. The exceptions are Victoria and WA where the expenditure is for people of all ages and includes a component of funding (\$357.2 million in total) from those two jurisdictions (\$252.5 million spent by the Victorian Government in Victoria and \$104.7 million spent by the WA Government in WA). ^b Includes total program expenditure, including expenditure on services provided for younger people with disability.

Source: DSS (unpublished); DVA unpublished; tables 13A.4 and 13A.8.

Services provided in mixed delivery settings

In 2013-14, government expenditure on flexible care and specific support provided in mixed delivery settings was \$853.0 million. Three types of flexible care are provided under the *Aged Care Act 1997* (TCP, MPS and innovative care places). The Australian, State and Territory governments jointly fund the TCP and MPS. In 2013-14, the Australian Government spent \$232.3 million and the State and Territory governments spent \$102.9 million on the TCP (table 13A.9) and the Australian Government spent \$133.0 million on the MPS (State and Territory governments' expenditure on MPS is not available) (table 13A.9). Australian Government expenditure on a range of other services provided in mixed delivery settings was \$384.8 million in 2013-14 (table 13A.9).

Size and scope of sector

Aged care target population

To align with the funding arrangements as specified under the *National Health Reform Agreement*, this Report defines the aged care target population as all people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. This aged care target population differs in scope to the Australian Government’s aged care ‘planning population’ (people aged 70 years or over) used to allocate residential care places and community care packages under the *Aged Care Act 1997*, and which for reporting purposes is combined with the population of Aboriginal and Torres Strait Islander Australians aged 50–69 years.

Size and growth of the older population

The Australian population is ageing, as indicated by an increase in the proportion of older people (aged 65 years or over) in the total population and this trend is expected to continue during this century (figure 13.3). The proportion of older people in the population at June 2014 was 14.7 per cent nationally (figure 13.4). Higher life expectancy for females resulted in all jurisdictions having a higher proportion of older females than older males in the total population (except the NT) (table 13A.1). A disaggregation by remoteness categorisation is provided in table 13A.1.

The demand for aged care services is driven by the size and health of the older population. Females comprise a larger proportion of the older population and are more likely to utilise aged care services than males (partly because they are more likely to live alone). Based on the current age- and sex-specific utilisation rates for residential and community care combined, and the projected growth in the size of the aged care planning population, it is estimated that the demand for aged care services for people aged 70 years or over will more than treble by 2056 (DSS unpublished estimate, based on ABS population projections series B in Cat. no. 3222.0).

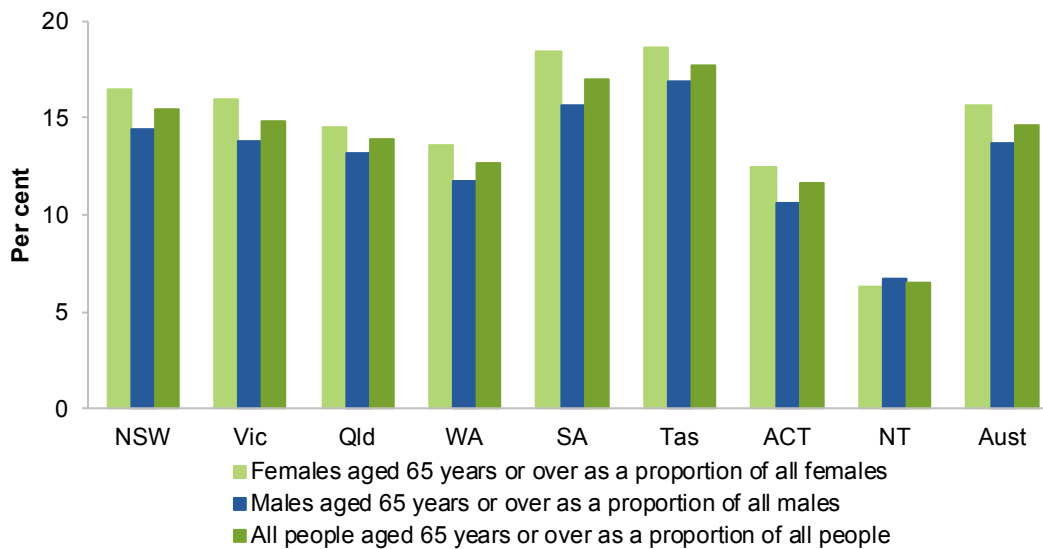

Figure 13.3 **People aged 65 years or over as a proportion of the total population^a**

^a Population projections are derived from the ABS 'B' series population projections.

Source: ABS (2014) *Australian Historical Population Statistics, 2014*, Cat. no. 3105.0.65.001, Canberra; ABS (2013) *Population Projections, Australia, 2012 (base) to 2101*, Cat. no. 3222.0, Canberra.

Figure 13.4 **Estimated proportion of population aged 65 years or over, by sex, June 2014**

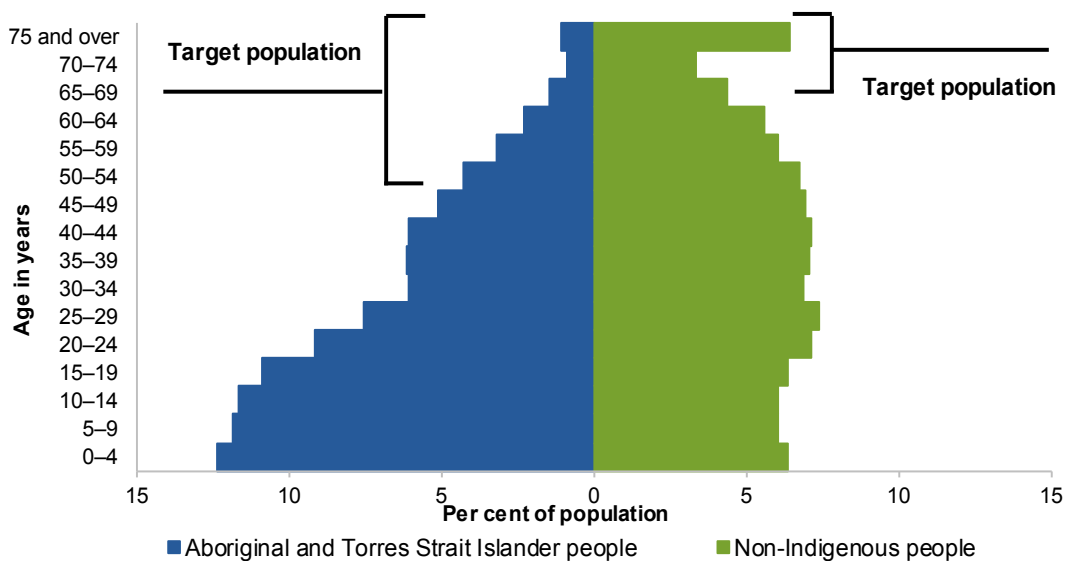

Source: Population projections prepared by the ABS based on the 2011 Census according to assumptions agreed to by DSS (unpublished); table 13A.1.

Characteristics of older Aboriginal and Torres Strait Islander Australians

ABS estimates that about 102 612 Aboriginal and Torres Strait Islander Australians were aged 50 years or over in Australia at 30 June 2014 (table 13A.2). Although the Aboriginal and Torres Strait Islander population is also ageing, there are marked differences in the age profile of Aboriginal and Torres Strait Islander Australians compared with non-Indigenous Australians (figure 13.5). Estimates show life expectancy at birth in the Aboriginal and Torres Strait Islander population is around 10.6 years less for males and 9.5 years less for females when compared with the total Australian population (ABS 2013). Aboriginal and Torres Strait Islander Australians aged 50 years or over are used in this Report as a proxy for the likelihood of requiring aged care services, compared to 65 years or over for the general population.

Figure 13.5 **Age profile and aged care target population differences between Aboriginal and Torres Strait Islander and other Australians, June 2011**

Source: ABS (2013) *Australian Demographic Statistics, March 2013*, Cat. no. 3101.0, Canberra; ABS (2013) *Estimates of Aboriginal and Torres Strait Islander Australians, June 2011*, Cat. no. 3238.0.55.001.

Aged care services

Aged Care Assessments

Aged care assessments are designed to assess the care needs of older people and assist them to gain access to the most appropriate type of care. There were 95 ACATs (94 Australian Government funded) at 30 June 2014 (DSS unpublished). Nationally, there

were 52.3 assessments per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years in 2012-13. The rate for Aboriginal and Torres Strait Islander Australians was 23.1 per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over (figure 13.6).

Figure 13.6 **Aged Care Assessment Team assessment rates, 2012-13^{a, b, c, d, e, f}**

^a Includes ACAT assessments for all services. ^b All Australians includes all assessments of people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. ^c Aboriginal and Torres Strait Islander includes all assessments of Aboriginal and Torres Strait Islander Australians aged 50 years or over per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over. ^d The number of Aboriginal and Torres Strait Islander assessments is based on self-identification of Indigenous status. ^e Data were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective date of 31 August 2014. Future extracts of these data may change. ^f See table 13A.40 for further explanation of these data.

Source: Aged Care Assessment Program (ACAP) National Data Repository (unpublished); table 13A.40.

Assessments that result in ACAT approvals of eligibility for various types of care can be reported by age specific rates, for a series of age groups in the population, for residential care and for Home Care (see table 13A.41). These data reflect the numbers of approvals, which are a subset of assessments, as some assessments will not result in an approval for a particular level of care.

Residential care services

Residential care services provide permanent high level and low level care and respite high/low level care:

- high care combines services such as nursing care, continence aids, basic medical and pharmaceutical supplies and therapy services with the types of services provided in low care such as accommodation, support services (cleaning, laundry and meals) and personal care services
- low care focuses on accommodation, support services (cleaning, laundry and meals) and personal care services
- respite provides short term residential high/low care on a planned or emergency basis (DoHA 2012).

At June 2014, there were 2688 residential aged care services (table 13A.17). The size and distribution across remoteness areas of residential aged care services — which can influence the costs of service delivery — vary across jurisdictions. Nationally, there were 189 283 mainstream operational places (excluding flexible care places) in residential care services at June 2014 (table 13A.17). Box 13.1 contains information on how the Aged Care Funding Instrument (ACFI) is used to appraise a resident's needs as high or low care.

Box 13.1 The Aged Care Funding Instrument (ACFI) and the characteristics of residents

Aged Care Assessment Team (ACAT) approvals for residential care may limit the approval for some residents to low care. Following an assessment, approved providers of aged care homes appraise the level of a resident's care needs using the ACFI. The ACFI was introduced on 20 March 2008 and replaced the Resident Classification Scale (RCS).

The ACFI measures each resident's need for care (high, medium, low or nil) in each of three domains: Activities of Daily Living, Behaviours and Complex Health Care. Residents are classified as high or low care based on the resident's level of approval for care (determined by an ACAT) and on the approved provider's appraisal of the resident's care needs against the ACFI, in the following manner:

- Residents who have not yet received an ACFI appraisal are classified using their ACAT approval.
- Residents whose ACAT approval is not limited to low care, are classified as high care if they are appraised under the ACFI as:
 - High in Activities of Daily Living, or
 - High in Complex Health Care, or
 - High in Behaviour, together with low or medium in at least one of the Activities of Daily Living or Complex Health Care domains; or
 - Medium in at least two of the three domains.

(Continued next page)

Box 13.1 (continued)

- All other residents appraised under the ACFI are classified as low care residents.
- In addition, residents whose ACAT approval is limited to low care, but whose first ACFI appraisal rates them in a high care range are classified as 'interim low' until the ACAT low care restriction is removed, or the ACFI high status is confirmed by a subsequent assessment or review.

Residents' care needs may change over time. Under 'ageing in place', a low care resident who becomes high care at a later date is able to remain within the same service.

The combined number of all operational high care and low care residential places per 1000 people in the aged care planning population (aged 70 years or over) at June 2014 was 82.6 (41.6 high care and 41.1 low care) on a national basis (table 13.3). Nationally, the proportion of low care places relative to high care places has remained relatively constant between 2007 and 2014 (table 13A.24).

Table 13.3 Operational high care and low care residential places, 30 June 2014^{a, b, c, d, e}

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|-------------|
| Number of places per 1000 people aged 70 years or over | | | | | | | | | | |
| High care places | no. | 43.7 | 40.9 | 38.2 | 36.0 | 49.5 | 43.3 | 29.8 | 47.2 | 41.6 |
| Low care places | no. | 40.7 | 43.2 | 40.6 | 38.4 | 42.0 | 36.7 | 40.8 | 29.2 | 41.1 |
| Total places | no. | 84.5 | 84.1 | 78.8 | 74.4 | 91.5 | 80.0 | 70.6 | 76.4 | 82.6 |
| Proportion of places | | | | | | | | | | |
| High care places | % | 51.7 | 48.6 | 48.5 | 48.4 | 54.1 | 54.1 | 42.2 | 61.8 | 50.3 |
| Low care places | % | 48.2 | 51.4 | 51.5 | 51.6 | 45.9 | 45.9 | 57.8 | 38.2 | 49.7 |

^a Excludes places that have been 'approved' but are not yet operational. Includes multi-purpose and flexible services attributed as high care and low care places. ^b The target ratio of 125 aged care places comprises 80 residential places and 45 Home Care Packages. This target is to be achieved by 2021-22. In recognition of poorer health among Aboriginal and Torres Strait Islander communities, planning in some cases also takes account of the Aboriginal and Torres Strait Islander population aged 50-69 years. This means that the provision ratio based on the population aged 70 years or over may appear high in areas with a higher proportion of the population who are Aboriginal and Torres Strait Islander people (such as in the NT). ^c Includes residential places categorised as high care or low care. ^d See table 13A.19 for further information regarding the calculation of provision ratios, which may vary from corresponding data published elsewhere. ^e Data in this table may not add due to rounding.

Source: DSS (unpublished); table 13A.19.

Age-specific usage rates for permanent residential aged care, by jurisdiction and remoteness, at 30 June 2014 are included in tables 13A.26 and 13A.31, respectively. National, Aboriginal and Torres Strait Islander age-specific usage rates for all these services by remoteness category are in table 13A.32.

During 2013-14, the number of older clients (aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50-64 years) who received either high or low care

in a residential aged care facility was 224 222 nationally for permanent care and 46 851 nationally for respite care (table 13A.3). These figures reflect the number of older individuals who utilised these services during the year, for any length of time. Data on the number of younger people aged under 65 years who used permanent residential care during 2013-14 are in table 13A.30.

Community care services

The distinctions between the HACC and Home Care are summarised in table 13.4. DVA VHC and Community Nursing Program services are described below.

Table 13.4 Distinctions between HACC and Home Care, 2013-14

| | <i>HACC</i> | <i>Home Care levels 1–2</i> | <i>Home Care levels 3–4</i> |
|-----------------------------------|--|--|--|
| Type of services ^a | Maintenance and support services for people in the community whose independence is at risk | Package of basic to low level care tailored to client needs | Package of intermediate to high level care tailored to client needs |
| Relationship to residential care | Aims to prevent premature or inappropriate admission | Level 2 substitutes for a low care residential place | Level 4 substitutes for a high care residential place |
| Eligibility | ACAT approval not required | ACAT approval mandatory | ACAT approval mandatory |
| Funding | Funded by the Australian Government and client contributions, except in Victoria and WA where funding is also provided by those jurisdictions. | Funded primarily by the Australian Government and client contributions — State and Territory governments fund younger people using these services (except in Victoria and WA). | Funded primarily by the Australian Government and client contributions — State and Territory governments fund younger people using these services (except in Victoria and WA). |
| Target client groups ^b | Available to frail older people with functional limitations as a result of profound, severe or moderate disability and their carers. Not age specific in Victoria and WA | Targets older people with care needs similar to low level residential care | Targets older people with care needs similar to high level residential care |
| Size of program | \$2.1 billion funding for older clients (includes funding for younger people in Victoria and WA) At least 775 959 older clients ^c | \$641.4 million total funding 52 265 operational places ^d | \$629.5 million total funding 14 689 operational places |

^a HACC services such as community nursing, can be supplied to someone receiving Home Care levels 1-2 when additional nursing services are required to support the consumer to remain living at home. ^b Most HACC clients with lower support needs would not be assessed as eligible for residential care; for example, an individual may receive only an hour of home support per fortnight. At the higher end, some people have needs that would exceed the level available under a Home Care place. ^c The proportion of HACC funded agencies that submitted Minimum Data Set data for 2013-14 differed across jurisdictions and ranged from 75 per cent to 100 per cent. Consequently, the total number of clients will be higher than those reported. ^d The number of operational places includes Home Care levels 1–2 and flexible community places. See notes to table 13A.14.

Source: DSS (unpublished); tables 13A.3, 13A.4 and 13A.14.

Services provided under the HACC program are basic maintenance and support services, including allied health care, assessment, case management and client care coordination, centre based day care, counselling, support, information and advocacy, domestic assistance, home maintenance, nursing, personal care and respite care, social support, meals, home modification, linen service, goods and equipment and transport. During 2013-14, the HACC program delivered approximately 9895 hours per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (table 13A.33).

Home Care levels 1–2 provides community-based basic to low level care to older people who are assessed by ACATs as having these care needs, but who are able to live at home with assistance. There were 21.6 places of Home Care levels 1–2 per 1000 people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years in June 2014 (table 13A.20). Home Care levels 3–4 provides community-based intermediate to high level care to older people who are assessed by ACATs as having these care needs, but who have expressed a preference to live at home and are able to do so with assistance. There were 6.1 places of Home Care levels 3–4 per 1000 people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years in June 2014 (table 13A.20). Older people who access a package of Home Care levels 1–4 can also receive supplements for additional care needs including a Dementia and Cognition Supplement, Veterans' Supplement for veterans with service-related mental health conditions, an Oxygen Supplement and an Enteral Feeding Supplement.

Age-specific usage rates for Home Care, by jurisdiction and remoteness, at 30 June 2014 are included in tables 13A.26 and 13A.31 respectively. National, Aboriginal and Torres Strait Islander age-specific usage rates for permanent residential and Home Care services by remoteness category are in table 13A.32. Presentation of age-specific usage rates raises particular data issues. In particular, if the numbers of people within a particular range for a given service are small, this can lead to apparently large differences in rates across categories.

Data on the number of older clients (aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) who received HACC and Home Care in 2013-14 are included in table 13.5. These data reflect the number of individuals who utilised these services during the year, for any length of time, as distinct from the number of places available. Data on the number of younger people aged under 65 years who used Home Care during 2013-14 are in table 13A.30.

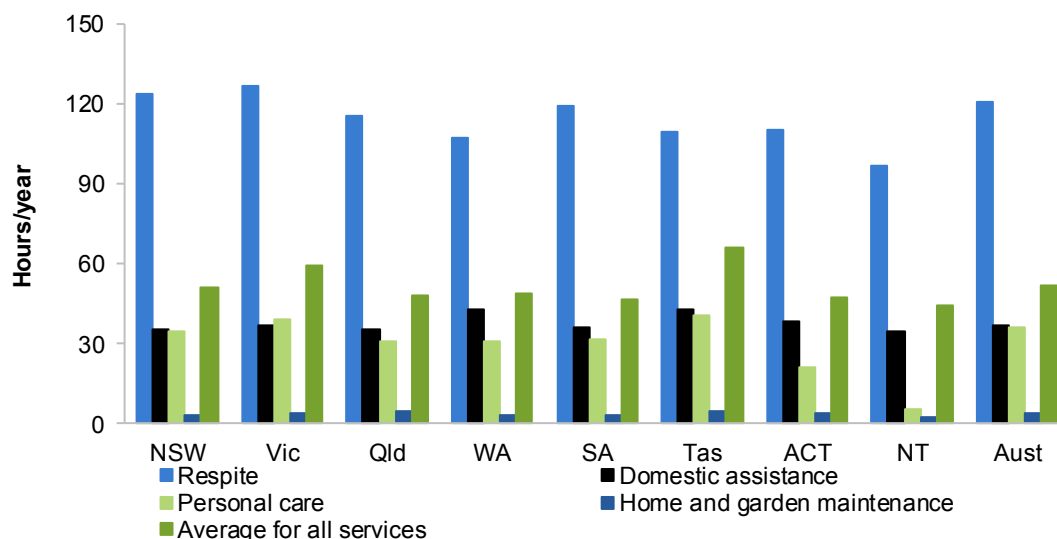

Table 13.5 Number of community aged care older clients, by program, 2013-14

| | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |
|------------|---------|---------|---------|--------|--------|--------|--------|-------|---------|
| HACC | 229 332 | 217 745 | 152 583 | 57 599 | 83 370 | 22 708 | 10 556 | 2 066 | 775 959 |
| Home Care | | | | | | | | | |
| Levels 1–2 | 22 265 | 16 191 | 11 350 | 5 514 | 5 590 | 1 671 | 958 | 818 | 64 312 |
| Levels 3–4 | 5 232 | 3 939 | 4 266 | 3 988 | 1 218 | 440 | 657 | 218 | 19 942 |

Source: DSS (unpublished); table 13A.3.

The services of the VHC program target veterans and war widows/widowers with low care needs. The program offers veterans and war widows/widowers who hold a Gold or White Repatriation Health Card home support services, including domestic assistance, personal care, home and garden maintenance, and respite care. Eligibility for VHC services is not automatic, but based on assessed need. There were 63 741 people approved for VHC services in 2013-14 (table 13A.12). The average number of hours provided per year for veterans who were eligible to receive VHC services was 52 nationally in 2013-14 (figure 13.7).

Figure 13.7 Average number of hours approved for Veterans' Home Care, 2013-14

Source: Department of Veterans' Affairs (DVA) (unpublished); table 13A.12.

The DVA also provides community nursing services to veterans and war widows/widowers. These services include acute/post-acute support and maintenance, personal care, medication management and palliative care. In 2013-14, 25 977 veterans received these services (table 13A.12) and the average number of hours provided for each recipient was 9.3 per 28 day period (table 13A.12).

Services provided in mixed delivery setting

Information on the size/scope of a selection of the programs delivering services in mixed delivery settings is below:

- At 30 June 2014, the Australian Government had allocated 4000 places to transition care, all were operational, across 87 services nationally. The average length of stay in 2013-14 was 60 days (8.6 weeks) nationally for completed episodes (table 13A.66).
- At 30 June 2014, there were 147 operational MPS program services with a total of 3525 operational flexible aged care places (includes residential and community places). Some of the MPS providers serve more than one location (DSS 2014).
- At 30 June 2014, there were 30 aged care services funded to deliver 739 flexible aged care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program (DSS unpublished).

13.2 Framework of performance indicators

The framework of performance indicators aims to provide information on equity, efficiency and effectiveness, and to distinguish the outputs and outcomes of government aged care services. This approach is consistent with the general performance indicator framework and service process diagram outlined in chapter 1 (see figures 1.2 and 1.3) that have been agreed by the Steering Committee. The performance indicator framework for aged care services is based on a set of shared government objectives in the aged care sector (box 13.2).

Box 13.2 Objectives for aged care services

The aged care system aims to promote the wellbeing and independence of older people and their carers through the funding and delivery of care services that are:

- accessible
- appropriate to needs
- high quality
- efficient
- person centred.

These objectives are consistent with the Australian, State and Territory governments' long-term aged care objectives articulated under the National Healthcare Agreement (NHA) that 'older Australians receive appropriate high quality and affordable health and aged care services' (COAG 2009).

The Council of Australian Governments (COAG) has agreed six National Agreements to enhance accountability to the public for the outcomes achieved or outputs delivered by a range of government services (see chapter 1 for more detail on reforms to federal financial

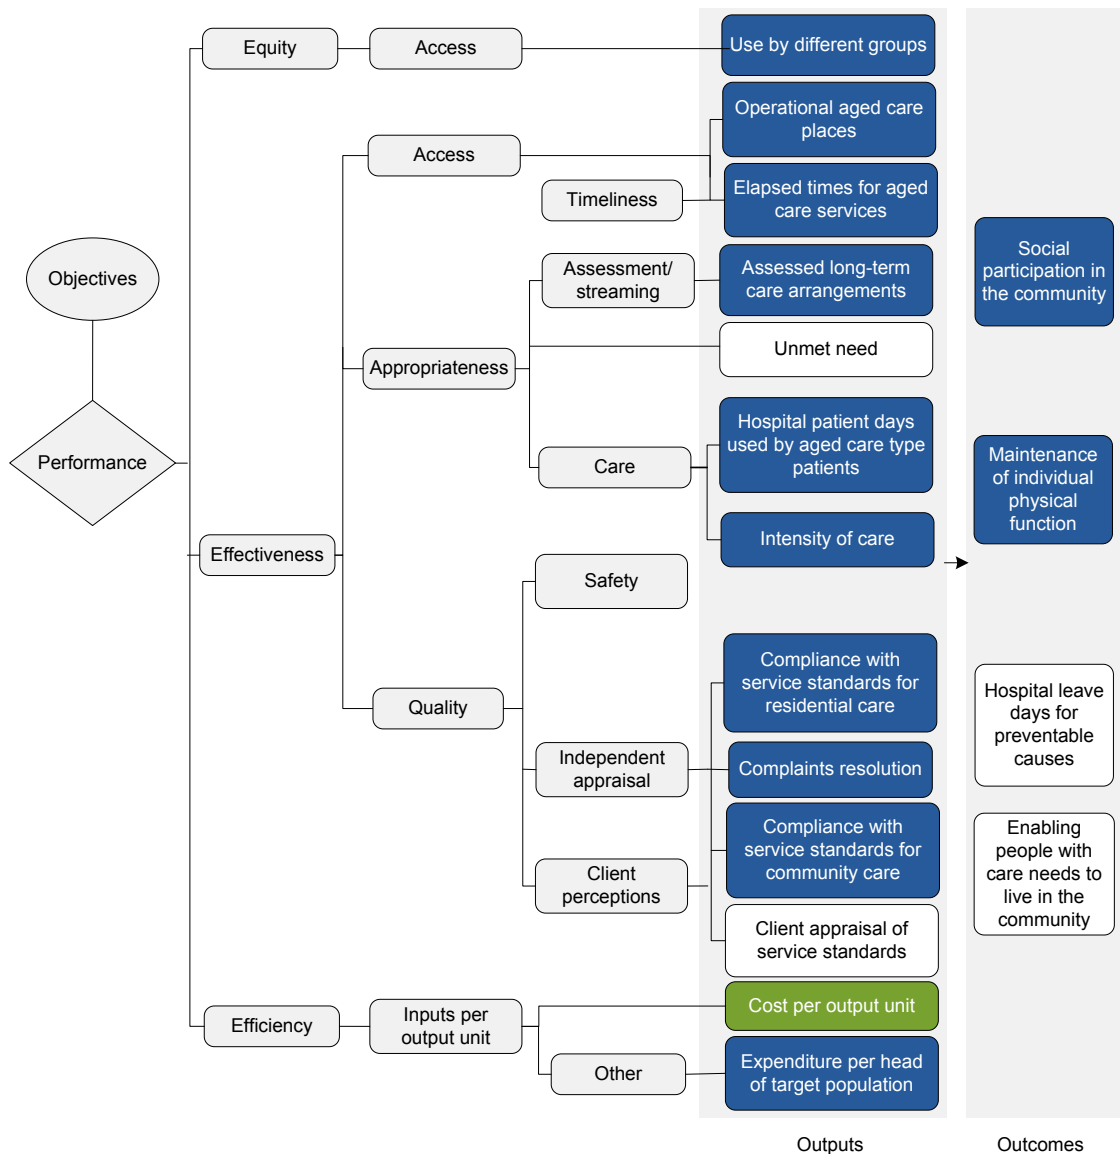

relations). The National Healthcare Agreement (NHA) covers the area of health and aged care, and health indicators in the National Indigenous Reform Agreement (NIRA) establish specific outcomes for reducing the level of disadvantage experienced by Aboriginal and Torres Strait Islander Australians. Both agreements include sets of performance indicators. The Steering Committee collates NIRA performance information for analysis by the Department of Prime Minister and Cabinet. Performance indicators reported in this chapter are aligned with health performance indicators in the most recent version of the NHA, where relevant.

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of aged care services (figure 13.8). The performance indicator framework shows which data are complete and comparable in the 2015 Report. For data that are not considered directly comparable, text includes relevant caveats and supporting commentary. Chapter 1 discusses data comparability and data completeness from a Report wide perspective (section 1.6).

The Report's statistical context chapter contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics, including age profile, geographic distribution of the population, income levels, education levels, tenure of dwellings and cultural heritage (including Indigenous and cultural status) (chapter 2).

DQI is being progressively introduced for all indicators in the Report. The purpose of DQI is to provide structured and consistent information about quality aspects of data used to report on performance indicators, in addition to material in the chapter or sector overview and attachment tables. DQI in this Report cover the seven dimensions in the ABS' data quality framework (institutional environment, relevance, timeliness, accuracy, coherence, accessibility and interpretability) in addition to dimensions that define and describe performance indicators in a consistent manner, and key data gaps and issues identified by the Steering Committee. All DQI for the 2015 Report can be found at www.pc.gov.au/rogs/2015.

Figure 13.8 Aged care services performance indicator framework

Key to indicators*

- Text Most recent data for all measures are comparable and complete
- Text Most recent data for at least one measure are comparable and complete
- Text Most recent data for all measures are either not comparable and/or not complete
- Text No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the chapter

13.3 Key performance indicator results

Different delivery contexts, locations and types of client may affect the effectiveness and efficiency of aged care services.

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see chapter 1, section 1.5).

Equity — Access

Use by different groups

‘Use by different groups’ is an indicator of governments’ objective for the aged care system to provide equitable access to aged care services for all people who require these services (box 13.3). Data presented for this indicator are organised by the relevant special needs groups.

Box 13.3 Use by different groups

'Use by different groups' has four measures defined as follows:

- the number of Aboriginal and Torres Strait Islander Australians using residential services, Home Care, Home and Community Care (HACC) and Transition Care services, divided by the number of Aboriginal and Torres Strait Islander Australians aged 50 years or over (because Aboriginal and Torres Strait Islander Australians tend to require aged care services at a younger age than the general population), compared with the rate/proportions at which the total aged care target population (people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) access these services
- the rate of contacts with Commonwealth Respite and Carelink Centres for Aboriginal and Torres Strait Islander Australians compared with the rate for all people
- the number of veterans aged 65 years or over in residential care divided by the total number of eligible veterans aged 65 years or over, where a veteran is defined as a Department of Veterans' Affairs (DVA) Gold or White card holder
- access to residential aged care services for financially disadvantaged people
 - the proportion of new residents classified as supported
 - the proportion of permanent resident care days classified as concessional, assisted or supported.

In general, usage rates for special needs groups similar to those for the broader aged care population are desirable, but interpretation of results differs for some special needs groups because:

- there is evidence that Aboriginal and Torres Strait Islander Australians have higher disability rates than those of the general population, which suggests a greater level of need for services compared with those in the broader aged care population
- for financially disadvantaged users, Australian Government planning guidelines require that services allocate a minimum proportion of residential places for concessional, assisted or supported residents. These targets range from 16 per cent to 40 per cent of places, depending on the service's region. Usage rates equal to, or higher than, the minimum rates are desirable.

Use by different groups is a proxy indicator of equitable access. Various groups are identified by the *Aged Care Act 1997* and its principles (regulations) as having special needs, including people from Aboriginal and Torres Strait Islander communities, people from culturally and linguistically diverse backgrounds, people who live in rural or remote areas, people who are financially or socially disadvantaged, veterans (including widows and widowers of veterans), people who are homeless or at risk of becoming homeless, people who are care leavers², parents separated from their children by forced adoption or removal and lesbian, gay, bisexual, transgender and intersex people.

(Continued next page)

² A care leaver is a person who was in institutional care (such as an orphanage or mental health facility) or other form of out-of-home care, including foster care, as a child or youth (or both), at some time during their lifetime (DoHA 2012).

Box 13.3 (continued)

Several factors need to be considered in interpreting the results for this set of measures:

- Cultural differences and geographic location can influence the extent to which Aboriginal and Torres Strait Islander Australians use different types of services.
- The availability of informal care and support can influence the use of aged care services in different population groups.

In previous editions of this Report, proxy measures of access (number of recipients/hours per 1000 aged care target population) were reported across states and territories for people born in non-English speaking countries (for residential care, Home Care and HACC) and for people who live in regional or remote areas (for HACC). Data for these measures are no longer reported due to data quality concerns regarding the derived relevant aged care target populations used for the denominators. Data are still available by State and Territory on the proportion of all residential and Home Care recipients who are from non-English speaking countries (table 13A.24) and nationally on the number of residential and Home Care recipients per 1000 aged care target population for people from regional and remote areas (tables 13A.21 and 13A.31-32).

Data reported for the four measures for this indicator are:

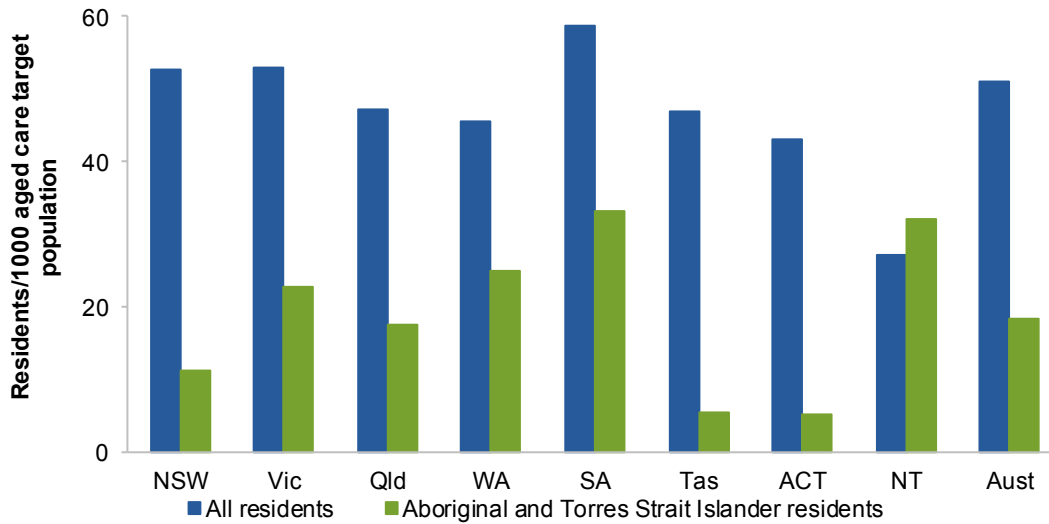

- comparable (subject to caveats) across jurisdictions for all measures and comparable over time for the 'access to residential services by financially disadvantaged users' and 'access by veterans' measures, but not comparable over time for measures that use the aged care target populations as they are based on different Census years (see footnotes to table 13A.2 for details)
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for these measures is at www.pc.gov.au/rogs/2015. Data quality information for some service types (HACC and Transition Care) is under development.

Access to residential aged care services by Aboriginal and Torres Strait Islander Australians

Nationally at 30 June 2014, Aboriginal and Torres Strait Islander Australians had lower rates of use of aged care residential services (18.5 per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over), compared with the population as a whole (51.1 per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) (figure 13.9).

Figure 13.9 Residents per 1000 aged care target population, 30 June 2014^{a, b}

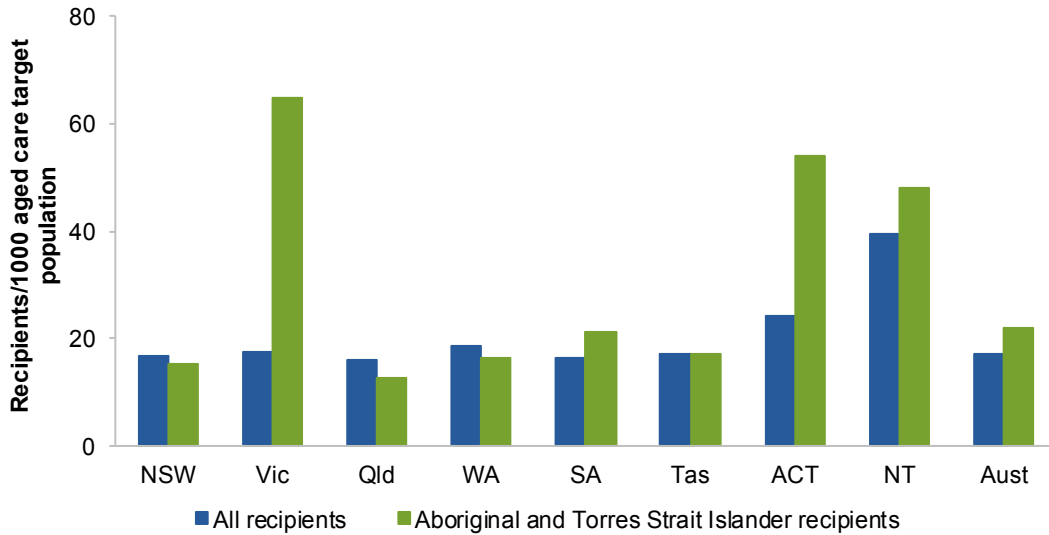

^a All residents data are per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. ^b Aboriginal and Torres Strait Islander residents data are per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over.

Source: DSS (unpublished); tables 13A.22 and 13A.25.

Access to Home Care by Aboriginal and Torres Strait Islander Australians

Nationally at 30 June 2014, the number of Aboriginal and Torres Strait Islander recipients of Home Care per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over was 22.1, compared to a total of 17.2 per 1000 of the aged care target population (people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) (figure 13.10).

Figure 13.10 Home Care recipients per 1000 aged care target population, 30 June 2014^{a, b, c}

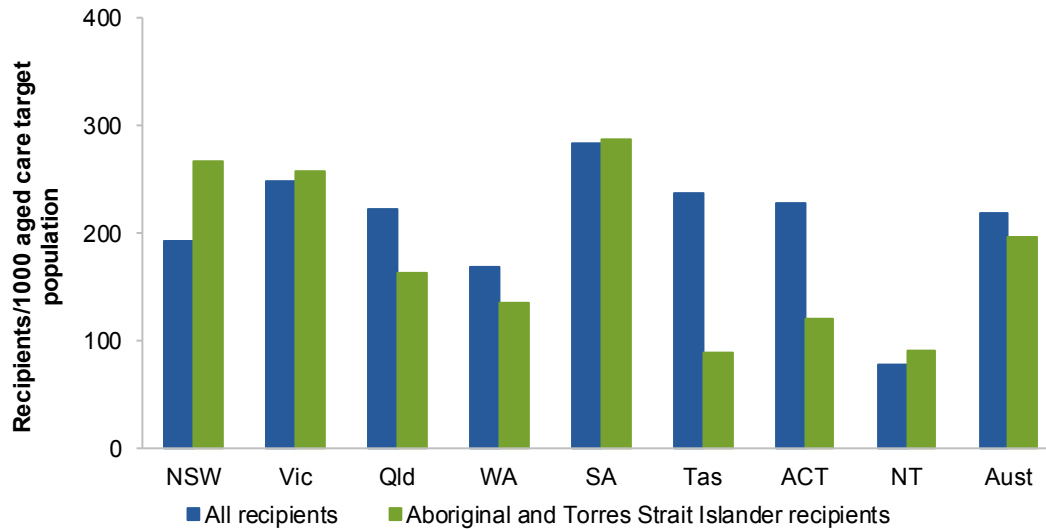

^a All recipients data are per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. ^b Aboriginal and Torres Strait Islander recipients data are per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over. ^c The ACT has a very small Aboriginal and Torres Strait Islander population aged 50 years or over (table 13A.2), and a small number of places result in a very high provision ratio.

Source: DSS (unpublished); tables 13A.22 and 13A.25.

Access to HACC aged care services by Aboriginal and Torres Strait Islander Australians

Nationally in 2013-14, the number of Aboriginal and Torres Strait Islander HACC recipients per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over was 197.9 compared to a total of 218.3 per 1000 of the aged care target population (people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) (figure 13.11).

Figure 13.11 **HACC recipients per 1000 aged care target population, 2013-14^{a, b}**

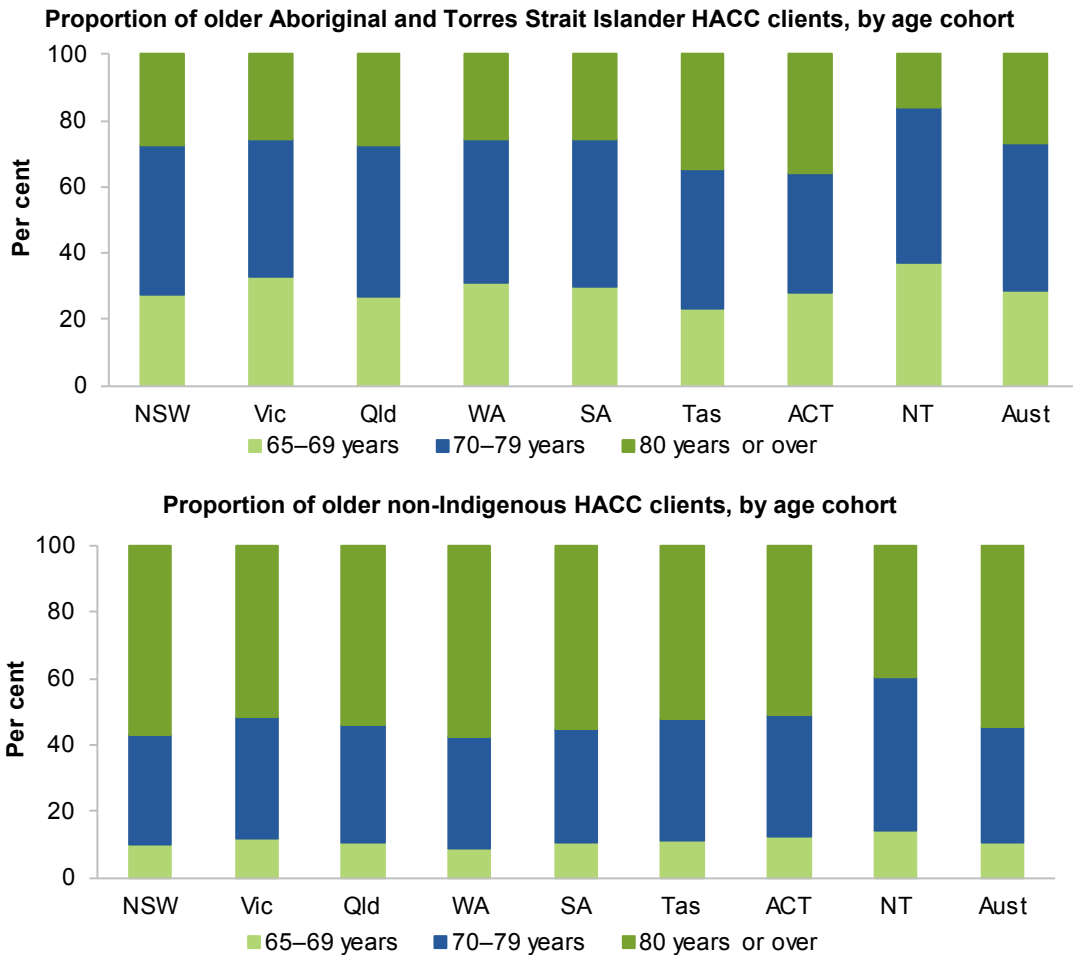

^a All recipients data are per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. ^b Aboriginal and Torres Strait Islander recipients data are per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over.

Source: DSS (unpublished) Home and Community Care (HACC) Minimum Data Set; table 13A.23.

There are substantial differences in the age profile across the Aboriginal and Torres Strait Islander and non-Indigenous populations. This reflects the difference in morbidity and mortality trends between Aboriginal and Torres Strait Islander Australians and the general population. The proportion of older Aboriginal and Torres Strait Islander HACC clients (aged 65 years or over) who are aged 80 years or over is 26.9 per cent and the proportion of non-Indigenous HACC clients who are aged 80 years or over is 54.5 per cent (figure 13.12).

Figure 13.12 Older recipients of HACC aged care services by age and Indigenous status, 2013-14^{a, b, c}

^a Reports provisional HACC data that have not been validated and may be subject to revision. ^b The proportion of older HACC clients with unknown Indigenous status differed across jurisdictions. Nationally, the proportion of older HACC clients with unknown or null Indigenous status was 6.3 per cent (table 13A.36). ^c The Aboriginal and Torres Strait Islander proportions are derived using data contained in table 13A.37.

Source: DSS (unpublished); table 13A.37.

Access to TCP services by Aboriginal and Torres Strait Islander Australians

Nationally, the number of Aboriginal and Torres Strait Islander TCP clients per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over was 1.6 compared to a total of 6.5 clients per 1000 non-Indigenous people aged 65 years or over (figure 13.13).

Figure 13.13 **TCP clients per 1000 aged care target population, 2013-14^{a, b, c}**

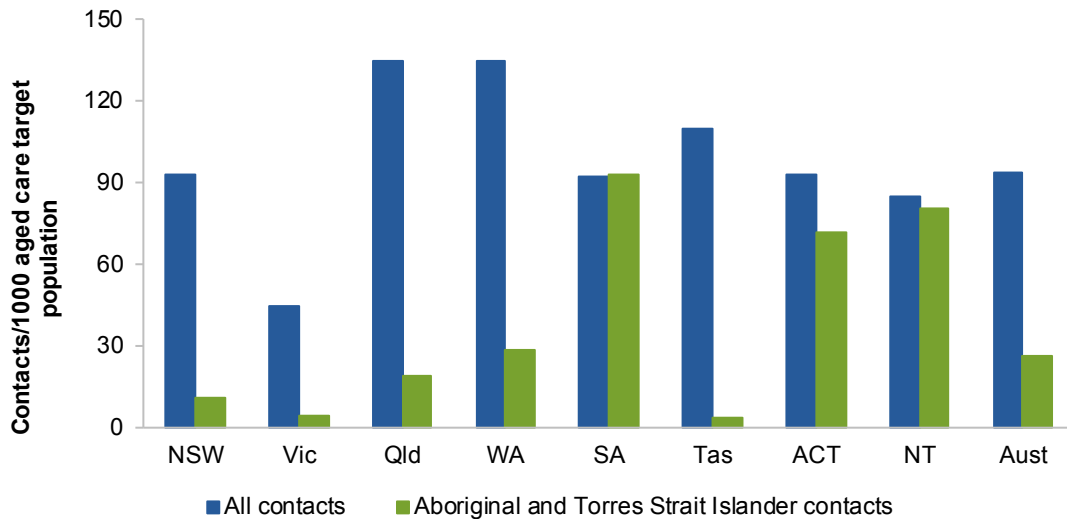

^a Non-Indigenous recipients data are per 1000 people aged 65 years or over. ^b Aboriginal and Torres Strait Islander recipients data are per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over. ^c Data for Aboriginal and Torres Strait Islander recipients are not published for Tasmania and the ACT.

Source: DSS (unpublished); table 13A.3.

Access by Aboriginal and Torres Strait Islander Australians to Commonwealth Respite and Carelink Centres

Commonwealth Respite and Carelink Centres provide information on a range of community services and supports available locally or anywhere in Australia, the costs of services, assessment processes and eligibility criteria. The national rate at which Aboriginal and Torres Strait Islander Australians contacted Respite and Carelink Centres at 30 June 2014, was 26.2 people per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over. The rate for all Australians was 93.4 per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. These figures varied across jurisdictions (figure 13.14).

Figure 13.14 Commonwealth Respite and Carelink Centres, contacts per 1000 aged care target population, by Indigenous status, 30 June 2014^{a, b, c, d}

^a Contacts include phone calls, visits, emails and facsimiles. ^b Aboriginal and Torres Strait Islander contacts refer to contacts by Aboriginal and Torres Strait Islander Australians per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over. ^c All contacts refers to contacts per 1000 aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. ^d Indigenous status is determined through people making contact self-identifying themselves as Aboriginal and Torres Strait Islander. Therefore, there is likely to be substantial under reporting of Indigenous status.

Source: DSS (unpublished); table 13A.39.

Access by veterans

The total number of veterans 65 years or over who were in the DVA treatment population (that is, eligible veterans) at 30 June 2014 was 165 658 (table 13A.13). The number of veterans in residential care per 1000 eligible veterans aged 65 years or over at 30 June 2014 was 149.0 (figure 13.15). Nationally, DVA expenditure on residential aged care subsidy per client was \$53 108 (including payroll tax) in 2013-14 (table 13A.13). Total DVA expenditure on residential aged care per 1000 eligible veterans aged 65 years or over was \$7911 (figure 13.15).

Figure 13.15 **Veterans use of and DVA expenditure on, residential care, 2013-14^{a, b}**

^a Data are subject to a time lag and may be subject to revision. ^b Eligible veterans are veterans with a DVA Gold and White card holder residents as at June 2014. ^c The number of eligible veterans aged 65 years or over used to derive these results, includes those whose age was unknown.

Source: DVA (unpublished); DSS (unpublished); table 13A.13.

Access to residential services by financially disadvantaged users

New residents who are assessed as eligible to receive subsidised accommodation costs are known as supported residents. Residents who entered care prior to 20 March 2008 are still subject to the eligibility criteria for ‘concessional’ or ‘assisted’ resident status. The proportion of all new residents classified as supported residents during 2013-14 was 33.5 per cent nationally (figure 13.16). Targets for financially disadvantaged users range from 16 per cent to 40 per cent of places, depending on the service’s region.

Figure 13.16 **New residents classified as supported residents, 2013-14^a**

^a Supported residents are those who have entered permanent residential care on or after 20 March 2008 (or who re-entered care on or after 20 March 2008 after a break in care of more than 28 days) and have assets of up to a set value (from 20 March 2013 to 19 September 2013 — \$112 243.20, from 20 September 2013 to 19 March 2014 — \$113 784.00 and from 20 March 2014 to 30 June 2014 — \$116 136.00).

Source: DSS (unpublished); table 13A.27.

The proportion of all permanent resident care days classified as concessional, assisted or supported during 2013-14 was 40.9 per cent nationally (figure 13.17).

Figure 13.17 **Permanent residents' care days classified as concessional, assisted or supported, 2013-14^a**

^a Concessional residents are those who entered permanent residential care before 20 March 2008, receive an income support payment and have not owned a home for the last two or more years (or whose home is occupied by a protected person, for example, the care recipient's partner), and have assets of less than 2.5 times the annual single basic age pension (or for a transfer from 20 September 2009 less than 2.25). Assisted residents are those meeting the above criteria, but with assets between 2.5 and 4.0 times the annual single basic age pension (or for a transfer from 20 September 2009 between 2.25 and 3.61). Supported residents are those who have entered permanent residential care on or after 20 March 2008 (or who re-enter care on or after 20 March 2008 after a break in care of more than 28 days) and have assets of up to a set value (from 20 March 2013 to 19 September 2013 — \$112 243.20, from 20 September 2013 to 19 March 2014 — \$113 784.00 and from 20 March 2014 to 30 June 2014 — \$116 136.00).

Source: DSS (unpublished); table 13A.27.

Effectiveness — level of access

Operational aged care places

'Operational aged care places' is an indicator of governments' objective to provide older Australians with access to a range of aged care services that can meet their care needs (box 13.4). This indicator does not include places that have been approved, but are not yet operational.

Box 13.4 Operational aged care places

'Operational aged care places' is defined by two measures, the number of operational places (by type of place — high or low residential aged care and Home Care levels 1-2 or Home Care levels 3-4) per 1000 people in the aged care planning population:

- aged 70 years or over
- aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years.

The planning framework for services provided under the *Aged Care Act 1997* aims to keep the growth in the number of Australian Government subsidised aged care places in line with growth in the aged population, and to ensure a balance of services across Australia, including services for people with lower levels of need and in rural and remote areas. The national provision ratio is planned to increase from 113 operational places per 1000 people aged 70 years or over to 125 places by 2021-22. Within this provision ratio, the number of home care places will increase from 27 to 45, reflecting a greater emphasis on assisting people to remain in their own home as they age. The absolute number of residential aged care places will also continue to increase, but at a rate more reflective of consumer demand (decreasing from 86 to 80 per 1000 of the population aged 70 years or over).

In recognition of poorer health among Aboriginal and Torres Strait Islander communities and that planning in some cases also takes account of the Aboriginal and Torres Strait Islander population aged 50–69 years, the provision ratio is also reported for operational places per 1000 people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years. A provision ratio based on the population aged 70 years or over will appear high in areas with a higher proportion of the population who are Aboriginal and Torres Strait Islander people (such as the NT).

In general, provision ratios across states and territories, and across regions, that are broadly similar to the overall target provision ratios are desirable as it indicates that older Australians have access to a similar level and mix of services to meet their care needs.

This indicator does not provide information on whether the overall target provision ratios are adequate or provide an appropriate mix of services relative to need.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period (subject to caveats). All required 30 June 2014 data are available for all jurisdictions.

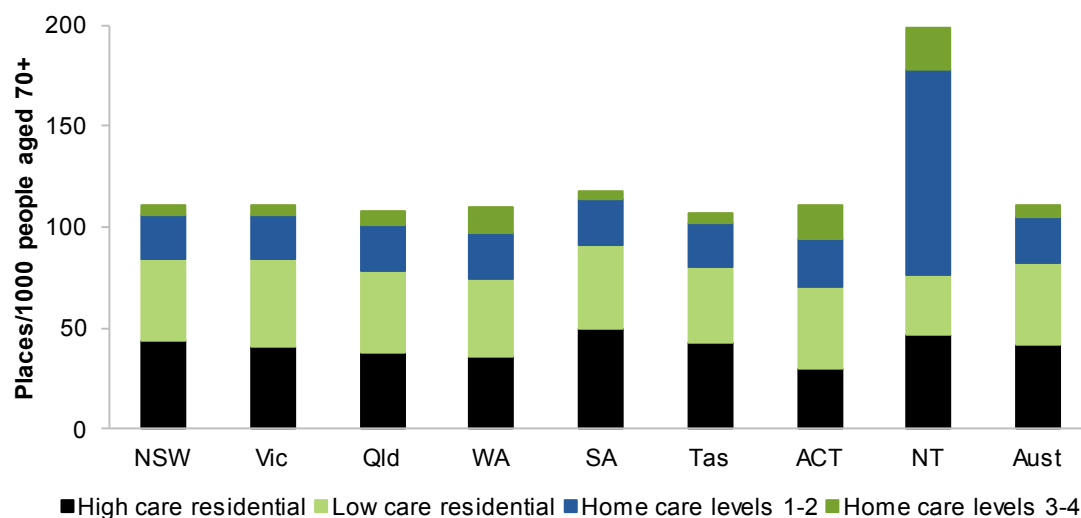

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, the combined number of high care residential places, low care residential places, and Home Care places at 30 June 2014, was 111.3 per 1000 people aged 70 years or over (figure 13.18). Transition Care places add an additional 1.7 per 1000 people aged 70 years or over (table 13A.19), however, these places are not included in the national provision ratio (box 13.4). The number of operational aged care places per 1000 people aged 70 years or over by care type was:

- 41.6 places for residential high care
- 41.1 places for residential low care

- 22.4 places for Home Care levels 1-2
- 6.3 places for Home Care levels 3-4 (figure 13.18).

Figure 13.18 **Operational residential and Home Care places per 1000 people aged 70 years or over, 30 June 2014^{a, b, c, d, e, f, g}**

^a Excludes places that have been approved but are not yet operational. ^b Ageing in place may result in some low care places being filled by high care residents. ^c For this Report, Australian Government planning targets are based on places per 1000 people aged 70 years or over. However, in recognition of poorer health among Aboriginal and Torres Strait Islander communities, planning in some cases also takes account of the Aboriginal and Torres Strait Islander population aged 50–69 years. This means that the provision ratio based on the population aged 70 years or over will appear high in areas with a higher proportion of the population who are Aboriginal and Torres Strait Islander people (such as the NT). ^d Includes residential places categorised as high care or low care. ^e Home Care places are included in the Australian Government planning targets. ^f Home Care places data include flexible community care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, MPS Program and Innovative Pool Program. ^g See table 13A.19 for further information regarding the calculation of provision ratios.

Source: DSS (unpublished); table 13A.19.

The number of operational aged care places can also be shown using an aged care planning population that incorporates Aboriginal and Torres Strait Islander Australians aged 50–69 years (figure 13.19). Use of this ‘adjusted’ aged care planning population has a noticeable effect on the NT, which has a large proportion of Aboriginal and Torres Strait Islander Australians.

Figure 13.19 **Operational residential and Home Care places per 1000 people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years, 30 June 2014^a, b, c, d, e, f**

^a Excludes places that have been approved but are not yet operational. ^b Ageing in place may result in some low care places being filled by high care residents. ^c Home Care places are included in the Australian Government planning targets. ^d Includes residential places categorised as high care or low care. ^e Home Care places data include flexible community care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, MPS Program and Innovative Pool Program. ^f TCP places are not shown, see table 13A.20.

Source: DSS (unpublished); table 13A.20.

Data on the number of residential and Home Care operational aged care places per 1000 people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years by remoteness areas are in table 13A.21.

Effectiveness — timeliness of access

Elapsed times for aged care services

‘Elapsed times for aged care services’ is an indicator of governments’ objective to maximise the timeliness with which people are able to access aged care services (box 13.5).

Box 13.5 **Elapsed times for aged care services**

'Elapsed times for aged care services' is defined by two measures.

- The proportion of people who entered residential high care who did so within three months of their ACAT approval. Entry into a residential care service refers to the date of admission to a residential aged care service. ACAT approval refers to the most recent approval date for the type of care for which the client is being admitted.
- The proportion of people who commenced Home Care who did so within three months of their ACAT approval. ACAT approval refers to the most recent approval date for the type of care which the client is commencing.

Data are also presented for these service types on the proportions who enter/receive these services within other periods of time.

Higher proportions of admission to residential high care or commencement of Home Care within three months of ACAT approval are desirable.

This indicator needs to be interpreted with caution. The measure of 'elapsed time' is utilised, rather than 'waiting times', because the period of time between the ACAT approval and entry into residential care or commencement of Home Care may be affected by factors other than time spent 'waiting' to enter/receive a service, for example:

- hospital discharge policies and practices
- client choice not to enter or commence care immediately, but to take up the option at a later time
- variations in perceived quality of care, care fee regimes and building quality, which influence client choice of preferred service and delays their take up of care.

In addition, the measure does not include clients who have received an ACAT approval and who may have spent time waiting, but who:

- did not enter residential care or commence Home Care (for example, who died before entering care)
- ultimately decided not to take up a care placement offer
- choose to take up an alternative care option due to, for example, varying fee regimes.

Elapsed time needs to be interpreted locally and may vary in relevance according to individual circumstances. A client's decision to take up care at a particular point in time can be influenced by the location of residential care services; the availability of alternatives to residential care, such as Home Care places; and for community care, the availability of informal care and respite services.

(Continued next page)

Box 13.5 (continued)

For residential aged care, this indicator focuses on high care services because the link between 'elapsed time' before entry to residential care and actual 'waiting time' is stronger for high care residents than for low care residents. This is due to the urgency of high care residents' needs, and the greater number of alternatives for people with ACAT approvals for low residential aged care only. Where there is some urgency because of a client's high care needs, it is clearly desirable to minimise the time elapsing between ACAT approval and entry to high level residential aged care. However, there is an equally strong argument for ensuring all options are explored, including Transition Care, to ensure that premature entry to residential aged care is avoided or at least postponed for as long as practical given individual circumstances.

It is recognised that this indicator has limitations and work is underway to review the data. This indicator will continue to be reported until improved data are available.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Overall, 19.3 per cent of all people entering residential high care during 2013-14 did so within seven days of being approved by an ACAT, compared with 22.0 per cent in 2012-13 (table 13A.42). In 2013-14, 47.0 per cent entered within one month of their ACAT approval and 69.4 per cent entered within three months of their approval (figure 13.20), compared with 50.0 per cent and 72.0 per cent respectively in 2012-13 (table 13A.42). The median time for entry into high care residential services was 35 days in 2013-14 compared to 30 days in 2012-13 (table 13A.42).

Nationally in 2013-14, a greater proportion of people entering high care residential services entered within three months of approval (69.4 per cent), compared with the proportion entering low care residential services within that time (62.3 per cent). Further data on elapsed time by remoteness, Socio Economic Indexes for Areas (SEIFA) and Indigenous status are included in table 13A.43-45.

Overall, 59.2 per cent of all people commencing Home Care during 2013-14 received it within three months of being approved by an ACAT. This proportion varied across jurisdictions. Nationally, 30.7 per cent started receiving Home Care within one month of being approved by an ACAT (figure 13.21). Data to 2012-13, on 'elapsed time' for CACP, EACH and EACH are in table 13A.42.

Source: DSS (unpublished); table 13A.42.

Effectiveness — appropriateness

Assessed long-term care arrangements

‘Assessed long-term care arrangements’ is an indicator of governments’ objective to meet clients’ needs through provision of appropriate aged care services (box 13.6).

Box 13.6 Assessed long-term care arrangements

Assessed long-term care arrangements’ is defined as the proportions of ACAT clients recommended to reside in the community (private residence or other community), or in residential care (high or low level), or in another location (such as, other institutional care) or for clients whom ACATs did not make a recommendation for long-term care arrangements for reasons such as death, transfer or cancellation. A recommendation does not mean that the person will be approved for the care recommended, and an approval does not mean that the person will take up the care approved. Aged care approvals are mandatory for admission to Australian Government subsidised residential care, or for receipt of Home Care (Community Aged Care Packages [CACPs], Extended Aged Care at Home [EACH] packages, and EACH Dementia [EACH-D] in the 2012-13 reporting year) or Transition Care.

High or increasing proportions of clients recommended to remain in the community (assuming this is appropriate) are desirable.

The results for this indicator show the distribution of long-term care arrangements of ACAT clients in each jurisdiction. Differences in recommendations across jurisdictions can reflect external factors such as geographic dispersion of clients and service availability, but also views on the types of client best served by community based services and client preferences. The distribution of ACAT recommendations for various care arrangements are influenced by the degree to which any pre selection process refers people requiring residential care to an ACAT for an assessment.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period (subject to caveats). All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is under development.

The national proportion of ACAT clients recommended for residential care in 2012-13 was 36.5 per cent and the proportion recommended to remain in the community was 52.4 per cent (figure 13.22). The remaining 11.1 per cent comprise those for whom the recommendation was another location (for example, other institutional care) or for whom reasons such as death, transfer or cancellation meant that no recommendation for long-term care arrangements was made.

Figure 13.22 Recommended long-term care arrangements of ACAT clients, 2012-13^{a, b, c}

^a Other includes hospital and other institutional care. ^b No recommendation includes deaths, cancellations and transfers. ^c Data were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective date of 31 August 2014. Future extracts of these data may change.

Source: DSS (unpublished) Ageing and Aged Care Data Warehouse from ACAP Minimum Data Set; table 13A.46.

Unmet need

‘Unmet need’ is an indicator of governments’ objective of ensuring aged care services are allocated to meet clients’ needs (box 13.7).

Box 13.7 Unmet need

‘Unmet need’ is defined as the extent to which demand for services to support older people requiring assistance with daily activities is not met.

Low rates of unmet need are desirable; however, defining and determining the level of need at an individual level is complex and at a population level is highly complex. Perceptions of need and unmet need are often subjective.

Data for this indicator are drawn from the ABS 2012 *Survey of Disability, Ageing and Carers*. Data are for people aged 65 years or over, living in households, who have a need for assistance with at least one everyday activity, and the extent to which that need was being met (fully, partly or not at all).

(Continued next page)

Box 13.7 (continued)

Direct inferences about the demand for services need to be made with caution, because the measure used does not:

- reveal the intensity of care required by those who identify an unmet need — there is no indication of whether the need can readily be met informally or by formal home care, or whether the person may require residential care
- reflect the degree of unmet demand for a specific type of service. Differences across jurisdictions in the proportion of unmet need can reflect different policy approaches to targeting services. Some governments may choose to focus on those with the greatest degree of need for care and on fully meeting their needs. By contrast, other governments may choose to provide a lower level of service to a greater number of people, while only partly meeting the needs of those with the greatest need for care — both are valid policy approaches
- reflect the past and possible future duration of the need — that is, whether it is long term or transitory
- reflect whether the need relates to a disability support service, aged care service or health care.

Although data are included, this indicator is regarded as yet to be developed, because of the extent of the caveats.

Of those people aged 65 years or over in 2012, who were living in households and who have a need for assistance with at least one everyday activity, 34.0 ± 1.3 per cent reported that their need for assistance was not fully met (table 13A.47).

Hospital patient days used by aged care type patients

‘Hospital patient days used by aged care type patients’ is an indicator of governments’ objective to minimise the incidence of older people staying in hospitals for extended periods of time when their care needs may be met more appropriately through residential or community care services (box 13.8).

Box 13.8 **Hospital patient days used by aged care type patients**

'Hospital patient days used by aged care type patients' has two measures:

- the proportion of completed aged care type public hospital separations for people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years for which the length of stay was 35 days or longer, where 'aged care type' hospital separations are defined as:
 - the care type was maintenance, and
 - the diagnosis (either principal or additional) was either person awaiting admission to residential aged care service or need for assistance at home and no other household member able to render care
- the proportion of all patient days (for overnight separations only) used by patients who are waiting for residential aged care, where the:
 - care type was maintenance, and
 - diagnosis (either principal or additional) was person awaiting admission to residential aged care service, and
 - separation mode was discharge/transfer to another acute hospital or to residential aged care (unless this is usual place of residence); statistical discharge, that is a change in care type; the patient died; discharge/transfer to other health care accommodation (including mother craft hospitals and another psychiatric hospital); left against medical advice/discharge at own risk or statistical discharge from leave.

Low or decreasing proportions of hospital stays of 35 days or more and low or decreasing proportions of patient days used by people waiting for residential aged care are desirable.

Hospital inpatient services are geared towards shorter periods of care aimed at addressing serious illness or injury, or diagnosis, and are a less effective form of care for older people who cannot live independently in the long term.

These measures should be interpreted with caution, because:

- patients who have not completed their period of care in a hospital are not included
- although the diagnosis codes reflect a care type, they do not determine a person's eligibility for residential aged care (this is determined by an ACAT assessment) or necessarily reliably reflect access issues for residential aged care from the acute care sector
- diagnosis codes may not be applied consistently across jurisdictions or over time
- reported hospital separations and patient days do not necessarily reflect the full length of hospital stay for an individual patient. If a change in the type of care occurs during a patient's hospital stay (for example, from acute to maintenance) then two separations are reported for that patient
- for the first measure, the code 'need for assistance at home and no other household member able to render care' may also be used for respite care for aged care residents or those receiving community care, and some jurisdictions may have a high proportion of this type of use. This is particularly relevant in some rural areas where there are few alternative options for these clients

(Continued next page)

Box 13.8 (continued)

- the measures do not necessarily reflect alternative strategies in place by states and territories to manage the older person into appropriate residential aged care facilities from acute care hospitals
- the measures are regarded as proxies, as the desired measures (utilising appropriate linked hospital separations and ACAT approvals) are not available at this time. Further development is underway to improve available data sets and associated measures for future reports.

Data reported for the first measure are:

- comparable (subject to caveats) across jurisdictions, but a break in series means that data from 2011-12 are not comparable to data for earlier years
- complete for the current reporting period (subject to caveats). All required 2012-13 data are available for all jurisdictions.

Data reported for the second measure are:

- comparable (subject to caveats) across jurisdictions and over time (except Tasmanian data where two significant private hospitals are excluded in 2008-09)
- complete for the current reporting period (subject to caveats). All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The proportion of separations for ‘aged care type’ patients (as defined in box 13.8) aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years whose separation was 35 days or longer was 10.9 per cent nationally in 2012-13 (figure 13.23). The number of ‘aged care type’ patient separations for people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years was 12 290, of a total 2.2 million nationally (table 13A.48).

Figure 13.23 Proportion of separations for ‘aged care type’ public hospitals patients that were 35 days or longer^{a, b, c, d, e, f, g, h}

^a Data are for hospital separations with a care type of maintenance and a diagnosis (either principal or additional) of either ‘person awaiting admission to residential aged care service’ or ‘need for assistance at home and no other household member able to render care’ and where the separation lasted 35 days or longer. ^b Age of patients is 65 years or over and Aboriginal and Torres Strait Islander patients 50–64 years. ^c Although the diagnosis codes reflect a care type, they do not determine a person’s eligibility for residential aged care. ^d Diagnosis codes may not be applied consistently across jurisdictions or over time. ^e These data only account for completed unlinked separations. ^f The code ‘need for assistance at home and no other household member able to render care’ may also be used for respite care for either residential or community care patients. ^g An individual patient may have multiple hospital separations during a single hospital stay, for example, if a change in the type of care occurs during a patient’s hospital stay. Data on length of stay relate to each separation and not to the whole hospital stay. ^h Data from 2011-12 include public patients in private hospitals, these patients were not included in earlier years.

Source: Australian Institute of Health and Welfare (AIHW) (unpublished); table 13A.48.

The proportion of all hospital patient days (for overnight separations only) used by patients who are waiting for residential aged care (as defined in box 13.8) was 10.4 per 1000 patient days nationally in 2012-13 (figure 13.24).

Figure 13.24 **Hospital patient days used by patients waiting for residential aged care^{a, b, c, d, e, f}**

^a Data include overnight hospital separations only. ^b Numerator data include patients with a care type of maintenance, and diagnosis (either principal or additional) was 'person awaiting admission to residential aged care service', and separation mode was 'discharge/transfer to another acute hospital'; 'discharge, transfer to residential aged care (unless this is usual place of residence)'; 'statistical discharge—type change'; 'died'; 'discharge/transfer to other health care accommodation (including mother craft hospitals)' or 'left against medical advice/discharge at own risk; statistical discharge from leave; discharge/transfer to (an)other psychiatric hospital'. ^c Includes patients of all ages. ^d Although the diagnosis codes reflect a care type, they do not determine a person's eligibility for residential aged care. ^e Diagnosis codes may not be applied consistently across jurisdictions or over time. ^f These data only account for completed unlinked separations. An individual patient may have multiple hospital separations during a single hospital stay, for example, if a change in the type of care occurs during a patient's hospital stay. Data on patient days relate to the defined separations and not to the whole hospital stay.

Source: AIHW (unpublished); table 13A.49.

Intensity of care

'Intensity of care' is an indicator of governments' objective to encourage 'ageing in place' to increase choice and flexibility in residential aged care service provision (box 13.9). (See box 13.10 for background information on the 'ageing in place' policy.)

Box 13.9 Intensity of care

'Intensity of care' is defined by two measures:

- the proportion of people who stayed in the same residential aged care service when changing from low care to high care
- the proportion of low care places occupied by residents with high care needs, compared with the proportion of all operational places taken up by residents with high care needs.

High or increasing rates of ageing in place are desirable, in the context of a flexible system that also meets the need for low level care either in residential facilities or in the community.

These measures reflect the proportion of residents who remain in the same residential aged care facility as their care needs increase from low care to high care. The *Aged Care Act 1997* aims explicitly to encourage ageing in place to increase choice and flexibility in residential aged care service provision (box 13.10).

This indicator needs to be viewed from the perspective of the system as a whole. The implication of ageing in place is that some places that were allocated for low care will be occupied by high care residents (or, conversely, allocated for high care and occupied by low care residents). Information about the use of operational residential aged care places is provided to demonstrate the impact of ageing in place on the aged care services system over time.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period (subject to caveats). All required June 2014 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Nationally, from 2005-06 to 2013-14, there was a steady increase in the proportion of people who stayed in the same residential aged care service when changing from low care to high care, from 75.0 per cent to 92.8 per cent (figure 13.25). For 2013-14, the proportion in major cities (93.1 per cent) was similar to other areas, with the lowest proportion in outer regional areas (91.1 per cent) (table 13A.28).

Box 13.10 Ageing in place in residential care

In its Objects, the *Aged Care Act 1997* aims to:

... encourage diverse, flexible and responsive aged care services that:

(i) are appropriate to meet the needs of the recipients of those services and the carers of those recipients; and

(ii) facilitate the independence of, and choice available to, those recipients and carers.

Further, the *Aged Care Act 1997* explicitly aims to encourage and facilitate 'ageing in place'. The Act does not define 'ageing in place', but one useful definition is 'the provision of a responsive and flexible care service in line with the person's changing needs in a familiar environment'. In effect, 'ageing in place' refers to a resident remaining in the same residential aged care service as his or her care needs increase from low level to high level. This is changing the profile of people in services.

The *Aged Care Act 1997* does not establish any 'program' or require any residential aged care service to offer ageing in place. Rather, it creates the opportunity for providers to choose to provide the full continuum of care, by removing the legislative and administrative barriers that prevented this outcome in the past.

The concept of 'ageing in place' is linked to the outcomes of increasing choice and flexibility in residential aged care service provision. These are difficult outcomes to measure.

Source: Department of Health and Ageing (DoHA) (unpublished).

Figure 13.25 Proportion of residents who changed from low care to high care and remained in the same aged care service^a

^a Ten years of annual data for this indicator are in table 13A.28.

Source: Department of Health and Ageing (DoHA)/DSS (unpublished); table 13A.28.

Nationally, 61.2 per cent of low care places in 2013-14 were occupied by residents with high care needs. The proportion of all operational places taken up by residents with high care needs was 76.8 per cent (figure 13.26).

Figure 13.26 **Utilisation of operational residential places, 30 June 2014^a**

^a Includes residential places categorised as high care or low care.

Effectiveness — quality

Compliance with service standards for residential care

‘Compliance with service standards for residential care’ is an indicator of governments’ objective to ensure residential care services attain high levels of service quality, through compliance with certification and accreditation standards (box 13.11).

Box 13.11 Compliance with service standards for residential care

'Compliance with service standards for residential care' is defined by two measures:

- the proportion of re-accredited services that have received three year accreditation:
 - services re-accredited in the financial year
 - all re-accredited services
- the proportion of aged care services that are compliant with building certification, fire safety and privacy and space requirements.

High or increasing proportions of approval for three year re-accreditation and services that are compliant with building certification, fire safety and privacy and space requirements are desirable. The extent to which residential care services comply with service standards and other requirements implies a certain level of care and service quality.

Australian Government funded residential services are required to meet accreditation standards (which comprise 44 expected outcomes). The accreditation indicator reflects the period of accreditation granted. The accreditation process is managed by an accreditation agency (currently the Australian Aged Care Quality Agency, which replaced the Aged Care Standards and Accreditation Agency Ltd (ACSAA) on 1 January 2014). A service applies for accreditation and its application is based on a self-assessment of performance against the accreditation standards. Following an existing residential service applying for accreditation, a team of registered quality assessors reviews the application, conducts an onsite assessment and prepares a report based on these observations, interviews with residents, relatives, staff and management, and relevant documentation. An authorised decision maker from the accreditation agency then considers the report, in conjunction with any submission from the residential service and other relevant information (including information from the Department of Social Services [DSS]) and decides whether to accredit and, if so, for how long. Commencing services are subject to a desk audit only, and are accredited for one year.

A home must be certified to be able to receive accommodation payments and extra service charges. Residents expect high quality and safe accommodation in return for their direct and indirect contributions. Certification provides a mechanism to encourage provision of safe and high quality accommodation within the regulatory frameworks for buildings legislated by State and Territory governments. Aged care homes are required to meet building certification, fire safety, privacy and space requirements to be eligible to receive the maximum level of the accommodation supplement.

Under the privacy and space requirements, all new buildings constructed since July 1999, are required to have an average, for the whole aged care home, of no more than 1.5 residents per room. No room may accommodate more than two residents. There is also a mandatory standard of no more than three residents per toilet, including those off common areas, and no more than four residents per shower or bath.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete for the current reporting period (subject to caveats). All required June 2014 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Accreditation decisions and further information relating to the accreditation standards and the Australian Aged Care Quality Agency (Quality Agency) are publicly available (Quality Agency 2014). Further information on the number of residential aged care facilities that had an audit in 2013-14 and the outcomes of these audits is available in the latest *Report on the Operation of the Aged Care Act 1997* (DSS 2014). The accreditation process is summarised in box 13.11.

As at 30 June 2014, 496 residential aged care services had a re-accreditation decision in 2013-14. Of these, 87.9 per cent were granted three years accreditation (table 13.6). Data on re-accreditation decisions during 2013-14 by remoteness and size of facility are in tables 13A.51-52. Of all re-accredited residential aged care services, 96.7 per cent had an accreditation status of a period of three years, as at 30 June 2014 (table 13.6).

Table 13.6 Residential aged care services re-accredited for three years, 30 June 2014^{a, b}

Complaints resolution

‘Complaints resolution’ is an indicator of governments’ objective to ensure aged care services provide a high quality of care (box 13.12).

Box 13.12 Complaints resolution

‘Complaints resolution’ has two measures:

- the number of complaints received by the Aged Care Complaints Scheme (the Scheme) that are within the scope of the Scheme to handle (that is, relate to the responsibilities of an approved provider of residential or community care under the *Aged Care Act 1997* or HACC funding agreements with the Australian Government) per 1000 permanent care recipients
- the proportion of complaints that were resolved without the need for a direction.

This indicator is a proxy of the quality of care and of the responsiveness of approved providers where issues about the quality of care or services are raised through complaints. A low or decreasing rate of complaints received and high proportion of complaints that were resolved without the need for a direction are desirable.

The Scheme encourages people to raise their concerns with the aged care provider in the first instance where possible. This can achieve a faster and sustainable result through building relationships between all parties. If concerns are unable to be resolved directly with a service provider, then people can contact the Scheme. The Scheme assesses the risk associated with a complaint and the most appropriate method for resolving the complaint. This may mean encouraging resolution at a local provider level, conciliating an outcome between the complainant and the provider, or the Scheme investigating the complaint. Where the Scheme decides that an approved provider is not meeting its responsibilities, it has the power to issue the provider with directions. Prior to issuing a direction, the Scheme will typically give the provider other opportunities to remedy the issues, including giving the provider the opportunity to respond to a notice of intention to issue directions. Where issues are addressed, directions may not be issued.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions, but a break in series means that data from 2012-13 are not comparable to data for 2011-12
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is under development.

During 2013-14, the Scheme received 3903 complaints that were within the scope of the Scheme to handle. The number of complaints per 1000 care recipients was 22.4 nationally in 2013-14 (figure 13.27). Of the complaints dealt with by the Scheme in 2013-14, 88.9 per cent related to residential care services, 8.4 per cent related to Home Care services and 1.5 per cent related to HACC services. A further 1.2 per cent of complaints were not linked to a corresponding care type (DSS unpublished).

Figure 13.27 **Complaints received by the Aged Care Complaints Scheme which are within its scope to handle**

Source: DoHA/DSS (unpublished); table 13A.54.

In 2013-14, 78.5 per cent of complaints were resolved through early resolution and 21.5 per cent progressed to resolution, utilising the range of techniques available to Scheme officers including approved provider resolution, conciliation, and investigation (DSS unpublished). Of those complaints that progressed to resolution, 97.5 per cent were resolved without the need for a direction to the approved provider (figure 13.28).

Figure 13.28 **Proportion of in-scope complaints that were resolved without the need for a direction**

Source: DoHA/DSS (unpublished); table 13A.54.

Compliance with service standards for community care

‘Compliance with service standards for community care’ is an indicator of governments’ objective to ensure that community aged care programs provide a high quality of service (box 13.13). Reporting of compliance with service standards for community aged care services for Home Care, NRCP and HACC has changed for this year’s Report to provide more meaningful and greater detail about community aged care service compliance with the service standards than the previous reporting of an overall rating of a service’s processes and systems. Historical data using the new reporting format is included in tables 13A.55-56 to enable comparison.

Box 13.13 Compliance with service standards for community care

Compliance with service standards for community care' is defined as the proportion of reviews of community aged care services that met all expected outcomes under each of the Home Care Common Standards:

- Standard 1 — Effective management — the service provider demonstrates effective management processes based on a continuous improvement approach to service management, planning and delivery.
- Standard 2 — Appropriate access and service delivery — each service user (and prospective service user) has access to services and service users receive appropriate services that are planned, delivered and evaluated in partnership with themselves and/or their representatives.
- Standard 3 — Service user rights and responsibilities — each service user (and/or their representative) is provided with information to assist them to make service choices and has the right (and responsibility) to be consulted and respected. Service users (and/or their representative) have access to complaints and advocacy information and processes and their privacy and confidentiality and right to independence is respected.

The number of reviews against program standards for community aged care services that were completed is also provided for information. Data are reported for the Home Care Packages Program and National Respite for Carers Program (NRCP) combined and separately for the HACC program. HACC review numbers and outcomes are reported separately as they may be undertaken at a different organisational level to the other programs.

A high or increasing proportion of community aged care reviews that met all expected outcomes under each standard of the Home Care Common Standards is desirable.

The indicator monitors the extent to which agencies are being reviewed over a three year cycle by identifying what proportion of services targeted for review have been reviewed in a particular year. This indicator also measures the proportion of individual agencies that comply with the service standards, through the outcomes of service standard. It should be noted that a review against the standards is not an accreditation process.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and overtime
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Nationally, a total of 545 reviews of community aged care organisations providing Home Care and NRCP services were completed in 2013-14 (table 13.8). All relevant expected outcomes for Standard 1 — effective management, were achieved in 67.2 per cent of these reviews (table 13.8). All relevant expected outcomes for Standard 2 — Appropriate access and service delivery, were achieved in 74.6 per cent of these reviews (table 13.8). All relevant expected outcomes for Standard 3 — Service user rights and responsibilities, were achieved in 85.5 per cent of these reviews (table 13.8).

Client appraisal of service standards

‘Client appraisal of service standards’ is an indicator of governments’ objective to ensure high levels of client satisfaction with aged care services (box 13.14).

Box 13.14 Client appraisal of service standards

'Client appraisal of service standards' is yet to be defined.

Data for this indicator were not available for the 2015 Report.

Efficiency — inputs per output unit

Cost per output unit

'Cost per output unit' is an indicator of governments' objective to deliver efficient aged care services (box 13.15).

Box 13.15 Cost per output unit

'Cost per output unit' is defined by two measures:

- Australian Government expenditure per ACAT assessment — Australian Government expenditure on the Aged Care Assessment Program (ACAP) divided by the number of assessments completed
- expenditure per hour of service for HACC — Australian, Victorian and WA governments expenditure on services (some of the expenditure in Victoria and WA is funded by the Australian Government), divided by the number of hours of service provided (by service type domestic assistance, personal care, nursing and allied health service).

This is a proxy indicator of efficiency and needs to be interpreted with caution. While high or increasing expenditure per assessment or hour of service may reflect deteriorating efficiency, it may also reflect changes in aspects of the service (such as greater time spent with clients) or changes in the characteristics of clients (such as their geographic location). Similarly, low or declining expenditure per assessment or hour of service may reflect improving efficiency or less time spent with clients, for example.

Australian Government expenditure per ACAT assessment and expenditure per hour of HACC service have been developed as proxies. For Australian Government expenditure per ACAT assessment, only Australian Government expenditure is included, although State and Territory governments also contribute to the cost of ACAT assessments. Similarly only Australian, State and Territory governments' expenditure on HACC services is included and expenditure funded by non-government sources is excluded.

Data reported for the 'Australian Government expenditure per ACAT assessment' measure are:

- comparable (subject to caveats) across jurisdictions and overtime
- complete for the current reporting period (subject to caveats). All required 2012-13 data are available for all jurisdictions.

(Continued next page)

Box 13.15 (continued)

Data reported for the 'expenditure per hour of service for HACC' measure are:

- comparable (subject to caveats) within jurisdictions over time, but are not comparable across jurisdictions
- incomplete for the current reporting period (subject to caveats). All required 2012-13 data were not available for Queensland and the NT.

Data quality information for this indicator is under development.

Australian Government expenditure per aged care assessment during 2012-13 averaged \$560 nationally (figure 13.29).

Figure 13.29 Australian Government expenditure on aged care assessments, per assessment (2012-13 dollars)^{a, b, c, d, e}

^a Only includes Australian Government expenditure on ACATs. ^b The referrals and operations of ACATs vary across jurisdictions. ^c Data on the number of assessments used to derive this measure were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective date of 31 August 2014. Future extracts of these data may change. ^d Time series financial data are adjusted to 2013-14 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details. ^e The high cost for each assessment in the NT may be influenced by the remoteness of people requiring assessments, clients having English as a second or third language, and a lack of supporting health and community services infrastructure to assist with assessments..

Source: DoHA/DSS (unpublished); table 13A.57.

Australian, Victorian and WA governments' expenditure per hour of HACC service during 2012-13 was higher for nursing and allied health than for domestic assistance and personal care across the states and territories for which data are available (figure 13.30).

Figure 13.30 **State and Territory governments' expenditure per hour of HACC service, by service type, 2012-13^{a, b}**

^a WA contract by service group. Unit costs (includes government expenditure only) reported are an average across all services in the group. ^b Unit costs (includes government expenditure only) are not available for the NT for allied health and nursing.

Source: DSS (unpublished); table 13A.58.

Expenditure per head of aged care target population

'Expenditure per head of aged care target population' is an indicator of governments' objective to deliver efficient aged care services (box 13.16).

Box 13.16 Expenditure per head of aged care target population

'Expenditure per head of aged care target population' is defined as government inputs (expenditure) divided by the number of people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. Expenditure per person in the aged care target population is reported for residential care, Home Care and multi-purpose and Aboriginal and Torres Strait Islander specific services combined and reported separately for the three main service types: residential care services, Home Care and HACC.

This is a proxy indicator of efficiency and needs to be interpreted with caution as it measures cost per head of the aged care target population, not cost per unit of service. While high or increasing expenditure per person can reflect deteriorating efficiency, it can also reflect changes in aspects of the service (such as better quality of services) or in the characteristics of clients receiving the service (such as their geographic location or level of care need). Similarly, low or declining expenditure per person can reflect improving efficiency or a decrease in service standards.

(Continued next page)

Box 13.16 (continued)

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions for all services, but a break in series means that data from 2012-13 are not comparable to data for earlier years
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Governments' expenditure on residential care, Home Care and on Multi-Purpose and Aboriginal and Torres Strait Islander specific services combined per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years was \$3233 nationally in 2013-14 (figure 13.31).

Figure 13.31 Governments' expenditure on selected programs, per person in the aged care target population, 2013-14^a

^a Results include State and Territory governments expenditure on residential aged care services and funding of younger people with disability (people aged under 65 years and Aboriginal and Torres Strait Islander Australians aged under 50 years) in residential and home care. The majority of expenditure included is from the Australian Government (DSS and DVA).

Source: DSS (unpublished); tables 13A.7–9.

Nationally, governments' expenditure on residential care services per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years was \$2828 in 2013-14 (figure 13.32).

Figure 13.32 Governments' real expenditure on residential services per person in the aged care target population (2013-14 dollars)^{a, b, c}

^a Includes a payroll tax supplement provided by the Australian Government. Actual payroll tax paid may differ. ^b Results include State and Territory governments' expenditure and funding for younger people with disability (people aged 64 years or under and Aboriginal and Torres Strait Islander aged 49 years or under) in residential aged care (see tables 13A.4 and 13A.7 for details). ^c Time series financial data are adjusted to 2013-14 dollars using the GFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Source: DoHA/DSS (unpublished); DVA (unpublished); table 13A.59.

Australian Government expenditure on Home Care per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years was \$360 in 2013-14 (figure 13.33).

Figure 13.33 **Australian Government expenditure on Home Care per person in the aged care target population, 2013-14^a**

^a Results include State and Territory governments' funding for younger people with disability (people aged under 65 years and Aboriginal and Torres Strait Islander aged under 50 years) receiving Home Care (see tables 13A.4 and 13A.8 for details).

Source: DSS (unpublished); table 13A.62.

Nationally, in 2013-14, Australian, Victorian and WA governments' expenditure on HACC services was \$523 per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (figure 13.34). These data reflect expenditure against the aged care target population (see section 13.2), which is not the same as the HACC target population for older people. Expenditure per person in the HACC target population for older people is reported in table 13A.60.

Figure 13.34 **Australian, Victorian and WA governments' real expenditure on HACC services per person in the aged care target population (2013-14 dollars)^{a, b, c, d}**

^a For Victoria and WA, these data represent expenditure under the HACC Review agreements. HACC total program expenditure is adjusted (reduced) to take into account the proportion of people who are older (around 75 per cent in Victoria and 80 per cent in WA) and will not match data reported in table 13A.8. ^b Expenditure per person in the older HACC target population (people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) is in table 13A.60. ^c Reports provisional HACC data that have not been validated and may be subject to revision. ^d Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Source: DSS (unpublished); table 13A.61.

Outcomes

Outcomes are the impact of services on the status of an individual or group (while outputs are the services delivered) (see chapter 1, section 1.5).

Social participation in the community

‘Social participation in the community’ is an indicator of governments’ objective to encourage the wellbeing and independence of older people (box 13.17).

Box 13.17 **Social participation in the community**

'Social participation in the community' is defined by three measures, the estimated proportions of older people (aged 65 years or over) who:

- participated in social or community activities away from home in the last three months
- had face-to-face contact with family or friends not living in the same household in the last week, month or three months
- did not leave home or did not leave home as often as they would like.

These measures are reported by disability status (profound or severe, other disability, all disability, without disability) and for all older people. Disability status is used as a 'proxy' to identify those older people who might need more assistance to support their social participation in the community.

High or increasing proportions of social participation in the community are desirable, as it indicates higher levels of wellbeing and independence.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions
- complete (subject to caveats) for the current reporting period. All required 2012 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Nationally in 2012, the estimated proportion of people aged 65 years or over who participated in any social or community activities away from home in the last three months was 93.2 ± 0.6 per cent (table 13A.63). Participation in these activities was 82.7 ± 1.8 per cent for people with profound or severe disability, 94.5 ± 0.3 per cent for other people with disability and 95.6 ± 0.5 per cent for those without disability (figure 13.35).

Figure 13.35 Participation of people aged 65 years or over in any social or community activities away from home in the last three months, by disability status, 2012^{a, b, c}

^a Data used to derive this figure have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals (table 13A.63). ^b The rates reported in this figure include 95 per cent confidence intervals. ^c Data for the NT should be used with caution as very remote areas were excluded from the Survey of Disability, Ageing and Carers. This translates to exclusion of around 23 per cent of the NT population.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers 2012*; table 13A.63.

Nationally in 2012, the estimated proportion of people aged 65 years or over who had face-to-face contact with family or friends not living in the same household at least once in the last week was 78.1 ± 1.0 per cent (table 13A.64). Older people without disability were more likely than those with profound or severe disability to have face-to-face contact with family or friends not living in the same household in the last week (78.9 ± 1.3 per cent compared to 74.8 ± 1.4 per cent) (figure 13.36). Data on face-to-face contact with family or friends not living in the same household, in the last month and last three months are in table 13A.64.

Figure 13.36 **People aged 65 years or over who had face-to-face contact with family or friends not living in the same household in the last week, by disability status, 2012^{a, b, c, d}**

^a Data used to derive this figure have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals (table 13A.64). ^b The rates reported in this figure include 95 per cent confidence intervals. ^c At least once in the last week includes people who had face-to-face contact with family or friends not living in the same household every day or at least once in the last week. ^d Data for the NT should be used with caution as very remote areas were excluded from the Survey of Disability, Ageing and Carers. This translates to exclusion of around 23 per cent of the NT population.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers 2012*; table 13A.64.

Nationally in 2012, the estimated proportion of people aged 65 years or over who did not leave home or did not leave home as frequently as they would like was 16.2 ± 0.8 per cent (figure 13.37). A higher proportion of older people with profound or severe disability (46.8 ± 2.5 per cent) did not leave home or did not leave as often as they would like, than for other older people especially those without disability (6.4 ± 0.7 per cent). Nationally, the two main reasons older people did not leave home as frequently as they would like was their own disability/condition or they could not be bothered/nowhere to go (table 13A.65).

Figure 13.37 People aged 65 years or over who did not leave home or did not leave home as often as they would like, by disability status, 2012^{a, b, c, d}

^a Data used to derive this figure have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals (table 13A.65). ^b The rates reported in this figure include 95 per cent confidence intervals. ^c Data for people with 'other disability' in the NT and for older people without disability in the ACT and the NT have a RSE of between 25 per cent and 50 per cent. ^d Data for the NT should be used with caution as very remote areas were excluded from the Survey of Disability, Ageing and Carers. This translates to exclusion of around 23 per cent of the NT population.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers 2012*; table 13A.65.

Maintenance of individual physical function

'Maintenance of individual physical function' is an indicator of governments' objective for aged care services to promote the health, wellbeing and independence of older people and is measured using data for the TCP only (box 13.18).

Box 13.18 Maintenance of individual physical function

Maintenance of individual physical function' is defined as the improvement in the Transition Care Program (TCP) client's level of physical function, reflected in the difference between the average Modified Barthel Index (MBI) score on entry to the TCP to the average MBI score on exit from the TCP. The minimum MBI score is 0 (fully dependent) and the maximum score is 100 (fully independent).

This indicator needs to be interpreted with caution. The TCP operates with some differences across jurisdictions including differences in health and aged care service systems, local operating procedures and client groups. Variation in the average MBI scores on entry and exit from the program may reflect a range of target client groups for the program across jurisdictions. An increase in the score from entry to exit is desirable.

The TCP is a small program at the interface of the health and aged care systems. A person may only enter the TCP directly upon discharge from hospital. The average duration of care is around 8 weeks (62 days for completed episodes), with a maximum duration of 12 weeks that may in some circumstances be extended by a further 6 weeks. It may be possible to develop measures for other aged care programs such as residential aged care and community aged care services which would be indicators of maintenance of individual physical function.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and overtime
- complete for the current reporting period (subject to caveats). All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The average Modified Barthel Index (MBI) score on entry to the TCP in 2013-14 was 72 nationally. The average MBI score on exit from the TCP was 82 nationally (figure 13.38). This was an average increase in the score of 10 nationally.

Figure 13.38 Transition Care Program — average MBI score on entry and exit, 2013-14^{a, b}

MBI = Modified Barthel Index. ^a The MBI is a measure of functioning in the activities of daily living, ranging from 0 (fully dependent) to 100 (fully independent). Data are reported for TCP recipients who completed a transition care episode. ^b Different health and aged care service systems, local operating procedures and client groups can affect the outcomes of the TCP across jurisdictions.

Source: DSS (unpublished); table 13A.66.

Hospital leave days from residential aged care for preventable causes

‘Hospital leave days from residential aged care for preventable causes’ has been identified for development as an indicator of governments’ objective to provide high quality and safe residential aged care services (box 13.19).

Box 13.19 Hospital leave days from residential aged care for preventable causes

‘Hospital leave days from residential aged care for preventable causes’ is yet to be defined.

Low or decreasing proportions of residential aged care days on hospital leave due to selected preventable causes are desirable.

When developed for future reports, this indicator will show the proportion of residential aged care days that are taken as hospital leave for selected preventable causes.

Enabling people with care needs to live in the community

‘Enabling people with care needs to live in the community’ has been identified for development as an indicator of governments’ objective to delay entry to residential care when a person’s care needs can be met in the community (box 13.20).

Box 13.20 Enabling people with care needs to live in the community

‘Enabling people with care needs to live in the community’ is yet to be defined.

High or increasing rates of people with care needs remaining and participating in the community are desirable.

When developed for future reports, this indicator will show the extent to which older people’s entry to residential care is delayed.

13.4 Future directions in performance reporting

For several aspects of aged care services, indicators are not fully developed and there is little performance reporting available. Priorities for the future include:

- continued improvement of equity and efficiency indicators
- improved reporting of elapsed times for aged care
- improved reporting of hospital patient days used by aged care type patients
- inclusion of data on hospital leave days for preventable causes as they become available
- development of performance indicators relevant to the aged care reforms
- further development of outcome indicators, including possible improvements to the current reporting on the TCP.

In 2012, the Australian Government announced a package of reforms to aged care. On 28 June 2013, to implement these reforms, a package of Bills amending the *Aged Care Act 1997* was passed into law. The key reform implemented since 1 July 2014 that will have a significant effect on reporting in the next version of this Report is the removal of the distinction between high care and low care in permanent residential aged care (table 13.21). A number of other reforms implemented since 1 July 2014 are also outlined in box 13.21.

Box 13.21 **Aged care reforms**

The Australian Government's aged care reforms were developed in response to the Productivity Commission's *Caring for Older Australians Report*. The focus of the reforms is to make the structural changes needed to ensure the future sustainability of Australia's aged care system. The key elements of the new aged care system are designed to provide for:

- greater choice and control over aged care arrangements for consumers
- new and more equitable ways of meeting the ever increasing costs of aged care
- ensuring that the most vulnerable in our society are fully protected
- the aged care sector working more closely with the wider health system to tackle key health challenges in particular, the increasing prevalence of dementia, and support for end of life care
- a single identifiable entry point for consumers, called the Aged Care Gateway
- access to aged care based on need and not the ability to pay.

The key reforms implemented from 1 July 2014 include the following:

- Two fee estimators were made available for consumers, families and carers to estimate fees payable for entering residential or home care.
- Income testing for home care fees commenced including reduction in subsidies.
- Providers commenced publishing residential care accommodation prices on the My Aged Care website.
- A means test replaced separate income tests for residential aged care fees and assets test for accommodation payments.
- Refundable Accommodation Deposits (RADs) and Daily Accommodation Payments (DAPs) replaced accommodation bonds and accommodation charges for new residential aged care recipients.
- Restrictions on accommodation pricing in high care residential settings were removed.

(Continued next page)

Box 13.21 (continued)

- There was an increase in the accommodation supplement paid to new or significantly refurbished residential care facilities. The maximum level of the accommodation supplement in residential care facilities was increased from \$32.58 to \$52.84 per day to certified providers who meet the 'significant refurbishment' criteria.
- The Schedule of Specified Care and Services for residential care services was reviewed and modernised.
- ACAT approvals for residential aged care are now indefinitely valid, unless approval is for a specific period.
- The distinction between high care and low care in permanent residential aged care was removed, all permanent residential aged care is now provided on an 'ageing in place' basis.
- The Aged Care Pricing Commissioner commenced approving costs for extra services and accommodation prices greater than \$550 000.

Source: DSS (unpublished).

13.5 Jurisdictions' comments

This section provides comments from each jurisdiction on the services covered in this chapter.

Australian Government comments

“

In an effort to ensure that we get the best outcomes for older Australians, now and into the future, a number of changes were implemented on 1 July 2013 and 1 July 2014.

These changes lay the groundwork for longer term changes that will be needed to meet increasing demands on our aged care system.

In 2013-14, the recurrent expenditure on aged care was \$14.8 billion and included aged care support and assistance provided under and outside the *Aged Care Act 1997*.

Reporting on aged care services in 2013-14 was revised to reflect changes for community and flexible aged care, with continued improvements being made to the coverage and quality of the data.

The provision of Government funded aged care services for older people include information and assessment, residential care, community care, respite and services that are delivered in mixed settings, such as flexible care and specific support services.

The demand for aged care services will continue to be driven by the size and health of the older population.

The Government is continuing to introduce further changes to the aged care system, including the way that care is provided to older people in their homes and community. Home care packages will be delivered on a consumer directed care basis — giving consumers more choice, control and flexibility in the way their care and support is provided.

The functionality of My Aged Care will be increased, providing a simple and effective entry point into the aged care system, while also providing increased transparency and information on aged care services.

The Commonwealth HACC Programme, the Day Therapy Centres Programme, the National Respite for Carers Programme and the Assistance with Care and Housing for the Aged programme will be rolled into one programme — the Commonwealth Home Support Programme. This will provide basic maintenance, care, support and respite services for older people living in the community and their carers.

The changes to aged care are also aimed at reducing the red tape burden on aged care providers to increase business flexibility and allow them to focus on meeting the needs of their consumers.

The Government will continue to work with the aged care sector to deliver quality, affordable and accessible aged care and carer support services for older people.

”

New South Wales Government comments

“

The NSW Government's first report on progress with implementation of its 2012 Ageing Strategy covers activities undertaken by government and non-government agencies during 2013-14. A key action is to prevent and address abuse against older people. The Elder Abuse Helpline and Resource Unit started operating in March 2013. The revised interagency policy on *Preventing and responding to the abuse of older people* is being implemented across NSW.

Keeping people healthy and out of hospital is a priority for NSW Health under the Ageing Strategy. Initiatives include the NSW Aboriginal Health Plan 2013–2023, developed in partnership with the Aboriginal Health and Medical Research Council, identifies six key strategic directions to close the gap in Aboriginal health outcomes including specific actions designed to achieve the goal of keeping Aboriginal people healthy and out of hospital.

The NSW Minister for Health launched its Advance Planning for Quality Care at End of Life: Action Plan 2013–2018 in July 2013. Projects include developing a standardised Resuscitation Plan for NSW; developing an End of Life Model of Care; piloting 'AMBER Care Bundles' as a means of better identifying those in the last months of life; releasing state standards for death auditing including assessing for prior advance care planning; and finalising release of a resource for health professionals on end of life decisions and the law in NSW.

The NSW Healthy Eating and Active Living Strategy 2013–2018 provides a whole of government framework to promote and support healthy eating and active living in NSW and to reduce the impact of lifestyle-related chronic disease.

A key direction of the NSW State Health Plan launched in June 2014 is to deliver truly integrated care. Consistent with the NSW Health Integrated Care Strategy, it sets a new direction for the health system and for transforming the way services are provided for patients. The NSW Government will be investing \$120 million over four years in new and innovative models of integrated care.

NSW Health will continue to manage the Aged Care Assessment Program in NSW through to 30 June 2016 after which responsibility for delivery of ACAT services moves under the Commonwealth's My Aged Care gateway. It also continues to operate the 1378 Transition Care places allocated to NSW. At June 2014, 44 Transition Care services provided 138 (10 per cent) residential places, 1205 (87.5 per cent) community places and 35 (2.5 per cent) 'mixed setting' places.

The Agency for Clinical Innovation (ACI), one of the NSW Health pillars, is developing a Framework for integrating the care of older people with complex health needs. Another ACI project is CHOPS (Care of Confused Hospitalised Older Persons) in recognition that confusion or cognitive impairment is a common condition for older people in hospital. The ACI has developed *Key Principles for Care of Confused Hospitalised Older Persons* to assist hospitals identify key components of best practice management of confusion in the older person that will support optimal patient care across NSW.

”

Victorian Government comments

“ A number of important change initiatives were underway in Victoria in 2013-14, that will contribute to shaping Victoria’s role in ageing and aged care for the future.

Victoria and the Commonwealth have been negotiating a complex range of issues associated with implementing changed roles and responsibilities in Home and Community Care (HACC). They include base funding for agencies following transition and the means for retaining the benefits of the Victorian HACC system.

Some important features of Victoria’s HACC system are being built into the new Commonwealth Home Support Program and the Aged Care Gateway or single point of access to services. The acceptance by the Commonwealth Government of a wellness promoting model of service delivery as a key policy focus and the importance of face to face assessment when a person makes initial contact with the Aged Care Gateway is welcomed.

Victoria and the Commonwealth have also jointly engaged with service providers and other stakeholders across the State.

In September 2013, Mr Gerard Mansour was appointed as the first Commissioner for Senior Victorians and Chair of the newly appointed Ministerial Advisory Committee of Senior Victorians (MACSV).

The terms of reference of the MACSV include the development of a whole of government older persons action plan, provision of advice to the Minister and departments across Government, and consideration of opportunities for improving the perceptions of older people in society and opportunities for intergenerational collaboration.

The prime focus of the work of the MACSV in this period has been the development of *Seniors Count! – The Victorian Seniors Participation Action Plan*, which was finalised by the MACSV in June.

”

Queensland Government comments

“

The Queensland Government is committed to delivering its primary role of providing a quality health system for all Queenslanders by delivering public hospital and health services such as elective surgery and emergency department services. In recognition of its primary role, the Queensland Government is continuing to transfer residential aged care places to non-government providers having regard to local circumstances and capacity. This recognises that non-government providers of residential aged care already provide over 95 per cent of residential aged care places in Queensland and have the necessary expertise and capacity to provide high quality services.

During 2013-14, Queensland Hospital and Health Services (HHSs) continued to examine their role in providing residential aged care services to determine whether these could be more appropriately delivered by non-government providers. In addition, HHSs have continued to assess their role in providing community services under the Commonwealth Home and Community Care (HACC) Program and where appropriate, relinquished funding to the Commonwealth for reallocation to non-government providers. This process has allowed HHSs to focus on the provision of public hospital services, whilst strengthening the capacity of the non-government sector.

The Queensland Government will continue to be a provider of residential aged care services and HACC Program services in circumstances where no other alternative providers are willing or able to provide services or for people who have high and complex care needs that are unable to be met by other providers.

HHSs have continued to work closely with Medicare Locals as well as primary health and aged care providers to improve the integration of services for older people between the different sectors. This work, similar to 2012-13, has contributed to the continued downward trend in the number of longer stay older patients remaining in public hospitals who are in need of aged care services. In addition, the Government has continued to support a range of clinical networks such as the Queensland Clinical Senate, the Statewide Dementia Clinical Network and the Statewide Older People's Clinical Network to drive service improvements in the care of older people.

Queensland provided 733 transition care places across the state assisting more than 3000 older people in 2013-14 to regain or maximise their level of independence following discharge from hospital.

”

Western Australian Government comments

“ During the past 12 months the Western Australian (WA) Aged Care Advisory Council has supported two key dementia initiatives for the health and community care sectors in WA. The overarching aim is to achieve better outcomes and quality of life for people with dementia and their carers through improved service delivery.

The establishment of the Dementia Partnership Project in conjunction with Alzheimer’s Australia WA in January 2014 represents a significant investment in the community care sector and its capacity to provide high quality support to people living with dementia in the community. Utilising a train the trainer, change management model the Dementia Partnership Project has already provided mentoring for community care providers, opportunities for professional development and established a network of 13 Dementia Champions across 10 community care service providers.

In respect of acute hospitals, work commenced on the objective of improving hospital performance when screening, assessing and supporting patients with cognitive impairment. A key output is development of a framework for improvement that can be applied by hospitals. These projects are founded on recommendations from the WA models of care for dementia and delirium and the work aligns with the national Framework for Action on Dementia.

State-wide implementation of the WA Assessment Framework was achieved during the past twelve months with the outcome being improved pathways, communication and information sharing arrangements, and all relevant client information being available on the web-based client management system. The colocation and shared in-take process of country Regional Assessment Services with the Aged Care Assessment Teams has led to significantly improved coordination of care and reduced duplication of assessment.

Reablement interventions are also being utilised by a number of Regional Assessment Services with results independently evaluated as part of the ‘Measuring the impact of community care’ research commissioned by the WA Home and Community Care Program. Findings of this research continue to inform assessment and service delivery practice in WA and will be shared with the Commonwealth to inform the development and implementation of the Home Support Program.

The Department of Health has completed a Tender process for the provision of 331 Transition Care places to ensure the continued access in the metropolitan and rural areas. In accordance with National *Transition Care Program Guidelines* Quality Improvement Framework, WA completed the community based Transition Care services quality audits in April 2013 and has commenced the 2nd residential audit cycle.

”

South Australian Government comments

“

In 2013-14, SA has implemented a wide range of initiatives as part of its vision for an all ages friendly state outlined in the *Prosperity Through Longevity: South Australia's Ageing Plan Action 2014–2021* released in February 2014.

In June 2014 the SA Government released its *Strategy to Safeguard the Rights of Older South Australians 2014–2021*, which focuses on preventing the abuse of older people carried out by someone the older person knows and trusts. It raises awareness of physical, psychological, social, sexual, chemical and financial abuse, accidental or deliberate that can occur particularly during times of increased vulnerability and provides direction for preventing and responding to elder abuse issues. To activate the strategy, SA is undertaking development of a state government action plan for initiatives to enable a range of responses to key strategic areas to be implemented under the action plan over a seven year time frame. This will be released in 2014-15.

On 27 November 2013 the Parliamentary Select Committee on the Review of the *Retirement Villages Act 1987* tabled its report and recommendations. The state government response has comprised of three elements: the establishment of a retirement Village Residents' Advocacy Service, Better Practice Guidelines and proposed legislative amendments seeking to achieve a balance between the interests of residents and operators.

The *Advanced Care Directives Act 2013* will commence legal operation on 1 July 2014. The new rights based legislation enables adults to put in place clear legal arrangements for their future health care, residential, accommodation and personal matters and/or appointed trusted people to make such decisions in the event of future incapacity, whether temporary or permanent. A user friendly toolkit has been prepared and will be promoted widely to support this important safeguard for South Australians.

SA provided restorative care services to older people across the state through its 347 Transition Care Program places and provided health and aged care services to people living in rural and remote areas across the state through 14 Multi-purpose Health Services.

”

Tasmanian Government comments

“

- Tasmania's population is ageing more rapidly than any other Australian jurisdiction. Tasmania has the highest proportion of the population who are over 65 years of age (17.7 per cent) and it is anticipated that future demand for aged care services will increase at a significantly faster rate than the rate of availability. Tasmania is also likely to have more people per capita with dementia than any other state or territory.
- Population ageing will continue to have a significant impact on hospitalisation rates in Tasmania. While the Australian Government has assumed full funding and management responsibility for the provision of aged care services to people over 65 years of age, the Tasmanian Government retains a strong interest in those services and their impact on the broader health and human services system as older people use a broad range of Tasmanian Government health and human services, including public hospital services.
- It is likely that there will continue to be a complex relationship between aged care and health services for older people and their families. With increasing demand associated with the ageing of the population, it is important that avoidable hospitalisations and long-stays by older people are minimised and well managed.
- From 2006 until 2014, the Australian Government funded Long Stay Older Patients (LSOP) initiatives underpinned effective programs in Tasmania for diverting older people away from, or reducing their necessary stay in, hospital care. Tasmania's public hospitals have also implemented their own strategies, such as purchasing temporary beds in private aged care facilities to facilitate the transition for older people from hospital to home or into residential care.
- The funding provided through the *National Partnership Agreement (on Financial Assistance for LSOP — 2011-12 to 2013-14)*, enabled Tasmania to support older patients in public hospitals who no longer required acute or subacute care but were waiting for residential aged care. Most State and Territory governments' reported that this Australian Government funding enabled the implementation of valuable interventions to mitigate the problem of longer stay older patients.
- The Tasmanian Government is concerned that, with the expiry of the current funding arrangement in June 2014, the successful programs now in place are at risk and that the numbers of older people remaining for excessive periods in hospital will again increase due to the sufficient unavailability of safe and appropriate aged care services.
- Despite an increase in demand, total expenditure on aged care services in Tasmania decreased by 4.8 per cent in 2013-14 compared to the previous year (partly as a result of the winding down of the LSOP program) and this decrease is likely to be greater in 2014-15 with the discontinuation of the program and a decrease in related Australian Government funding.

”

Australian Capital Territory Government comments

“

- In September 2014, the ACT signed the new *Agreement for the Payment of Flexible Care Subsidy for Transition Care* and the associated *Transition Care Programme Guidelines 2014*. The ACT was an active member of the Transition Care Working Group (TCWG) and provided feedback on both the draft Agreement and Programme Guidelines leading to the final documents.
- In line with the new 2014–16 ACT Aged Care Assessment Program Agreement was signed in August 2014, the ACT continued to contribute to the Commonwealth's Government's aged care reforms through the development of a national screening and assessment form and training requirements for the screening and assessment workforce as part of the My Aged Care initiative.
- Following the launch of the ACT Palliative Care Services Plan 2013-17 in October 2013, the ACT Palliative Care Clinical Network (the Network) has been formed. Meeting monthly, the Network is currently finalising its Action Plan for the implementation of measures including strategies to support people to die at home, and models of care that work to minimise unwanted interventions at end-of-life, especially for Residential Aged Care Facility residents, such as exploration of extended scope of practice for ACT Ambulance Services.
- Launched in May 2013, the ACT Chronic Conditions Strategy 2013-18 sets the direction for the care and support of those living with chronic conditions in the ACT. Sizable projects during the reporting period have included the development of ACT localised integrated HealthPathways of care (a jointly funded project by ACT Health and ACT Medicare Local (ACTML) to progress chronic disease management and coordination); and the promotion of Advance Care Plans (ACP). Promotion included a joint project undertaken with ACTML to provide education and support to local GPs, Residential Aged Care Facilities and the local community. In March 2014 a promotional campaign "Be My Voice" was conducted to increase uptake of ACP generally.

”

Northern Territory Government comments

“

- The Australian Government Department of Social Services continues to provide Aged Care Funding for Dementia Nurse Services, Specialist Community Care Nurses and HACC Equipment program for HACC clients in the Northern Territory. (Eligibility: 65 years and over; and 50 years and over for Aboriginal and Torres Strait Islander persons)
- The Equipment program has continued to grow since its establishment in July 2012, providing assessments and equipment for HACC eligible aged clients across the NT. The delivery of this program is currently contracted to the NT Department of Health until 30 June 2015.
- The NT continues to provide comprehensive aged care assessments as per the Aged Care Assessment Program agreement. In the period from 1 July 2013 to 30 June 2014 the NT Aged Care Assessment Teams (ACAT) received 1163 referrals. A total of 988 referrals resulted in delegated assessments and approvals. The delivery of this program is currently under contract to the NT Department of Health until 30 June 2016.
- Throughout the last year the ACAT teams have continued to successfully utilise the electronic Aged Care Evaluation software throughout the NT, which enables the electronic transfer of ACAT assessments direct to Medicare
- During 2013-14, the NT Transition Care Program provided services to frail aged persons throughout the NT. The goal oriented, time-limited and therapy focussed care is for older persons following a hospital stay. There are 29 allocated places under the Transition Care Program in the NT. These packages are provided throughout the Territory and are managed and co-ordinated by the NT Department of Health.
- The NT Psychogeriatric Service gained approval for ongoing funding for two positions in each of the Health Services. The program continues to provide intervention, assessment and case management to elderly people with mental health disorders, cognitive impairment and ageing issues.
- Memory Clinics continue to be delivered collaboratively by the Community Geriatrician and the Dementia Nurse Services. These are delivered in Darwin, Palmerston, Alice Springs, Katherine and have included several remote locations. The number of people referred for cognitive assessment, diagnosis and management continues to escalate and it is expected specialist staff increases will be required to meet this increasing demand.

”

13.6 Definitions of key terms

| | |
|--|---|
| Adjusted subsidy reduction supplement | <p>An adjusted subsidy reduction supplement is a payment made by State governments to some public sector residential care operators to offset the effect of the Australian Government's adjusted subsidy reduction. The adjusted subsidy reduction reduces the daily rate of Residential Care Subsidy paid by the Australian Government in respect of certain residential aged care places owned by State governments or State public sector organisations. The rate of the reduction is determined by the relevant Commonwealth Minister from 1 July each year, in accordance with section 44-19 of the <i>Aged Care Act 1997</i>.</p> |
| Accreditation | <p>Accreditation is a key component of the Australian Government's quality framework for federally funded residential aged care and is a quality assurance system for residential aged care services — based on the principle of continuous improvement.</p> <p>Accreditation requires assessment against the 44 expected outcomes used for accreditation assessment — grouped into four standards: management systems, staffing and organisational development; health and personal care; residential lifestyle; and physical environment and safety systems.</p> |
| Aged care | <p>Formal services funded and/or provided by governments that respond to the functional and social needs of older people, and the needs of their carers. Community aged care services aim to optimise independence and to assist older people to stay in their own homes, while residential care services provide accommodation and care for those who can no longer be assisted to stay at home. Assessment of care needs is an important component of aged care.</p> <p>The majority of aged care services assist in activities of daily living such as personal care (for example, bathing and dressing), housekeeping and meal provision. Other services aim to promote social participation and connectedness. These services are delivered by trained aged care workers and volunteers. However, aged care services may also be delivered by health professionals such as nurses and occupational therapists.</p> <p>Aged care services generally aim to promote wellbeing and foster function rather than to treat illness. Although some aged care services such as transition care have a specific restorative role, they are distinguished from the health services described in Part E of this Report.</p> <p>Aged care services may be funded through programs specifically or mainly directed to older people, or through programs that address the needs of people of different ages.</p> |
| Aged care target population | <p>The Aged Care target population is defined as all people (Aboriginal and Torres Strait Islander and non-Indigenous) aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. This is the population specified in the <i>National Health Reform Agreement</i> who are within the scope of, and funded for services under, the national aged care system (except in Victoria and WA).</p> |
| Aged care planning population | <p>The Aged care planning population is defined as people aged 70 years or over. This is the population used by the Australian Government for its needs-based planning framework to ensure sufficient supply of both low-level and high-level residential and community care places by matching the growth in the number of aged care places with growth in the aged population. It also seeks to ensure balance in the provision of services between metropolitan, regional, rural and remote areas, as well as between people needing differing levels of care (DoHA 2012).</p> <p>Under the framework, the Australian Government seeks to achieve and maintain a specified national provision level of subsidised operational aged care places for every 1000 people aged 70 years or over. This provision level is known as the aged care provision ratio (DoHA 2012).</p> |

| | |
|---|---|
| Ageing in place in residential care | <p>An approach that aims to provide residents with appropriate care and increased choice by allowing them to remain in the same facility regardless of changes in their level of care needs. It also allows couples with different levels of care needs to be cared for in the same facility. The main facet of 'ageing in place' is that funding is tied to the assessed care needs of the client rather than to the services provided by the facility.</p> <p>One of the objectives of Australian Government aged care legislation is 'to promote ageing in place through the linking of care and support services to the places where older people prefer to live' (<i>Aged Care Act 1997</i> (Cwlth), s.2-1 [1j]).</p> |
| Capital expenditure on residential services | Expenditure on building and other capital items, specifically for the provision of Australian government funded residential aged care. |
| Care leaver | A care leaver is a person who was in institutional care (such as an orphanage or mental health facility) or other form of out-of-home care, including foster care, as a child or youth (or both) at some time during their lifetime (DoHA 2012). |
| Centre day care | Respite care provided from a facility such as a day care or health centre. Respite care is usually combined with social support services to maintain the functional capabilities of the person receiving care. |
| Commonwealth Home and Community Care Program | Services to support frail older people and their carers, who live in the community and whose capacity for independent living is at risk, or who are at risk of premature inappropriate admission to long-term residential care. Older people are people aged 65 years and over and Aboriginal and Torres Strait Islander people aged 50 years and over. |
| Comparability | Data are considered comparable if (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data. |
| Complaint | A complaint by the affected care recipient or his or her representative, or anyone else, to the Secretary of the Department of Social Services about matters relevant to an approved provider's responsibilities under the <i>Aged Care Act 1997</i> or the Aged Care Principles or a service provider's responsibilities under the Commonwealth HACC funding agreement. |
| Completeness | Data are considered complete if all required data are available for all jurisdictions that provide the service. |
| Dementia services program | Includes flexible and innovative support, respite, counselling, information and referral services, education and leisure. The program includes meeting individual and immediate needs which cannot be met by other services, through carer respite services and other carer support agencies. Inpatient services are excluded. |
| Disability | A limitation, restriction or impairment that has lasted, or is likely to last, for at least six months and restricts everyday activities. |
| EBA supplement | Payments made to supplement services for the extra costs associated with public sector enterprise bargaining agreements over and above those required by other wage Awards. |
| Elapsed time | The measure of the time elapsed between ACAT approval and entry into a residential care service. It has been used in past years as an indicator of access to residential care. |
| HACC target population | The HACC target population is people in the Australian community who, without basic maintenance and support services provided under the scope of the HACC Program, would be at risk of premature or inappropriate long term residential care, including older and frail people with moderate, severe or profound disabilities. The HACC target population is estimated by applying the proportion of all people with moderate, severe or profound disability in households, by sex and five year age groups, from the ABS <i>Survey of Disability, Ageing and Carers</i> (SDAC) to population projections for the total population in each jurisdiction. To calculate the Aboriginal and Torres Strait Islander 50–64 year component of the HACC target population for older people, the proportion of all people aged 50–64 years in |

| | |
|---|--|
| High/low care recipient | <p>households with moderate, severe or profound disability was multiplied by an additional Indigenous factor of 1.9 (from ABS unpublished analysis) and then applied to DSS Aboriginal and Torres Strait Islander population projections in the 50–64 years age groups in each jurisdiction. The HACC target population for June 2014 is based on SDAC 2012 while HACC target populations for previous years are based on SDAC 2009. See table 13A.2 for details about the total population projections and the Aboriginal and Torres Strait Islander population used in these calculations.</p> <p>On entry, a resident is classified as high or low care based on their approval by an ACAT and their approved provider's appraisal of their care needs under the ACFI.</p> <p>Residents whose ACAT approval is not limited to low care are classified as high care if they have an ACFI appraisal of:</p> <ul style="list-style-type: none"> • high in Activities of Daily Living, or • high in Complex Health Care, or • high in Behaviour, together with low or medium in at least one of the Activities of Daily Living or Complex Health Care domain, or • medium in at least two of the three domains. <p>All other ACAT approval and ACFI appraisal combinations result in a classification of low level care.</p> <p>A resident's care needs may change over time resulting in a change in classification from low to high level care (ageing in place).</p> |
| In-home respite | A short term alternative for usual care. |
| People from non-English speaking countries | People who were born in non-English speaking countries. English-speaking countries are defined as Australia, New Zealand, the United Kingdom, Ireland, the United States, Canada and South Africa. |
| People with disability | <p>A person with a profound disability is unable to do, or always needs help with, a core activity task.</p> <p>A person with a severe disability:</p> <ul style="list-style-type: none"> • sometimes needs help with a core activity task, and/or • has difficulty understanding or being understood by family or friends, or • can communicate more easily using sign language or other non-spoken forms of communication. <p>A person with a moderate disability needs no help, but has difficulty with a core activity task.</p> |
| Personal care | Assistance in undertaking personal tasks (for example, bathing). |
| Places | A capacity within an aged care service for the provision of residential care, community care or flexible care in the residential care context to an individual (<i>Aged Care Act 1997 (Cwlth)</i>); also refers to 'beds' (<i>Aged Care (Consequential Provisions) Act 1997 (Cwlth)</i> , s.16). |
| Real expenditure | Actual expenditure adjusted for changes in prices, using the GDP(E) price deflator and expressed in terms of final year prices. |
| Resident | For the purposes of the <i>Aged Care Act 1997</i> , a person who is being provided with residential care through an aged care service conducted by an approved provider under the Act. |
| Respite care | Alternative care arrangements for dependent people living in the community, with the primary purpose of giving a carer or a care recipient a short term break from their usual care arrangement. |
| Rural small nursing home supplement | Payments made by states and territories to small sized high care public sector residential aged care facilities (up to 30 places) that are located in rural areas. Three levels of supplement are paid to facilities varying in size from 10 to 20 and 30 places. |
| Special needs groups | Section 11-3 of the <i>Aged Care Act 1997</i> , specifies the following people as people with special needs: people from Aboriginal and Torres Strait Islander communities; people from culturally and linguistically diverse backgrounds; veterans; people who live in rural or remote areas; people who are financially or socially disadvantaged; people who are homeless or at risk of becoming homeless; care-leavers; parents separated from their children by forced adoption or removal; and lesbian, gay, bisexual, transgender and intersex (LGBTI) people. |

Veterans

Veterans, war widows, widowers and dependants who hold a Repatriation Health Card and are entitled to health services and treatment under the *Veterans' Entitlements Act 1986* (VEA), *Safety, Rehabilitation and Compensation Act 1988* (SRCA) or the *Military Rehabilitation and Compensation Act 2004* (MRCA).

13.7 List of attachment tables

Attachment tables are identified in references throughout this chapter by a '13A' prefix (for example, table 13A.1). Attachment tables are available on the Review website (www.pc.gov.au/gsp).

13A Aged care services — attachment

Definitions for the indicators and descriptors in this attachment are in section 13.6 of the chapter. Unsourced information was obtained from the Australian, State and Territory governments.

Data in this Report are examined by the Aged Care Services Working Group, but have not been formally audited by the Secretariat.

Data reported in the attachment tables are the most accurate available at the time of data collection. Historical data may have been updated since the last edition of RoGS.

This file is available in Adobe PDF format on the Review web page (www.pc.gov.au/gsp).

(a) Data from this table are not used to calculate the target population for the chapter. Target population data for the chapter are reported in table 13A.2.

(b) See footnotes to table 13A.2 for detail on regional data classification.

Source: Department of Social Services (DSS) projections of the total population are based on the 2012 Estimated Resident Population (ERP). These projections were prepared at Statistical Area 2 (SA2) level for DSS by the Australian Bureau of Statistics (ABS) according to assumptions agreed to by DSS.

(a) For data before June 2013, geographical data are based on the ABS Australian Standard Geographic Classification (ASGC). Data are classified according to an index of remoteness which rates each ABS census district based on the number and size of towns, the distance to major towns and urban centres. For more information refer to the Australian Standard Geographic Classification (ABS Publication 1216.0). From 2013, remoteness areas are based on the Australian Statistical Geographic Standard (ASGS).

Table 13A.2 **Aged care target population data, by location ('000) (a), (b), (c)**

|--|-----|-----|-----|----|----|-----|-----|----|------|
|--|-----|-----|-----|----|----|-----|-----|----|------|

- (b) Data for total population aged 65 years or over and 70 years or over are based on Statistical Local Area (SLA) (for 2008 to 2013) or Statistical Area 2 (SA2) (for 2014) population projections prepared by the Australian Bureau of Statistics (ABS) for the Department of Health and Ageing (DoHA) or the Department of Social Services (DSS) according to assumptions agreed to by DoHA/DSS. Data for June 2008 are 2006 Census-based preliminary population projections for 2006–2026. Data June 2009–2012 are 2006 Census-based population projections for 2006–2026 based. Data for 2013 are 2011 Census based preliminary population projections for 2011–2026. Data for 2014 are revised population projections (based on the 2012 Estimated Residential Populations (ERPs) for 2012–2027.
- (c) Data in this table are utilised to determine the target populations for the chapter.
- (d) Aboriginal and Torres Strait Islander data for 2008 are Aboriginal and Torres Strait Islander estimates based on ratios from ABS Census 2001 data applied to population projections by SLA 2002–2022. Data for June 2009 are determined as follows: observed average annual growth at state-level in ABS Experimental Aboriginal and Torres Strait Islander ERPs between 2001 and 2006 for total Aboriginal and Torres Strait Islander people of all ages was applied to project 2006 ERPs forward to 2009. The increase from 2001 to 2006 contains unexplained population increase in addition to demographic population increase. Aboriginal and Torres Strait Islander population estimates for June 2010 are based on ratios from ABS 2006 Census-based Experimental Aboriginal and Torres Strait Islander ERP data applied to population projections by SLA 2006–2026 (unpublished, produced for DoHA by ABS).
- (e) From June 2011-2013, Aboriginal and Torres Strait Islander population projections were prepared from ABS 2006 Aboriginal and Torres Strait Islander Experimental ERP data (at SLA level) projected forward so as to align with published ABS *Aboriginal and Torres Strait Islander Experimental Estimates and Projections* (ABS cat no 3238.0, series B) at the state level.
- (f) For June 2014, Aboriginal and Torres Strait Islander projections align closely to ABS 3238.0 — Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026 (which are 2011 Census-based). These projections have been adjusted slightly by DSS to include Other Territories.

.. Not applicable. – Nil or rounded to zero.

Source: Department of Health and Ageing (DoHA)/DSS (unpublished) population projections by SLA for 2002–2022, 2006–2026 or 2001–2026 prepared for DoHA/DSS by ABS according to assumptions agreed to by DoHA; ABS (2004) *Experimental Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 1991 to 2009*, Cat. no. 3238.0; ABS 2008, *Experimental Estimates of Aboriginal and Torres Strait Islander Australians, Jun 2006*, Cat. no. 3238.0.55.001; ABS (2014) *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026*, Cat. no. 3238.0.

- (a) Recipient numbers in care is a distinct count of clients at any time in the 12 month period to 30 June 2014. Clients may have care under multiple types or states, so a client may be counted twice. Population is people aged 65 years and over and Aboriginal and Torres Strait Islander Australians aged 50–64 years at 30 June 2014.
- (b) Data is presented at the program level only. Since an individual may receive services under more than one aged care program throughout the year, the number of unique individuals accessing aged care cannot be determined.
- (c) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care Programs – Community Aged Care Packages (CACP), Extended Aged Care at Home (EACH) packages and EACH Dementia (EACH-D) packages.
- (d) State and Territory is based on the location of the service provider outlet. For all programs excluding Home and Community Care (HACC), where a person moved from one State to another they are counted uniquely in each State. Thus, a person who moved between states within the year will be double counted, making the total number of people greater than the number of unique individuals receiving services under the program.

(e) Populations are derived as follows;

Age Group: Total population within each age bracket by state.

Indigenous Status, Aboriginal and Torres Strait Islanders: Total Aboriginal and Torres Strait Islander population aged 50+ by state.

Indigenous Status, Non-Indigenous: Total non-Indigenous and not stated population aged 65+ by state.

Indigenous Status, Not Stated: Figures are not provided as population data is not available.

na Not applicable. – Nil or rounded to zero. **np** Not published

TABLE 13A.4

Table 13A.4 **Government expenditure on aged care services, 2013-14 (\$ million)**

| | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |
|-----|---|-----|-----|----|----|-----|-----|----|------|
| (a) | The objective of Aged Care Assessment is to provide comprehensive multidisciplinary assessment of needs of older people, including delegated authority to approve people for Australian Government subsidised care through residential aged care, Home Care and flexible care. Australian Government funding is provided to State and Territory governments to operate Aged Care Assessment Teams (ACATs) and evaluation units. | | | | | | | | |
| (b) | Totals may not add due to rounding. | | | | | | | | |
| (c) | Australian Government (DoHA/DSS) expenditure includes State and Territory governments' funding of younger people with disability using residential aged care and home care. The State and Territory governments' funding of these services is identified separately (but is not double counted in the totals). | | | | | | | | |
| (d) | Recurrent funding to residential care providers is derived using accrual based reporting. Due to accrual adjustments, for smaller jurisdictions in particular, this can lead to significant year on year variation. Based on claims data, recurrent funding for each state and territory grew between 4.7 per cent and 9.6 per cent between 2012-13 and 2013-14. | | | | | | | | |
| (e) | The Department of Veterans' Affairs (DVA) expenditure figures are subject to lag and may therefore be subject to revision. All figures on the expenditure on veterans in residential aged care are sourced from data from the DSS. | | | | | | | | |
| (f) | Due to delays in finalising the 2013-14 Schedule B of the <i>National Partnership Agreement for Transitioning Responsibilities for Aged Care and Disability Services</i> , funds were not expended in 2013-14. Expenditure in 2013-14 for Queensland and the NT relates to the 2012-13 Schedule. | | | | | | | | |
| (g) | Detailed data and footnotes on the State and Territory governments' supplements paid to residential aged care facilities are in table 13A.10. | | | | | | | | |
| (h) | Reports provisional HACC estimates that may be subject to revision. Data are Australian Government expenditure on Commonwealth HACC services for older people under the national aged care program, except for Victoria and WA where it is expenditure under the <i>2007 HACC Review Agreements</i> . The expenditure in Victoria and WA is total program expenditure so includes expenditure on younger and older people. The estimated proportion of total HACC program expenditure spent on older people in Victoria and WA is around 75 per cent. | | | | | | | | |
| (i) | The category other home support includes expenditure on Assistance with Care and Housing for the Aged, Day Therapy Centres and other home support. | | | | | | | | |
| (j) | DVA community nursing expenditure data are at 18 September 2014. Figures are subject to significant claiming lag and may therefore be subject to revision. These figures may also differ slightly from the figures published in the DVA annual report for this reason. Community nursing program expenditure does not include an additional \$2 million that was spent on wound management consumables. | | | | | | | | |
| (k) | Veterans' Home Care (VHC) expenditure data are as at 30 June 2014. The VHC service provision expenditure does not include fees for respite care services, as these are paid under separate appropriations. Social Assistance is also not included. The 2013-14 appropriation for in-home and emergency respite was \$21.5 million. Residential respite is funded under the aged care appropriation and separate figures are not available. | | | | | | | | |
| (l) | Data relate to expenditure administered under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program which is aimed at providing quality, flexible, culturally appropriate aged care to older Aboriginal and Torres Strait islander people close to their home and community. | | | | | | | | |

| (m) The category Other flexible and residential aged care includes expenditure on Innovative Pool, Zero Real Interest Loans and other residential care and flexible care. | | | | | | | | | |
| (n) The total Workforce and Quality and Ageing and Service Improvement category includes expenditure on Aged Care Workforce Fund, Community Visitors Scheme and Advocacy Services, Indigenous Aged Care Workforce, Other Workforce and Quality, Aged Care Service Improvement and Healthy Ageing Grants, Continence Aids Payment Scheme and Other Ageing and Service Improvement. | | | | | | | | | |
| .. Not applicable. – Nil or rounded to zero. | | | | | | | | | |

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(b) The objective of Aged Care Assessment is to provide comprehensive multidisciplinary assessment of needs of older people, including delegated authority to approve people for Australian Government subsidised care through residential aged care, Home Care and flexible care. Australian government funding is provided to State and Territory governments to operate ACATs and evaluation units.

(c) Total ACAP expenditure for 2012-13 includes \$8.7 million of funding from the previous financial year.

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Table 13A.7 Government real expenditure on residential aged care services (2013-14\$)
(a)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (b) | Recurrent funding to residential care providers is derived using accrual based reporting. Due to accrual adjustments, for smaller jurisdictions in particular, this can lead to significant year on year variation. Based on claims data, recurrent funding for each state and territory grew between 4.7 per cent and 9.6 per cent between 2012-13 and 2013-14. | | | | | | | | |
| (c) | Australian Government (DSS) expenditure includes State and Territory governments' funding of younger people with disability using residential aged care. The State and Territory governments' funding of these services is identified separately (but is not double counted in the totals). | | | | | | | | |
| (d) | The figures are subject to lag and may therefore be subject to revision. For data on expenditure per client, see table 13A.13. | | | | | | | | |
| (e) | Due to delays in finalising the 2013-14 Schedule B of the National Partnership Agreement for Transitioning Responsibilities for Aged Care and Disability Services, State and Territory funding for young people with disability was not expended in 2013-14. Expenditure in 2013-14 for Queensland and the NT relates to the 2012-13 Schedule. | | | | | | | | |
| (f) | Detailed data and footnotes on the State and Territory governments' supplements paid to residential aged care facilities are in table 13A.10. | | | | | | | | |
| | .. Not applicable. – Nil or rounded to zero. | | | | | | | | |

- (a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (b) DVA community nursing expenditure data are subject to significant claiming lag and may therefore be subject to revision. These figures may also differ slightly from the figures published in the DVA annual report for this reason. Community nursing program expenditure does not include that spent on wound management consumables.
- (c) The VHC service provision expenditure does not include fees for respite care services, as these are paid under separate appropriations. Social Assistance is also not included. Residential respite is funded under the aged care appropriation and separate figures are not available.
- (d) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care Programs — CACP, EACH packages and EACH-D packages (July expenditure for packaged care is reported as Home Care for 2013-14). Australian Government (DSS/DoHA) expenditure includes State and Territory governments' funding of younger people with disability using home care. The State and Territory governments' funding of these services is identified separately (but is not double counted in the totals).
- (e) Reports provisional HACC estimates that may be subject to revision. Data are Australian Government expenditure on Commonwealth HACC services for older people under the national aged care program, except for Victoria and WA where it is expenditure under the 2007 HACC Review Agreements. The expenditure in Victoria and WA is total program expenditure so includes expenditure on younger and older people. The estimated proportion of total HACC program expenditure spent on older people in Victoria and WA is around 75 per cent. See table 13A.61 that shows expenditure per person in the aged care target population adjusted (that is, reduced) to account for this proportion.
- (f) The category other home support includes expenditure on Assistance with Care and Housing for the Aged, Day Therapy Centres and other home support.
- (g) Due to delays in finalising the 2013-14 Schedule B of the National Partnership Agreement for Transitioning Responsibilities for Aged Care and Disability Services, State and Territory funding for young people with disability was not expended in 2013-14. Expenditure in 2013-14 for Queensland and the NT relates to the 2012-13 Schedule.

.. Not applicable. – Nil or rounded to zero.

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(b) Data relate to expenditure administered under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, which is aimed at providing quality, flexible, culturally appropriate aged care to older Aboriginal and Torres Strait islander people close to their home and community.

(c) The category Other flexible and residential aged care includes expenditure on Innovative Pool, Zero Real Interest Loans and other residential care and flexible care.

(d) The total Workforce and Quality and Ageing and Service Improvement category includes expenditure on Aged Care Workforce Fund, Community Visitors Scheme and Advocacy Services, Indigenous Aged Care Workforce, Other Workforce and Quality, Aged Care Service Improvement and Healthy Ageing Grants, Continence Aids Payment Scheme and Other Ageing and Service Improvement.

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

Table 13A.10 State and Territory governments' aged care related expenditure (\$2013-14 million) (a)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (b) | These data are experimental or aged care related, but are not included in calculations of recurrent expenditure in the Report. | | | | | | | | |
| (c) | In NSW, not all recipients of Post Acute Packages of Care are aged 70 years or over. | | | | | | | | |
| (d) | In Victoria, 67 per cent of recipients of Post Acute packages of care were aged over 60 years and 50 per cent over 70 years of age. | | | | | | | | |
| (e) | Tasmania provides substantial non-HACC funded nursing services to post-acute clients in the community. However, as these are not counted discretely it is not possible to quantify or cost the services. | | | | | | | | |
| (f) | In Queensland, Enterprise Bargaining Agreement (EBA) expenditure includes all additional funding including depreciation provided for operations of State owned and operated Residential Aged Care Facilities. Rural Small Nursing Home Supplement expenditure is included with EBA supplement. In Tasmania, while it finances an EBA supplement to registered nursing staff it is not possible to quantify the amount of that supplement in relation to its aged care services as they are delivered in integrated settings and programs. Data for 2012-13 are not directly comparable to previous years, as improved accounting methods have resulted in better attribution and identification of costs related to aged care in some regions. | | | | | | | | |
| (g) | While Tasmania finances an EBA supplement to registered nursing staff it is not always possible to quantify the amount of that supplement in relation to its aged care services as they are delivered in integrated settings and programs. | | | | | | | | |

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(b) These expenditure data are not included in calculations of recurrent expenditure.

(c) While Tasmania maintains a regular maintenance and capital renewal program for all its facilities it is not always able to quantify its capital expenditure on aged care services only.

(d) Capital expenditure in 2007-08 by NT Government was gifted lands.

(e) Rural and Regional Building Fund/ Rural and Remote Building Fund expenditure is to assist aged care residential services in rural or remote locations which target people who have less access to residential aged care, that are unable to meet the cost of necessary capital works from the income they receive through resident accommodation payments (accommodation bonds and accommodation charges and the capital component of Australian Government recurrent funding).

(f) Capital Infrastructure (remote and Indigenous services) expenditure is to assist services providing aged care to Indigenous people and remote communities.

(g) From 2011-12 onwards, Capital Infrastructure expenditure (Remote and Indigenous Services) will not be included in this table. This expenditure will now be included in Aged Care Service Improvement and Healthy Ageing Grants which forms part of Workforce and Quality and Ageing and Service Improvement in Table 13A.4.

| | Unit | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |
|---|---------------|---------------|---------------|---------------|--------------|--------------|--------------|--------------|-----------|----------------|
| Other | no. | 596 | 262 | 426 | 58 | 131 | 56 | 8 | – | 1 537 |
| Total (j) | no. | 11 223 | 4 796 | 5 365 | 1 467 | 1 729 | 982 | 431 | 23 | 25 977 |
| Veterans aged under 65 years | no. | 144 | 53 | 110 | 28 | 32 | 15 | 9 | – | 390 |
| Veterans aged 65 years or over | no. | 11 079 | 4 743 | 5 255 | 1 439 | 1 699 | 967 | 422 | 21 | 25 587 |
| Average number of hours provided per client per 28 day claiming period (k), (l) | no. | 9.0 | 9.1 | 8.9 | 11.2 | 9.2 | 12.2 | 16.5 | 18.9 | 9.3 |
| Veterans Community Nursing expense | | | | | | | | | | |
| Total program expense (m) | \$'000 | 60 000 | 21 000 | 23 000 | 6 000 | 8 000 | 6 000 | 3 000 | 76 | 127 000 |
| Average expense per client (n) | \$ | 649 | 739 | 668 | 760 | 785 | 788 | 878 | 790 | 689 |

- (a) Veterans approved for VHC Services' and the 'Average number of hours approved per year for non-transitional veterans' relate to services that were approved to occur but not necessarily provided in the reference year.
- (b) Individual service totals will not add to the all services total because veterans may be approved for more than one service. In addition, State/Territory totals may slightly exceed total Australia figure as some veterans move State during the year and are counted in each State of residence.
- (c) Transitional veterans are those veterans who transferred to the VHC program from the HACC program, often with grandfathered service and/or fee levels, and so may have been approved for higher hours of service than other VHC clients. Veterans who do not transfer from the HACC program are referred to as 'non-transitional'.
- (d) These figures are approximations only; the data has been derived from percentage age distributions sourced from a separate data set.
- (e) VHC expense figures as at 30 June 2014.
- (f) The Service Provision expense figures do not include fees for respite care services, as these are paid under separate appropriations. Social Assistance is also not included. The 2013-14 appropriation for in-home and emergency respite was \$21.5 million. Residential respite is funded under the aged care appropriation and separate figures are not available.
- (g) Average expense per client figures are for core VHC services only; that is, they exclude Respite Services (in-home, emergency and residential) as these are paid under separate appropriations. They also exclude Social Assistance.
- (h) Due to the very small number of clients, some ACT client numbers have been included with NSW and some NT client numbers have been included with SA.
- (i) DVA's Community Nursing Program moved to a new Classification System from March 2010 – all clinical care is now covered under one classification.

Table 13A.12 **Australian Government (DVA) Veterans' Home Care (VHC) and Community Nursing programs, 2013-14**

| | Unit | NSW | Vic | Qld | WA | SA | Tas | ACT | NT | Aust |
|-----|---|-----|-----|-----|----|----|-----|-----|----|------|
| (j) | Individual State/Territory totals may not add up to the total for Australia because veterans can move between states. Individual service totals may not add up to the total for all services because veterans can move between service types. | | | | | | | | | |
| (k) | DVA Community Nursing services are provided under a casemix model using a 28-day claiming cycle, with clients classified into categories based on care interventions. As a substantial proportion of clients receive services for well under 12 months, the average hours per 28-day claim period more accurately reflects the average service levels received by clients. | | | | | | | | | |
| (l) | Estimated as some data on hours provided are not available. | | | | | | | | | |
| (m) | Total Program Expense data are at 18 September 2014. Figures are subject to significant claiming lag and may therefore be subject to revision. These figures may also differ slightly from the figures published in the DVA annual report for this reason. Total program expenses reported does not include an additional \$2 million that was spent on wound management consumables. | | | | | | | | | |
| (n) | Average expenses do not include wound management consumables. | | | | | | | | | |
| | – Nil or rounded to zero. | | | | | | | | | |

(a) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(b) See table 13A.2 for notes and sources of population data.

(c) The figures are subject to lag and may therefore be subject to revision. All figures on the number of, and expenditure on, veterans in residential aged care are sourced from the DSS.

Table 13A.13 **Australian Government (DVA) residential aged care clients (a), (b), (c)**

| Unit | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(d) The payroll tax figures for 2012-13 have been estimated.

(e) The Tasmanian client number includes overseas clients.

(f) The NT client number figures for 2009 have been included with SA given the very small number of clients.

(g) The State/Territory figures for 2011 have been estimated.

(h) The category 'Veterans 65 years or over' includes those whose age is unknown.

| Commonwealth Carelink Centres — instances of assistance (g) | 109 714 | 39 112 | 91 689 | 45 552 | 26 865 | 10 376 | 4 281 | 1 995 | 329 584 |
| Continence Aids Payment Scheme — people assisted (h) | 38 738 | 34 019 | 22 763 | 7 968 | 12 509 | 2 606 | 1 166 | 411 | 120 180 |

- (a) Aged Care Assessment — assessments data are for the financial year before the one noted in the heading. For example, for 2013-14 the data are for 2012-13 and for 2012-13 the data are for 2011-12. Data for 2011-12 and 2012-13 were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective dates of 31 August 2013 and 31 August 2014 respectively. Future extracts of this data may change and thus alter final numbers.
- (b) Aged care assessments includes all completed assessments for all age groups. (Incomplete assessments are not included).
- (c) Operational places/packages as at 30 June. For 2011-12 and 2012-13, CACP data includes the flexible community low places under Consumer Directed Care (CDC) and EACH data includes CDC high care places. EACH-D row includes CDC high care dementia places. On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs – CACP, EACH packages and EACH-D packages.
- (d) For data up to 2012-13 (except for 2008-09), CACP places include community care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care program, Multi-Purpose Services (MPS) and Innovative Care. For 2013-14, flexible Home Care places under the National Aboriginal & Torres Strait Islander Flexible Aged Care Program are included in Home Care Level 2.
- (e) Community Care Grants: funding and support for those activities previously supported through the provision of Community Care Grants has been consolidated within the Aged Care Services Improvement and Healthy Ageing Grants Fund.
- (f) National Respite for Carers includes carers assisted through Commonwealth Respite and Carelink Centres. Numbers in 2011-12 may be less than actual carers assisted as not all Centres submitted data for all quarters.

Table 13A.14 **Australian Government Activity Measures on selected Aged Care Programs**

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (g) Commonwealth Carelink Centres refers to number of instances of assistance, not carers assisted. Numbers of instances of assistance are less than actual instances of assistance as Carelink data for Access Points is not available. | | | | | | | | | |
| (h) Number of clients at 30 June. | | | | | | | | | |
| (i) For 2010-11, Aged Care Assessment Program data for NSW and SA in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and/or Aged Care Assessment Team amalgamations undertaken by the respective state governments. This has a flow-on effect on the national figures. | | | | | | | | | |

Table 13A.16 **Average annual Australian Government basic subsidy amount, including Conditional adjustment payment, per occupied place and the dependency level of aged care residents (a)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (a) | Data exclude flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool program and Multi-Purpose Service Program. | | | | | | | | | |
| (b) | Includes basic subsidy plus Conditional Adjustment Payment (CAP). Subsidy reported in constant dollars (that is, \$ 2013-14). | | | | | | | | | |
| (c) | Subsidy plus CAP divided by the number of bed days, multiplied by 365. Differences in average annual subsidies reflect differences in the dependency of residents. | | | | | | | | | |
| (d) | Aged Care Funding Instrument (ACFI) proportions are for permanent residents that have an ACFI classification. | | | | | | | | | |
| (e) | Numbers of all residents are all residents (whether they have an ACFI or not). | | | | | | | | | |
| (f) | Numbers of permanent residents are all permanent residents (whether they have an ACFI or not). | | | | | | | | | |

(a) The occupancy rate is defined as the proportion of available bed days that were used for residential care. Occupancy is measured over the financial year however places are reported at June 30.

(b) Data exclude flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool program and Multi-Purpose Service Program.

(c) See footnotes to table 13A.2 for detail on regional data classification.

.. Not applicable. – Nil or rounded to zero.

- (a) Places do not include those that have been approved, but are not yet operational.
- (b) Residential aged care include places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose Services.
- (c) From June 2011–2013, CACP data includes flexible community low places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Multi-Purpose Service Program and Innovative Pool Program (including CDC low care places). EACH data includes CDC high care places and EACH-D data includes CDC high care dementia places.
- (d) On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs – CACP, EACH packages and EACH-D packages. For 2013-14, all flexible Home Care places in Multi-Purpose Services, Innovative Care and under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1-2.
- Nil or rounded to zero.

| 2014 | 1.7 | 1.7 | 1.7 | 1.6 | 1.8 | 1.8 | 2.0 | 3.4 | 1.7 |

- (a) Places do not include those that have been approved, but are not yet operational.
- (b) This table differs from table 13A.22, which refers to residents.
- (c) Government planning targets are based on providing 125 places per 1000 people aged 70 years and over by 2021-22. However, in recognition of poorer health among Indigenous communities, planning in some cases also takes account of the Indigenous population aged 50–69 years. This means that the provision ratio based on the population aged 70 years and over will appear high in areas with a high Indigenous population (such as the NT). Transition Care Program places are not included in this target planning ratio.
- (d) Ratios prior to 2008 were calculated using projections based on the 2001 Census. In this Report, provision ratios since 2008 for aged care places were calculated using population projections (at the Statistical Local Area level) prepared by ABS (see table 13A.2). Up to 2013 data, the projections were based on the 2006 Census, from 2013 the projections are based on the 2011 Census.
- (e) Includes all flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, multi-purpose services and innovative pool programs.
- (f) From June 2011–2013, CACP data includes flexible community low places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Multi-Purpose Service Program and Innovative Pool Program (including CDC low care places), EACH data includes CDC high care places and EACH-D data includes CDC high care dementia places.
- (g) On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs — CACP, EACH packages and EACH-D packages. For 2013-14, all flexible Home Care places in Multi-Purpose Services, Innovative Care and under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1-2.
- (h) Totals may not add due to rounding.
– Nil or rounded to zero.

- (a) Places do not include those that have been approved, but are not yet operational.
- (b) Data for the numerators are all operational places (by service type). Data for the denominators are people aged 70 years or over and Aboriginal and Torres Strait Islander Australians aged 50–69 years. This table differs from table 13A.22, which refers to residents.
- (c) Population data are calculated on a different basis across years. See table 13A.2 for notes and sources of population data.
- (d) Includes all flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Multi-Purpose Services and Innovative Pool programs.
- (e) From June 2011–2013, CACP data includes flexible community low places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Multi-Purpose Service Program and Innovative Pool Program (including CDC low care places), EACH data includes CDC high care places and EACH-D data includes CDC high care dementia places.
- (f) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care programs – CACP, EACH packages and EACH-D packages. For 2014 all flexible Home Care places in Multi-Purpose Services, Innovative Care and under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1-2.
- (g) Totals may not add due to rounding.
– Nil or rounded to zero.

Table 13A.21 **Residential and community aged care places per 1000 population aged 70 years or over and Indigenous aged 50–69 years, by remoteness, 2014 (at 30 June) (a)**

| | <i>Residential aged care places per 1000 population (b)</i> | <i>Community aged care places per 1000 population (c)</i> |
|--------------------------------------|---|---|
| Major cities | 83.8 | 30.9 |
| Inner Regional and Outer Regional | 73.3 | 25.8 |
| Remote and Very Remote | 50.6 | 33.4 |

(a) Population people aged 70 years and over plus Indigenous Australians aged 50–69 years at 30 June 2014.

(b) Count is of operational residential places delivered in Australian Government subsidised residential aged care facilities at 30 June 2014 and includes Multi-Purpose Services and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Programs delivered in a residential aged care facility.

(c) Count is of operational home care places at 30 June 2014 and includes: Home Care levels 1–4, Transition Care Program, and Multi-Purpose Services and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Programs provided in the community. On 1 August 2013 the Home Care Packages Program replaced the former community packaged care programs – CACP, EACH packages and EACH-D packages.

Source: Department of Social Services (DSS) (unpublished) Australian Government DSS Aged Care data warehouse. For 30 June 2014 DSS projections of the total population are based on the 2012 Estimated Resident Population. These projections were prepared at the SA2 level for DSS by the Australian Bureau of Statistics (ABS) according to assumptions agreed to by DSS. For 30 June 2014 Indigenous projections are based closely on ABS 3238.0 – *Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026*. These projections have been adjusted slightly by DSS to include Other Territories.

- (a) For high and low care residential, community aged care and total: includes flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose Services. Aged care recipient numbers included for the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are based on the number of allocated places.
- (b) From June 2011–2013, CACP data includes flexible community low places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Multi-Purpose Service Program and Innovative Pool Program (including CDC low care places), EACH data includes CDC high care places and EACH-D data includes CDC high care dementia places.
- (c) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care programs – CACP, EACH packages and EACH Dementia packages. For June 2014, all flexible Home Care places in Multi-Purpose Services, Innovative Care and under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1-2.
- (d) Totals may not add due to rounding.
- (e) Results for this table may have been derived using small numbers, in particular where the rate is for a small program or smaller jurisdiction.

- (a) On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs – CACP, EACH packages and EACH-D packages.
- (b) Data for EACH-D packages prior to 2009 are included in EACH packages.
- (c) Unknown responses for country of birth were distributed *pro rata* up to 2011 data. For all other estimates they are excluded.
- (d) People from a non-English speaking country of birth are those who are born overseas in countries other than UK, Ireland, NZ, Canada, South Africa and USA.
- (e) Data exclude people who received services under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool program and Multi-Purpose Service program.
- (f) High care residential aged care includes permanent residents and respite care recipients. Low care residential aged care includes permanent residents and respite care recipients.

(a) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care programs – CACP, EACH packages and EACH-D packages.

(b) Data for EACH-D packages prior to 2009 are included in EACH packages.

(c) Unknown responses for Indigenous status have been distributed pro rata up to 2011 data. For all other estimates they are excluded.

(d) Includes National Aboriginal and Torres Strait Islander Flexible Aged Care Program places attributed as residents. For 2014 flexible, Home Care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1-2. Excludes multi-purpose services.

(e) See footnotes to table 13A.2 for information on Aboriginal and Torres Strait Islander projections.

(f) Totals may not add due to rounding.

Table 13A.25 Aboriginal and Torres Strait Islander aged care recipients of all ages per 1000 Aboriginal and Torres Strait Islander Australians aged 50 years or over and as a proportion of all recipients, 30 June (a), (b), (c), (d), (e), (f), (g)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT (h)</i> | <i>NT</i> | <i>Aust</i> |
|--|-------------|------------|------------|------------|-----------|-----------|------------|----------------|-----------|-------------|
|--|-------------|------------|------------|------------|-----------|-----------|------------|----------------|-----------|-------------|

- (g) Results for this table may have been derived using small numbers, in particular where the rate/proportion is for a small program, smaller jurisdiction or remote/very remote area.
- (h) The ACT has a very small Aboriginal and Torres Strait Islander population aged over 50 years and a small number of CACPs results in a very high provision ratio.
- (i) For the proportions of Aboriginal and Torres Strait Islander recipients as a proportion of all recipients, the National Aboriginal and Torres Strait Islander Flexible Aged Care Program places are attributed as recipients and are added to both numerator and denominator of the calculation.

.. Not applicable. – Nil or rounded to zero.

(a) On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs –CACP, EACH packages and EACH-D packages. Data exclude flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose Services.

(b) See table 13A.2 for notes and sources of population data.

(c) Results for this table may have been derived using small numbers, in particular where the rates are for a small program or smaller jurisdictions.

– Nil or rounded to zero.

Source: DSS (unpublished).

(a) Concessional residents are those who entered care prior to 20 March 2008, receive an income support payment and have not owned a home for the last two or more years (or whose home is occupied by a 'protected' person, for example, the care recipient's partner), and have assets of less than 2.5 times the annual single basic age pension (or for a transfer from 20 September 2009 less than 2.25). Assisted residents are those meeting the above criteria, but with assets between 2.5 and 4.0 times the annual single basic age pension (or for a transfer from 20 September 2009 between 2.25 and 3.61). Supported residents are those who have entered permanent residential care on or after 20 March 2008 (or who re-enter care on or after 20 March 2008 after a break in care of more than 28 days) and have assets of up to a set value:

- from 20 March 2010 to 19 September 2010 — \$93 410.40
- from 20 September 2010 to 19 March 2011 — \$98 237.60
- from 20 March 2011 to 19 September 2011 — \$102 544.00
- from 20 September 2011 to 19 March 2012 — \$107,850.40
- from 20 March 2012 to 19 September 2012 — \$108,266.40
- from 20 September 2012 to 19 March 2013 — \$109,640.80
- from 20 March 2013 to 19 September 2013 — \$112,243.20
- from 20 September 2013 to 19 March 2014 — \$113,784.00
- from 20 March 2014 to 30 June 2014 — \$116,136.00.

(b) These data refer to permanent residents only, at their first admission.

(c) For 2005-06 and 2006-07, data include concessional or assisted residents. Data for 2007-08 include concessional, assisted or supported residents. Data from 2008-09 include supported residents only.

(a) Geographical data are based on the ABS ASGC/ASGS of Remoteness Areas. See notes to table 13A.2.

(b) Numbers fewer than three are not published and the relevant totals do not include these figures. Proportions which may identify numbers fewer than three are not published. The proportions published for Australia and all areas, take into account all residents, including those numbers not published.

.. Not applicable. – Nil or rounded to zero. **np** Not published.

(a) Places allocated for residents classified as ACFI Low and ACFI High.

(b) Used for high care means place used by residents classified as ACFI High.

(c) Data exclude flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs, CDC places and care provided by Multi-Purpose services.

(d) Proportion is calculated as the number of low care places used for high care, divided by the number of nominal low care places.

(e) Proportion is calculated as the number of places used for high care, divided by the number of nominal high and low care places.

(f) Proportion is calculated as the number of high care places used for low care, divided by the number of nominal high care places.

(g) Proportion is calculated as the number of places used for low care, divided by the number of nominal high and low care places.

(a) Number of younger people, aged under 65 years, receiving aged care services at any time in the 12 month period to 30 June. Number is provided as a count of distinct clients in each program and in each jurisdiction, that is, an individual may have had more than one care type, or care in different states. Hence, number of clients in Australia total is not a sum of the states figures.

(b) Residential aged care services includes permanent residential care only.

(c) In the ACT, includes people aged <50 years who cannot be reported separately as the numbers are too small.

(d) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care Programs – CACP, EACH packages and EACH-D packages.

(e) In Tasmania and the ACT, includes people aged <50 years who cannot be reported separately as the numbers are too small.

| 85+ | 286.5 | 280.8 | 239.1 | 176.4 | 139.3 | 280.0 |

(a) Geographical data are based on the ABS ASGC/ASGS of Remoteness Areas. See table 13A.2 for notes and sources of population data.

(b) Low usage rates in remote and very remote regions may reflect that clients have moved to other regions to access services.

(c) On 1 August 2013 the Home Care Packages Program replaced the former community packaged care Programs – CACP, EACH packages and EACH-D packages. Data exclude flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose Services.

(d) Results for this table may have been derived using small numbers, in particular where the rates are for a small program or remote/very remote areas.

– Nil or rounded to zero.

Source: DSS (unpublished).

| 65–74 | 40.2 | 54.2 | 70.6 | 53.1 |
| 75+ | 138.6 | 143.7 | 256.6 | 163.7 |

(a) Remoteness areas are based on the ASGS 2011. See notes to table 13A.2.

(b) Data exclude flexible places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool programs and care provided by Multi-Purpose Services.

(c) Where Indigenous status is unknown recipients are excluded. Where age is unknown recipients are excluded.

(d) Results for this table may have been derived using small numbers, in particular where the rate is for a small program or remote/very remote areas.

- (a) Reports provisional data that have not been validated and may be subject to revision.
- (b) Data in this table represent HACC services received by people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years, divided by people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years.
- (c) The proportion of HACC funded agencies that submitted HACC Minimum Data Set data differed across jurisdictions and years. Actual service levels will be higher than those reported here.
- (d) See table 13A.2 for notes and sources of population data.
- (e) The proportion of HACC clients with unknown or null Aboriginal and Torres Strait Islander status differed across jurisdictions and years. Client records for people aged 50–64 years that do not contain information on Aboriginal and Torres Strait Islander status are excluded.
- (f) The proportion of HACC clients with unknown or invalid date of birth differed across jurisdictions and years. Client records that do not contain information on date of birth are excluded.

|-----|--|----------------|------------|-----------|---------------|----------------|------------|-----------|-------------|
| (g) | Validation processes for the Victorian Data Repository (VDR) and the HACC Minimum Data Set differ and actual service levels may be up to 9 per cent higher or lower than stated. For example, for 2013-14, in the case of respite care, the VDR recorded service levels 27 per cent higher than shown in the table, for Centre Based Day Care, the VDR recorded service levels 13 per cent higher than shown in the table and for counselling, the VDR recorded service levels 26 per cent higher than shown in the table. No targets are set and relatively little is reported. | | | | | | | | |
| (h) | Validation processes for SA can differ from HACC MDS and actual service levels may be up to 5 per cent higher or lower than stated. | | | | | | | | |
| (i) | For 2010-11, results for Tasmania exclude HACC services provided under the Multi-Purpose Services program. For 2011-12, for Tasmania, partial data has been received from Multi-Purpose Services. HACC funded services delivered by Multi-Purpose Services in 2011-12 are therefore under reported. | | | | | | | | |
| (j) | Allied Health Care includes at home and at centre. | | | | | | | | |
| (k) | Nursing Care includes at home and at centre. | | | | | | | | |

(a) The HACC target population is people in the Australian community who, without basic maintenance and support services provided under the scope of the HACC Program, would be at risk of premature or inappropriate long term residential care, including older and frail people with moderate, severe or profound disabilities. The HACC target population is estimated by applying the proportion of all people with moderate, severe or profound disability in households, by sex and five year age groups, from the ABS *Survey of Disability, Ageing and Carers* (SDAC) to population projections for the total population in each jurisdiction. To calculate the Aboriginal and Torres Strait Islander 50–64 year component of the HACC target population for older people, the proportion of all people aged 50–64 years in households with moderate, severe or profound disability was multiplied by an additional Indigenous factor of 1.9 (from ABS unpublished analysis) and then applied to DSS Aboriginal and Torres Strait Islander population projections in the 50–64 years age groups in each jurisdiction. The HACC target population for June 2014 is based on SDAC 2012 while HACC target populations for previous years are based on SDAC 2009. See table 13A.2 for details about the total population projections and the Aboriginal and Torres Strait Islander population used in these calculations.

(a) Reports provisional data that have not been validated and may be subject to revision.

(b) Data in this table represent HACC services received by people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years, divided by the HACC target population aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years.

(c) The proportion of HACC funded agencies that submitted HACC Minimum Data Set data differed across jurisdictions and years. Actual service levels will be higher than those reported here.

Table 13A.35 HACC services received per 1000 HACC target population aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (a), (b), (c), (d), (e)

| | <i>NSW</i> | <i>Vic (f)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (g)</i> | <i>Tas (h)</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---|------------|----------------|------------|-----------|---------------|----------------|------------|-----------|-------------|
| (d) The HACC target population is people in the Australian community who, without basic maintenance and support services provided under the scope of the HACC Program, would be at risk of premature or inappropriate long term residential care, including (i) older and frail people with moderate, severe or profound disabilities. The HACC target population for people 65 years and over is estimated by applying the proportion of people in households with moderate, severe or profound disability, by sex and five year age groups, from the ABS 2009 Survey of Disability, Ageing and Carers to Population projections by SLA for 2007–2027 or 2011–2026 (prepared by ABS according to assumptions agreed to by DoHA/DSS) in each jurisdiction and by remoteness categories. To calculate the Aboriginal and Torres Strait Islander people aged 50–64 years component of the HACC target population for older people, the proportion of all people aged 50–64 years in households with moderate, severe or profound disability was multiplied by an additional Aboriginal and Torres Strait Islander factor of 1.9 (from ABS unpublished analysis) and then applied to DoHA/DSS Aboriginal and Torres Strait Islander population projections for this age group in each jurisdiction and by remoteness categories. | | | | | | | | | |
| (e) The proportion of HACC clients with unknown or invalid date of birth differed across jurisdictions and years. Client records that do not contain information on date of birth are excluded. | | | | | | | | | |
| (f) Validation processes for the VDR and the HACC Minimum Data Set differ and actual service levels may be up to 9 per cent higher or lower than stated. For example, for 2013-14, in the case of respite care, the VDR recorded service levels 27 per cent higher than shown in the table, for Centre Based Day Care, the VDR recorded service levels 13 per cent higher than shown in the table and for counselling, the VDR recorded service levels 26 per cent higher than shown in the table. No targets are set and relatively little is reported. | | | | | | | | | |
| (g) Validation processes for SA data differ from HACC MDS and actual service levels may be up to 5 per cent higher or lower than stated. | | | | | | | | | |
| (h) For 2010-11, results for Tasmania exclude HACC services provided under the Multipurpose Services Program. For 2011-12 for Tasmania, partial data has been received from Multi Purpose Services. HACC funded services delivered by Multi Purpose Services in 2011-12 are therefore under reported. | | | | | | | | | |
| (i) Allied Health Care includes at home and at centre. | | | | | | | | | |
| (j) Nursing Care includes at home and at centre. – Nil or rounded to zero. | | | | | | | | | |

- (a) Reports provisional data that have not been validated and may be subject to revision. Rounding of proportions may result in age cohorts not summing to the total aggregate proportion.
- (b) Data in this table represent HACC clients aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years.
- (c) The proportion of HACC clients with date of birth unknown differed across jurisdictions and years.
- (d) The proportion of HACC clients with unknown gender differed across jurisdictions and years.
- (e) The proportion of HACC clients with unknown Indigenous status differed across jurisdictions and years.
- (f) The proportion of HACC clients with unknown language spoken at home differed across jurisdictions and years.
- (g) The proportion of HACC clients with unknown carer status differed across jurisdictions and years.
- (h) The proportion of HACC funded agencies that submitted HACC MDS data differed across jurisdictions and years. Actual service levels will be higher than those reported here.

- (a) Reports provisional data that have not been validated and may be subject to revision.
- (b) The proportion of HACC clients with unknown or null Indigenous status differed across jurisdictions and years. Client records for people aged 50–64 years that do not contain information on Indigenous status are excluded.
- (c) The proportion of HACC clients with unknown date of birth differed across jurisdictions and years.
- (d) Rounding of proportions may result in age cohorts not summing to the total aggregate proportion.
- (e) Calculations exclude HACC clients with unknown or null Indigenous Status.
– Nil or rounded to zero.

(a) Contacts include phone calls, emails, visits and facsimiles.

(b) People making contact self identify as Aboriginal and Torres Strait Islander. Therefore, there is likely to be substantial under reporting of Aboriginal and Torres Strait Islander status.

(c) Aboriginal and Torres Strait Islander Australians aged 50 years or over. See footnotes to table 13A.2 for details of population calculations.

(d) Number of instances of assistance provided, not the number of carers assisted.

(e) All people aged 65 years or older and Aboriginal and Torres Strait Islander Australians aged 50–64 years. See footnotes to table 13A.2 for details of population calculations.

Source: DSS (unpublished).

| 2008-09 | 37.5 | 58.8 | 27.2 | 70.2 | 43.3 | 22.7 | 64.9 | 54.4 | 42.7 |
| 2009-10 | 28.6 | 45.3 | 23.1 | 55.8 | 33.2 | 12.0 | 35.8 | 39.5 | 32.9 |
| 2010-11 | 36.7 | 45.6 | 19.7 | 42.2 | 32.8 | 10.3 | 26.4 | 43.0 | 33.0 |
| 2011-12 | 23.0 | 43.5 | 18.7 | 34.0 | 28.5 | 11.7 | 28.3 | 32.4 | 25.7 |
| 2012-13 | 20.3 | 35.4 | 18.4 | 33.2 | 21.2 | 10.4 | 13.3 | 31.0 | 23.1 |
| Total number of assessments of people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years | | | | | | | | | |
| 2009-10 | 58 462 | 48 230 | 27 925 | 18 864 | 16 048 | 4 796 | 2 120 | 902 | 177 347 |
| 2010-11 | 57 733 | 47 774 | 27 713 | 18 480 | 13 184 | 4 684 | 1 872 | 988 | 172 428 |
| 2011-12 | 58 419 | 49 839 | 28 945 | 17 752 | 13 278 | 4 957 | 2 213 | 993 | 176 396 |
| 2012-13 | 59 157 | 51 591 | 29 476 | 17 524 | 13 000 | 4 656 | 2 016 | 866 | 178 286 |
| Aged care assessments of people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years (f) | | | | | | | | | |
| 2009-10 | 56.5 | 63.1 | 47.6 | 65.8 | 61.5 | 58.9 | 56.0 | 48.0 | 57.7 |
| 2010-11 | 54.2 | 60.7 | 45.3 | 62.1 | 49.2 | 55.8 | 47.2 | 49.5 | 54.3 |
| 2011-12 | 53.0 | 61.4 | 46.5 | 57.4 | 48.5 | 56.3 | 53.2 | 48.0 | 54.0 |
| 2012-13 | 51.5 | 61.1 | 45.1 | 54.0 | 45.9 | 50.9 | 45.9 | 39.1 | 52.3 |

(a) Data in this table includes complete assessments only for years after 2006-07.

(b) The number of Aboriginal and Torres Strait Islander assessments is based on self-identification of Aboriginal and Torres Strait Islander status. Therefore these figures may not accurately represent the assessment of Aboriginal and Torres Strait Islander persons.

(c) Results for this table may have been derived using small numbers, in particular where the rates are for a smaller jurisdiction.

Table 13A.40 **Aged care assessments (a), (b), (c), (d)**

| | <i>NSW (e)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|--|----------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|--|----------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(d) Data for 2011-12 and 2012-13 were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective dates of 31 August 2013 and 31 August 2014 respectively. Future extracts of this data may change and thus alter final numbers.

(e) Data for NSW, in 2009-10, in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and Aged Care Assessment Team amalgamations undertaken by the NSW Government. This has a flow-on effect on the national figures.

(f) See footnotes to table 13A.2 for information on population projections.

(a) Aged Care Assessment Program 2009-10 data for NSW in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and/or Aged Care Assessment Team amalgamations undertaken by the respective state governments. This has a flow-on effect on the national figures.

(b) Data for 2011-12 and 2012-13 were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective dates of 31 August 2013 and 31 August 2014 respectively. Future extracts of this data may change and thus alter final numbers.

(a) Data only includes records where ACAT approval is before admission date. Data only includes first admissions in the financial year. Data are based on location of the service.

Table 13A.42 Elapsed time between Aged Care Assessment Team (ACAT) approval and entry into aged care services (a), (b), (c), (d), (e)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (b) | The measure of 'elapsed time' is utilised because the period of time between the ACAT approval and entry into residential care may be due to factors which cannot be categorised as 'waiting' time. | | | | | | | | | |
| (c) | The data for elapsed time by remoteness and by Socio-Economic Indexes for Areas (SEIFA) were sourced at a later date than the data for elapsed time by state/territory and therefore may have slightly larger total numbers of admissions. The variance between each breakdown of this indicator is less than 0.5 per cent. | | | | | | | | | |
| (d) | Results for this table may have been derived using small numbers, in particular where the proportions are for a small program or smaller jurisdictions. | | | | | | | | | |
| (e) | For 2013-14, the data for elapsed time by remoteness and by SEIFA was sourced at a later date than the data for elapsed time by state/territory and therefore may have slightly different total numbers of admissions. The variance between each breakdown of this indicator is less than 0.5 per cent. | | | | | | | | | |
| (f) | Data on elapsed time for residential aged care relates to permanent residents only. | | | | | | | | | |

na Not available. – Nil or rounded to zero. **np** Not published.

(a) Data only includes records where ACAT approval is before admission date. Data only includes first admissions in the financial year.

(b) A small number of recipient postcodes are invalid and not able to be reported by remoteness area. Postcodes that span more than one remoteness area are apportioned as per ABS 1270.0.55.006 – ASGS: Correspondences, July 2011.

Table 13A.43 **Elapsed times for aged care services, by remoteness (a), (b), (c), (d)**

| <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
|-------------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|

(c) Data with unknown elapsed time are excluded.

(d) Data for 2011-12 are based on location of the service. Data from 2012-13 are based on the postcode of the recipient's usual residence.

(e) Data for elapsed time by remoteness were sourced at a later date than the data for elapsed time by state/territory and therefore may have slightly different total numbers of admissions.

(f) Data for residential care only includes permanent residents.

np Not published .. Not applicable – Nil or rounded to zero.

(a) Data only includes records where ACAT approval is before admission date. Data only includes first admissions in the financial year.

(b) Elapsed time by SEIFA are determined from the recipient's residential postcode at time of assessment using 2033.0.55.001 – Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australia, 2011. Recipient's postcodes not found in the ABS's SEIFA data are excluded.

(c) Data with unknown elapsed time are excluded.

(d) Data are based on the postcode of the recipient's usual residence.

(e) Data for elapsed time by SEIFA were sourced at a later date than the data for elapsed time by state/territory and therefore may have slightly different total numbers of admissions.

(f) Data for residential care only includes permanent residents.

np Not published – Nil or rounded to zero

(a) Data only includes records where ACAT approval is before admission date. Data only includes first admissions in the financial year.

(b) Data with Indigenous status 'unknown' is excluded.

(c) Data are based location of the aged care service.

(d) Excludes elapsed time unknown.

(e) Data for elapsed time by Indigenous status were sourced at a later date than the data for elapsed time by state/territory and therefore may have slightly different total numbers of admissions.

(f) Data for residential care only includes permanent residents.

np Not published. – Nil or rounded to zero

- (a) Data in this table includes complete assessments only for years after 2006-07.
- (b) The client count is sourced from the Ageing and Aged Care Data Warehouse and may change in subsequent data loads. The individual client count was achieved by taking the most recent assessment for an individual client (if the client had more than one assessment in the financial year).
- (c) Results for this table may have been derived using small numbers, in particular where the rates are for a small program, smaller jurisdictions or remote/very remote areas.
- (d) Aged Care Assessment Program 2009-10 data for NSW in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and/or Aged Care Assessment Team amalgamations undertaken by the respective state governments. This has a flow-on effect on the national figures.
- (e) Includes independent living in retirement villages, supported community accommodation and boarding houses.
- (f) Includes hospital, other institutional care and other.
- (g) No long term plan made includes the following categories: died, cancelled, transferred, other incomplete assessments and unknown.
- (h) Data for 2011-12 and 2012-13 were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective dates of 31 August 2013 and 31 August 2014 respectively. Future extracts of this data may change and thus alter final numbers.

(a) Aged 65 years or over, living in households.

(b) Measures need for assistance with the following activities: transport, household chores, property maintenance and meal preparation.

(c) Upper and lower confidence intervals represent the 95 per cent confidence interval associated with each point estimate.

(d) The random adjustment of estimates, by perturbation, for the purpose of maintaining confidentiality, may result in the sum of components not equalling the total, or subtotal. In these cases, the difference between the sum of components and its total will be small and will not impact the overall information value of the estimate for the total or any individual component.

- (a) Data includes completed hospital separations with a care type of maintenance care for people aged 65 years or over and Aboriginal and Torres Strait Islander persons aged 50–64 years, with a principal or additional diagnosis of Z75.11 or Z74.2. Z75.11 is defined as “person awaiting admission to residential aged care”. Z74.2 is defined as “need for assistance at home and no other household member able to render care”.
- (b) These data only account for completed unlinked separations — that is, if a change in the type of care occurs during a patient’s hospital stay, these data do not combine these separations to reflect the full length of hospital stay for a patient.
- (c) Diagnosis codes may not be applied consistently across jurisdictions, or over time.
- (d) Although the diagnosis codes reflect a care type, they do not determine a persons appropriate requirement for residential aged care (this is determined by an ACAT assessment).
- (e) The code ‘need for assistance at home and no other household member able to render care’ may also be used for respite care for aged care residents or those receiving community care and some jurisdictions may have a high proportion of this type of use. This is particularly relevant in some rural areas where there are few alternative options for these clients.
- (f) Data from 2011-12 include public patients in private hospitals, these patients were not included in 2009-10 or 2010-11.
- (g) Includes separations with a care type of maintenance only.

np Not published.

- (a) For data before 2012-13, some cells have been suppressed to protect confidentiality where the presentation could identify a patient or service provider or where rates are likely to be highly volatile, for example, where the denominator is very small. See the Data Quality Statement for further details.
- (b) Victoria has developed alternative care pathways for older people waiting for residential aged care to be supported outside the acute hospital system. These alternative care pathways impact on the data reporting the number of hospital patient days by those eligible and waiting for residential aged care.
- (c) Data for Tasmania and ACT should be interpreted with caution until further assessment of Aboriginal and Torres Strait Islander identification is completed. The Australian totals for Aboriginal and Torres Strait Islander/Other Australians do not include data for the ACT, Tasmania and NT (private hospitals only).
- (d) 'Other Australians' includes non-Indigenous Australians and those for whom Indigenous status was not stated.
- (e) Disaggregation by remoteness is by the patient's usual residence, not the location of the hospital. Patient days are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of residence. Hence, rates represent the number of patient days for patients living in each remoteness area (regardless of their jurisdiction of usual residence) divided by the total number of patient days for patients living in that remoteness area and hospitalised in the reporting jurisdiction.

Table 13A.49 **Hospital patient days used by those eligible and waiting for residential aged care (a)**

| (f) | SEIFA quintiles are based on the ABS Index of Relative Socio-economic Disadvantage (IRSD), with quintile 1 being the most disadvantaged and quintile 5 being the least disadvantaged. Each SEIFA quintile represents approximately 20 per cent of the national population, but does not necessarily represent 20 per cent of the population in each state or territory. Disaggregation by SEIFA is by the patient's usual residence, not the location of the hospital. Patient days are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of residence. Hence, rates represent the number of patient days for patients living in each SEIFA quintile (regardless of their jurisdiction of usual residence) divided by the total number of patient days for patients living in that SEIFA quintile and hospitalised in the reporting jurisdiction. | | | | | | | | |
| (g) | Total includes separations for which a SEIFA category or remoteness area could not be assigned/mapped as the place of residence was not known or not stated. | | | | | | | | |
| (h) | Data for Tasmania for 2008-09 does not include two private hospitals that account for approximately one eighth of Tasmania's total hospital separations. – Nil or rounded to zero. np Not published. .. Not applicable. | | | | | | | | |

(a) From 1 July 2012, the Australian Government assumed full funding and operational responsibility for Commonwealth HACC services delivered to people aged 65 years and over (or 50 years and over for Aboriginal and Torres Strait Islander peoples), except in WA and Victoria, where state-based arrangements continue. The Aged Care Complaints Scheme began responding to HACC aged care complaints from that date. This table includes data for in-scope HACC complaints.

(b) Data for 2011-12 are for the period 1 September 2011 to 30 June 2012.

| 2012-13 | % | 88.8 | 90.2 | 55.1 | 82.6 | 82.5 | 38.5 | 100.0 | 60.0 | 78.0 |
| 2013-14 | % | 93.4 | 96.8 | 59.8 | 100.0 | 87.3 | 77.8 | 100.0 | 57.7 | 85.5 |

(a) Community aged care services include providers of National Respite for Carers Program, Home care (for 2013-14) and CACP, EACH, EACH-D (up to 2012-13). These services are required to appraise their performance against the Community Care Common Standards and complete a quality review at least once during a three year cycle.

(b) Data for the ACT on the number of services to be reviewed and the proportion of services reviewed are combined with that of NSW for 2013-14. Number of services to be reviewed for each financial year was provided at the beginning of the financial year.

(c) Queensland data for 2013-14 on the proportion of reviews that met all expected outcomes under each of the Standards excludes five quality reviews, as the review outcomes were not available at the time of data preparation.

(d) The proportion of reviews that met all expected outcomes under each of the Standards are based on less than ten quality reviews in the ACT for all years and in Tasmania for 2013-14.

(e) In some states and territories, more services were reviewed than the annual target in the relevant year.

(f) Standard 1 — Effective management — the service provider demonstrates effective management processes based on a continuous improvement approach to service management, planning and delivery.

- (a) The HACC program for older people transitioned to the Australian Government on 1 July 2012 for all states and territories except for WA and Victoria. In 2012-13 targets for the review of Commonwealth HACC services were not established due to the transition of the review function from state and territory governments. Targets for the HACC component of the Commonwealth Home Support Program will be established following its introduction from 1 July 2015. The Home Support Program will combine under one program services currently providing basic home support, including Commonwealth HACC program, the National Respite for Carers program, the Day Therapy Centres program and Assistance with Care and Housing for the Aged program.
- (b) Victoria reviews agencies against the Community Care Common Standards and against the Victorian HACC Program Manual. Victoria considers that the aggregated method used in constructing this table leads to results that do not accurately reflect the high quality of Victorian HACC funded agencies in delivering services to clients.
- (c) Data for the ACT on the number of reviews are combined with that of NSW, as these reviews are undertaken by the NSW office.
- (d) Standard 1 — Effective management — the service provider demonstrates effective management processes based on a continuous improvement approach to service management, planning and delivery.
- (e) Standard 2 — Appropriate access and service delivery — each service user (and prospective service user) has access to services and service users receive appropriate services that are planned, delivered and evaluated in partnership with themselves and/or their representatives.
- (f) Standard 3 — Service user rights and responsibilities — each service user (and/or their representative) is provided with information to assist them to make service choices and has the right (and responsibility) to be consulted and respected. Service users (and/or their representative) have access to complaints and advocacy information and processes and their privacy and confidentiality and right to independence is respected.

(a) Data for assessments for 2011-12 and 2012-13 were extracted from the Ageing and Aged Care Data Warehouse from preliminary data using the snapshot effective dates of 31 August 2013 and 31 August 2014 respectively. Future extracts of this data may change and thus alter final numbers.

(b) The high cost for each assessment in the NT may be influenced by the remoteness of people requiring assessments, clients having English as a second or third language and a lack of supporting health and community services infrastructure to assist with assessments.

(c) Includes one non-government funded ACAT team in NSW.

(d) Aged care assessment expenditure is Australian Government spending only.

(e) Time series financial data are adjusted to 2012-13 dollars using the GGFCE chain price deflator (2012-13 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(f) Cost per assessment includes clients aged less than 65 years.

(g) From 2006-07, includes completed assessments only. Earlier years may include complete and incomplete assessments.

(a) Time series financial data are adjusted to 2012-13 dollars using the GGFCE chain price deflator (2012-13 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(b) There is no commonly agreed methodology for calculating unit costs and therefore unit costs across jurisdictions are not comparable.

(c) The unit costs reported for some years do not correspond to Victoria's HACC unit prices published by the Department of Health, since they are based on a different methodology.

(d) WA contract by service group. Unit costs reported are an average across all services in the group. The NT contracted by service group in 2009-10.

(e) Unit costings are not available for the NT for some years or for some services in some years as the remote services and other factors effect a reliable unit cost being developed and applied in the NT.

na Not available.

- (a) DVA expenditure figures are sourced from the DoHA. The figures are subject to lag and may therefore be subject to revision. For data on DVA expenditure per person client see table 13A.13.
- (b) See table 13A.2 for footnotes on the sources of population data.
- (c) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (d) Expenditure data include State and Territory funding (except in Victoria and WA) of younger people in residential aged care. State and Territory governments expenditure on supplements provided to residential aged care are also included for the first time in this edition of the Report.

Source: DoHA/DSS (unpublished); DVA (unpublished); State and Territory governments (unpublished); table 2A.51.

Table 13A.60 Australian, Victorian and WA governments' real expenditure on HACC services per person in the HACC target population aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (2013-14 dollars) (a), (b), (c), (d), (e)

| | <i>NSW</i> | <i>Vic (b)</i> | <i>Qld</i> | <i>WA (b)</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---------|------------|----------------|------------|---------------|-----------|------------|------------|-----------|-------------|
| 2011-12 | 1 590.56 | 1 865.60 | 2 293.37 | 2 271.33 | 1 710.81 | 1 992.81 | 1 739.30 | 1 738.23 | 1 880.01 |
| 2012-13 | 1 664.26 | 1 949.79 | 2 362.79 | 2 352.30 | 1 955.42 | 2 093.76 | 1 793.79 | 1 954.75 | 1 970.80 |
| 2013-14 | 1 721.05 | 2 114.23 | 2 464.63 | 2 558.93 | 2 020.73 | 2 201.38 | 1 849.86 | 2 041.86 | 2 079.89 |

- (a) The HACC target population is people in the Australian community who, without basic maintenance and support services provided under the scope of the HACC Program, would be at risk of premature or inappropriate long term residential care, including older and frail people with moderate, severe or profound disabilities. The HACC target population is estimated by applying the proportion of all people with moderate, severe or profound disability in households, by sex and five year age groups, from the ABS SDAC to population projections for the total population in each jurisdiction. To calculate the Aboriginal and Torres Strait Islander 50–64 year component of the HACC target population for older people, the proportion of all people aged 50–64 years in households with moderate, severe or profound disability was multiplied by an additional Indigenous factor of 1.9 (from ABS unpublished analysis) and then applied to DSS Aboriginal and Torres Strait Islander population projections in the 50–64 years age groups in each jurisdiction. The HACC target population for June 2014 is based on SDAC 2012 while HACC target populations for previous years are based on SDAC 2009. See table 13A.2 for details about the total population projections and the Aboriginal and Torres Strait Islander population used in these calculations.
- (b) For Victoria and WA, this table represents expenditure under the HACC Review agreements. HACC total program expenditure is adjusted (reduced) to take into account the proportion of people who are older (around 75 per cent in Victoria and 80 per cent in WA).
- (c) Reports provisional data that have not been validated and may be subject to revision.
- (d) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.
- (e) Includes expenditure by the Australian, Victorian and WA governments.

Source: DoHA/DSS (unpublished); table 2A.51.

Table 13A.61 Australian, Victorian and WA governments' total real expenditure on HACC services, per person aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (2013-14 dollars) (a), (b), (c), (d)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|---------|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| 2011-12 | 427.26 | 502.37 | 599.01 | 595.23 | 467.02 | 524.74 | 453.15 | 398.08 | 501.19 |
| 2012-13 | 443.56 | 521.76 | 610.80 | 612.30 | 529.35 | 546.48 | 465.92 | 445.32 | 521.32 |
| 2013-14 | 436.53 | 539.43 | 605.36 | 632.75 | 519.82 | 543.95 | 457.18 | 433.04 | 523.34 |

(a) For Victoria and WA, this table represents expenditure under the HACC Review agreements. HACC total program expenditure is adjusted (reduced) to take into account the proportion of people who are older (around 75 per cent in Victoria and 80 per cent in WA) and will not match data reported in table 13A.8.

(b) Reports provisional data that have not been validated and may be subject to revision.

(c) See table 13A.2 for notes and sources of population data.

(d) Time series financial data are adjusted to 2013-14 dollars using the GGFCE chain price deflator (2013-14 = 100) (table 2A.51). See chapter 2 (sections 2.5-6) for details.

(a) Cells in this table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals.

(b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent). A '*' indicates a relative standard error (RSE) of between 25 per cent and 50 per cent. Estimates with RSEs greater than 25 per cent should be used with caution. Estimates with RSEs greater than 50 per cent are considered too unreliable for general use.

(c) Data are for older people living in households only.

Table 13A.63 Participation of people aged 65 years or over in any social and community activities away from home in the last 3 months, by disability status, 2012 (per cent) (a), (b), (c), (d)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT (e)</i> | <i>Aust</i> |
|--|------------|------------|------------|-----------|-----------|------------|------------|---------------|-------------|
|--|------------|------------|------------|-----------|-----------|------------|------------|---------------|-------------|

(d) The social and community activities participated in away from home in the last 3 months are: visited relatives or friends, went to restaurant or club, church activities, voluntary activities, performing arts group activity, art or craft group activity, other special interest group activities and other activities not specified elsewhere.

(e) Data for the NT should be used with caution as very remote areas were excluded from the Survey of Disability, Ageing and Carers. This translates to exclusion of around 23 per cent of the NT population.

(a) Average length of stay is only for recipients who completed a transition care episode (that is, as it is for the Modified Barthel Index figures), while admissions and discharges are totals for the financial year (that is, not restricted to those who completed TC episode).

(b) At 30 June.

Table 13A.66 **Transition care program, summary measures**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|-------------|
| (c) | Allocated places include places that will not be funded and therefore cannot become operational until the next financial year. | | | | | | | | | |
| (d) | Nominal expenditure for the year. Includes direct funding only. | | | | | | | | | |
| (e) | Nominal expenditure for the year. Includes direct funding and in-kind contributions. | | | | | | | | | |
| (f) | The Modified Barthel Index is a measure of functioning in the activities of daily living reported for Transition Care Program recipients who completed a transition care episode with zero being fully dependent and 100 being fully independent. Data are available from 2007-08 onwards. | | | | | | | | | |
| (g) | Different health and aged care service systems, local operating procedures and client groups can have an effect on the outcomes of the Transition Care Program across jurisdictions. | | | | | | | | | |
| (h) | Average Functional Capacity Scores on Entry and on Exit are for Transition Care completed episodes only. | | | | | | | | | |
| | na Not available. | | | | | | | | | |

Data quality information — Aged care services, chapter 13

Data Quality Information

Data quality information (DQI) provides information against the seven Australian Bureau of Statistics (ABS) data quality framework dimensions, for a selection of performance indicators in the Aged care services chapter. DQI for additional indicators will be progressively introduced in future reports.

Technical DQI has been supplied or agreed by relevant data providers. Additional Steering Committee commentary does not necessarily reflect the views of data providers.

DQI Contents:

| | |
|---|----|
| Use by different groups — access to residential aged care services by Aboriginal and Torres Strait Islander people | 3 |
| Use by different groups — access to Home Care by Aboriginal and Torres Strait Islander people | 5 |
| Use by different groups — the rate of contacts with Commonwealth Respite and Carelink Centres for Aboriginal and Torres Strait Islander Australians benchmarked against the rate for all people | 8 |
| Use by different groups — Veterans' access to residential aged care | 10 |
| Use by different groups — the proportion of new residents classified as concessional, assisted or supported residents | 14 |
| Operational aged care places | 16 |
| Elapsed times for aged care services | 18 |
| Hospital patient days used by aged care type patients — proportion of completed hospital separations for which the length of stay was 35 days or longer | 20 |
| Hospital patient days used by those eligible and waiting for residential aged care — proportion of total patient days used by patients who are waiting for residential aged care | 23 |
| Compliance with service standards for residential care — proportion of residential aged care services that are three year re-accredited | 27 |

| | |
|---|----|
| Compliance with service standards for residential care — compliance with building certification, fire safety and privacy and space requirements | 29 |
| Cost per output unit — government funding per hour of HACC service | 30 |
| Expenditure per head of aged care target population — HACC | 32 |
| Maintenance of individual physical function | 34 |

Use by different groups — access to residential aged care services by Aboriginal and Torres Strait Islander people

Data quality information (DQI) for this indicator has been drafted by the Australian Government Department of Social Services (DSS), with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity — Access |
| Indicator | Use by different groups — access to residential aged care services by Aboriginal and Torres Strait Islander people. |
| Measure (computation) | <p><u>Definition</u></p> <p>Number of Aboriginal and Torres Strait Islander people who access residential aged care services per 1000 people.</p> <p><u>Numerators:</u></p> <p>(1) the number of people of all ages using residential aged care services</p> <p>(2) the number of Aboriginal and Torres Strait Islander people of all ages using residential aged care services</p> <p><u>Denominators:</u></p> <p>(1) estimated resident population aged 65 years or over and Aboriginal and Torres Strait Islander population aged 50–65 years</p> <p>(2) estimated resident Aboriginal and Torres Strait Islander population aged 50 years or over</p> <p><u>Computation:</u></p> <p>Expressed as a rate. Calculation is: (Numerator ÷ Denominator) x 1000.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Government DSS's Ageing and Aged Care data warehouse. The Ageing and Aged Care data warehouse is a consolidated data warehouse of service provider and service recipient data held by the Ageing and Aged Care Division and the Office of Aged Care Quality and Compliance of the DSS.</p> <p><u>Denominators:</u></p> <p>Total population projections 65 years or over</p> <ul style="list-style-type: none">• From June 2013 — projections based on the 2011 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• June 2008–June 2012 — projections based on the 2006 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• Before June 2008 — projections based on the 2001 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS. <p>Aboriginal and Torres Strait Islander population projections 50–64 year olds or aged 50 years or over</p> <ul style="list-style-type: none">• June 2008–June 2013 — based on Australian Bureau of Statistics (ABS) Aboriginal and Torres Strait Islander Experimental 2006 Estimated Resident Population (ERP) data at statistical local area (SLA) level and aligned to published ABS Aboriginal and Torres Strait Islander data in Experimental Estimates and Projections (ABS Cat. no. 3238.0, series B).• June 2014 — Aboriginal and Torres Strait Islander projections are based closely on ABS 3238.0 — <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026</i>. These projections have been adjusted slightly by DSS to include Other Territories. |

Data Quality Framework Dimensions

| | |
|----------------------|--|
| Institutional | Approved service providers submit data to the Department of Human Services |
|----------------------|--|

| | |
|-------------------------|---|
| environment | <p>(DHS) to claim subsidies from the Australian Government for services delivered under the Aged Care Act 1997 (the Act) and Aged Care Principles (the Principles)¹. These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse.</p> <p>Information relating to the recipient details is provided by DHS to provide context around the claims.</p> <p>The tables for this indicator are prepared by the DSS.</p> |
| Relevance | <p>The data are reported by state / territory and provide information on the ratios of recipients in aged care based on characteristics of age and Indigenous status to the relevant populations aged 65 years or over and Aboriginal and Torres Strait Islander population aged 50 years or over.</p> |
| Timeliness | <p>DHS provides recipient data weekly to DSS and numbers are considered complete in the month after the period in question.</p> <p>On occasion a small percentage of late data are received from DHS.</p> <p>Data collected in September for the previous financial year are considered complete for publishing purposes.</p> <p>Population data are based on the ABS data from the 2011 census. Future census data for population projections (denominator) may be used to provide updates to the current ratios if significantly different.</p> |
| Accuracy | <p>Funding to service providers of Aged Care under the Act and the Principles is contingent on their submitting claims to DHS. Service providers' claims are audited annually.</p> <p>The data presented against this indicator relate to people who are in a residential care service as at 30 June.</p> <p>Approximately one per cent of all residential aged care recipients has an unspecified Indigenous status. These unspecified responses are excluded.</p> <p>Approximately one half of one per cent of all residential aged care recipients has an unspecified country of birth. These unspecified responses are excluded.</p> <p>The age of the recipient is calculated as at 30 June.</p> |
| Coherence | <p>The data items used to construct this performance indicator will be consistent and comparable over time.</p> <p>The recipient data are also set to 30 June and are available as a time series. The time series is broken down into months.</p> <p>Rates derived using population data based on different Censuses are not comparable.</p> |
| Accessibility | <p>Data are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services.</p> |
| Interpretability | <p>Further information on definitions is available in the: <i>Aged Care Act 1997 and Aged Care Principles</i>; the Residential Aged Care Manual 2009; Residential Respite Care Manual; Steering Committee for the Review of Government Service Provision's Report on Government Services Aged Care Services Data Manual.</p> |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • The data provide relevant and accurate information on recipients of residential aged care services by Aboriginal and Torres Strait Islander Australians. • Annual data are available. The most recent data available are for 2013-14. • The data are consistent and comparable over time. • No significant data gaps or issues are identified. |
|-----------------------------|---|

¹ Services delivered under the *Act Care Act 1997* and *Aged Care Principles* include residential care and residential respite care.

Use by different groups — access to Home Care by Aboriginal and Torres Strait Islander people

DQI for this indicator has been drafted by the Australian Government DSS, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Equity — Access |
| Indicator | Use by different groups — access to Home Care by Aboriginal and Torres Strait Islander people. |
| Measure (computation) | <p><u>Definition</u></p> <p>Number of Aboriginal and Torres Strait Islander people who received Home Care per 1000 people compared to number of all people received Home Care per 1000 people.</p> <p><u>Numerators:</u></p> <p>(1) number of people of all ages who received Home Care</p> <p>(2) number of Aboriginal and Torres Strait Islander people of all ages who received Home Care</p> <p><u>Denominators:</u></p> <p>(1) estimated resident population aged 65 years or over and Aboriginal and Torres Strait Islander population aged 50-64 years</p> <p>(2) estimated resident Aboriginal and Torres Strait Islander population aged 50 years or over</p> <p><u>Computation:</u></p> <p>Expressed as a rate. Calculation is: (Numerator ÷ Denominator) x 1000.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Australian Government DSS's Ageing and Aged Care data warehouse. The Ageing and Aged Care data warehouse is a consolidated data warehouse of service provider and service recipient data held by the Ageing and Aged Care Division and the Office of Aged Care Quality and Compliance of the DSS.</p> <p><u>Denominators:</u></p> <p>Total population projections 65 years or over</p> <ul style="list-style-type: none">• From June 2013 — projections based on the 2011 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• June 2008–June 2012 — projections based on the 2006 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• Before June 2008 — projections based on the 2001 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS. <p>Aboriginal and Torres Strait Islander population projections 50–64 year olds or aged 50 years or over</p> <ul style="list-style-type: none">• June 2008–June 2013 — based on ABS Aboriginal and Torres Strait Islander Experimental 2006 ERP data at SLA level and aligned to published ABS Aboriginal and Torres Strait Islander data in Experimental Estimates and Projections (ABS Cat. no. 3238.0, series B).• June 2014 — Aboriginal and Torres Strait Islander projections are based closely on ABS 3238.0 — <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026</i>. These projections have been adjusted slightly by DSS to include Other Territories. |

Data Quality Framework Dimensions

| | |
|----------------------|---|
| Institutional | Approved service providers submit data to DHS to claim subsidies from the |
|----------------------|---|

| | |
|-------------------------|--|
| environment | <p>Australian Government for services delivered under the <i>Aged Care Act 1997</i> and <i>Aged Care Principles (the Principles)</i>². These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse.</p> <p>Information relating to the recipient details is provided by DHS to provide context around the claims.</p> <p>The tables for this indicator are prepared by DSS.</p> |
| Relevance | <p>The data are reported by state / territory and provide information on the ratios of Home Care recipients based on characteristics of age and Indigenous status to the relevant populations of people aged 65 or over and the Aboriginal and Torres Strait Islander population aged 50 years or over.</p> |
| Timeliness | <p>The latest reference period for these data is 2013-14.</p> <p>DHS provides recipient data to DSS weekly and numbers are considered complete in the month after the period in question.</p> <p>On occasion a small percentage of late data are received from DHS.</p> <p>Data collected in September for the previous financial year is considered complete for publishing purposes.</p> |
| Accuracy | <p>Funding to service providers of Aged Care under the Act and the Principles is contingent on their submitting claims to DHS. Service providers' claims are audited annually.</p> <p>The data presented against this indicator relate to people who have received Home Care in the relevant financial year.</p> <p>Approximately ten per cent of all consumers of Home Care have no record on whether they are Aboriginal or Torres Strait Islander or not. This may be attributed to the quality of some of the data collected from the new payments system for this program and non-reporting by home care consumers on whether they were Aboriginal or Torres Strait Islander. Data with unspecified Indigenous status are excluded.</p> <p>The age of the recipient is calculated as at 30 June.</p> |
| Coherence | <p>From 1 August 2013, the new Home Care Program replaced the former community and flexible packaged care programs — Community Aged Care Packages (CACPs), Extended Aged Care at Home (EACH) packages, and EACH Dementia (EACH-D) packages. For existing CACP consumers, their packages became Home Care Level 2 and for existing EACH/EACH-D consumers, their packages became Home Care Level 4. For the 2013-14 data, the CACP, EACH and EACH-D data for month of July were allocated accordingly.</p> <p>Due to the program change the data items for 2013-14 used to construct this performance indicator are not consistent or comparable with data from previous reporting years.</p> <p>The recipient data are set to 30 June.</p> <p>Rates derived using population data based on different Censuses are not comparable.</p> |
| Accessibility | <p>Data are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services.</p> |
| Interpretability | <p>Further information on definitions are available in the: <i>Aged Care Act 1997</i> and <i>Aged Care Principles</i>; the draft <i>Community Packaged Care Guidelines 2007</i>; and the Steering Committee for the Review of Government Service Provision's Report on Government Services Aged Care Services Data Manual.</p> |

Data Gaps/Issues Analysis

Key data gaps/issues The Steering Committee notes the following issues:

² Services delivered under the *Act Care Act 1997* and *Aged Care Principles* include residential care and residential respite care.

-
- The data have a relatively high missing rate for information on Indigenous status.
 - Rates that are based on different Censuses are not comparable.
 - Annual data are available. The most recent data available are for 2013-14.
 - No significant data gaps or issues are identified.

Use by different groups — the rate of contacts with Commonwealth Respite and Carelink Centres for Aboriginal and Torres Strait Islander Australians benchmarked against the rate for all people

DQI for this indicator has been drafted by the Australian Government DSS, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity — Access |
| Indicator | Use by different groups — the rate of contacts with Commonwealth Respite and Carelink Centres for Aboriginal and Torres Strait Islander Australians benchmarked against the rate for all people. |
| Measure (computation) | <p><u>Definition:</u></p> <p>Rate of contacts with Commonwealth Respite and Carelink Centres for Aboriginal and Torres Strait Islander Australians compared against the rate for all people.</p> <p><u>Numerators:</u></p> <p>(1) Number of contacts made by Aboriginal and Torres Strait Islander Australians with Commonwealth Respite and Carelink Centres.</p> <p>(2) Number of contacts made by all people with Commonwealth Respite and Carelink Centres.</p> <p><u>Denominators:</u></p> <p>(1) Aboriginal and Torres Strait Islander Australians aged 50 years or over.</p> <p>(2) People aged 65 years or over plus Aboriginal and Torres Strait Islander Australians aged 50–64 years.</p> <p><u>Computation:</u></p> <p>Expressed as a rate. Calculation is: $(\text{Numerator} \div \text{Denominator}) \times 1000$.</p> |
| Data source/s | <p><u>Numerators:</u></p> <p>Commonwealth Carelink Centre Information System (CCCIS). The CCCIS is a database used by Centre staff to provide information to people about residential and community care services for older people and younger people with disabilities and their carers. CCCIS also captures information on all people that contact the Centres for information and/ or assistance. The CCCIS is owned and supported by the Australian Government DSS.</p> <p><u>Denominators:</u></p> <p>Total population projections 65 years or over:</p> <ul style="list-style-type: none">• From June 2013 — projections based on the 2011 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• June 2008–June 2012 — projections based on the 2006 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.• Before June 2008 — projections based on the 2001 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS. <p>Aboriginal and Torres Strait Islander population projections 50–64 year olds or aged 50 years or over:</p> <ul style="list-style-type: none">• June 2008–June 2013 — based on ABS Aboriginal and Torres Strait Islander Experimental 2006 ERP data at SLA level and aligned to published ABS Aboriginal and Torres Strait Islander data in Experimental Estimates and Projections (ABS Cat. no. 3238.0, series B).• June 2014 — Aboriginal and Torres Strait Islander projections are based closely on ABS 3238.0 — <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026</i>. These projections have been adjusted slightly by DSS to include Other Territories. |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional Environment | Centres are bound by their funding agreement with the Commonwealth to record information about people that contact them for information and assistance. Centres have access to the CCCIS to capture this data. Centres that do not use the CCCIS to capture client episodes must upload their data monthly onto the CCCIS. The Department uses the data on the CCCIS to monitor Centre performance under the funding agreement, and to improve the planning, targeting and delivery of the program. |
| Relevance | The data are reported by state / territory and provide information on the rate of contacts with Commonwealth Respite and Carelink Centres based on Indigenous status compared to rate of contacts with Commonwealth Respite and Carelink Centres for the total population. It is important to note that the provision of demographic data by people contacting Centres for information and assistance is voluntary. There is a high percentage of people that do not give any personal details since this is an information provision service and it is not proportionate, or fit for purpose, for Centres to collect personal information for every contact. |
| Timeliness | Centres that use the CCCIS database to record personal details and to maintain data on community service providers do not need to send monthly data to the DSS. The data are accessed centrally for reporting purposes. Centres that do not use CCCIS are required to submit data to DSS every month, through CCCIS. Submissions must include the data for a whole calendar month, and must be made in the first week of the following month. |
| Accuracy | <p>Funding to Commonwealth Respite and Carelink Centre service organisations is contingent on their meeting the requirements under their funding agreement which include submitting data about people that contact the Centre seeking information and assistance.</p> <p>The data presented against this indicator relate to people who have contacted a Commonwealth Respite and Carelink Centre in the relevant financial year. Contacts include phone calls, visits, emails and facsimiles. It is not compulsory for Centres to ask about Indigenous status. It is also not practical that Centres ask a range of demographic data if the person is seeking only information. However, if the call leads to service delivery e.g. respite provision then it is more likely that the Centre will ask about Indigenous status or the person will self-identify. For this reason there is likely to be substantial under-reporting of Indigenous status in the overall data collected.</p> |
| Coherence | <p>The data items used to construct this performance indicator are consistent and comparable across states / territories.</p> <p>Contacts with Commonwealth Respite and Carelink Centre include those made by people of any age (numerators). Populations used to derive the rates include people aged 65 years or over plus Aboriginal and Torres Strait Islander Australians aged 50–64 years (denominators).</p> |
| Accessibility | Data are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services. |
| Interpretability | Further information for Centres is contained in the CCCIS user manual, the CCCIS training manual, the Centres operational manual and through the CCCIS helpdesk within the DSS. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none">• The provision of demographic data, such as Indigenous status and age, by people contacting Centres for information and assistance is voluntary. There is a proportion of people who contact a Centre but do not provide demographic information.• Annual data are available. The most recent data available are for 2013-14. |
|-----------------------------|---|

Use by different groups — Veterans' access to residential aged care

DQI for this indicator has been drafted by the Australian Government Department of Veterans' Affairs (DVA), with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity — Access |
| Indicator | Use by different groups — Veterans' access to residential aged care |
| Measure (computation) | <u>Definition</u> (1) Veterans in residential aged care per 1000 eligible veterans. (2) Total expenditure (\$million) on residential aged care per 1000 eligible veterans. <u>Numerators</u> (1) Total expenditure (\$million) on veterans in residential care. (2) Total DVA clients in residential aged care. <u>Denominator</u> Number of eligible veterans aged 65 years or over. <u>Computation</u> (1) — Numerator (1)/Denominator (2) — Numerator (2)/Denominator |
| Data source/s | Unpublished DVA data. DVA source the residential aged care client and expenditure data from DSS. |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>Approved service providers submit data to DHS to claim subsidies from the Australian Government for services delivered under the <i>Aged Care Act 1997</i> and <i>Aged Care Principles</i> (the Principles)³. The DVA clients and expenditure data are provided to the DSS, which in turn and provide them to DVA.</p> <p>Information relating to the recipient details is provided by DHS to provide context around the claims.</p> <p>Eligible veterans are holders of DVA Gold or White cards. A Gold Card is determined to:</p> <p><u>Australian Veterans</u></p> <p>A Gold Card is issued to veterans of Australia's defence force who:</p> <ul style="list-style-type: none">• are ex-prisoners of war;• are World War 1 veterans, nurses or mariners;• are returned ex-servicewomen of World War 2, that is, who served in Australia's defence force between 3 September 1939 and 29 October 1945 and who have qualifying service from that conflict;• are World War 2 veterans who served in Australia's defence force and mariners who served in Australia's merchant navy, between 3 September 1939 and 29 October 1945, who are aged 70 years or over, and have qualifying service from that conflict;• are mariners who served in Australia's merchant navy between 3 September 1939 and 29 October 1945 and are ex-prisoners of war; or• are veterans who served in Australia's defence force after World War 2, who are aged 70 years or over, and have qualifying service under section 7A of the VEA. This includes members who have rendered a period of service classified as |
|----------------------------------|--|

³ Services delivered under the *Act Care Act 1997* and *Aged Care Principles* include residential care and residential respite care.

warlike on or after 1 July 2004, and which is covered under the Military, Rehabilitation and Compensation Act 2004 (MRCA) for compensation purposes.

Commonwealth and Allied Veterans

Some veterans of Commonwealth or allied forces with qualifying service are eligible for a Gold Card if they are:

- a veteran who served with a Commonwealth or allied force during World War 2 or in specified operational areas after World War 2 and were domiciled in Australia immediately prior to enlistment in the Commonwealth or allied force; or
- a mariner who served on a Commonwealth or allied ship during World War 2, if they or their dependants were residing in Australia for at least 12 months immediately prior to the commencement of their service on that ship.

Note: Eligibility for individuals who served with a Commonwealth or allied force requires that they have been 'domiciled' in Australia immediately prior to enlistment. Until 1 July 2010, individuals who were under 21 years of age were automatically determined to have been domiciled in the same country as their father (or mother, where their father was deceased). On 1 July 2010, this age was lowered to 18, allowing individuals older than this to take their own domicile.

Veterans Receiving Disability Pension under the Veterans' Entitlements Act 1986 (VEA)

Veterans who don't fit into the above categories but who receive the disability pension are also eligible to receive the Gold Card, if:

- the rate of their disability pension is 100 per cent of the general rate or higher;
- the rate of their disability pensions is 50 per cent of the general rate or higher and they also receive any amount of service pension;
- their disability pension includes an additional amount under section 27 of the VEA for specific service-related amputations or blindness in one eye; or
- they were granted the disability pension for pulmonary tuberculosis before 2 November 1978.

Veterans Receiving an Age or Invalidity Service Pension

Some veterans who receive an age or invalidity service pension are eligible to receive the Gold Card, if they also:

- satisfy the treatment benefits eligibility income and assets test; or
- are permanently blind in both eyes; or
- receive any amount of service pension and have an impairment from one or more service injuries or diseases that constitutes at least 30 impairment points under the MRCA.

Members with Conditions Accepted under MRCA

Former members of the Australian Defence Force (ADF), cadets and reservists who have conditions for which liability has been accepted under the MRCA are eligible for a Gold Card if they:

- have permanent impairment from accepted conditions assessed at or above 60 points; or
- have a permanent impairment from accepted conditions assessed at 30 points or above, and the person is receiving any amount of Service Pension, or
- meet the criteria for the Special Rate Disability Pension (SRDP) safety net payment even if they have not chosen that pension.

Dependants of Veterans

Certain dependants of veterans are also eligible for a Gold Card if they are:

- a war widow or widower in receipt of the war widow's or widower's pension;
- as at 1 July 2008 a war widow whose partner was in receipt of Temporary Special Rate and Intermediate Rate Pensions at the time of their death;
- a dependent child of a deceased veteran whose death has been accepted as war-caused, who is under 16 or between the ages of 16 and 25 and undergoing full-time education;
- a child of a deceased veteran whose death was not war-caused and who had

- operational service, if the child is not being cared for by the remaining parent;
- an invalid son or daughter of a deceased veteran whose death has been accepted as war-caused, who had treatment entitlement before 6 June 1985*;
- a widowed mother or widowed step-mother who was dependent on an unmarried deceased veteran whose death has been accepted as war-caused, who had treatment entitlement before 6 June 1985*; or
- a wholly dependent partner or dependent child of a member who is eligible for compensation for the member's death under the MRCA.

A White Card is determined to:

- Australian veterans or mariners under the *Veterans' Entitlements Act 1986* (VEA) with an accepted war or service-caused injury or disease. (may be eligible for non-liability health care treatment, whether war caused or not, for the following conditions;
 - malignant cancer (neoplasia);
 - pulmonary tuberculosis;
 - posttraumatic stress disorder (PTSD);
 - anxiety and/or depression;
 - substance use disorder; or
 - alcohol use disorder.)
- Former members of the Australian Defence Force who have accepted conditions under the *Safety, Rehabilitations and Compensation Act 1988* (SRCA) and ongoing treatment needs.
- Ex-service personnel who are eligible for treatment under agreements between the Australian Government and New Zealand, Canada, South Africa and the United Kingdom for disabilities accepted as war-caused by their country of enlistment.
- Former members of the Australian Defence Force, current part-time Reservists, cadets and, in limited circumstances, to full-time members under the *Military Rehabilitation and Compensation Act 2004* (MRCA) who have a medical condition accepted as service related under the MRCA.

Once DVA Gold or White Cards are determined it is recorded on the following Departmental systems: VIEW, aDVAnce and DEFCARE.

The tables for this indicator are prepared by the DVA.

| | |
|-------------------|---|
| Relevance | The data are reported by State and Territory and provide information on all clients and expenditure for veterans in residential aged care. |
| Timeliness | <p>Eligible veterans aged 65 years or over include data for those who age is unknown. An eligible veteran is defined as a DVA Gold or White card holder.</p> <p>DVA requests DSS monthly payment files. DSS provides these files 3 months in arrears, at the end of a month.</p> <p>On occasion a small percentage of late client data are received from Medicare Australia. The figures are subject to lag and may therefore be subject to revision.</p> |
| Accuracy | <p>Data collected in September for the previous financial year is considered complete for publishing purposes.</p> <p>Funding to service providers of Aged Care under the Act and the Principles is contingent on their submitting claims to Medicare Australia. Service providers' claims are audited annually.</p> <p>The data presented against this indicator relate to people who have received residential aged care that is funded by DVA.</p> <p>Before 1 July 2014, there was a data exchange between DSS, Centrelink and DVA via a nightly flat file (referred to as the "Train") that:</p> <ul style="list-style-type: none"> • was prepared by DSS, containing all relevant aged care recipients and sent to DVA; • DVA then updated the file by amending the liability indicator and details of care recipients who are DVA clients, and subsequently sent the file to Centrelink; • Centrelink updated the file with details of care recipients who are Centrelink |

| | |
|-------------------------|--|
| | clients and subsequently returned the file to DSS. From 1 July 2014 a new process has been established. |
| Coherence | The data items used to construct this performance indicator will be consistent and comparable over time. |
| Accessibility | Data are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services. Expenditure for Residential Aged Care is published in the annual Portfolio Budget Statements. Veteran's Demographic Data on DVA clients and eligible veterans are published on the DVA website. |
| Interpretability | Further information on definitions is available in the: <i>Aged Care Act 1997</i> and <i>Aged Care Principles</i> and the Steering Committee for the Review of Government Service Provision's Report on Government Services Aged Care Services Data Manual. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • The data provide relevant and accurate information on DVA expenditure and clients for residential aged care. • Annual data are available. The most recent data available are for 2013-14. • The data are consistent and comparable over time. • No significant data gaps or issues are identified. |
|-----------------------------|---|

Use by different groups — the proportion of new residents classified as concessional, assisted or supported residents

DQI for this indicator has been drafted by the Australian Government DSS, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Equity — Access |
| Indicator | Use by different groups — concessional, assisted or supported residents. |
| Measure (computation) | <p><u>Definition:</u></p> <p>Proportion of new residents classified as concessional, assisted or supported residents, divided by the number of new residents.</p> <p><u>Numerators:</u></p> <p>(1) Number of new high care residents classified as concessional, assisted or supported.</p> <p>(2) Number of new low care residents classified as concessional, assisted or supported.</p> <p>(3) Number of new residents (high and low care) classified as concessional, assisted or supported.</p> <p><u>Denominators:</u></p> <p>(1) Number of new high care residents</p> <p>(2) Number of new low care residents</p> <p>(3) Number of new residents (high and low care).</p> <p><u>Computation:</u></p> <p>Expressed as a proportion. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| • Data source/s | Australian Government DSS's Ageing and Aged Care data warehouse. The Ageing and Aged Care data warehouse is a consolidated data warehouse of service provider and service recipient data held by the Ageing and Aged Care Division and the Office of Aged Care Quality and Compliance of the DSS. |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional Environment | <p>Approved service providers submit data to DHS to claim subsidies from the Australian Government for services delivered under the <i>Aged Care Act 1997</i> (the Act) and Aged Care Principles (the Principles)⁴. These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse.</p> <ul style="list-style-type: none">• Information relating to the recipient details is provided by DHS to provide context around the claims.• The tables for this indicator are prepared by the DSS. |
| Relevance | <p>These data only refer to permanent residents only, at their first admission.</p> <p>For 2005-06 and 2006-07, data include concessional or assisted residents. Data for 2007-08 include concessional, assisted or supported residents. Data from 2008-09 include supported residents only.</p> <ul style="list-style-type: none">• Concessional residents are those who receive an income support payment and have not owned a home for the last two or more years (or whose home is occupied by a 'protected' person, for example, the care recipient's partner), and have assets of less than 2.5 times the annual single basic age pension. For residents who enter care from 20 Sept 2009 onwards the threshold is 2.25 times the annual single basic age pension.• Assisted residents are those meeting the above criteria, but with assets between |

⁴ Services delivered under the *Act Care Act 1997* and *Aged Care Principles* include residential care and residential respite care.

| | |
|-------------------------|--|
| | <p>2.5 and 4.0 times the annual single basic age pension. For residents who enter care from 20 Sept 2009 onwards the range is from 2.25 to 3.61 times the annual single basic age pension.</p> <ul style="list-style-type: none"> Supported residents are those who have entered permanent residential care on or after 20 March 2008 (or who re-enter care on or after 20 March 2008 after a break in care of more than 28 days) and have assets of up to a set value (\$102 544 as at March 2011). This threshold is indexed in March and September each year in line with pension increases. <p>The data are reported by state / territory and provide information on the proportion of people entering residential aged care who are supported residents, by level of care.</p> |
| Timeliness | <p>DHS provides recipient data to DSS weekly and numbers are considered complete in the month after the period in question.</p> <p>On occasion a small percentage of late data are received from DHS.</p> <p>Data collected in September for the previous financial year is considered complete for publishing purposes.</p> |
| Accuracy | <p>Funding to service providers of Aged Care under the Act and the Principles is contingent on their submitting claims to DHS. | Coherence | <p>The data items used to construct this performance indicator will be consistent and comparable over time.</p> <p>The recipient data are set to 30 June and are available as a time series. The time series is broken down into months.</p> |
| Accessibility | <p>Data are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services.</p> |
| Interpretability | <p>Further information on definitions is available in the: <i>Aged Care Act 1997</i> and <i>Aged Care Principles</i> and the Steering Committee for the Review of Government Service Provision's Report on Government Services Aged Care Services Data Manual.</p> |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> The data provide relevant and accurate information on the proportion of new residents classified as supported. Annual data are available. The most recent data available are for 2013-14. The data are consistent and comparable over time. No significant data gaps or issues are identified. |
|-----------------------------|---|

Operational aged care places

DQI for this indicator has been sourced from the Australian Institute of Health and Welfare (AIHW) for the National Healthcare Agreement with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness – Access |
| Indicator | Operational residential and community aged care places/packages per 1,000 people aged 70 year or over (and Aboriginal and Torres Strait Islander people aged 50 years and over), excluding services funded through Home and Community Care (HACC). |
| Measure (computation) | <p><i>Numerator:</i> Number of operational residential and community aged care places at 30 June (excluding services funded through Home and Community Care).</p> <p>Residential aged care places is a count of operational residential care places delivered in Australian Government subsidised residential aged care facilities. It includes Multi-Purpose Services and places delivered under the National Aboriginal Torres Strait Islander Flexible Aged Care Program and the Innovative Care program provided in a residential aged care facility.</p> <p>Community Aged Care places is a count of operational packages under the following programs: Home Care Packages Levels 1–4; Transition Care Program (except when broken down into aged care region); Multi-Purpose Services; and places delivered under the Aboriginal and Torres Strait Islander Aged Care Strategy in the community as well as Innovative Care Programs provided in the community.</p> <p><i>Denominator:</i> Estimated population aged 70 years and over for the total population plus the estimated Indigenous population aged 50–69 years as at 30 June of the current reporting period.</p> <p>Expressed as numerator only and rate ($1000 \times \text{numerator} \div \text{denominator}$).</p> <p>Rate (per 1000 population) calculated separately for residential and community aged care places.</p> |
| Data source/s | <p><i>Numerator:</i> Australian Government Department of Social Services Aged Care data warehouse of service provider and service recipient data held by Department of Social Services (DSS).</p> <p><i>Denominator: For total population:</i> For June 2014, DSS projections of the total population are based on 2012 Estimated Resident Population. These projections were prepared at the Statistical Area 2 (SA2) level for DSS by the Australian Bureau of Statistics (ABS) according to the assumptions set by DSS.</p> <p><i>For Indigenous population:</i> For June 2014, DSS Indigenous population projections are based closely on <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2016 (ABS cat no. 3238.0)</i>. These projections have been adjusted slightly by DSS to include Other Territories.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional Environment | <p>Approved services submit data to DHS to claim subsidies from the Australian Government. This data is provided to DSS to administer services under the <i>Aged Care Act 1997</i> and the Aged Care Principles and to administer places delivered under the Aboriginal and Torres Strait Islander Aged Care Strategy.</p> <p>The data quality statement was developed by DSS and includes comments from the AIHW. The AIHW did not have all of the relevant datasets required to independently verify the data tables for this indicator. For further information see the AIHW website.</p> |
| Relevance | <p><i>Numerator:</i> The data includes all places offered by aged care services subsidised by the Australian Government under the programs identified above.</p> <p>Residential places are those allocated to an Aged Care Planning Region which were delivered in an Australian Government subsidised residential aged care facility and were operational at 30 June 2013, and includes Multi-Purpose Services and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Programs provided in a residential aged care facility.</p> |

Community care places are those allocated to an Aged Care Planning Region which were operational at 30 June 2013 and includes: Home Care Packages Levels 1–4 and Multi-Purpose Services and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Programs provided in the community. Note that it does not include places allocated under the Transition Care Program only for Aged Care Planning Region, as it is not possible to disaggregate these places by Aged Care Planning Region.

This indicator does not include services funded through HACC.

Timeliness *Numerator:* Based on a stocktake of aged care places which were operational at 30 June 2014. Data for the current reporting period is available October each year.

Accuracy The data used to calculate this indicator are from an administrative data collection designed for payment of subsidies to service providers and have accurate data on the number and location of funded aged care places.

Coherence The data items used for the numerator in this indicator are consistent and comparable over time. This indicator is consistent with other publicly available information about aged care places.

Indigenous population projections have been calculated using a different method compared with that used in previous years. This will have a small effect on comparability with results from previous years.

In 2011, the ABS updated the standard geography used in Australia for most data collections from the Australian Standard Geographical Classification (ASGC) to the Australian Statistical Geography Standard (ASGS). Also updated at this time were remoteness areas, based on the 2011 ABS Census of Population and Housing. The new remoteness areas will be referred to as RA 2011, and the previous remoteness areas as RA 2006. Data for 2009 through to 2012 reported by remoteness were reported for RA 2006. Data for 2013 and subsequent years are reported for RA 2011. The AIHW considers the change from RA 2006 to RA 2011 to be a series break when applied to data supplied for this indicator, therefore remoteness data for 2012 and previous years are not directly comparable to remoteness data for 2013 and subsequent years.

Accessibility Aggregated data items are published in the Steering Committee for the Review of Government Service Provision's Report on Government Services, the Reports on the Operation of the *Aged Care Act 1997* prepared by DSS, and in the AIHW's Aged care statistics series.

Interpretability Further information on definitions is available in the *Aged Care Act 1997* and Aged Care Principles, and in the Guide to Aged Care.

Data Gaps/Issues Analysis

Key data gaps/issues The Steering Committee notes the following issues:

- Data development is required in order to develop a measure of capacity available under the HACC program.
- Remoteness data for 2012 and previous years are not directly comparable to remoteness data for 2013 and subsequent years.

Elapsed times for aged care services

DQI for this indicator has been sourced from the AIHW for the National Healthcare Agreement with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — access — timeliness |
| Indicator | Elapsed times for aged care services. The elapsed time between an Aged Care Assessment Team (ACAT) approval and entry into a residential aged care service or commencement of a Home Care Package. |
| Measure (computation) | <i>Numerator:</i> Number of new aged care recipients who commence a service within the following elapsed time periods during the previous financial year: <ul style="list-style-type: none">• Within two days or less• Seven days or less• Less than one month• Less than three months• Less than nine months <i>Denominator:</i> Total number of new aged care recipients during the previous financial year. Expressed as percentage of people admitted by length of entry period and service type ($100 \times \text{numerator} \div \text{denominator}$) calculated separately for each service type and elapsed time period. |
| Data source/s | Australian Government DSS's Aged Care Assessment Program Minimum Data Set. Australian Government Department of Social Services' Aged Care Data Warehouse. |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | Approved service providers submit data to the DHS to claim subsidies from the Australian Government for services delivered under the <i>Aged Care Act 1997</i> and Aged Care Principles. These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse. The tables for this indicator were prepared by the DSS and quality-assessed by the AIHW. The data quality statement was developed by DSS and includes comments from the AIHW. The AIHW did not have the relevant datasets required to independently verify the data tables for this indicator. |
| Relevance | The measure of 'elapsed time' is utilised because the period of time between the Aged Care Assessment Team (ACAT) approval and entry into residential care or commencement of community care may be influenced by factors that cannot be categorised as time spent 'waiting' and not all 'waiting' time is included. Factors that influence this indicator are: <ul style="list-style-type: none">• care placement offers that are not accepted• the availability of alternative community care, informal care and respite services• variations in care fee regimes that influence client choice of preferred service• building quality and perceptions about quality of care that influence client choice of preferred service. |
| Timeliness | The reference period for this data set is the previous financial year. |
| Accuracy | The elapsed time between an ACAT approval and entry into an aged care service is retrospective, i.e. the elapsed time is calculated once a person has obtained entry into an aged care service. The data for elapsed time by State and Territory, and by Indigenous status, are derived from the location of the aged care service. The data for elapsed time by Remoteness are derived from the recipient's |

postcode at time of assessment and exclude some postcodes which cannot be matched to a Remoteness area.

Socio-Economic Indexes for Area (SEIFA) quintiles and deciles are derived from the recipient's postcode at time of assessment. Recipient's postcodes not found in the ABS's SEIFA data are excluded.

The data for elapsed time by remoteness and SEIFA were sourced at a later date than the data for elapsed time by state/territory resulting in slightly different total numbers of admissions. The variance across the different breakdowns of this indicator is less than 0.4 per cent.

Coherence

The state/territory level data items used to construct this performance indicator are consistent and comparable over time. As noted in the Accuracy section above, there is variance between the state/territory level data items and the data for remoteness and SEIFA. This occurs for 2011-12 and subsequent years.

For 2011-12 and subsequent years, cells have been suppressed to protect confidentiality where the presentation could identify an aged care recipient or where rates are likely to be highly volatile, for example where the denominator is very small. The following rules were applied:

Rates were suppressed where the numerator was less than 5 and/or the denominator was less than 10.

Counts were suppressed when the number was less than 5.

Consequential suppression was applied.

In 2011, the ABS updated the standard geography used in Australia for most data collections from the ASGC to the Australian Statistical Geography Standard ASGS. Also updated at this time were remoteness areas and the SEIFA, based on the 2011 ABS Census of Population and Housing.

The new remoteness areas will be referred to as RA 2011, and the previous remoteness areas as RA 2006. The new SEIFA will be referred to as SEIFA 2011, and the previous SEIFA as SEIFA 2006.

Data for 2011-12 were reported for RA 2006. Data for 2012-13 and subsequent years are reported for RA 2011. The AIHW considers the change from RA 2006 to RA 2011 to be a series break when applied to data supplied for this indicator, therefore remoteness data for 2011-12 are not directly comparable to remoteness data for 2012-13 and subsequent years.

Data for 2011-12 for SEIFA quintiles and deciles were reported using SEIFA 2006. Data for 2012-13 and subsequent years for SEIFA quintiles and deciles are reported using SEIFA 2011. The AIHW considers the change from SEIFA 2006 to SEIFA 2011 to be a series break when applied to data supplied for this indicator, therefore SEIFA data for 2012-13 and subsequent years are not directly comparable with SEIFA data for 2011-12.

Accessibility

The data for this indicator are also used to report in the Report on Government Services.

Interpretability

The Report on Government Services includes footnotes and explanations on this measure.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- The measure of 'elapsed time' is used as a proxy for demand for aged care services, however there are many factors that cannot be categorised as time spent 'waiting' and not all 'waiting' time is included in this measure.
- For residential aged care, it is important to focus on high care services, as the link between 'elapsed time' before entry to residential care and actual 'waiting time' is stronger for high care residents than for low care residents.
- Remoteness data for 2011-12 are not directly comparable to remoteness data for 2012-13 and subsequent years.
- SEIFA data for 2012-13 and subsequent years are not directly comparable with SEIFA data for 2011-12.

Hospital patient days used by aged care type patients – proportion of completed hospital separations for which the length of stay was 35 days or longer

DQI for this indicator has been drafted by the AIHW, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Equity — Access |
| Indicator | Proportion of completed hospital separations for aged care type patients (aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years) for which the length of stay was 35 days or longer. |
| Measure (computation) | <p><u>Numerator:</u></p> <p>Number of completed hospital separations for ‘aged care type’ patients aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years where the length of stay was 35 days or longer.</p> <p><u>Denominator:</u></p> <p>Number of completed hospital separations for ‘aged care type’ patients aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years.</p> <p><u>Computation:</u></p> <p>Numerator/Denominator * 100</p> |
| Data source/s | This indicator is calculated using data from the National Hospitals Morbidity Database (NHMD), based on the National Minimum Data Set (NMDS) for Admitted patient care. |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>The AIHW has calculated this indicator.</p> <p>The AIHW is a major national agency set up by the Australian Government under the <i>Australian Institute of Health and Welfare Act 1987</i> to provide reliable, regular and relevant information and statistics on Australia’s health and welfare. It is an independent statutory authority established in 1987, governed by a management board, and accountable to the Australian Parliament through the Health portfolio.</p> <p>The AIHW aims to improve the health and wellbeing of Australians through better health and welfare information and statistics. It collects and reports information on a wide range of topics and issues, ranging from health and welfare expenditure, hospitals, disease and injury, and mental health, to ageing, homelessness, disability and child protection.</p> <p>The Institute also plays a role in developing and maintaining national metadata standards. This work contributes to improving the quality and consistency of national health and welfare statistics. The Institute works closely with governments and non-government organisations to achieve greater adherence to these standards in administrative data collections to promote national consistency and comparability of data and reporting.</p> <p>One of the main functions of the AIHW is to work with the states and territories to improve the quality of administrative data and, where possible, to compile national datasets based on data from each jurisdiction, to analyse these datasets and disseminate information and statistics.</p> <p>The <i>Australian Institute of Health and Welfare Act 1987</i>, in conjunction with compliance to the Privacy Act 1988 (Commonwealth), ensures that the data collections managed by the AIHW are kept securely and under the strictest conditions with respect to privacy and confidentiality.</p> <p>For further information see the AIHW website www.aihw.gov.au</p> <p>Data for the NHMD were supplied to the AIHW by state and territory health authorities under the terms of the National Health Information Agreement (see the</p> |
|----------------------------------|--|

following links):

- www.aihw.gov.au/nhissc/
- meteor.aihw.gov.au/content/index.phtml/itemId/182135

The state and territory health authorities received these data from public hospitals and private hospitals. States and territories use these data for service planning, monitoring and internal and public reporting. Hospitals may be required to provide data to states and territories through a variety of administrative arrangements, contractual requirements or legislation.

Relevance

Aged care type' patients are defined as older patients (65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years) where the care type was 'maintenance' and the diagnosis (either principal or additional) was either 'awaiting admission to residential aged care' or 'no-one to provide care at home'.

- 'Awaiting admission to residential aged care' are those separations recorded as code Z75.11.
- 'No-one to provide care at home' are those separations recorded as code Z74.2.
- Only 'completed unlinked separations' are included, these are separations by care type, not the full length of the hospital stay for a patient.

Although the diagnosis codes reflect a care type, they do not determine a person's appropriate requirement for residential aged care (this is determined by an ACAT assessment). This indicator is a proxy indicator.

The purpose of the NMDS for Admitted patient care is to collect information about care provided to admitted patients in Australian hospitals. The scope of the NMDS is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals. Hospitals operated by the Australian Defence Force, corrections authorities and in Australia's off shore territories are not included. Hospitals specialising in ophthalmic aids and other specialised acute medical or surgical care are included.

The hospital separations data do not include episodes of non-admitted patient care provided in outpatient clinics or emergency departments.

Acute care certificate

After a patient has been hospitalised for 35 days health funds are not obliged to pay unless the treating doctor issues an Acute Care Certificate indicating why the patient needs to remain in hospital. Under section 3B of the *Health Insurance Act 1973*, an Acute Care Certificate needs to be completed by the Doctor for each 30 day period that a patient requires hospitalisation. This is applicable to long-term patients. The 3B certificate can be reviewed by an independent committee called the Acute Care Advisory Committee (ACAC), formed under the Health Insurance Act. If the committee decides that the 3B should be revoked, health funds are only required to pay the equivalent of the benefit that would be payable to nursing home type patients – which is less than the Acute Care rate.

Timeliness

The latest reference period for these data is 2012-13.

Accuracy

States and territories are primarily responsible for the quality of the data they provide. However, the AIHW undertakes extensive validation on receipt of data. Data are checked for valid values, logical consistency and historical consistency. Where possible, data in individual data sets are checked against data from other data sets. Potential errors are queried with jurisdictions, and corrections and resubmissions may be made in response to these queries. The AIHW does not adjust data to account for possible data errors or missing or incorrect values.

For 2012-13, almost all public hospitals provided data for the NHMD, with the exception of all separations for a mothercraft hospital in the ACT. The great majority of private hospitals also provided data, the exceptions being the private free-standing day hospital facilities in the ACT, the single private free-standing day hospital in the NT, and a private free-standing day hospital in Victoria.

There is some variation among jurisdictions in the assignment of care type categories.

Coherence

Data from 2011-12 include public patients in private hospitals, these patients were

not included in 2009-10 or 2010-11.

The data can be compared across all jurisdictions for each year.

The information presented for this indicator is calculated using the same methodology as data published in Australian hospital statistics.

Accessibility

The AIHW provides a variety of products that draw upon the NHMD. Published products available on the AIHW website are:

Australian hospital statistics with associated Excel tables

Interactive data cubes for Admitted patient care (for Principal diagnoses, Procedures and Diagnosis Related Groups).

These products may be accessed on the AIHW website at: www.aihw.gov.au/hospitals/.

Interpretability

Supporting information on the quality and use of the NHMD are published annually in Australian hospital statistics (technical appendixes), available in hard copy or on the AIHW website. Readers are advised to note caveat information to ensure appropriate interpretation of the performance indicator. Supporting information includes discussion of coverage, completeness of coding, the quality of Aboriginal and Torres Strait Islander data, and changes in service delivery that might affect interpretation of the published data. Metadata information for the NMDS for Admitted patient care is published in the AIHW's online metadata repository, METeOR, and the National health data dictionary.

The National health data dictionary can be accessed online at:

- www.aihw.gov.au/publication-detail/?id=10737422826

The Data Quality Statement for the National Hospital Morbidity Database can be accessed on the AIHW website at:

- meteor.aihw.gov.au/content/index.phtml/itemId/568730

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Further development is required to enable reporting on the number of days waited by people in hospitals who have received ACAT assessments and are deemed eligible for residential aged care.

Hospital patient days used by those eligible and waiting for residential aged care — proportion of total patient days used by patients who are waiting for residential aged care

DQI for this indicator has been sourced from the AIHW for the National Healthcare Agreement with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — Appropriateness |
| Indicator | Number of hospital bed days used by patients whose acute (or sub-acute) episode of admitted patient care has finished and who have been assessed by an ACAT and approved for residential aged care. |
| Measure (computation) | <p>The <u>numerator</u> is the number of patient days used by patients who are waiting for residential aged care where the care type is <i>Maintenance</i>, a diagnosis was reported as <i>Person awaiting admission to residential aged care service</i> and the separation mode was not <i>Other (includes discharge to place of usual residence)</i>. Includes overnight separations only.</p> <p>The <u>denominator</u> is the total number of patient days (including overnight and same-day separations).</p> <p>An overnight separation is an episode of care for an admitted patient that involves at least one overnight stay—that is, the date of admission and date of separation are different.</p> <p>Calculation is $1000 \times (\text{numerator} \div \text{denominator})$.</p> |
| Data source/s | <p>Numerator and denominator:</p> <p>This indicator is calculated using data from the NHMD, based on the National Minimum Data Set (NMDS) for Admitted patient care.</p> <p>Data for socioeconomic status was calculated by AIHW using the ABS Index of Relative Socio-Economic Disadvantage 2011 and ERP by Statistical Area level 2 (SA2) as at 30 June 2012. Each SA2 in Australia is ranked and divided into quintiles and deciles in a population-based manner, such that each quintile has approximately 20 per cent of the population and each decile has approximately 10 per cent of the population..</p> |

disseminate information and statistics.

The *Australian Institute of Health and Welfare Act 1987*, in conjunction with compliance to the Privacy Act 1988 (Commonwealth), ensures that the data collections managed by the AIHW are kept securely and under the strictest conditions with respect to privacy and confidentiality.

For further information see the AIHW website www.aihw.gov.au.

Data for the NHMD were supplied to the AIHW by state and territory health authorities under the terms of the National Health Information Agreement (see the following links):

- www.aihw.gov.au/nhissc/
- meteor.aihw.gov.au/content/index.phtml/itemId/182135

The state and territory health authorities received these data from public hospitals. States and territories use these data for service planning, monitoring and internal and public reporting. Hospitals may be required to provide data to states and territories through a variety of administrative arrangements, contractual requirements or legislation.

Relevance

The purpose of the NMDS for Admitted patient care is to collect information about care provided to admitted patients in Australian hospitals. The scope of the NMDS is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals. Hospitals operated by the Australian Defence Force, corrections authorities and in Australia's off-shore territories are not included. Hospitals specialising in ophthalmic aids and other specialised acute medical or surgical care are included.

The hospital separations data do not include episodes of non-admitted patient care provided in outpatient clinics or emergency departments.

This indicator is a proxy indicator.

Analyses by remoteness and socioeconomic status are based on the SA2 of usual residence of the patient. The SEIFA categories for socioeconomic status represent approximately the same proportion of the national population, but do not necessarily represent that proportion of the population in each state or territory (each SEIFA decile or quintile represents 10 per cent and 20 per cent respectively of the national population).

The SEIFA scores for each SA2 are derived from 2011 Census data and represent the attributes of the population in that SA2 in 2011.

In 2011, the ABS updated the SEIFA, based on the 2011 ABS Census of Population and Housing. The new SEIFA will be referred to as SEIFA 2011, and the previous SEIFA as SEIFA 2006. Data for 2007-08 through to 2010-11 reported for SEIFA quintiles and deciles are reported using SEIFA 2006 at the SLA level. Data for 2011-12 are reported using SEIFA 2011 at the SLA level. Data for 2012-13 are reported using SEIFA 2011 at the SA2 level. The AIHW considers the change from SEIFA 2006 to SEIFA 2011, and the change from SLA to SA2 to be series breaks when applied to data supplied for this indicator. Therefore, SEIFA data for 2010-11 and previous years are not directly comparable with SEIFA data for 2011-12, and SEIFA data for 2011-12 and previous years are not directly comparable with SEIFA data for 2012-13 and subsequent years.

Patient days are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of residence. Hence, rates represent the number of patient days for patients living in each remoteness area or SEIFA population group (regardless of their jurisdiction of usual residence) divided by the total number of patient days for patients living in that remoteness area or SEIFA population group hospitalised in the reporting jurisdiction. This is relevant if significant numbers of one jurisdiction's residents are treated in another jurisdiction (for example, the ACT).

Other Australians includes separations for non-Indigenous people and those for whom Indigenous status was not stated.

Timeliness

The latest reference period for these data is 2012-13.

Accuracy

For 2012–13, almost all public hospitals provided data for the NHMD, with the exception of all separations for a mothercraft hospital in the ACT.

The majority of private hospitals provided data, with the exception of the private day hospital facilities in the Australian Capital Territory and the Northern Territory.

States and territories are primarily responsible for the quality of the data they provide. However, the AIHW undertakes extensive validation on receipt of data. Data are checked for valid values, logical consistency and historical consistency. Where possible, data in individual data sets are checked against data from other data sets. Potential errors are queried with jurisdictions, and corrections and resubmissions may be made in response to these queries. The AIHW does not adjust data to account for possible data errors or missing or incorrect values.

There is some variation among jurisdictions in the assignment of care type categories, this may impart reflect measurement and definitional differences across jurisdictions.

The NHMD does not include data on ACAT assessments.

The AIHW report Indigenous identification in hospital separations data: quality report (AIHW 2013) found that nationally, about 88 per cent of Indigenous Australians were identified correctly in hospital admissions data in the 2011–12 study period, and the ‘true’ number of separations for Indigenous Australians was about 9 per cent higher than reported. The report recommended that the data for all jurisdictions are used in analysis of Indigenous hospitalisation rates, for hospitalisations in total in national analyses of Indigenous admitted patient care. However, these data should be interpreted with caution as there is variation among jurisdictions in the quality of the Indigenous status data.

Cells have been suppressed to protect confidentiality where the presentation could identify a patient or a service provider or where rates are likely to be highly volatile, for example, where the denominator is very small. The following rules were applied:

- Counts less than 3 were suppressed.
- Rates were suppressed where the numerator was less than 5 and/or the denominator was less than 1,000.
- Rates which appear misleading (for example, because of cross border flows) were also suppressed.
- Consequential suppression was applied where appropriate to protect confidentiality.

Coherence

The information presented for this indicator is calculated using the same methodology as data published in Australian hospital statistics 2012–13.

The data can be meaningfully compared across reference periods for all jurisdictions except Tasmania. Data for Tasmania for 2008–09 does not include two private hospitals that were included in 2007–08 and 2009–10 data reported in National Healthcare Agreement reports.

Methodological variations also exist in the application of SEIFA to various data sets and performance indicators. Any comparisons of the SEIFA analysis for this indicator with other related SEIFA analysis should be undertaken with careful consideration of the methods used, in particular the SEIFA Census year, the SEIFA index used and the approach taken to derive quintiles and deciles.

National level data disaggregated by Indigenous status for 2007–08 included data from NSW, Qld, WA, SA and NT. National level data disaggregated by Indigenous status for 2008–09, 2009–10 and 2010–11 included data from NSW, Victoria, Qld, WA, SA and NT. National level data disaggregated by Indigenous status for 2011–12 and subsequent years includes data from all eight states and territories. Therefore, data disaggregated by Indigenous status from 2007–08 is not comparable to 2008–09, 2009–10 and 2010–11, and data for 2011–12 and subsequent years are not comparable with data for 2010–11 and prior years.

Accessibility

The AIHW provides a variety of products that draw upon the NHMD. Published products available on the AIHW website are:

- Australian hospital statistics with associated Excel tables
- interactive data cubes for Admitted patient care (for Principal diagnoses,

Procedures and Diagnosis Related Groups).

These products may be accessed on the AIHW website at: <http://www.aihw.gov.au/hospitals/>

Interpretability

Supporting information on the quality and use of the NHMD are published annually in Australian hospital statistics (technical appendixes), available in hard copy or on the AIHW website. Readers are advised to note caveat information to ensure appropriate interpretation of the performance indicator. Supporting information includes discussion of coverage, completeness of coding, the quality of Indigenous data, and changes in service delivery that might affect interpretation of the published data. Metadata information for the National Minimum Data Set (NMDS) for Admitted patient care is published in the AIHW's online metadata repository, METeOR, and the National health data dictionary.

The National health data dictionary can be accessed online at:

- <http://www.aihw.gov.au/publication-detail/?id=10737422826>

The Data Quality Statement for the 2012–13 NHMD can be accessed on the AIHW website at:

- <http://meteor.aihw.gov.au/content/index.phtml/itemId/546749>

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- The indicator as presented is a proxy measure based on available data items in the NHMD. The indicator is not a count of patient days used by those eligible (as assessed and approved by an Aged Care Assessment Team (ACAT)) and waiting for residential aged care. The indicator as presented is the number of patient days (and proportion of all patient days) used by patients where the care type is 'Maintenance', a diagnosis was reported as 'Person awaiting admission to residential aged care service' and the separation mode was not 'Other (includes discharge to place of usual residence)'.
• There is some variation among jurisdictions in the assignment of care type categories, this may impart reflect measurement and definitional differences across jurisdictions.
• Numerators for remoteness and socioeconomic status are based on the reported area of usual residence of the patient, regardless of the jurisdiction of hospital. This is relevant if significant numbers of one jurisdiction's residents are treated in another jurisdiction. Interpretation of rates for jurisdictions should take into consideration cross-border flows, particularly in the Australian Capital Territory.
• Remoteness data for 2011–12 and previous years are not directly comparable to remoteness data for 2012–13 and subsequent years.
• SEIFA data for 2010–11 and previous years are not directly comparable with SEIFA data for 2011–12, and SEIFA data for 2011–12 and previous years are not directly comparable with SEIFA data for 2012–13 and subsequent years.

Compliance with service standards for residential care — proportion of residential aged care services that are three year re-accredited

DQI for this indicator has been sourced from the AIHW for the National Healthcare Agreement with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|---|
| Element | Effectiveness — quality |
| Indicator | Compliance with service standards for residential care — proportion of residential aged care services that are three year re-accredited |
| Measure (computation) | <p><i>Numerator:</i> Number of residential aged care facilities that received re-accreditation for three years during the financial year, decision as in effect at 30 June.</p> <p><i>Denominator:</i> Total number of residential aged care facilities that received re-accreditation decisions during the financial year.</p> <p>Expressed as percentage (100 × numerator ÷ denominator).</p> |
| Data source/s | Australian Aged Care Quality Agency. |

Data Quality Framework Dimensions

| | |
|----------------------------------|---|
| Institutional environment | <p>The data are from an administrative data collection designed for meeting the Accreditation Standards and a home's responsibilities under the <i>Aged Care Act 1997</i>.</p> <p>The tables for this indicator were prepared by the Australian Aged Care Quality Agency and quality-assessed by the AIHW. The data quality statement was developed by DSS and includes comments from the AIHW. The AIHW did not have the relevant datasets required to independently verify the data tables for this indicator</p> |
| Relevance | <p>The data are restricted to services seeking re-accreditation. Each year there are more assessment contacts (including unannounced visits) than there are audits. Restricting this measure to 're-accreditation' data excludes those homes which were subject to a review audit – that is, those homes which the regulator has sufficient concerns to decide that the provider may not be meeting the Accreditation Standards or its responsibilities under the <i>Aged Care Act 1997</i>.</p> <p>Assessment contacts are necessarily limited in scope and hence how a home performs at a full audit is considered a more robust indicator. This indicator is a 'point in-time' assessment of performance and as accreditation generally follows a three-yearly cycle. The audit data can sometimes be up to three years old.</p> <p>A limitation in the data is that they are only for re-accreditation decisions made during the financial year.</p> <p>In 2013-14 there were 2693 accredited residential aged care homes but only 496 re-accreditation decisions were made. In the previous year 1139 decisions were made.</p> |
| Timeliness | The data are restricted to re-accreditations within the previous financial year. |
| Accuracy | <p>The data used to calculate this indicator are from an administrative data collection designed for meeting the Accreditation Standards and a home's responsibilities under the <i>Aged Care Act 1997</i>. The data are considered to be accurate.</p> <p>The intent of the indicator is to provide a proxy for overall industry performance. The indicator shows how many homes are on the maximum period of accreditation (due to being consistently good performers). It is not relevant how many homes were assessed during the year.</p> |
| Coherence | <p>The data are used to report in the Report on Government Services and are coherent.</p> <p>The 'accreditation period' only shows the decision in effect at 30 June of that year.</p> |

The figures will not necessarily be consistent with the accreditation decisions made in the previous year because those decisions may not yet have taken effect, or may have been superseded. The data vary across years according to how many homes were due for assessment during the year. The comparison across reference periods of the number of homes assessed is not meaningful. The comparison across reference periods of the proportions of re-accredited homes is meaningful and comparable.

The measure excludes those homes where there are reasonable grounds to believe there may be significant and systemic failure. The possible decisions available following a review audit of this kind are:

- to revoke the service's accreditation,
- not revoke and not vary the period of accreditation, or
- not revoke and to vary the period of accreditation.

'Re-accreditation' is not a decision available following a review audit under the Accreditation Grant Principles 2011.

In 2011, the ABS updated the standard geography used in Australia for most data collections from the ASGC to the ASGS. Also updated at this time were remoteness areas, based on the 2011 ABS Census of Population and Housing. The new remoteness areas will be referred to as RA 2011, and the previous remoteness areas as RA 2006. Data for 2011-12 (reported in the previous cycle) were reported for RA 2006. Data for 2012-13 and subsequent cycles are reported for RA 2011. The AIHW considers the change from RA 2006 to RA 2011 to be a series break when applied to data supplied for this indicator, therefore remoteness data for 2011-12 are not directly comparable to remoteness data for 2012-13 and subsequent years.

Accessibility

The data are collected by the Australian Aged Care Quality Agency and are readily available.

Interpretability

The data are restricted to re-accreditations within the previous financial year and exclude those homes that are reviewed during a financial year for possible systemic failures.

Terms used in the dataset may be ambiguous because a user may not understand that the data has limitations as a proxy measure of the industry's performance.

The Report on Government Services includes footnotes and explanations on this measure.

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- This indicator is a proxy measure of the quality of aged care. Although it identifies facilities that met the re-accreditation standards, it does not distinguish levels at which facilities may have exceeded the standards.
- Consideration of disaggregation of this indicator by SES is a priority.
- The data are restricted to re-accreditations within the previous financial year.
- The data exclude those homes that are reviewed during a financial year for possible systemic failures.
- Remoteness data for 2011-12 are not directly comparable to remoteness data for 2012-13 and subsequent years.

Compliance with service standards for residential care — compliance with building certification, fire safety and privacy and space requirements

DQI for this indicator has been drafted by the Australian Government DSS, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Effectiveness — quality |
| Indicator | Compliance with service standards for residential care — compliance with building certification, fire safety and privacy and space requirements. |
| Measure (computation) | <p><u>Definition</u></p> <p>Proportion of residential aged care services that are compliant with building certification, fire safety and privacy and space requirements.</p> <p><u>Numerator:</u></p> <p>Number of residential aged care services that were compliant with building certification, fire safety and privacy and space requirements.</p> <p><u>Denominator:</u></p> <p>Number of operational residential aged care services.</p> <p><u>Computation:</u></p> <p>Expressed as a proportion. Calculation is: (Numerator ÷ Denominator) x 100.</p> |
| Data source/s | <p><u>Numerator and Denominator:</u></p> <p>Australian Government DSS aged care data warehouse.</p> |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional Environment | Approved providers submit data to DHS to claim subsidies from the Australian Government for services delivered under the <i>Aged Care Act 1997</i> and Aged Care Principles. These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse. |
| Relevance | The data provides complete coverage of residential aged care services subsidised by the Australian Government. |
| Timeliness | Data for the current reporting period are available in October each year. |
| Accuracy | A residential aged care facility must be certified to receive accommodation bonds, accommodation payments and extra service charges. To be eligible to receive the maximum level of the accommodation supplement, aged care homes are required to meet fire safety and privacy and space requirements. |
| Coherence | The data items used to construct this performance indicator will be consistent and comparable over time. |
| Accessibility | Data items are published in the <i>Reports on the Operation of the Aged Care Act 1997</i> prepared by the DSS. |
| Interpretability | Further information on definitions is available in the <i>Aged Care Act 1997</i> and Aged Care Principles and the Residential Aged Care Manual 2009. |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none"> • The data provide relevant and accurate information on compliance with residential aged care standards. • Annual data are available. The most recent data available are for 2012-13. • The data are consistent and comparable over time. • No significant data gaps or issues are identified. |
|-----------------------------|---|

Cost per output unit — government funding per hour of HACC service

DQI for this indicator has been drafted by the Australian Government DSS, Victorian and WA governments with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Efficiency — inputs per output unit |
| Indicator | Inputs per output unit — government funding per hour of HACC service. |
| Measure (computation) | <p><u>Definition</u></p> <p>Government funding per hour of HACC service, by service type (nursing, allied health, domestic assistance and personal care).</p> <p><u>Numerators:</u></p> <p>Government funding spent on HACC services, by service type.</p> <p><u>Denominators:</u></p> <p>Number of hours of services, by service type.</p> <p><u>Computation:</u></p> <p>Expressed as \$ per hour of service. Numerator/Denominator.</p> <p>Real funding is reported across years. The general formula for applying the deflator (used in the attachment tables) to convert nominal dollars to real dollars is:</p> $R_t = \frac{D_t}{N_t} \times 100$ <p>Where:</p> <p>R_t is real dollars in year t</p> <p>D_t is nominal dollars in year t</p> <p>N_t is the new index based in year t (2012-13=100).</p> |
| Data source/s | DSS using data reported by States or Territories in their annual HACC business reports. |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>The Australian Government (DSS) has funding and program responsibility for the Commonwealth HACC program for older people in all jurisdictions is responsible for the policy oversight and regulation of HACC aged care services except in Victoria and WA where it is a joint Australian Government, and State governments' initiative administered under the Home and Community Care Review Agreement 2007. HACC service providers vary from small community-based groups to large charitable and public sector organisations.</p> <p>Commonwealth HACC agencies service providers report to the Australian governments on outputs achieved. HACC service providers in Victoria and WA report to the state government, who collate this into regional information, which is forwarded to the Australian Government Health Minister in an Annual Business Report. The data for this indicator in Victoria and WA are accessed from these annual reports.</p> |
| Relevance | <p>Expenditure and hours data relate to services provided to all service users that is for older people and younger people with disability. Funding per hour of HACC service for the service types reported (nursing, allied health, domestic assistance and personal care) is not expected to vary significantly across the older or younger aged cohorts.</p> |

| | |
|-------------------------|---|
| | Funding only includes that provided by Australian, State or Territory governments and does not include any non-government or local government expenditure on HACC services. |
| Timeliness | Business reports are submitted annually six months after the end of the reference period. The reference period for the latest data is 2012-13. |
| Accuracy | <p>Data are collected by service providers either electronically or via paper forms. Data are collected progressively and aggregated for transmission in accordance with a quarterly collection cycle. Aggregated data are transmitted during the collection months immediately following each quarterly activity period.</p> <p>The proportion of HACC agencies that submitted data may vary across years and between jurisdictions and actual service levels may be higher than stated.</p> <p>The unit costs reported for Victoria do not correspond to Victoria's HACC unit prices published by the Victorian Department of Health as they are based on a different method.</p> |
| Coherence | <p>There is no commonly agreed method for calculating the funding per hour of service. Results may vary across jurisdictions and are not comparable.</p> <p>Results for WA and the NT differ to other jurisdictions as they contract by service group and the data are an average across all services in the group.</p> |
| Accessibility | Further information on this indicator is available in the <i>2007-08/2008-09 HACC Annual Reports</i> . |
| Interpretability | Further information on this indicator is available in the HACC Review Agreements and the <i>2007-08 HACC Annual Report</i> . |

Data Gaps/Issues Analysis

| | |
|-----------------------------|--|
| Key data gaps/issues | <p>The Steering Committee notes the following issue:</p> <ul style="list-style-type: none"> • There is no commonly agreed method for calculating the funding per hour of service. Results may vary across jurisdictions and are not comparable. |
|-----------------------------|--|

Expenditure per head of aged care target population — HACC

DQI for this indicator has been drafted by the Australian Government DSS, Victorian and WA governments with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Efficiency |
| Indicator | Efficiency — expenditure per head of aged care target population |
| Measure (computation) | <p><u>Definition</u></p> <p>Australian, State and Territory governments' expenditure on HACC services, per head of aged care target population.</p> <p><u>Numerator:</u></p> <p>Australian, State and Territory governments' expenditure on HACC services for older people.</p> <p><u>Denominator:</u></p> <p>Number of people aged 65 years or over and Aboriginal and Torres Strait Islander Australians 50–65 years.</p> <p><u>Computation:</u></p> <p>Expressed as \$ per head of aged care target population. Numerator/Denominator.</p> <p>Real expenditure is reported across years. The general formula for applying the deflator (used in the attachment tables) to convert nominal dollars to real dollars is:</p> |

$$R_t = \frac{D_t}{N_t} \times 100$$

Where:

R_t is real dollars in year t

D_t is nominal dollars in year t

N_t is the new index based in year t (2013-14=100).

Data source/s

Numerators:

DSS unpublished.

Denominators:

Total population projections 65 years or over:

- From June 2013 — projections based on the 2011 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.
- June 2008–June 2012 — projections based on the 2006 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.
- Before June 2008 — projections based on the 2001 Census as prepared for DSS by the ABS according to the assumptions agreed to by DSS.

Aboriginal and Torres Strait Islander population projections 50–64 year olds or aged 50 years or over:

- June 2008–June 2013 — based on ABS Aboriginal and Torres Strait Islander Experimental 2006 Estimated Resident Population (ERP) data at statistical local area (SLA) level and aligned to published ABS Aboriginal and Torres Strait Islander data in Experimental Estimates and Projections (ABS Cat. no. 3238.0, series B).
- June 2014 — Aboriginal and Torres Strait Islander projections are based closely on ABS 3238.0 — *Estimates and Projections, Aboriginal and Torres Strait*

Islander Australians, 2001 to 2026. These projections have been adjusted slightly by DSS to include Other Territories.

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional environment | <p>The Australian Government (DSS) is responsible for the policy oversight and regulation of HACC aged care services except in Victoria and WA where it is a joint Australian Government, and State governments' initiative administered under the <i>Home and Community Care Review Agreement 2007</i>. HACC service providers vary from small community-based groups to large charitable and public sector organisations.</p> <p>HACC agencies report to the State and Territory governments on outputs achieved. The State and Territory governments then collate this into regional information, which is forwarded to the Australian Government Health Minister in an Annual Business Report. The data for this indicator are accessed from these annual reports.</p> |
| Relevance | <p>Expenditure is for services provided to people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. Data for NSW, Qld, SA, Tasmania, the ACT and the NT are actual/estimated Australian Government expenditure in these jurisdictions under the Commonwealth HACC program. Expenditure in Victoria and WA is derived using an estimate of the proportion of activity that is for older people. Victoria provides this estimate based on their own modelling work and for WA it is based on the proportion of total hours that are accounted for by older people. These proportions are applied to the Australian Government and the State governments (Victoria and WA) total HACC program expenditure.</p> <p>Funding only includes that provided by Australian, State or Territory governments and does not include any non-government or local government expenditure on HACC services.</p> |
| Timeliness | <p>The reference period for the latest data is 2013-14.</p> |
| Accuracy | <p>No accuracy issues identified.</p> |
| Coherence | <p>The method for determining expenditure differs across Commonwealth HACC program jurisdictions and Victoria and WA (see relevance section). This may have a small effect on the comparability of the results across jurisdictions.</p> <p>The population projections used to calculate this indicator are not comparable overtime when based on different Censuses (2011, 2006 and 2001). Data from June 2013 (based on the 2011 Census) are not comparable to earlier years and data for 2008–2012 (based on the 2006 Census) are not comparable to data before 2008 (based on the 2001 Census).</p> <p>From 2010, Aboriginal and Torres Strait Islander population projections were calculated using a different method compared with that used in previous years. This will have a small effect on comparability with results from previous years.</p> |
| Accessibility | <p>Aggregated HACC data are published in the HACC MDS Statistical Bulletin on an annual basis. The last annual Bulletin contains 2010-11 data.</p> |
| Interpretability | <p>Further information on definitions is available in the HACC Data Dictionary and the HACC MDS Statistical Bulletin.</p> |

Data Gaps/Issues Analysis

| | |
|-----------------------------|---|
| Key data gaps/issues | <p>The Steering Committee notes the following issues:</p> <ul style="list-style-type: none">• Annual data are available. The most recent data available are for 2013-14.• The data are consistent and comparable over time.• No significant data gaps or issues are identified. |
|-----------------------------|---|

Maintenance of individual physical function

DQI for this indicator has been drafted by the Australian Government DSS, with additional Steering Committee comments.

Indicator definition and description

| | |
|------------------------------|--|
| Element | Outcome |
| Indicator | Maintenance of individual physical function Transition Care Program (TCP) |
| Measure (computation) | <p><u>Definition:</u></p> <p>Improvement in the TCP clients level of functioning.</p> <p><u>Numerators:</u></p> <p>Average Modified Barthel Index (MBI) score^a on entry to the TCP.</p> <p>Average MBI score^a on exit from the TCP.</p> <p><u>Computation:</u></p> <p>Comparison of MBI score on entry to MBI score on exit.</p> <p><u>Notes:</u></p> <p>^a The minimum MBI score is 0 (fully dependent) and the maximum score is 100 (fully independent).</p> |
| Data source/s | Australian Government DSS aged care data warehouse. |

Data Quality Framework Dimensions

| | |
|----------------------------------|--|
| Institutional Environment | The flexible care places used in the TCP are legislated by the Act and the Principles made under the Act. The TCP is jointly funded by the Australian and State and Territory governments. Service providers submit claims to the DHS - Medicare to claim for services delivered under the TCP. These data are provided to the DSS and are stored in the Ageing and Aged Care data warehouse. |
| Relevance | <p>The data provides complete coverage of aged care services subsidised by the Australian Government under the TCP.</p> <p>TCP clients can move from one facility to another during their care. From 2011-12 data, clients who transfer are excluded so that there is no double counting. This applies to a very small proportion of clients, approximately 2 per cent.</p> |
| Timeliness | Claims are submitted by service providers on a monthly basis for services delivered under the TCP. Data for the current reporting period is available October each year. |
| Accuracy | <p>Subsidies to service providers of Transition Care under the Act and the Principles are contingent on their submitting claims to the DHS — Medicare. Service providers' claims are audited annually.</p> <p>Clients who transferred across facilities are double counted in the data before 2011-12. This applies to a very small proportion of clients, approximately 2 per cent.</p> |
| Coherence | <p>The data items used to construct this performance indicator will be consistent and comparable over time.</p> <p>Clients who transfer between facilities are excluded from 2011-12. This will have a small effect on comparability with results from previous years.</p> <p>Different health and aged care service systems, local operating procedures and client groups can have an impact on the outcomes of the Transition Care Program across jurisdictions.</p> |
| Accessibility | Aggregated data items are published in the <i>Reports on the Operation of the Aged Care Act 1997</i> prepared by the DSS, and detailed data are in the AIHW aged care statistic series. |
| Interpretability | Further information on definitions is available in the: <i>Aged Care Act 1997</i> and <i>Aged Care Principles and the Transition Care Guidelines 2011</i> . |

Data Gaps/Issues Analysis

Key data gaps/issues

The Steering Committee notes the following issues:

- Annual data are available. The most recent data available are for 2013-14.
- Different health and aged care service systems, local operating procedures and client groups can have an impact on the outcomes of the TCP results across jurisdictions.

14 Services for people with disability

Attachment tables

Attachment tables are identified in references throughout this chapter by a '14A' prefix (for example, table 14A.1). A full list of attachment tables is provided at the end of this chapter, and the attachment tables are available from the Review website at www.pc.gov.au/gsp.

The Australian, State and Territory governments aim to ensure that people with disability and their carers have an enhanced quality of life and participate as valued members of the community. Governments fund a range of disability support services under the *National Disability Agreement* (NDA) and the *National Disability Insurance Scheme* (NDIS).

The *National Disability Agreement* (NDA), effective from 1 January 2009, provides the national framework and key areas of reform for the provision of government support and services for people with disability. Box 14.1 provides an overview of the NDA. The NDA replaced the third *Commonwealth, State and Territory Disability Agreement* (CSTDA), which was due to expire on 30 June 2007 but was extended to 31 December 2008. Funding to the State and Territory governments is provided through the National Disability Services Specific Purpose Payment (ND SPP), not the NDA.

Box 14.1 National Disability Agreement and the National Disability Services Specific Purpose Payment

Commonwealth funding to the State and Territory governments is provided through the National Disability Services Specific Purpose Payment (ND SPP), associated with the *National Disability Agreement* (NDA). The focus of the NDA is on the provision of specialist disability services. However, the NDA acknowledges that specialist disability services are complemented by mainstream services and income support measures.

Reforms under the NDA are directed at creating a disability services system that is effective, efficient and equitable, and has a focus on: early intervention; timely, person-centred approaches; and lifelong planning. Five priority areas to underpin the policy directions and achieve these reforms are:

- build the evidence base for disability policies and strategies
- enhance family and carer capacity
- develop strategies for increased choice, control and self-directed decision making
- maintain innovative and flexible support models for people with high and complex needs
- develop employment opportunities for people with disability.

Other specific details relating to the NDA (such as roles and responsibilities of different governments) are provided throughout this chapter.

Source: Council of Australian Governments (COAG) (2012a).

The NDIS was established under the *National Disability Insurance Scheme Act 2013* (the NDIS Act). Three-year trials of the NDIS commenced on 1 July 2013 in NSW, Victoria, SA and Tasmania. Trials of the NDIS in WA, the ACT and the NT commenced on 1 July 2014. Agreements for the full-scheme roll out of the NDIS have been reached with NSW, Victoria, Queensland, SA, Tasmania, the ACT and the NT. This means the scheme will be available to all eligible residents in the ACT by July 2016, in NSW and SA by July 2018, and in Tasmania, Victoria, Queensland and the NT by July 2019. The objectives of the NDIS align with the objectives and outcomes of the NDA (COAG 2012b). Box 14.2 provides an overview of the NDIS.

Box 14.2 National Disability Insurance Scheme

Both the Australian Government and host jurisdictions are responsible for the cost of the NDIS trial sites in accordance with *Intergovernmental Agreement for the National Disability Insurance Scheme (NDIS) Launch* (COAG 2012b). The NDIS Act (in conjunction with other laws) gives effect to Australia's obligations under the UN Convention on the Rights of Persons with Disabilities, and its objectives include:

- supporting people with disability to pursue their goals and maximise their independence and social and economic participation
- developing the capacity of people with disability to participate in the community and in employment
- providing reasonable and necessary supports, including early intervention supports, for Scheme participants
- supporting people with disability to exercise choice and control in the pursuit of their goals and the planning and delivery of their supports
- building a sustainable Scheme which is based on insurance principles.

Source: National Disability Insurance Agency (NDIA) (2014).

This chapter provides information on the assistance provided by governments to people with disability and their carers, focusing on specialist disability services provided under the NDA and funded by the ND SPP. The chapter reports NDA and ND SPP data from 2009-10 to 2012-13, a combination of NDA and CSTDA data for 2008-09, and CSTDA data for earlier years. Data on the specialist disability services provided under the NDA are collected in the Disability Services National Minimum Data Set (DS NMDS).

- Specialist psychiatric disability services are excluded to improve data comparability across jurisdictions. Further information regarding specialist psychiatric services are reported in chapter 12, Mental health management.
- Performance information on access by people with disability to mainstream services is excluded. Further information on access by people with disability to mainstream services is included elsewhere in this Report — for example, School education (chapter 4), Vocational education and training (VET) (chapter 5), Public hospitals (chapter 11), Mental health management (chapter 12) and Housing (chapter 17). Other mainstream services and supports provided to people with disability — such as transport and utility services at concessional rates — are outside the scope of this Report.
- Descriptive information on income support to people with disability and their carers is included, for context. This Report generally does not include performance information on income support.

With the gradual roll-out of the NDIS across Australia, it is expected that most existing NDA service users will transition to the NDIS and exit from the DS NMDS collection over time. It is anticipated that, by 2019-20, all eligible Australians under the age of 65 will be covered by the NDIS (except for WA residents). For this Report, service user data from the

DS NMDS are not affected by the introduction of the NDIS as they relate to the 2012-13 financial year.

Data on the services provided under the NDIS are collected by the National Disability Insurance Agency (NDIA). Some 2013-14 NDIS data are provided in section 14.4 as contextual information for this Report. Access to NDIS data will be sought for reporting against the disability framework in future reports.

Major improvements in the reporting of services for people with disability in this edition include:

- reporting data for the ‘client and carer satisfaction’ indicator from the 2012 Survey of Disability Ageing and Carers (SDAC) for the first time
- reporting data disaggregated by State and Territory for tables 14A.3, 14A.5, 14A.56, 14A.57 and 14A.58
- reporting 2013-14 Basic Community Care (BCC) data for Victoria and WA
- data quality information (DQI) available for the first time for the indicator ‘client and carer satisfaction’.

14.1 Profile of disability services

Service overview

Government assistance for people with disability and their carers comprises provision of specialist disability services, access to mainstream services, provision of income support and the NDIS. Definitions of disability are provided in box 14.3.

Box 14.3 Definitions of disability

The United Nation’s *Convention on the Rights of Persons with Disabilities*, ratified by Australia on 17 July 2008, defines ‘persons with disabilities’ as those who have long-term physical, mental, intellectual or sensory impairments which, in interaction with various barriers, may hinder their full and effective participation in society on an equal basis with others.

The World Health Organisation (WHO) defines ‘disabilities’ as impairments, activity limitations and participation restrictions: an impairment is a problem in body function or structure; an activity limitation is a difficulty encountered by an individual in executing a task or action; and a participation restriction is a problem experienced by an individual in involvement in life situations. Disability is a complex phenomenon, reflecting an interaction between features of a person’s body and features of the society in which he or she lives (WHO 2009).

(Continued on next page)

Box 14.3 (continued)

The third Commonwealth, State and Territory Disability Agreement ([CSTDA] 2003, p. 9) defined 'people with disabilities' as those whose disability manifests itself before the age of 65 years and for which they require significant ongoing and/or long-term episodic support.

For these people, the disability will be attributable to an intellectual, psychiatric, sensory, physical or neurological impairment or acquired brain injury (or some combination of these) which is likely to be permanent and results in substantially reduced capacity in at least one of the following:

- self-care/management
- mobility
- communication.

The NDA does not include a specific definition of 'people with disability'.

The Australian Bureau of Statistics (ABS) *Survey of Disability, Ageing and Carers* (SDAC) 2012 defines 'disability' as a limitation, restriction or impairment, which has lasted, or is likely to last, for at least 6 months and restricts everyday activities. Examples range from hearing loss that requires the use of a hearing aid, to difficulty dressing due to arthritis, to advanced dementia requiring constant help and supervision. The SDAC reports on the spectrum of disability experiences using three main 'categories' of disability:

- with a core activity limitation (mild, moderate, severe or profound)
- with a schooling or employment restriction
- with a disability, but without a specific limitation or restriction — includes people who need assistance with health care, cognition and emotion, paperwork, transport, housework, property maintenance or meal preparation.

Self-care, mobility and communication are defined as core activities. The ABS defines levels of core activity limitation as:

- mild — where a person does not need assistance and has no difficulty with self-care, mobility and/or communication, but uses aids or equipment. They may also not be able to easily walk 200m, walk up and down stairs without a handrail, bend to pick up objects from the floor or use public transport easily or without help or supervision
- moderate — where a person does not need assistance, but has difficulty with self-care, mobility and/or communication
- severe — where a person sometimes needs assistance with self-care, mobility and/or communication tasks; has difficulty understanding or being understood by family or friends; or can communicate more easily using sign language or other non-spoken forms of communication
- profound — where a person is unable, or always needs assistance, to perform self-care, mobility and/or communication tasks.

Source: CSTDA (2003); WHO (2009); ABS (2013).

Specialist disability services

Specialist disability services are services designed to meet the needs of people with disability. These services tend to be targeted at those who have profound or severe core activity limitations. The seven broad categories of specialist disability services are outlined below. These categories underpin the collection of the Disability Services National Minimum Data Set (DS NMDS) and expenditure data on specialist disability services:

- *accommodation support services*, which provide support to people with disability in accommodation settings (hostels, institutions and group homes) and in their own homes (including attendant/personal care, in home support and alternative family placements)
- *community support services*, which provide the support needed for a person with disability to live in a non-institutional setting — including therapy support, counselling and early childhood intervention
- *community access services*, which provide opportunities for people with disability to gain and use their abilities to enjoy their full potential for social independence — including learning and life skills development and recreation/holiday programs
- *respite care services*, which provide a short-term and time-limited break for families and other voluntary caregivers of people with disability, to assist in supporting and maintaining the primary care-giving relationship, while providing a positive experience for the person with disability
- *employment services* for people with disability, which provide:
 - open employment services — assistance in obtaining and/or retaining paid employment in the open labour market
 - supported employment services — support and employment within the same organisation
- *advocacy, information and alternative forms of communication*, which provide:
 - advocacy services to enable people with disability to increase their control over their lives by representing their interests and views in the community
 - information services to assist people with disability, their carers, families and related professionals accessing information about disabilities, specific and mainstream services and equipment; and promote the development of community awareness
 - alternative forms of communication for people who are, by reason of their disability, unable to access information provided in standard formats
- *other support services*, which include research and evaluation, and training and development projects.

National Disability Insurance Scheme

The NDIS is an insurance scheme that assists people with disability to access mainstream and community supports, helps support informal care and funds reasonable and necessary supports, including early intervention supports, for its participants. Currently, people with disability can access the scheme if they are in a trial location, are the eligible age for that location and meet either the disability or early intervention requirements. Disability requirements include people who have a significant and permanent disability and who need assistance with everyday activities. This includes people whose disability is attributed to intellectual, cognitive, neurological, sensory, or physical impairment, or a psychiatric condition. Early intervention requirements include people who have a permanent impairment or are aged under six years with a developmental delay. Data on NDIS participants are included as contextual information in box 14.4. Data from the scheme were not provided for reporting on performance indicators in the framework.

NDIS funding

Both the Australian Government and host jurisdictions are responsible for the cost of the NDIS trial sites in accordance with *Intergovernmental Agreement for the National Disability Insurance Scheme (NDIS) Launch* (COAG 2012b). Total funding committed to the NDIS for 2013-14 was \$148.8 million, including cash and in-kind contributions. The average annualised package cost at 30 June 2014 was approximately \$34 600 (NDIA 2014a).

The NDIS identifies six life domains (areas of focus for participant goals, objectives and strategies) — economic participation, education, health and wellbeing, independence, living arrangements and social participation. Across each of the trial sites the most commonly funded life domains at 30 June 2014 were independence (5289 plans), social participation (5327 plans) and health and wellbeing (4255 plans) (NDIA 2014b).

Box 14.4 National Disability Insurance Scheme (NDIS) participants

As at 30 June 2014, 7316 participants were receiving supports under an approved plan. Participant numbers varied by State and Territory, with 2268 in NSW, 2907 in Victoria, 1355 in SA and 786 in Tasmania. Aboriginal and Torres Strait Islander people made up 2 per cent of all participants and 3 per cent of participants were classified as Culturally and Linguistically Diverse (CaLD)¹. The proportion of male participants is higher than females across all trial sites (61 per cent to 39 per cent).

Access to mainstream services

Table 14.4.1 shows that the majority of participants with approved plans are also accessing mainstream services (80 per cent). The NDIA records information on mainstream supports in the following categories: education and training, community participation (sport, child care and recreation), community support (youth services, parenting programs, etc.), health, legal and justice, housing, employment, transport, income support, other assistance.

Table 14.4.1. Proportion of NDIS participants with approved plans accessing mainstream services, 30 June 2014^a

| | NSW | Vic | SA | Tas | Total |
|-----------------------|-------|-------|-------|-----|-------|
| Number | 1 498 | 2 589 | 1 138 | 590 | 5 815 |
| Proportion (per cent) | 67 | 89 | 84 | 75 | 80 |

^a Data are not comparable across jurisdictions due to different cohorts of people with disability participating in each trial site. For example, a high number of participants in the Barwon (Victoria) trial site are school aged children who are receiving mainstream education supports.

Client/carer satisfaction

The NDIA reports data on both participant and experience satisfaction. *Participant satisfaction* indicates the satisfaction of participants with the Agency, in particular, the planning process. *Experience satisfaction* indicates the overall satisfaction of a participant with their current life experience and outcomes. As at 30 June 2014, participant satisfaction was at 1.66 on a scale of -2 (extremely dissatisfied) to +2 (extremely satisfied) (table 14.4.2). It is anticipated that carer satisfaction data will be available for future reporting.

Table 14.4.2 NDIS participant satisfaction, 30 June 2014^a

| | NSW | Vic | SA | Tas | Total |
|--------------------------|-----|------|------|-----|-------|
| Participant satisfaction | 1.8 | 1.75 | 1.44 | 1.9 | 1.66 |

^a Satisfaction is reported on a scale of -2 *extremely dissatisfied* to +2 *extremely satisfied*, with 0 = *neutral*.

Source: NDIA (2014a), *Quarterly Report to COAG Disability Reform Council, 30 June 2014*.

¹ Data should be interpreted with caution. Indigenous status is not known for 58 per cent of participants. CALD status is known for most participants, with 13 per cent of records not stated. The NDIA is working to ensure that these data are collected for all participants.

Mainstream services

Mainstream services are services provided to the community as a whole. Governments acknowledge that specialist disability services are complemented by mainstream services. Under the NDA, and consistent with the National Disability Strategy 2010–2020, the Australian and State and Territory governments have agreed to strive to ensure that all people with disability have access to mainstream government services within their jurisdictions. It is recognised that improved outcomes for people with disability, their families and their carers, are contingent upon the effective coordination of efforts across government services. Some mainstream services give priority to people with disability (for example, social housing) or have programs to meet the special needs of people with disability (for example, school education).

Income support and allowances

Income support for people with disability and their carers contributes to the outcomes of the NDA. The Australian Government is responsible for the provision of income support targeted to the needs of people with disability, their families and carers (box 14.5). Income support is provided to those who meet the relevant eligibility criteria. Income support payments and allowances include the Disability Support Pension, Carer Payment, Carer Allowance, Sickness Allowance, Mobility Allowance, Child Disability Assistance Payment and Carer Supplement.

Box 14.5 Australian Government supplementary and income support arrangements

Under the NDA, provision of income support for people with disability, their families and carers is a key responsibility of the Australian Government (see 'roles and responsibilities' section). Outlays on income support payments and allowances to people with disability and their carers in 2013-14 (on an accrual basis) amounted to \$23.2 billion, comprising \$16.1 billion for the Disability Support Pension, \$4.2 billion for the Carer Payment, \$2.0 billion for the Carer Allowance, \$106.2 million for the Sickness Allowance, \$155.6 million for the Mobility Allowance, \$169.0 million for the Child Disability Assistance Payment and \$532.7 million for the Carer Supplement (Australian Government unpublished).

At 30 June 2014, there were around 830 500 recipients of the Disability Support Pension, 243 900 recipients of the Carer Payment, 613 100 recipients of the Carer Allowance (including Health Care Card only recipients), 63 700 recipients of the Mobility Allowance, 7800 recipients of the Sickness Allowance, 147 700 recipients of the Child Disability Assistance Payment and 597 700 recipients of the Carer Supplement.

Source: Australian Government (unpublished); table 14A.1.

Roles and responsibilities

Australian, State and Territory governments

The NDA defines the roles and responsibilities of the Australian, State and Territory governments in the provision of services and supports to people with disability and their carers.

The Australian Government is responsible for:

- provision of employment services for people with disability (which includes regulation, service quality and assurance, assessment, policy development, service planning, and workforce and sector development) in a manner that most effectively meets the needs of people with disability consistent with local needs and priorities
- provision of income support targeted to the needs of people with disability, their families and carers
- provision of funds to states and territories to contribute to the achievement of the NDA objectives and outcomes
- where appropriate, investing in initiatives to support nationally agreed policy priorities, in consultation with State and Territory governments
- ensuring that Commonwealth legislation and regulations are aligned with the national policy reform directions and the *United Nations Convention on the Rights of Persons with Disabilities*.

State and Territory governments are responsible for:

- the provision of specialist disability services, except disability employment services
- ensuring that State and Territory legislation and regulations are aligned with the national policy and reform directions
- where appropriate, investing in initiatives to support nationally agreed policy priorities, in consultation with the Australian Government.

Australian, State and Territory governments are jointly responsible for:

- development of national policy and reform directions to meet the agreed objectives and outcomes of the NDA
- funding and pursuing research that provides an evidence base for national policy and reform directions
- developing and implementing reforms to improve outcomes for Aboriginal and Torres Strait Islander people with disability
- the provision of data, including a commitment to providing data for the DS NMDS and a commitment to the improvement of data quality.

Funding

Australian and State and Territory governments fund both government and non-government providers of specialist disability services under the NDA including employment services. Total government expenditure on these services was \$7.5 billion in 2013-14 — a real increase of 4.1 per cent on the expenditure in 2012-13 (\$7.2 billion) (table 14A.6). State and Territory governments funded the majority of this expenditure in 2013-14 (70.2 per cent, or \$5.3 billion). The Australian Government funded the remainder (29.8 per cent, or \$2.2 billion), which included \$1.3 billion in transfer payments to states and territories and \$0.9 billion for disability employment services and other disability services (tables 14A.7 and 14A.8). Table 14A.9 provides data on total government expenditure including and excluding payroll tax.

Direct government expenditure on specialist disability services under the NDA (excluding expenditure on administration) was \$7.0 billion in 2013-14 (table 14A.10). The distribution of direct government expenditure varied across jurisdictions. The main areas of government expenditure were accommodation support services (50.7 per cent of total direct service expenditure) and community support (18.1 per cent of total direct service expenditure). Employment services were the main area of Australian Government expenditure in 2013-14 (79.2 per cent of Australian Government direct service expenditure) (figure 14.1).

Figure 14.1 Direct expenditure on NDA specialist disability services, by service type, 2013-14^{a, b, c, d, e}

^a Other support services includes advocacy, information and print disability. ^b State and Territory expenditure includes a contribution from the Australian Government. ^c See table 14A.10 for detailed notes accompanying expenditure data. ^d See tables 14A.7 and 14A.8 for expenditure by source of funding. ^e Expenditure for NSW, Victoria, SA, Tasmania and the Australian Government for 2013-14 are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, Victoria and Tasmania 2013-14 total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, total government expenditure also includes 'cash' contributions. Total government expenditure for SA excludes 'cash' contributions to the NDIA (\$2.6 million), but includes 'in-kind'. For SA, expenditure excludes revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000). Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA.

Source: Australian, State and Territory governments (unpublished); table 14A.11.

Size and scope

Disability prevalence

The Australian Bureau of Statistics (ABS) estimates that 4.2 million Australians, or 18.5 per cent of the population had a disability in 2012 (ABS 2013), the same proportion as in 2009 (ABS 2011a). Of the total population in 2012, an estimated 6.1 per cent had a profound or severe core activity limitation (ABS 2013) compared with 5.8 per cent in 2009 (ABS 2011a). Tables 14A.12 and 14A.13 contain additional information on disability prevalence, and table 14A.14 contains information on the estimated number of people with a profound or severe core activity limitation who received help as a proportion of those who needed help.

Aboriginal and Torres Strait Islander people

Aboriginal and Torres Strait Islander people experience significantly higher rates of disability than non-Indigenous people. Data on disability prevalence for Aboriginal and Torres Strait Islander people are available from the 2012 SDAC. Data are also available from the 2012-13 ABS Australian Aboriginal and Torres Strait Islander Health Survey (AATSIHS) and 2011-12 Australian Health Survey (AHS). There are differences in the scope of the SDAC, the AATSIHS and the AHS which affect direct comparability of these surveys.

Nationally in 2012, after adjusting for differences in population age structures, the SDAC shows that 8.4 per cent of Aboriginal and Torres Strait Islander people reported a profound or severe core activity limitation, around 1.7 times the rate for non-Indigenous people (4.9 per cent). AATSIHS/AHS data for 2011–13 show similar trends. Nationally in 2011–13, after adjusting for differences in population age structures, the rate of profound or severe core activity restriction for Aboriginal and Torres Strait Islander people was twice the rate for non-Indigenous people (ABS unpublished). The disparity between Aboriginal and Torres Strait Islander and non-Indigenous people is consistent across age groups (figure 14.2).

Figure 14.2 Disability prevalence, by Indigenous status, by age, 2012^{a, b}

AS = Age standardised. ^a The Survey of Disability Ageing and Carers (SDAC) does not survey people in very remote areas. ^b Data reported elsewhere for 'older' Aboriginal and Torres Strait Islander people often include people aged 50 years and over. SDAC data were not available for the 50+ age grouping.

Source: Australian Bureau of Statistics (ABS) (unpublished) *Survey of Disability, Ageing and Carers, 2012*.

Potential population

The potential population is an estimate, derived using a range of data sources, of the number of people with the potential to require disability support services, including individuals who meet the service eligibility criteria but who do not demand services. Results are reported as rates, which are the proportion of potential service users that are actually using the service. This allows better comparison between people in special needs groups with people outside those groups. For open employment services, the potential population is not used; instead, an estimate of all people aged 15–64 years with disability and who have an employment restriction is used.

Updated source data used in the calculation of the potential population were available for the 2015 Report. The potential population has been recalculated based on data from the 2012 SDAC and 2011 Census, and has been backcast to the 2008-09 year. New Aboriginal and Torres Strait Islander potential population estimates have been calculated for people aged 0–49 using new 2011 Census-based Indigenous Population Projections (previously calculated using 2006 Census-based Indigenous Population Projections) and backcast to the 2008-09 year. Further information on deriving potential populations for special needs groups for the 2015 Report can be found in sections 14.6 and 14.7.

Informal carers

Family and friends provide most help and/or care to people with disability. Information about informal carers enables governments to plan ahead for the future demand for services that support carers and the people they assist. Support services that assist people with disability to live in the community, such as in-home accommodation support and community support, often complement and are contingent on the availability of informal care. In turn, the provision of informal care may rely on access to formal support services, including carer respite services and a range of services for the person with disability.

Information on informal carers is available from the SDAC and for NDA service users from the DS NMDS. The definition of informal carers differs slightly across these data collections as:

- the SDAC defines an informal primary carer as a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities. The assistance has to be ongoing, or likely to be ongoing, for at least six months and be provided for one or more of the core activities (communication, mobility and self care)
- the DS NMDS defines an informal carer as someone, such as a family member, friend or neighbour, who is identified as providing regular and sustained care and assistance to a person with disability (see section 14.7 for further details). Informal carers who provide assistance with core activities (self care, mobility and communication) are defined as primary carers.

An estimated 576 400 informal primary carers aged 15–64 years provided the majority of assistance with self care, mobility and communication for people with disability, including older people, in 2012 (ABS 2013). This is similar to 2009, when there were 575 500 informal primary carers aged 15–64 years (ABS 2011a). Of 299 945 people with disability who accessed NDA specialist disability services in 2012-13, 44.3 per cent reported having an informal carer and 32.2 per cent reported having an informal carer who was a primary carer (figure 14.3).

Figure 14.3 **Users of NDA specialist disability services, by whether they had an informal carer and geographic location, 2012-13^{a, b, c, d}**

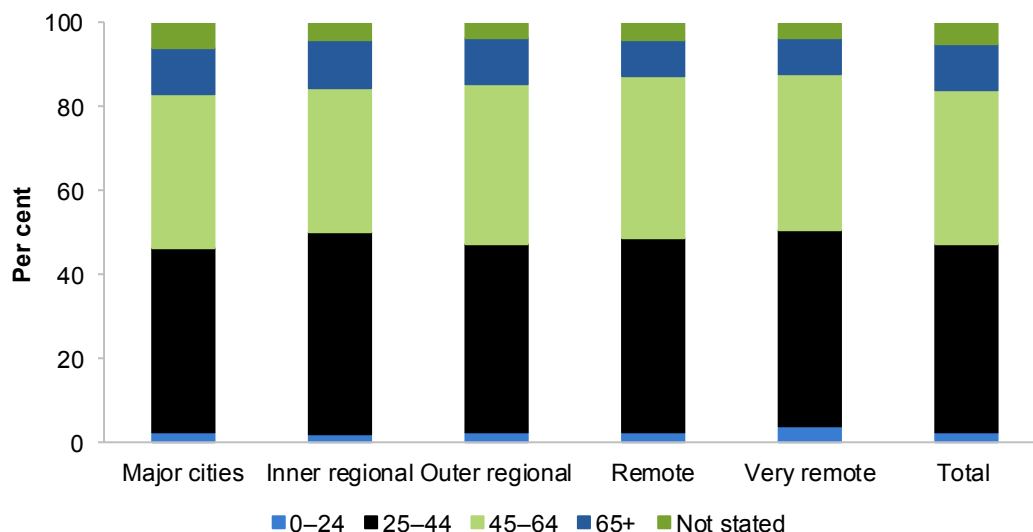

^a Total includes data for service users whose location was not collected/identified. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues. ^c Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status. ^d Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who was a primary carer, compared with 32 per cent in this figure. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.

Source: Australian Institute of Health and Welfare (AIHW) (unpublished) *DS NMDS 2012-13*; table 14A.2.

Figure 14.4 shows the proportions of informal primary carers who are in different age groups, by location.

^a Total includes data for service users whose location was not collected/identified. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues. ^c Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status.

Source: AIHW (unpublished) *DS NMDS 2012-13*; table 14A.4.

Use of NDA specialist disability services

In 2012-13, 187 559 people were reported as using specialist disability services administered by State and Territory governments under the NDA (excluding service users who received specialist psychiatric disability services only). Nationally, this is 34.2 per cent of the estimated potential population (see sections 14.6 and 14.7 for information on how the potential population is defined) (figure 14.5).

Figure 14.5 **Users of NDA specialist disability services administered by State and Territory governments as a proportion of the estimated potential population^{a, b}**

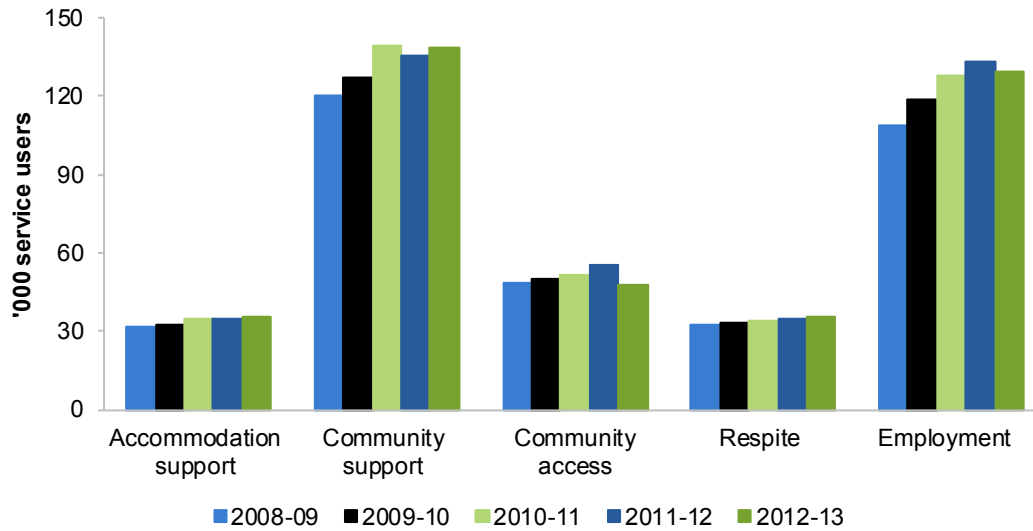

^a See sections 14.6 and 14.7 for information on how the potential population is defined. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues.

Source: AIHW (unpublished), *DS NMDS 2009-10 to 2012-13, CSTDA National Minimum Data Set (NMDS) 2008-09*; AIHW analysis of the *ABS Estimated Resident Population June 2008–2012*, *ABS Census of Population and Housing 2006 and 2011* and the *ABS Survey of Disability, Ageing and Carers 2009 and 2012*, table 14A.15.

Service user numbers varied across service types. Accommodation support (35 561 users), community access (47 721 users), community support (138 695 users) and respite services (35 652 users) reported a combined total of 187 559 users (table 14A.15) and employment services reported a total of 129 698 users, in 2012-13 (figure 14.6).

Figure 14.6 **Users of NDA specialist disability services, by service type^{a, b}**

^a Data need to be interpreted with care due to a number of factors affecting data quality. Section 14.6 contains further information on data quality issues. ^b See table 14A.15 for detailed notes relating to these data.

Source: AIHW (unpublished), *DS NMDS 2009-10 to 2012-13*, *CSTDA National Minimum Data Set (NMDS) 2008-09*; AIHW analysis of the *ABS Estimated Resident Population June 2008–2012*, *ABS Census of Population and Housing 2006 and 2011* and the *ABS Survey of Disability, Ageing and Carers 2009 and 2012*; table 14A.15.

In 2012-13, the most commonly reported disability of NDA service users was an intellectual disability (33.7 per cent of service users, including 28.0 per cent who reported it as their primary disability) (figure 14.7).

Figure 14.7 **NDA specialist disability service users, by disability group, 2012-13^{a, b}**

Source: AIHW (unpublished) *DS NMDS*; tables 14A.16-17.

Basic Community Care

BCC services are provided under the NDA to assist people with disability to live independently and to actively participate and engage in their community. BCC services include basic maintenance and support services, including allied health care, assessment, case management and client care coordination, centre-based day care, counselling, support, information and advocacy, domestic assistance, home maintenance, nursing, personal care and respite care, social support, meals, home modification, linen service, goods and equipment, and transport.

States and Territories have full financial and operational responsibility for BCC services for people with disability aged under 65 years (and Aboriginal and Torres Strait Islander people aged under 50 years). Similar services for older people are funded and delivered through the Australian Government Commonwealth Home and Community Care (HACC) program (except in Victoria and WA, where it is a joint Australian and State government program administered under the *Home and Community Care Review Agreement 2007*). Further information on these services can be found in sector overview F.

Nationally in 2013-14, 217 427 people under the age of 65 years (and Aboriginal and Torres Strait Islander people under the age of 50 years) received BCC services (table 14.1).

Table 14.1 Number of people receiving BCC services aged under 65 years and Aboriginal and Torres Strait Islander people aged under 50 years, 2013-14^{a, b, c, d}

| People born in non-English speaking countries aged 64 years and under | 7 295 | 10 301 | 2 159 | 1 236 | 1 708 | 182 | 627 | 21 | 23 529 |
| All people aged 64 years and under and Aboriginal and Torres Strait Islander people aged 49 years and under | 61 939 | 73 861 | 37 028 | 13 881 | 20 536 | 5 619 | 4 319 | 244 | 217 427 |

^a The proportion of Basic Community Care (BCC) clients with an unknown or invalid date of birth differed across jurisdictions and ranged from zero per cent to 1.2 per cent. Nationally, the proportion of BCC clients with an unknown or invalid date of birth was 0.3 per cent. ^b The proportion of BCC clients aged 49 years and under with unknown Indigenous status differed across jurisdictions and ranged from 0.6 per cent to 10.8 per cent. Nationally, the proportion of BCC clients aged 49 years and under with an unknown Indigenous status was 7.6 per cent. ^c The proportion of BCC clients aged 64 years and under with unknown country of birth differed across jurisdictions and ranged from 0.8 per cent to 7.8 per cent. Nationally, the proportion of BCC clients aged 64 years and under with an unknown country of birth was 5.1 per cent. ^d The proportion of BCC funded agencies that submitted Home and Community Care Minimum Data Set (HACC MDS) data differed across jurisdictions and ranged from 75 per cent to 100 per cent.

Source: DSS (unpublished) *HACC MDS 2013-14.*; table 14A.160.

Data on BCC services received by people aged under 65 years and Aboriginal and Torres Strait Islander people aged under 50 years are also available by geographical location (tables 14A.154–159).

14.2 Framework of performance indicators

The performance framework and related indicators reflect governments' shared objectives and priorities under the NDA (box 14.6).

The Council of Australian Governments (COAG) has agreed six National Agreements to enhance accountability to the public for the outcomes achieved or outputs delivered by a range of government services (see chapter 1 for more detail on reforms to federal financial relations).

The NDA covers the area of disability services and includes sets of performance indicators. Performance indicators reported in this chapter are aligned with performance indicators in the NDA where relevant.

Box 14.6 Objectives of government funded services for people with disability

The long-term objective under the NDA is that:

People with disability and their carers have an enhanced quality of life and participate as valued members of the community.

All aspects of the NDA contribute to or measure progress towards this objective. The objective is enhanced by three specific outcomes as well as a set of revised priority reform areas (outlined in box 14.1). The outcomes are that:

- people with disability achieve economic participation and social inclusion
- people with disability enjoy choice, wellbeing and the opportunity to live as independently as possible
- families and carers are well supported.

In support of the agreed NDA outcomes, governments will contribute to the following outputs:

- services that provide skills and support to people with disability to enable them to live as independently as possible
- services that assist people with disability to live in stable and sustainable living arrangements
- income support for people with disability and their carers
- services that assist families and carers in their caring role

Source: COAG (2012).

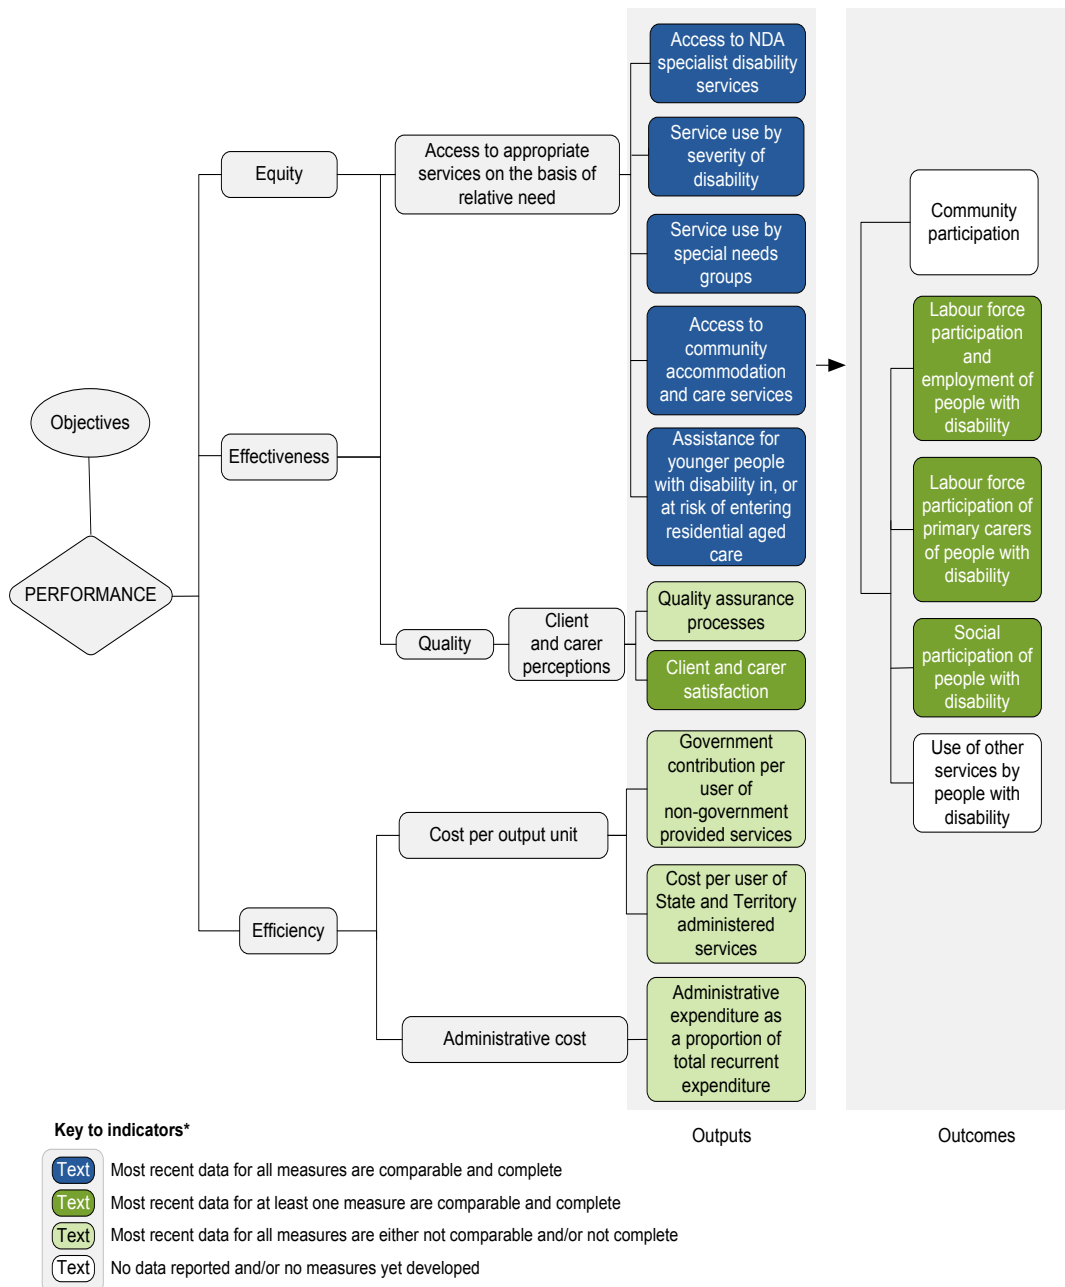

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes outputs and outcomes of government funded services for people with disability (figure 14.8). The performance indicator framework shows which data are comparable in the 2015 Report. For data that are not considered directly comparable, the text includes relevant caveats and supporting commentary. Chapter 1 discusses data comparability and data completeness from a Report-wide perspective (see section 1.6).

The Report's statistical context chapter contains data that may assist in interpreting the performance indicators presented in this chapter. These data cover a range of demographic and geographic characteristics, including age profile, geographic distribution of the population, income levels, education levels, tenure of dwellings and cultural heritage (including Indigenous and ethnic-status) (chapter 2).

DQI is being progressively introduced for all indicators in the Report. The purpose of DQI is to provide structured and consistent information about quality aspects of data used to report on performance indicators. DQI in this Report cover the seven dimensions in the ABS' data quality framework (institutional environment, relevance, timeliness, accuracy, coherence, accessibility and interpretability) in addition to dimensions that define and describe performance indicators in a consistent manner, and note key data gaps and issues

identified by the Steering Committee. All DQI for the 2015 Report can be found at www.pc.gov.au/rogs/2015.

Figure 14.8 Services for people with disability performance indicator framework

14.3 Key performance indicator results

The performance indicator results reported in this chapter relate to NDA specialist disability services. These data were sourced from the DS NMDS collection, which is managed by Australian, State and Territory governments at the service and jurisdictional level, and by the Australian Institute of Health and Welfare (AIHW) at the national level. Under the NDA, governments have committed to the ongoing improvement, and provision, of data for the DS NMDS.

When considering the performance indicator results derived from service user data, comparisons across jurisdictions and over years should be undertaken with care. While the implementation of the DS NMDS continues to improve, data quality and comparability remains affected by a number of factors, including differences across jurisdictions and over time in:

- the participation of service users and service outlets in the collection and in the ‘not stated’ response rates of particular data items (see section 14.6 for further details)
- the interpretation of DS NMDS service definitions (for example, the target group for services classified as ‘early intervention’ can differ)
- in whether particular activities are defined as specialist disability services or are funded under other programs.

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see chapter 1, section 1.5).

Equity and effectiveness — access to appropriate services on the basis of relative need

Access to NDA specialist disability services

‘Access to NDA specialist disability services’ is an indicator of governments’ objective to provide access to government funded services, including specialist disability services, on the basis of relative need and available resources. Measures of services are reported for accommodation support, community support, community access, respite services and employment services (open and supported) (box 14.7).

Box 14.7 Access to National Disability Agreement specialist disability services

'Access to NDA specialist disability services' is defined as the number of people using a particular NDA specialist disability service divided by the 'potential population' for that service. The potential population is an estimate of the number of people with the potential to require specialist disability services at some time.

Updated source data used in the calculation of the potential population has created a break in series for this Report. The potential population has been recalculated based on data from the 2012 SDAC and 2011 Census and has been backcast to the 2008-09 year to provide a consistent time series. See details in sections 14.6 and 14.7.

The potential population is the number of people aged 0–64 years (and Aboriginal and Torres Strait Islander people aged 0–49 years) who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment, and who have a substantially reduced capacity in one or more core activities. For respite services, only those people with a primary carer are included. For supported employment services, only the potential population aged 15–64 years participating in the labour force are included. For open employment services, the potential population is not used; instead, an estimate of all people aged 15–64 years with a disability and who have an employment restriction is used.

The numerator of an access measure is service users of all ages, unlike NDA reporting, where the numerator excludes users aged 65 years and over.

A high or increasing proportion of the relevant estimated potential population using a particular NDA service suggests greater access to that service.

Not all people in the estimated potential population will need the service or seek to access the service in the relevant period. In addition, this indicator does not provide information on whether the services are appropriate for the needs of the people receiving them, or accessed by those most in need.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, 6.5 per cent of the estimated potential population were using NDA accommodation support services in 2012-13 (figure 14.9).

Figure 14.9 Users of NDA accommodation support services as a proportion of the estimated potential population^{a, b}

^a See table 14A.18 for detailed notes relating to service user data. See sections 14.6 and 14.7 for information on how the potential population is defined. ^b Data need to be interpreted with care due to a number of factors affecting data quality. Section 14.6 contains further information on data quality issues.

Service use by severity of disability

‘Service use by severity of disability’ is an indicator of governments’ objective to use available resources to provide services to people on the basis of relative need, where need for services is assumed to vary according to the need for help with the activities of daily living (ADL) and for help with activities of independent living (AIL) or activities of work, education and community living (AWEC) (box 14.8). This indicator provides additional information for interpreting the access to NDA services measures reported.

Data on the need for assistance are derived using information on the level of support needed in one or more of the following support areas:

- ADL — self care, mobility, and communication (the core support areas) (conceptually comparable to people who have a profound or severe core activity limitation)
- AIL — interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life
- AWEC — education, community (civic) and economic life; and work.

Box 14.8 Service use by severity of disability

‘Service use by severity of disability’ is defined as the proportion of people who access National Disability Agreement (NDA) specialist disability services, by need for help with activities of daily living (ADL) or activities of independent living (AIL), or activities of work, education and community living (AWEC). Four categories are reported:

- need help with ADL
- need help with AIL or AWEC but not ADL
- does not need assistance or information on ADL, AIL or AWEC
- not stated/collected.

Measures are reported for accommodation support, community support, community access, respite and employment services.

A high or increasing proportion of people using a particular service type who need help with ADL suggests greater access for those with the greatest level of need.

This indicator does not provide information on whether services are appropriate for the needs of the people receiving them or appropriately targeted based on relative need taking into account access to other formal and informal support. The need for services is assumed to vary according to the need for help with ADL, or AIL, or AWEC. Data on ADL, AIL and AWEC are self/carer identified, not based on formal clinical assessments of individual limitations. Other factors may also be important in determining relative need, such as the complexity of a service user’s needs in other activity areas.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions.

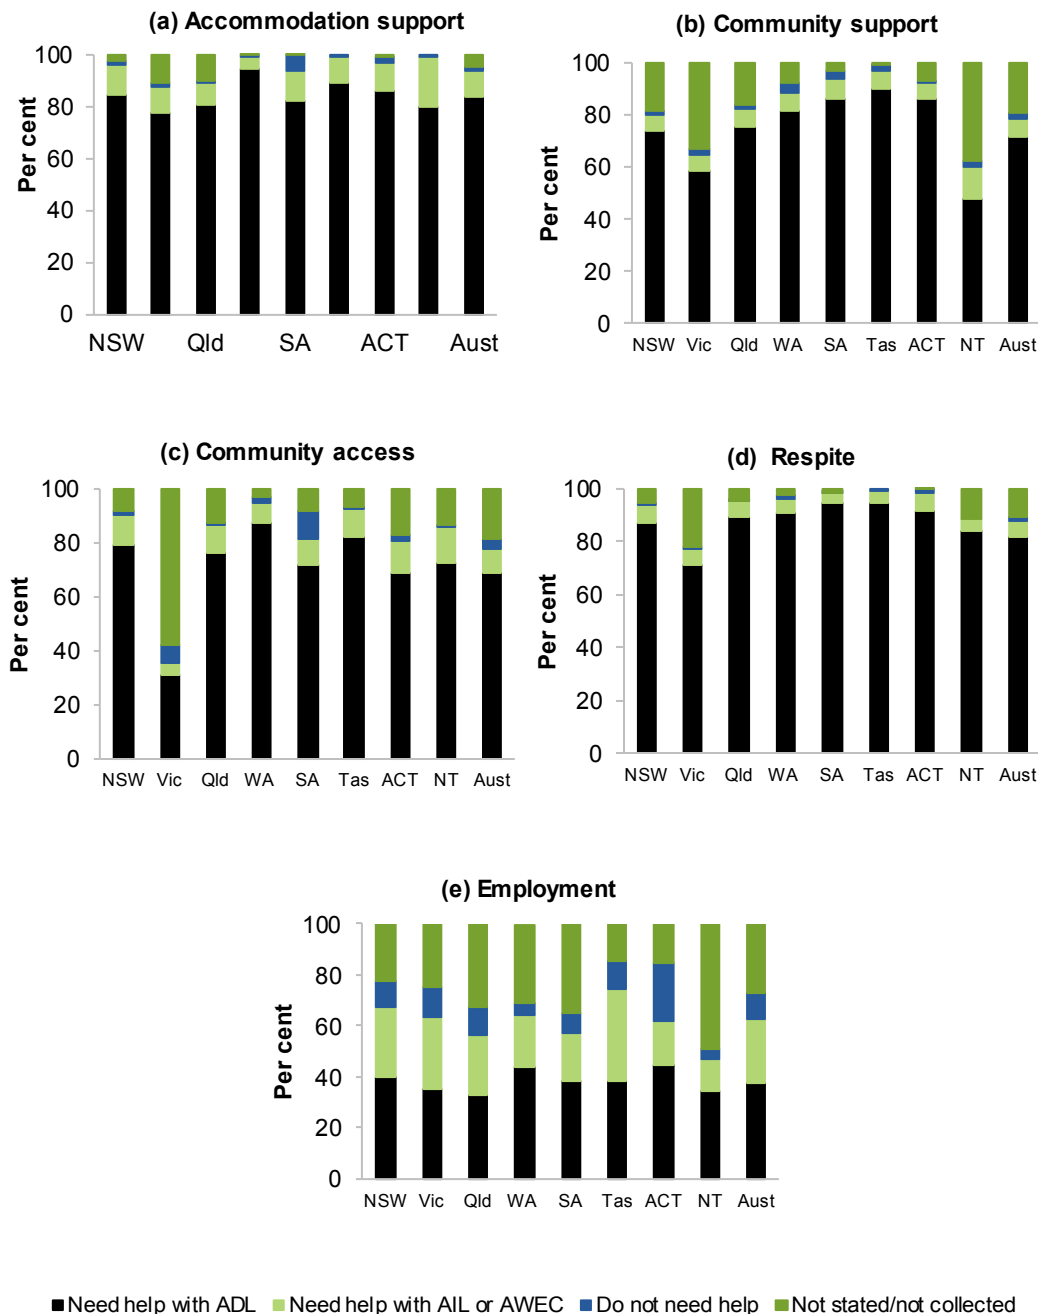

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2012-13:

- 83.5 per cent of users of NDA accommodation support services needed help with ADL, 10.1 per cent required assistance with AIL or AWEC but not with ADL, 1.7 per cent did not report need for any assistance in major life areas and for 4.7 per cent information on need for assistance was not collected/not stated (figure 14.16a)
- 71.6 per cent of users of NDA community support services needed help with ADL, 6.6 per cent required assistance with AIL or AWEC but not with ADL, 2.1 per cent did not report need for any assistance in major life areas and for 19.7 per cent information on need for assistance was not collected/not stated (figure 14.16b)
- 68.7 per cent of users of NDA community access services needed help with ADL, 9.0 per cent required assistance with AIL or AWEC but not with ADL, 3.8 per cent did not report need for any assistance in major life areas and for 18.5 per cent information on need for assistance was not collected/not stated (figure 14.16c)
- 82.0 per cent of users of NDA respite services needed help with ADL, 6.1 per cent required assistance with AIL or AWEC but not with ADL, 0.9 per cent did not report need for any assistance in major life areas and for 11.0 per cent information on need for assistance was not collected/not stated (figure 14.16d)
- 37.4 per cent of users of NDA open and supported employment services needed help with ADL, 25.6 per cent required assistance with AIL or AWEC but not with ADL, 10.1 per cent did not report need for any assistance in major life areas and for 26.9 per cent information on need for assistance was not collected/not stated (figure 14.16e).

Data on users of NDA specialist disability services for people aged 0–64 years as a proportion of the estimated potential population for 2007-08 to 2012-13 are also available (tables 14A.25, 14A.27, 14A.29, 14A.31, 14A.33). Tables on users of NDA employment services for people aged 15–64 years as a proportion of the estimated potential population for 2007-08 to 2012-13 are also available (14A.35-36).

Figure 14.16 Users of NDA specialist disability services, by need for help with activities 2012-13^{a, b, c, d}

^a Need for help with ADL relates to the level of support needed in self care, mobility and communication. It does not necessarily relate to the level of support needed to find or maintain employment or with other activities. ^b See tables 14A.26, 14A.28, 14A.30, 14A.32 and 14A.34 for detailed notes about these data. ^c Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues. ^d Need help with AIL or AWEC does not include people who also need help with ADL.

Source: AIHW (unpublished) *DS NMDS 2012-13*; tables 14A.26, 14A.28, 14A.30, 14A.32 and 14A.34.

Service use by special needs groups

‘Service use by special needs groups’ is an indicator of governments’ objective that access to services should be equitable for all members of the community and provided on the basis of relative need (box 14.9). This indicator compares access for people from special needs groups with access for people from outside the special needs group.

Box 14.9 Service use by special needs groups

‘Service use by special needs groups’ is defined by two measures:

- the proportion of service users per 1000 total population in a particular special needs group, compared with the proportion of service users per 1000 total population outside the special needs group
- the proportion of service users per 1000 potential population in a particular special needs group, compared with the proportion of service users per 1000 potential population outside the special needs group.

Both measures are reported for accommodation support, community support, community access and employment services. For respite services, data are reported per 1000 total population only, due to data limitations.

Data are reported for three special needs groups:

- people from outer regional and remote/very remote locations
- people identified as Aboriginal and Torres Strait Islander Australians
- people who were born in a non-English speaking country.

For both measures, while a lower proportion can indicate reduced access for a special needs group, it can also represent strong alternative informal support networks (and a consequent lower level of otherwise unmet need), or a lower tendency of people in a special needs group to choose to access NDA specialist disability services. Similarly, a higher proportion can suggest poor service targeting, the lack of alternative informal support networks or a greater tendency of people in a special needs group to choose to access NDA specialist disability services. For the measure that compares access per 1000 population, significant differences in access can also reflect the special needs group having a higher/lower prevalence of disability.

This indicator does not provide information on whether the services are appropriate for the needs of the people receiving them, or correctly targeted on the basis of relative need. The indicator does not take into account differences in the level of informal assistance that is available for people in special needs groups and outside the special needs groups. Results for outer regional and remote/very remote users of accommodation support services, for example, should be considered with care, because alternatives to government funded accommodation support services are likely to be more readily available in these areas.

(Continued next page)

Box 14.9 (continued)

This is because accommodation support services in outer regional and remote/very remote areas are largely provided informally, making use of local area coordinators and local community resources.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

The numerators and denominators of these measures use different age groups. The numerators include service users of all ages. The denominators are based on specific age groups of people aged:

- under 65 years for accommodation support, community support, community access and respite services
- 15–64 years for employment services.

The measures of access per 1000 potential population should be interpreted with care, due to factors affecting data quality. Potential sources of error include:

- the existence of service users for whom special needs group status (for example, Indigenous status) is not stated or not collected — poor and/or inconsistent levels of identification across states and territories would affect comparisons
- the assumptions underlying the method used to derive the potential populations
- for the Aboriginal and Torres Strait Islander estimates, differential Census undercount across states and territories could introduce bias in the results.

Section 14.6 contains more detailed information on these quality issues.

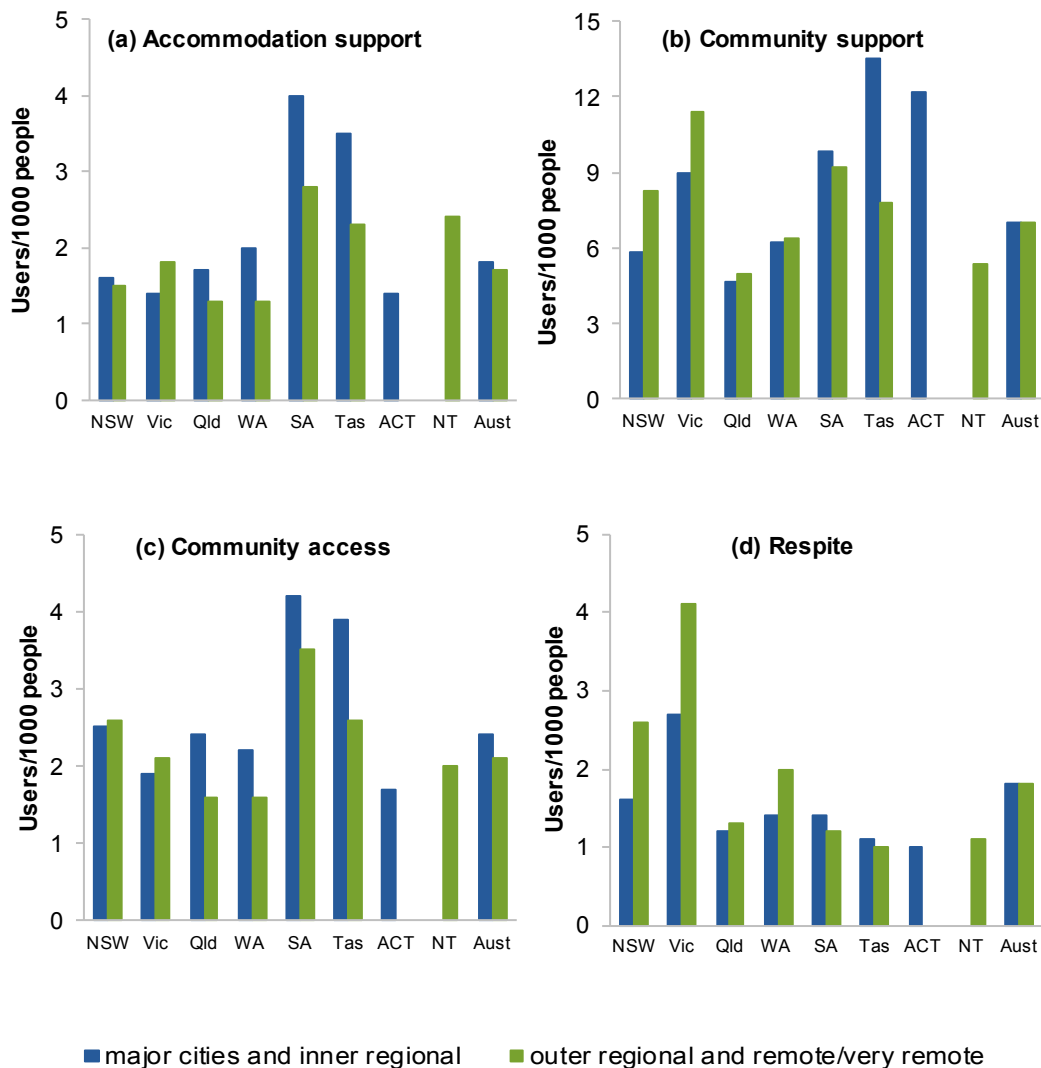

Service use by special needs groups — people in outer regional and remote/very remote areas

Nationally in 2012-13, the proportion of the outer regional and remote/very remote population who used NDA:

- accommodation support services was 1.7 service users per 1000 people, slightly lower than the proportion of the major cities and inner regional population who used these services (1.8 service users per 1000 people) (figure 14.17a). The proportion of the outer regional and remote/very remote potential population who used NDA accommodation support services (54.2 service users per 1000 potential population) was lower than that of the major cities and inner regional potential population who used these services (66.0 service users per 1000 potential population) (figure 14.18a).

-
- community support services was 7.0 service users per 1000 people, the same as the proportion of the major cities and inner regional population who used these services (7.0 service users per 1000 people) (figure 14.17b). The proportion of the outer regional and remote/very remote potential population who used NDA community support services (223.2 service users per 1000 potential population) was lower than the proportion of the major cities and inner regional potential population who used these services (253.1 service users per 1000 potential population) (figure 14.18b).
 - community access services was 2.1 service users per 1000 people, lower than the proportion of the major cities and inner regional population who used these services (2.4 service users per 1000 people) (figure 14.17c). The proportion of the outer regional and remote/very remote potential population who used NDA community access services (67.7 service users per 1000 potential population) was lower than the proportion of the major cities and inner regional potential population who used these services (86.9 service users per 1000 potential population) (figure 14.18c).
 - respite services was 1.8 service users per 1000 people, the same as the proportion of the major cities and inner regional population who used these services (1.8 service users per 1000 people) (figure 14.17d). Access to respite as a proportion of the potential population is not reported. Potential population data for respite services is not calculated at these levels because of conceptual, definitional and quality issues with carer data for special needs groups from the 2011 Census.

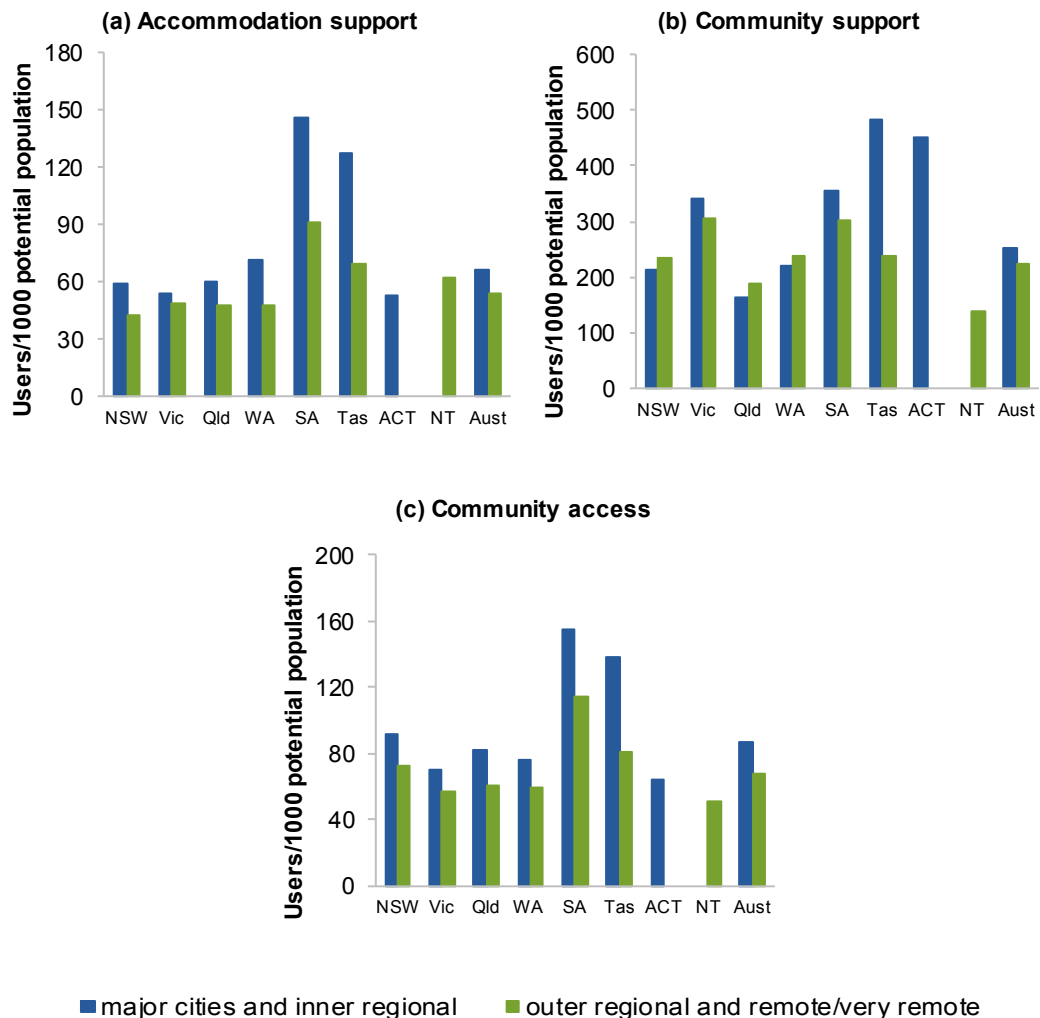

Figure 14.17 Users of State and Territory administered NDA specialist disability services per 1000 people, by geographic location, 2012-13^{a, b, c, d, e}

^a See tables 14A.37–40 for detailed notes relating to these data. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues. ^c The ACT does not have outer regional or remote/very remote areas. ^d The NT does not have major cities and inner regional areas. ^e Some data for Tasmania, ACT and NT community access services are not published due to privacy reasons (see table 14A.39) though these data have been included.

Service use by special needs groups — Aboriginal and Torres Strait Islander people

Nationally in 2012-13, the proportion of the Aboriginal and Torres Strait Islander population who used NDA:

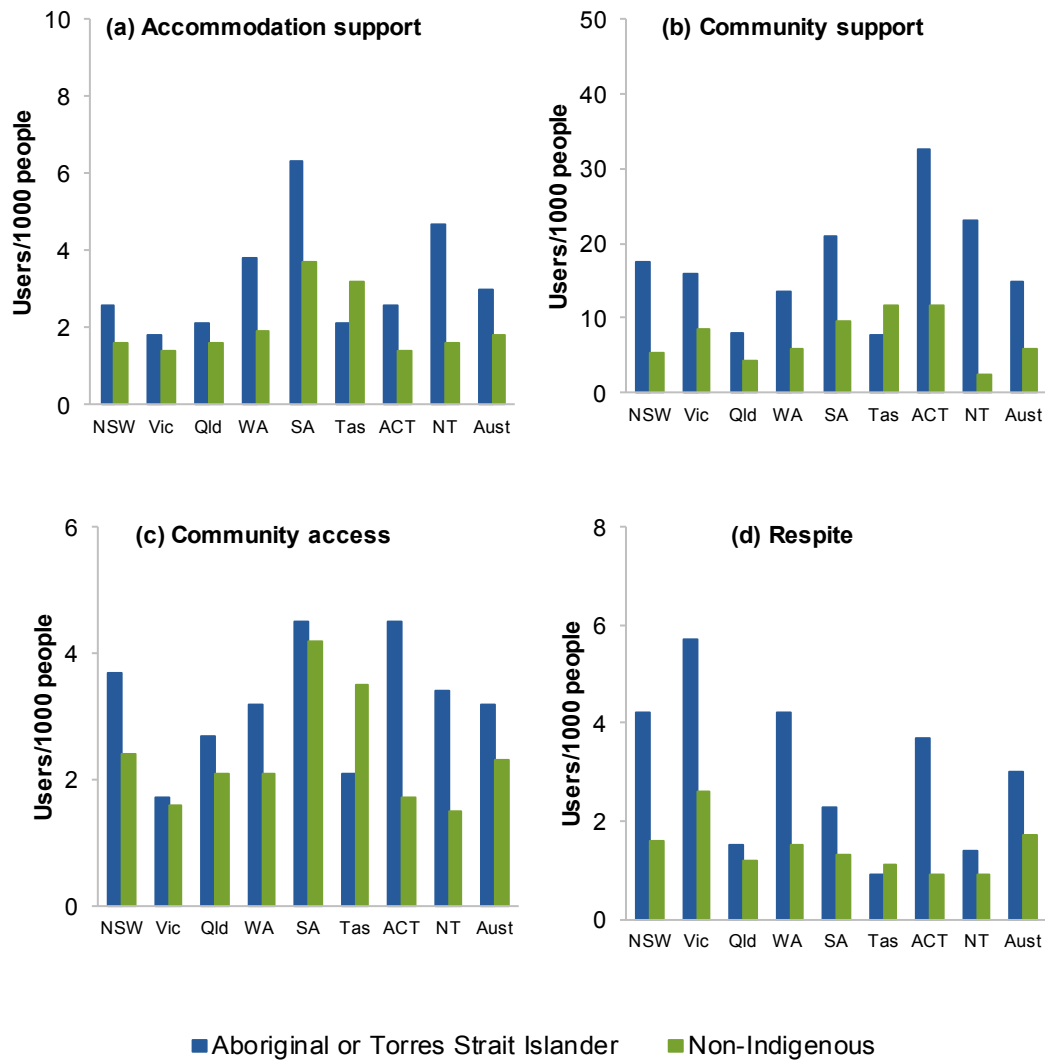

- accommodation support services was 3.0 service users per 1000 people, higher than the proportion of the non-Indigenous population who used these services (1.8 service users per 1000 people) (figure 14.20a). The proportion of the Aboriginal and Torres Strait Islander potential population who used NDA accommodation support services (51.3 service users per 1000 potential population) was slightly lower than the non-Indigenous potential population who used these services (65.0 service users per 1000 potential population) (figure 14.21a)
- community support services was 14.3 service users per 1000 people, higher than the proportion of the non-Indigenous population who used these services (6.6 service users per 1000 people) (figure 14.20b). The proportion of the Aboriginal and Torres Strait Islander potential population who used NDA community support services (248.0 service users per 1000 potential population) was higher than the proportion of

the non-Indigenous potential population who used these services (244.2 service users per 1000 potential population) (figure 14.21b)

- community access services was 3.2 service users per 1000 people, higher than the proportion of the non-Indigenous population who used these services (2.3 service users per 1000 people) (figure 14.20c). The proportion of the Aboriginal and Torres Strait Islander potential population who used NDA community access services (54.8 service users per 1000 potential population) was lower than the proportion of the non-Indigenous potential population who used these services (84.2 service users per 1000 potential population) (figure 14.21c)
- respite services was 3.0 users per 1000 people, higher than the proportion of the non-Indigenous population who used these services (1.7 service users per 1000 people) (figure 14.20d). Access to respite as a proportion of the potential population is not reported. Potential population data for respite services is not calculated at these levels because of conceptual, definitional and quality issues with carer data for the special needs groups from the 2011 Census.

Data on users of NDA specialist disability support services as a proportion of the Aboriginal and Torres Strait Islander estimated potential population for 2008-09 to 2012-13 are also available (tables 14A.42–46).

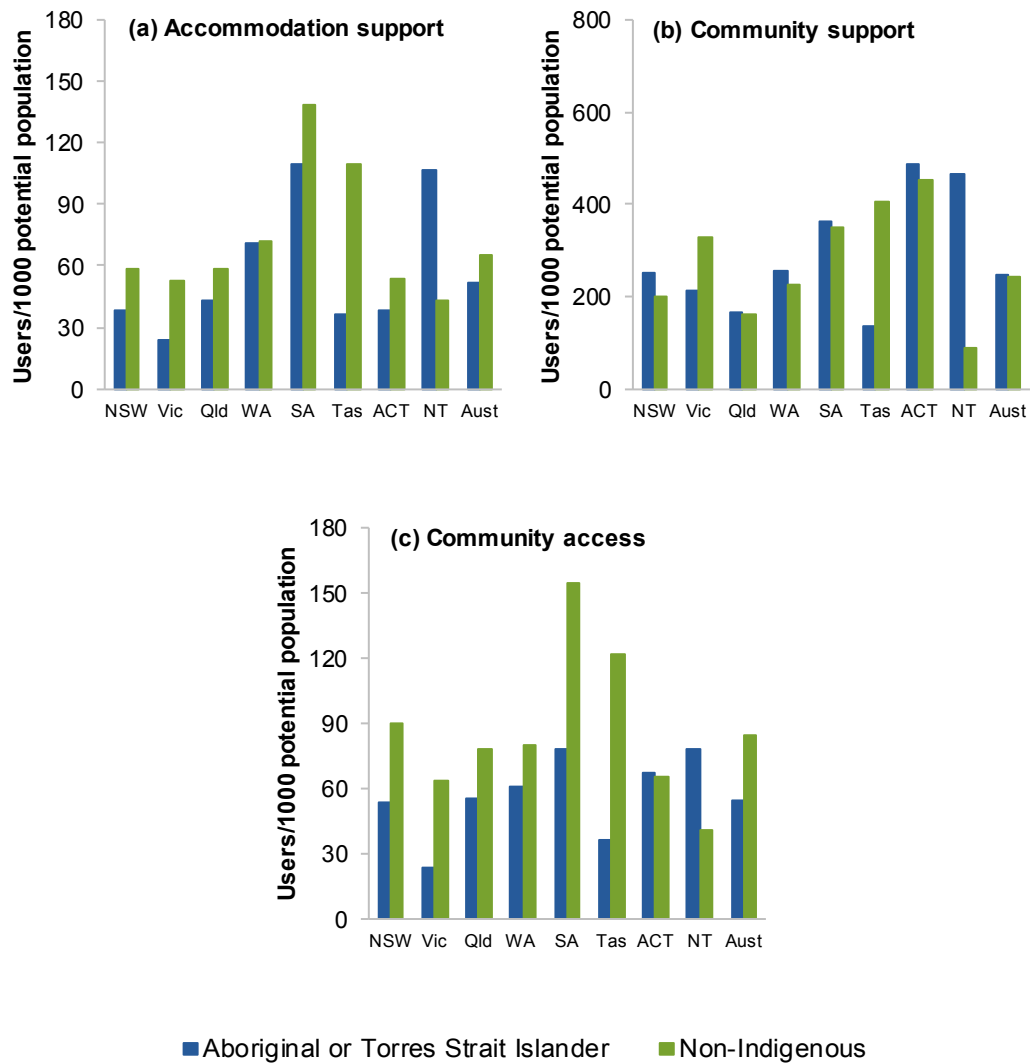

Figure 14.20 **Users of State and Territory administered NDA specialist disability services per 1000 people, by Indigenous status, 2012-13^{a, b}**

^a See tables 14A.43–46 for detailed notes relating to these data. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues.

Nationally in 2012-13, the proportion of the Aboriginal and Torres Strait Islander population who used NDA employment services (14.4 service users per 1000 population) was higher than that of the non-Indigenous population (8.4 service users per 1000 population) (figure 14.22). The proportion of the Aboriginal and Torres Strait Islander potential population who used NDA employment services (328.0 service users

per 1000 potential population) was lower than that of the non-Indigenous potential population (444.4 service users per 1000 potential population) (figure 14.22).

Data on users of NDA open and supported employment services as a proportion of the Aboriginal and Torres Strait Islander estimated potential population are also available disaggregated by age (tables 14A.48–50), from 2008-09 to 2012-13 for open (ESS) and supported (SES) services and from 2010-11 to 2012-13 for open (DMS) employment services.

Figure 14.22 Users of NDA employment services, by Indigenous status, 2012-13^{a, b, c}

^a See table 14A.47 or detailed notes relating to these data. ^b See sections 14.6 and 14.7 for information on how the potential population is defined. ^c Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues.

Source: AIHW (unpublished) *DS NMDS 2012-13*; AIHW (unpublished), AIHW analysis of the *ABS Estimated Resident Population June 2012*, *ABS Census of Population and Housing 2011* and the *ABS Survey of Disability, Ageing and Carers 2012*; table 14A.47.

Service use by special needs groups — people born in a non-English speaking country

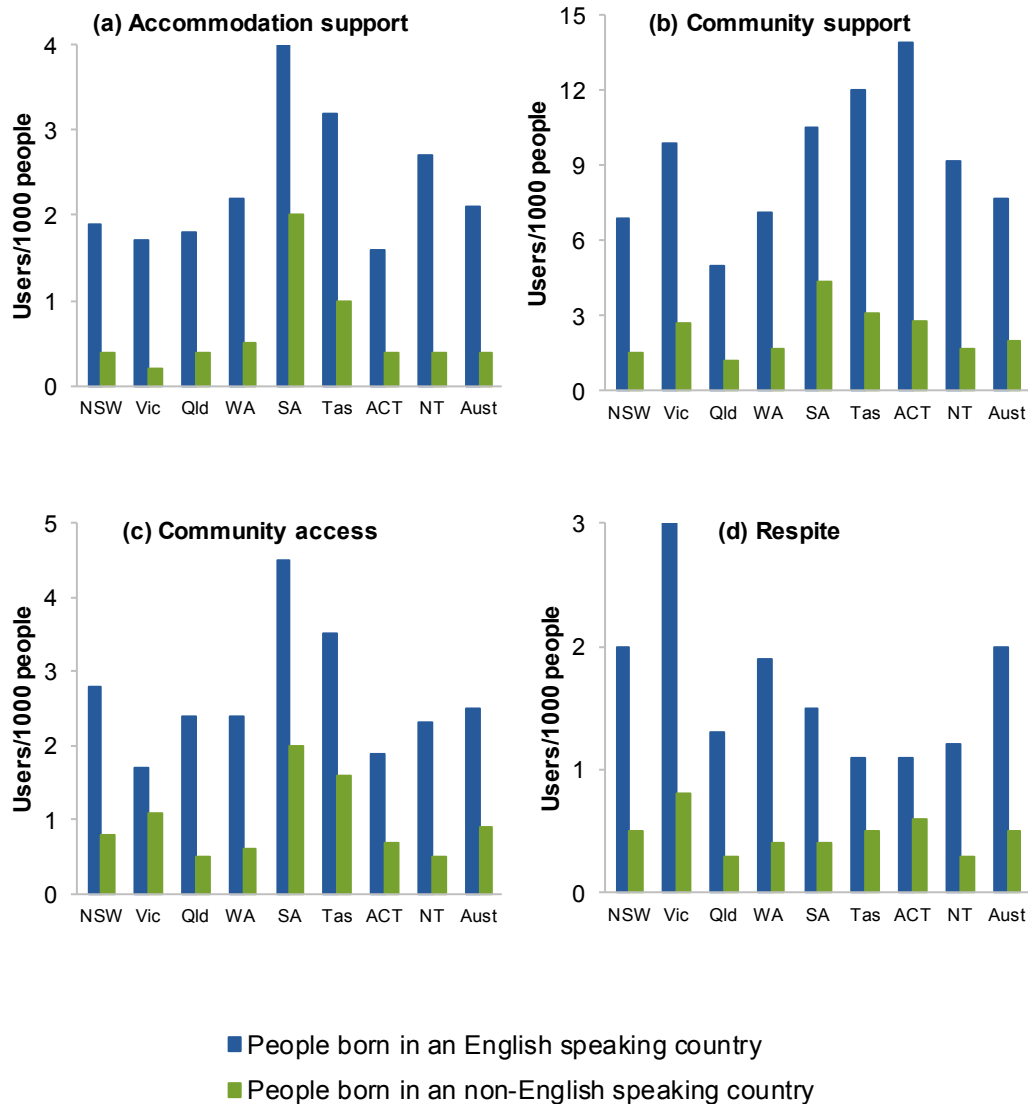

Nationally in 2012-13, the proportion of people born in a non-English speaking country who used NDA:

- accommodation support services was 0.4 users per 1000 people, lower than the proportion of people born in an English speaking country (2.1 service users per 1000 people) (figure 14.23a). The proportion of the potential population born in a non-English speaking country who used NDA accommodation support services (24.3 users per 1000 potential population) was lower than the proportion of people born

in an English speaking country who used these services (68.6 service users per 1000 potential population) (figure 14.24a)

- community support services was 2.0 service users per 1000 people, lower than the proportion of people born in an English speaking country who used these services (7.7 service users per 1000 people) (figure 14.23b). The proportion of the potential population born in a non-English speaking country who used community support services (111.2 service users per 1000 potential population) was lower than the proportion of people born in an English speaking country who used these services (257.8 service users per 1000 potential population) (figure 14.24b)
- community access services was 0.9 users per 1000 people, lower than the proportion of people born in an English speaking country who used these services (2.5 service users per 1000 people) (figure 14.23c). The proportion of the potential population born in a non-English speaking country who used community access services (48.7 service users per 1000 potential population) was lower than the proportion of people born in an English speaking country who used these services (84.6 service users per 1000 population) (figure 14.24c)
- respite services was 0.5 service users per 1000 people, lower than the proportion of people born in an English speaking country who used these services (2.0 service users per 1000 people) (figure 14.23d). Access to respite as a proportion of the potential population is not reported. Potential population data for respite services is not calculated at these levels because of conceptual, definitional and quality issues with carer data for the special needs groups from the 2011 Census.

Access to community accommodation and care services

‘Access to community accommodation and care services’ is an indicator of governments’ objective to assist people with disability to live as valued and participating members of the community (box 14.10). Governments provide or fund accommodation support services to people with disability in institutional/residential settings and through community accommodation and care services. Institutional or residential accommodation support services are provided in both institutions and hostels. Community accommodation and care services are provided in group homes and other community settings. The services provided in other community settings are attendant care/personal care, in home accommodation support, alternative family placement and other accommodation support.

State and Territory governments generally seek to provide accommodation support services to people with disability to enhance opportunities for people with disability to be involved in their community.

Box 14.10 Access to community accommodation and care services

‘Access to community accommodation and care services’ is defined as the number of people using a NDA community accommodation and care service divided by the total number of people using NDA accommodation support services (excluding people who use specialist psychiatric disability services only).

A higher or increasing proportion of people accessing NDA community accommodation and care services might provide better opportunities for people with disability (who need accommodation support) to be involved in their community.

NDA specialist disability services are provided on the basis of need and available resources. This indicator does not provide information on whether the services are appropriate for the needs of the people receiving them or correctly targeted on the basis of relative need.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, 91.0 per cent of users of NDA accommodation support services received community accommodation and care services in 2012-13 (figure 14.26).

Figure 14.26 **Users of community accommodation and care services as a proportion of all NDA accommodation support service users^{a, b}**

^a See table 14A.59 for detailed notes relating to these data. ^b Data need to be interpreted with care due to factors affecting data quality. Section 14.6 contains further information on data quality issues.

Source: AIHW (unpublished) *DS NMDS 2012-13*; table 14A.59.

Assistance for younger people with disability in, or at risk of entering, residential aged care

‘Assistance for younger people with disability in, or at risk of entering, residential aged care’ is an indicator of governments’ objective to provide access to services to people with disability that are appropriate to their needs (box 14.11).

Box 14.11 Assistance for younger people with disability in, or at risk of entering, residential aged care

'Assistance for younger people in, or at risk of entering, residential aged care' is defined by two measures:

- the percentage change in numbers of younger people in residential aged care
- the percentage change in numbers of younger people admitted to residential aged care.

This indicator is considered relevant to disability service provision because, under the National Disability Agreement (NDA), all governments have agreed to maintain innovative and flexible support models for people with high and complex needs, including options for younger people in, or at risk of entry to, residential aged care.

In 2006, all governments jointly funded a five-year Younger People in Residential Aged Care (YPIRAC) initiative to reduce the number of younger people with disability living in or at risk of entering residential aged care. The proportion of service users in the YPIRAC initiative, who achieved program objective, was included in the 2013 Report and earlier editions.

In 2011, the Australian Government funding for the YPIRAC program was rolled into the base National Disability Specific Purpose Payment funding provided to the State and Territory governments for specialist disability services for the NDA. The YPIRAC initiative ended on 30 June 2011 and data for the program are no longer collected. However, there are still younger people living in residential aged care and the YPIRAC initiative objectives remain as agreed in the previous bilateral agreements. Data on these younger people are reported against this indicator.

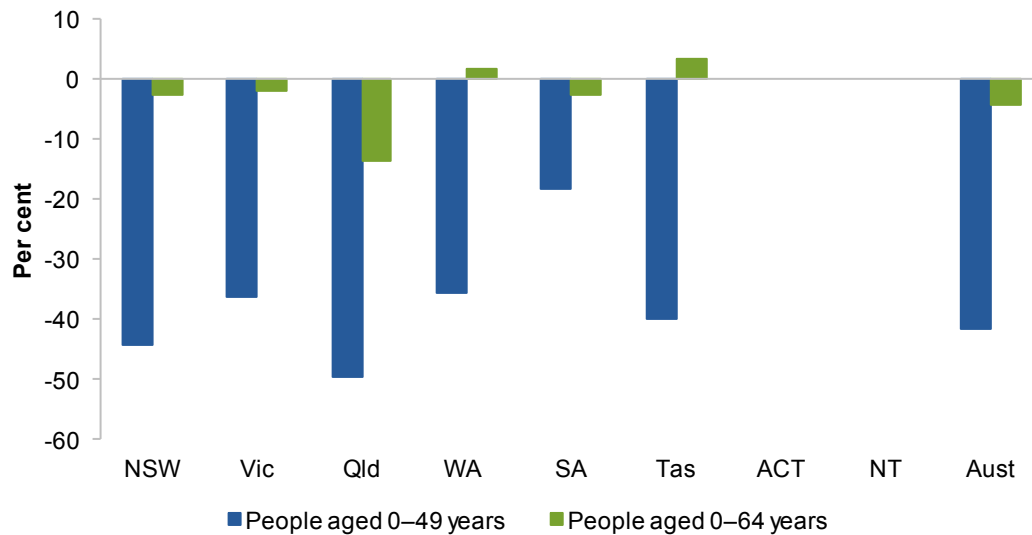

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally on 30 June 2014, there were 587 people under the age of 50 years living in permanent residential aged care (table 14A.60). This is a 41.7 per cent decrease on the number of people under the age of 50 years living in permanent residential aged care on 30 June 2006 (figure 14.27).

Figure 14.27 Younger people in residential aged care, percentage change in numbers between 2006 and 2014, by age group^{a, b, c}

^a Data are for permanent residents in aged care. ^b These data should be interpreted with care. There may be issues related to the age of Aboriginal and Torres Strait Islander residents being incorrectly recorded. An assessment of the NT data has previously shown that approximately half of Aboriginal and Torres Strait Islander Australian's ages were incorrectly recorded. ^c The percentage change for the ACT and the NT are not published due to confidentiality.

Source: DSS (unpublished) *Aged care data warehouse*, table 14A.60.

Nationally in 2013-14, the number of people under the age of 50 years admitted to permanent residential aged care was 232 (table 14A.61). This is 0.9 per cent lower than the number of people under the age of 50 years admitted to permanent resident aged care in 2006-07 (figure 14.28).

Figure 14.28 Younger people admitted to permanent residential aged care, percentage change in numbers between 2006-07 and 2013-14, by age group^{a, b, c}

^a Data are for permanent residents in aged care. ^b These data should be interpreted with care. There may be issues related to the age of Aboriginal and Torres Strait Islander residents being incorrectly recorded. An assessment of NT data has previously shown that approximately half of Aboriginal and Torres Strait Islander Australian's ages were incorrectly recorded. ^c The percentage changes for the numbers of people aged 0-49 years and 0-64 years in Tasmania and the ACT, and 0-49 years in the NT are not reported due to confidentiality. ACT had no admissions of 0-49 year olds in 2013-14 (ie 100 per cent decline).

Source: DSS (unpublished) *Aged care data warehouse*, table 14A.61.

Nationally in 2013-14, the number of younger people under the age of 50 years who separated from permanent residential aged care to return to home or family was 29. This is 16.0 per cent higher than in 2007-08 (table 14A.62).

These data should be interpreted with care, as some younger people choose to remain in residential aged care for a variety of reasons, such as:

- their physical and nursing needs can be best met in residential aged care
- they are satisfied with their current living situation (that is, it is their preferred facility)
- the facility is located close to family and friends
- it is a familiar home environment.

Additional information on younger people in residential aged care, including the number of people receiving residential aged care, the rate of admission to and the separation from residential aged care, from 2007-08 to 2013-14, are available in the attachment tables (see tables 14A.63-68).

Equity and effectiveness — quality of services

The following quality indicators are reported:

- ‘quality assurance processes’
- ‘client and carer satisfaction’.

Quality assurance processes

‘Quality assurance processes’ is related to governments’ objective to deliver and fund disability services that meet a particular standard of quality (box 14.12).

Box 14.12 Quality assurance processes

‘Quality assurance processes’ is defined as the proportion of NDA disability service outlets that have been assessed (either by an external agency or through a self-assessment process) against service standards.

A high or increasing proportion of disability service outlets that have been assessed against the standards (and are found to be compliant) suggests an improvement in the quality of government delivered or funded specialist disability services.

This indicator does not provide information on whether the standards or the quality assurance processes are appropriate. In addition, service outlets that are not quality assessed do not necessarily deliver services of lower quality.

Data reported for this measure are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- complete (subject to caveats) for the current reporting period. All required 2013-14 data are available for all jurisdictions.

Data quality information for this indicator is under development.

A revised set of six National Standards for Disability Services (National Standards) were endorsed by the Australian Government and all State and Territory governments in December 2013 (box 14.13). The Australian Government and all State and Territory governments agreed to implement these minimum standards. All State and Territory governments have developed, or are in the process of developing or re-developing, mechanisms for assessing compliance with the standards (tables 14A.69–77).

Box 14.13 **National Disability Service Standards**

Standard One — Rights

The service promotes individual rights to freedom of expression, self-determination and decision-making and actively prevents abuse, harm, neglect and violence.

Standard Two — Participation and Inclusion

The service works with individuals and families, friends and carers to promote opportunities for meaningful participation and active inclusion in society.

Standard Three — Individual Outcomes

Services and supports are assessed, planned, delivered and reviewed to build on individual strengths and enable individuals to reach their goals.

Standard Four — Feedback and Complaints

Regular feedback is sought and used to inform individual and organisation-wide service reviews and improvement.

Standard Five — Service Access

The service manages access, commencement and leaving a service in a transparent, fair, equal and responsive way.

Standard Six — Service Management

The service has effective and accountable service management and leadership to maximise outcomes for individuals.

Source: DSS (2013) National Standards for Disability Services.

Quality assurance processes differ across jurisdictions. Most processes include some form of self-assessment. Many include, or are working toward implementing, an external third party audit/certification process.

Data on quality assurance processes in 2013-14 are reported in box 14.14. These results should be interpreted with reference to tables 14A.69–77, which contain information on the legislation under which jurisdictions implement standards, the relevant disability service standards and how quality is monitored.

Box 14.14 Quality assurance processes for NDA specialist disability services 2013-14**Australian Government**

At 30 June 2014, the Australian Government funded a total of 333 disability employment organisations comprising a total of 2528 outlets across Australia. Of these:

- Disability Employment Services (DES) made up 142 (43 per cent) of the organisations but accounted for 2229 (88 per cent) of total outlets
- Australian Disability Enterprises (ADE) made up 191 (57 per cent) of the organisations, with 299 (11 per cent) of total outlets
- 50 (15 per cent) of the organisations operated as dual funded (both DES and ADE) employment services.

In 2013-14:

- a total of 329 quality assurance audits were performed at 146 DES organisations, 138 ADE organisations and 45 dual (both DES and ADE) funded organisations
- Department of Social Services (DSS) paid a total of \$2.2 million towards the cost of these quality assurance audits
- of the 146 audits performed at DES organisations, 58 were certification audits and 88 were surveillance audits
- of the 138 audits performed at ADE organisations, 70 were certification audits and 68 were surveillance audits
- of the 45 audits performed at dual organisations (both DES and ADEs), 18 were certification audits and 27 were surveillance audits.

State and Territory governments

Different quality assurance processes were in place in NSW, Victoria, Queensland, WA, SA, Tasmania, the ACT and the NT in 2013-14. The evaluation processes related to both government and non-government service outlets, although, in some jurisdictions, the requirements were different across service sectors.

NSW

All NSW non-government providers are required annually to revalidate ongoing compliance with the NSW Disability Standards (NSW DSS). In 2013, 93 per cent of providers reported self-assessed compliance with the NSW DSS.

From 1 July 2012, NSW has implemented a Quality Framework which requires funded service providers to implement a range of new quality requirements, including:

- implementing a quality management system
- undertaking third party verification to demonstrate compliance against the NSW DSS.

The Quality Framework Reporting (QFR) has been developed to assist organisations to review service performance and implement the quality requirements to meet the NSW DSS. Service providers are required to report on progress in achieving the milestones which are fundamental to the implementation of quality requirements of Ageing, Disability and Home Care (ADHC).

(Continued on next page)

Box 14.14 (continued)

To reduce the administrative burden faced by providers in submitting reporting requirements, NSW has developed an online form for the QFR commencing on 1 July 2013. Quality data will be collected at six monthly intervals over five stages, to ensure that service providers are on track to meet their quality requirements by 30 June 2015, and to enable additional support and resources to be rolled out where trends or concerns have been identified.

A range of steps have been undertaken and accelerated by ADHC to prepare the sector for the NDIS transition, including:

- training for service providers on the NSW DSS, Standards in action manual and safeguard policy obligations in the NDIS trial site, including tailored training to Aboriginal providers
- development and implementation of the Feedback and Complaints Management Log to drive organisational policy development and continuous improvement by supporting providers to record and analyse complaints
- development and implementation of the Quality Framework Report to assist organisations to review service performance and progress in implementing quality requirements
- development of Quality Assurance and Safeguards Working Arrangements for the launch of the NDIS in NSW as agreed between the NSW and Australian governments including complaints management and serious incident reporting protocol.

Victoria

On 1 July 2012, the Department of Human Services Standards (the Standards) were implemented. The Standards were developed to support quality services and in response to the assessment by service providers that the department's previous approach of using program based standards affects the amount of time staff could work with clients and that the approach to standards and quality reviews could be improved. The standards are summarised as:

- empowerment — people's rights are promoted and upheld
- access and engagement — people's right to access transparent, equitable and integrated services is promoted and upheld
- wellbeing — people's right to wellbeing and safety is promoted and upheld
- participation — people's right to choice, decision making and to actively participate as a valued member of their chosen community is promoted and upheld
- a service provider's governance and management systems will also be reviewed using the standards of the independent review body.

The Standards and the associated review processes replaced the Homelessness Assistance Service Standards, Standards for Disability Services in Victoria (which incorporated the National Disability Service Standards) and the Registration Standards for Community Service Organisations.

The Standards help to ensure a consistent quality of service no matter which departmentally funded service people access. Compliance with the Standards is an obligation of the Service Agreement, as well as a requirement of registration for those agencies registered either under the Children, Youth and Families Act 2005 or the Disability Act 2006. The Standards and independent review requirements apply to both internally and externally delivered services.

(Continued on next page)

Box 14.14 (continued)

Queensland

From 1 February 2013, service providers commenced transitioning to the new Human Services Quality Framework (the framework). The framework is a quality system for measuring and improving the quality of human services. It applies to organisations delivering services under a service agreement with the Department of Communities, Child Safety and Disability Services or other specified arrangements.

Central to the framework are the Human Services Quality Standards (HSQS), which define the key elements of human service delivery. These standards address governance and management, service access, responding to individual need, safety wellbeing and rights, feedback, complaints and appeals and human resources.

Recurrently funded disability service providers are required to be externally audited against the HSQS by JAS-ANZ accredited certification bodies. Audits occur over a three year certification cycle and include a mid-term maintenance audit at 18 months to ensure continued conformance with the standards. The framework's goal is to enable continuous improvement of human services through a streamlined client-focused approach ranging from self-assessment to independent audit against the standards.

Quality assessments help to ensure that organisations comply with the standards and guide them in their service improvements. The framework also reduces red tape and duplication involved in complying with multiple quality systems, allowing organisations to maintain a focus on quality, while freeing up resources to be redirected to frontline services.

Of the established 258 recurrently funded disability providers that have transitioned to the HSQF, 12 (4.7 per cent) did not meet all of the standards during their 2013-14 audit. One organisation had non-compliance issues that resulted in temporary suspension pending a follow-up audit. All other issues raised for all other providers were addressed within the appropriate timeframes and certification was maintained for those providers. There are 15 new service providers that are in the process of implementing quality management systems in preparation for their first independent audit in 2014.

WA

The Quality Management Framework (QMF) commenced in May 2010. Service quality is evaluated from the perspective of outcomes achieved by people with disability, their families and carers via the evaluation of service points (comprising a number of service outlets).

Independent Quality Evaluation is conducted for each service point on a three yearly cycle and includes an evaluation of agreed service outcomes and the nine Disability Services Standards as part of the QMF.

In 2013-14, 83 service points were evaluated. All nine Standards were met by 50 service points (60 per cent).

(Continued on next page)

Box 14.14 (continued)

SA

In SA, non-government service providers are required to meet quality assurance criteria before they can provide NDA specialist services. This includes the requirement for all service providers to be engaged with an approved quality improvement program.

Out of 144 organisations, 131 (91 per cent) have, or are working towards, accreditation.

As part of the department's quality framework the Disability Service Provider Panel (DSPP) process is being reviewed to ensure quality standards are being met. This requirement will be a key component of the DSPP review during 2014-15.

Tasmania

The Quality and Safety Framework for Tasmania's Department of Health and Human Services (DHHS) Funded Community Sector (the Framework) requires funded community sector organisations to undertake quality and safety activities against recognised standards, have systems and processes in place to record and monitor improvement activities, and to ensure that feedback and learnings from incidents contribute towards enhancing service delivery.

The DHHS monitors compliance with the Framework through an annual meeting with the funded community sector organisation, discussing performance against contractual requirements, and a three yearly quality and safety review. The quality and safety review includes a site visit to view the organisation's documentation, systems and processes, and to obtain feedback from consumers, staff, volunteers and management including Board or Committee members. A draft report is provided to the organisation and the organisation's feedback is considered by the review team prior to finalising the report.

At 30 June 2014, 17 per cent of DHHS' disability funded community sector organisations had participated in a quality and safety review. All 12 organisations demonstrated engagement with, and commitment to, the Framework; 66 per cent, or 8 of the 12 organisations, evidenced compliance with all requirements of the Framework.

ACT

In 2013-14, the ACT continued implementation of the quality improvement measures for all services delivered by government and community sector service providers. All organisations have continued work into business continuity management practices.

All organisations are required to undertake an annual baseline self-assessment against the National Disability Service Standards, with quality improvement action plans being developed and implemented on the basis of any identified issues.

NT

Disability services funded through the NT Government Department of Health's Office of Disability are assessed against the National Standards for Disability Services and/or the NT Disability Services at least once every three years.

(Continued next page)

Box 14.14 (continued)

The review process involves a desktop review of the relevant policies and procedures associated with the service; site visits; and interviews with clients, guardians, service staff, coordinators and management. Performance against the service standards is either rated as 'met', 'partially met' or 'not met'. Where performance is rated as either partially met or not met, recommendations for service improvement was made.

A Service Improvement Plan is developed by the service provider and its implementation is monitored on a regular basis. A site visit is then conducted to monitor the service and assess whether the services provided meet the standards. Review Officers may also liaise with service stakeholders such as guardians, clients, support workers, advocates and management. During the reporting period two reviews were conducted against the Northern Territory Disability Service Standards.

Service Improvement Plans have been developed and actions taken so far have resulted in significant improvements in the service quality. It is anticipated that follow-up reviews will be conducted on these services in the next reporting period.

The Office of Disability is currently in the process of updating quality assessment tools to be compatible with the revised National Standards for Disability Services, endorsed by all jurisdictions in December 2013.

Source: Australian, NSW, Victorian, Queensland, WA, SA, Tasmanian, ACT and NT governments (unpublished).

Client and carer satisfaction

'Client and carer satisfaction' is an indicator of governments' objective to deliver and fund quality disability services that meet the needs and goals of the client (or carer of the client) receiving them (box 14.15).

Box 14.15 **Client and carer satisfaction**

'Client and carer satisfaction' is defined as service users overall reported levels of satisfaction with services and satisfaction with individual services.

Results are reported from:

- State and Territory administered client and carer satisfaction surveys and is expressed as percentages
- the 2012 SDAC and are expressed as numbers and proportions.

A high or increasing proportion of clients and carers who are satisfied is desirable, as it suggests that the service received was of a higher quality and better met the needs and goals of the client or carer.

State and Territory data reported for this measure are:

- comparable (subject to caveats) within jurisdictions over time but are not comparable across jurisdictions
- incomplete for the current reporting period. 2013-14 data were not available for NSW, Victoria, Queensland, SA, Tasmania and the NT. These data may not be collected in the future.

SDAC data reported for this measure are:

- comparable across jurisdictions
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is available for 2012 SDAC data at www.pc.gov.au/rogs/2015. Data quality information for State and Territory data are under development.

State and Territory administered client and carer satisfaction survey data for 2013-14 are only available for this report for WA and the ACT (box 14.16). Data for earlier years for Queensland, WA, and the ACT were included in the 2014 Report (SCRGSP 2014, pp. 62–64).

Box 14.16 Client and carer satisfaction with specialist disability services

'Client and carer satisfaction' data relate to NDA specialist disability services only.

NSW

Surveys are not conducted in NSW.

Victoria

No survey was conducted in Victoria in 2013-14.

Queensland

No survey was conducted in Queensland in 2013-14.

WA

WA conducted a carer and client satisfaction survey in March 2014. In this survey, a total of 735 structured telephone interviews were completed from a sample of 1631 individuals with disability or their carers, which was stratified to ensure that it contained individuals representing users across all services funded by the Disability Services Commission. Of the 735 respondents, 144 (20 per cent) were service users and 591 (80 per cent) were carers responding on behalf of service users.

Overall service user satisfaction was 84 per cent. For individual services, reported satisfaction was:

- 92 per cent for accommodation
- 87 per cent for community-focused supports (includes Disability Professional Services and Day Options)
- 75 per cent for coordination and individual support
- 86 per cent for family and carer support.

SA

No survey was conducted in SA in 2013-14.

Tasmania

No survey was conducted in Tasmania in 2013-14.

(Continued on next page)

Box 14.16 (continued)

ACT

In 2013-14, the ACT conducted a client satisfaction survey that measured client satisfaction with all disability services funded through Disability ACT, including government provided services as well as services provided through non-government agencies.

This survey asked clients to rate their overall level of satisfaction with the quality of the main disability services they had received over the past 12 months. Overall, 81 per cent of respondents to the survey reported that they were satisfied or very satisfied with disability services funded through Disability ACT.

The proportion of service users reporting that they were satisfied or very satisfied was:

- 81 per cent for accommodation support services — group home
- 82 per cent for accommodation support services — in own home
- 88 per cent for community access — recreation
- 76 per cent for community access — support to participate in community
- 92 per cent for respite — in home respite
- 75 per cent for community support — case management/support
- 90 per cent for respite — centre based respite
- 86 per cent for information/referral.

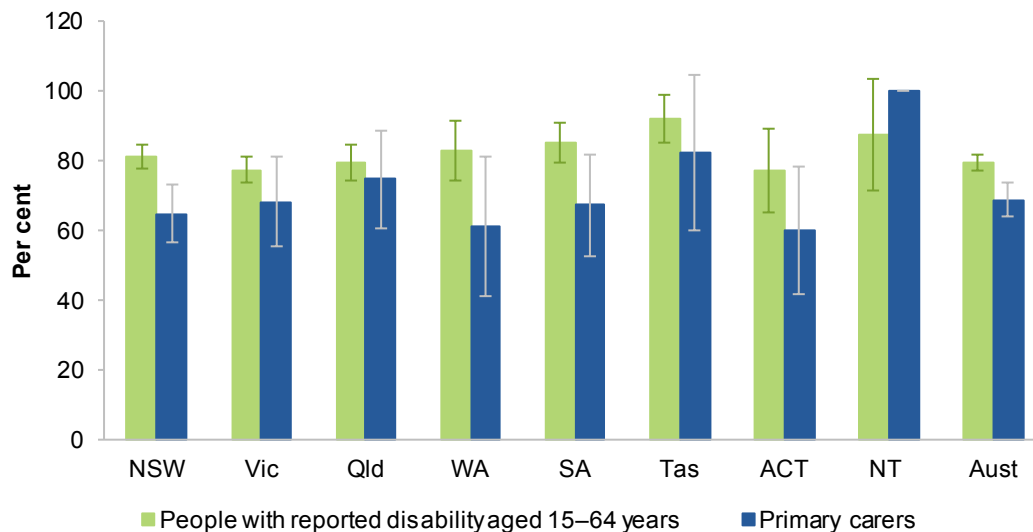

NT

Surveys are not conducted in the NT.

Source: WA and ACT governments (unpublished).

Data on the satisfaction of clients and carers with the quality of formal services are available for the first time from the 2012 SDAC (tables 14A.79–86). Nationally, in 2012, the estimated rate of people aged 15–64 years with a reported disability who were satisfied with the quality of assistance they received from organised and formal services (79.5 ± 2.4 per cent) was higher than the estimated rate of primary carers who were satisfied with the quality of formal services received to help in their caring role (69.0 ± 5.0 per cent) (figure 14.29). SDAC data should not be compared to State and Territory administered client and carer satisfaction data as the definition of formal services in the SDAC is broader than the scope of specialist disability services as defined by the NDA.

Figure 14.29 **Proportion of people with disability and primary carers who are satisfied with the quality of assistance received^{a, b, c, d}**

^a Data include only those people who undertook a personal interview, and do not include proxy interviews. ^b Data exclude need for assistance with health care. ^c Data exclude people who are residents of cared accommodation establishments. ^d Primary carers (aged 15 years or over) with a main recipient aged 0–64 years, or with a non-main recipient aged 0–64 with a profound or severe core activity limitation. Only includes primary carers who reported receiving assistance from formal services to assist with their caring role in the last 6 months.

Source: ABS (unpublished) 2012 Survey of Disability, Ageing and Carers; table 14A.79 and table 14A.83.

Efficiency — cost per output unit

The following cost per output unit efficiency indicators are reported:

- ‘government contribution per user of non-government provided services’
- ‘cost per user of State and Territory administered services’.

This Report includes 2013-14 expenditure data provided by Australian, State and Territory governments. However, as 2013-14 service user data from the DS NMDS collection were not available for this Report, the cost per service user efficiency indicators are reported using expenditure and service use data for 2012-13. Expenditure data in this Report might differ from information reported elsewhere (such as in departmental annual reports) because the financial counting rules and definitions used to calculate expenditure can differ and the data here exclude users of specialist psychiatric disability services.

It is an objective of the Review to report comparable estimates of costs. Ideally, such comparisons would include the full range of costs to government. Where the full costs cannot be counted, costs are estimated on a consistent basis. The jurisdictional expenditure

data included in this chapter do not yet include the user cost of capital, and so do not reflect the full costs of government funded services (user cost of capital is defined in chapter 1).

Considerable effort has been made to document any differences in calculating the reported efficiency indicators. Concerns remain over the comparability of the results, because jurisdictions use different methods of service use data collection (table 14A.78).

Financial data — expenditure items included/excluded

Financial data reported in this chapter include/exclude various expenditure items depending on the context in which the data are reported. Only direct recurrent expenditure on specific services is included (this may include administrative costs that can be directly attributed to a specific service/s). For the disability services system as a whole, expenditure includes general administrative overheads that cannot be allocated to a specific service/s and major capital grants to non-government service providers. Capital grants to non-government service providers are excluded from total recurrent expenditure for the indicator ‘administrative expenditure as a proportion of total recurrent expenditure’, as they are not a ‘recurrent’ expense. Exclusion of these grants improves the comparability of the indicator across jurisdictions and over time.

Government and non-government provided services

Efficiency indicators are reported for both government and non-government provided services. Government provision means that a service is both funded and directly provided by a government department, agency or local government. Non-government provision is a service purchased or part-funded by a government department or agency, but provided by a non-government organisation. Non-government service providers may receive funds from the private sector and the general public in addition to funding, grants and input tax concessions (such as payroll tax exemptions) from governments. Data on funds that non-government service providers receive from the private sector and the general public are outside the scope of this Report.

Government contribution per user of non-government provided services

‘Government contribution per user of non-government provided services’ is an indicator of governments’ objective to provide specialist disability services in an efficient manner (box 14.17).

Box 14.17 Government contribution per user of non-government provided services

'Government contribution per user of non-government provided services' is defined as the net government expenditure per user of non-government provided NDA services. Measures are reported for the following non-government provided services:

- accommodation support services in:
 - institutional/residential settings
 - group homes
 - other community settings
- employment services (reported per employment service user assisted).

Holding other factors constant (such as service quality and accessibility), low or decreasing government expenditure per service user reflects a more efficient provision of this service.

Efficiency data are difficult to interpret. Although high or increasing expenditure per unit of output can reflect deteriorating efficiency, it can also reflect improvements in the quality or other attributes of the services provided, or an increase in the service needs of users. Similarly, low or declining expenditure per unit of output can reflect improving efficiency, or lower quality and less effective services. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions that provide the service.

Data quality information for this indicator is under development.

Government contribution per user of non-government provided services — accommodation support services in institutional/residential settings

Nationally, estimated annual government funding of non-government provided accommodation support services in institutional/residential settings was \$63 519 per service user in 2012-13 (figure 14.30).

Figure 14.30 **Estimated annual government funding per user of non-government provided accommodation support services in institutional/residential settings (2012-13 dollars)^{a, b, c, d, e}**

^a See table 14A.87 for detailed notes relating to these data. ^b Service user data used to derive this indicator have quality issues, so estimates of jurisdictional efficiency need to be interpreted with care. Section 14.6 contains further information on data quality issues. ^c Government and non-government sectors have not been accurately recorded in the NSW DS MDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time. ^d There were no non-government provided accommodation support services in institutional/residential settings in the ACT and the NT. ^e Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See chapter 2 (section 2.5-6) for details.

Source: AIHW (unpublished) *DS NMDS 2008-09 to 2012-13*; State and Territory governments (unpublished); table 14A.87.

Estimated annual government funding per user of non-government provided accommodation support services in group homes and other community settings from 2003-04 to 2012-13 are reported in table 14A.87.

Government contribution per user of non-government provided services — government contribution per employment service user assisted

Nationally, for all employment services, estimated government expenditure per service user assisted was \$4945 in 2012-13 (figure 14.31). Nationally, estimated annual government expenditure per service user in 2012-13, by employment service type, was \$3681 on open services (employed or seeking employment in the open labour market) and \$10 598 on supported services (employed by the service provider) (table 14A.89).

Figure 14.31 **Government contribution per employment service user assisted (2012-13 dollars)^{a, b, c}**

^a See table 14A.88 for detailed notes relating to these data. ^b Cost per employment service user data reported here might differ from those reported in the Australian Government's annual report, where different rules are used to count the number of employment service users. ^c Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See chapter 2 (section 2.5-6) for details.

Source: Australian Government (unpublished); AIHW (unpublished) *DS NMDS 2008-09 to 2012-13*; table 14A.88.

Cost per user of State and Territory administered services

'Cost per user of State and Territory administered services' is an indicator of governments' objective to provide specialist disability services in an efficient manner (box 14.18).

Box 14.18 **Cost per user of State and Territory administered services**

'Cost per user of State and Territory administered services' is defined as government expenditure on NDA State and Territory administered services per service user. Two measures are reported:

- estimated government expenditure per user of NDA State and Territory administered services (data are reported separately for government expenditure net of payroll tax and for government expenditure including actual and/or imputed payroll tax)
- cost per user of government provided accommodation support services in:
 - institutional/residential settings
 - group homes
 - other community settings.

Holding other factors constant (such as service quality and accessibility), low or decreasing government expenditure per service user reflects a more efficient provision of this service.

Efficiency data are difficult to interpret. Although high or increasing expenditure per unit of output can reflect deteriorating efficiency, it can also reflect improvements in the quality or attributes of the services provided, or an increase in the service needs of service users. Similarly, low or decreasing expenditure per unit of output can reflect improving efficiency, or lower quality and less effective services. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions that provide the service.

Data quality information for this indicator is under development.

Total estimated government expenditure per user of NDA State and Territory administered specialist disability services in 2012-13 is reported both net of payroll tax and including actual or imputed payroll tax. Nationally, estimated expenditure per service user was \$37 773 excluding payroll tax and \$38 224 including actual and/or imputed payroll tax (figure 14.32).

Figure 14.32 Estimated annual government expenditure per user of NDA State and Territory administered services, 2012-13^{a, b, c, d}

^a In some jurisdictions (NSW, Victoria, SA, Queensland, Tasmania and the NT), payroll tax data are actual; in other jurisdictions (WA and ACT), payroll tax data are imputed. ^b Government expenditure per service user for Australia excludes Australian Government expenditure on State and Territory administered services that was not provided as transfer payments. ^c Payroll tax data for Queensland includes paid payroll tax and accrued payroll tax. ^d In the NT, payroll tax relates to government service provision and excludes expenditure for program management and administration.

Source: AIHW (unpublished) *DS NMDS 2012-13*; State and Territory governments (unpublished); table 14A.90.

Cost per user of State and Territory administered services — government provided accommodation support services — institutional/residential settings

Nationally, estimated annual government expenditure on accommodation support services in institutional/residential settings was \$162 529 per service user in 2012-13 (figure 14.33).

Figure 14.33 **Estimated annual government expenditure per user of government provided accommodation support services in institutional/residential settings (2012-13 dollars)^{a, b, c, d, e, f, g}**

^a See table 14A.87 for detailed notes relating to these data. ^b Service user data used to derive this measure have quality issues, so estimates of jurisdictional efficiency need to be interpreted with care. Section 14.6 contains further information on these quality issues. ^c Government and non-government sectors have not been accurately recorded in the NSW DS MDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time. ^d The increase in NSW expenditure in 2011-12 is partially the result of a change in the methodology for distributing depreciation expenditure. ^e Queensland data include funding provided by the Department of Communities only. ^f There were no government provided accommodation support services in institutional/residential settings in Tasmania, the ACT or the NT. ^g Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See chapter 2 (section 2.5) for details.

Source: AIHW (unpublished) *DS NMDS 2008-09 to 2012-13*; State and Territory governments (unpublished); table 14A.87.

Estimated annual government expenditure per user of government provided accommodation support services in group homes and other community settings from 2003-04 to 2012-13 are reported in table 14A.87.

Efficiency — administrative cost

Administrative expenditure as a proportion of total recurrent expenditure

'Administrative expenditure as a proportion of total recurrent expenditure' is an indicator of governments' objective to provide specialist disability services in an efficient manner (box 14.19). The proportion of total expenditure on administration is not yet comparable across jurisdictions, as it is apportioned by jurisdictions using different methods

(table 14A.91). However, administrative expenditure data can indicate trends within jurisdictions over time.

Box 14.19 Administrative expenditure as a proportion of total recurrent expenditure

‘Administrative expenditure as a proportion of total recurrent expenditure’ is defined as government expenditure on administration as a proportion of total recurrent NDA expenditure. Major capital grants to non-government service providers are excluded to improve comparability across jurisdictions and over time.

Holding other factors constant (such as service quality and accessibility), lower or decreasing administrative expenditure as a proportion of total recurrent NDA expenditure might reflect an increase in administrative efficiency.

Efficiency data are difficult to interpret. Although high or increasing administrative expenditure as a proportion of total expenditure may reflect deteriorating efficiency, it may also reflect improvements in the quality or attributes of the administrative services provided. Similarly, low or decreasing administrative expenditure as a proportion of total expenditure may reflect improving efficiency, or lower quality and less effective administrative services. This may in turn affect service delivery effectiveness. Efficiency data therefore should be interpreted within the context of the effectiveness and equity indicators to derive a holistic view of performance.

Data reported for this measure are:

- comparable (subject to caveats) within some jurisdictions over time but are not comparable across jurisdictions or over time for other jurisdictions (see caveats in attachment tables for specific jurisdictions)
- complete (subject to caveats) for the current reporting period. All required 2012-13 data are available for all jurisdictions.

Data quality information for this indicator is under development.

Nationally, administrative expenditure as a proportion of total government expenditure on specialist disability services (excluding actual and imputed payroll tax) decreased from 6.7 per cent in 2012-13 to 6.6 per cent in 2013-14 (figure 14.34). When actual or imputed payroll tax is included, the average national administrative expenditure as a proportion of total NDA expenditure was 6.5 per cent in 2013-14 (table 14A.91). Real total NDA expenditure is reported in table 14A.9, both excluding and including actual or imputed payroll tax amounts.

Figure 14.34 **Administrative expenditure as a proportion of total recurrent expenditure^{a, b, c, d, e}**

^a See table 14A.91 for an explanation of different methods of apportioning departmental costs. ^b Data exclude payroll tax. ^c Australian Government administrative expenditure is an estimate, based on average staffing levels. ^d The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure. ^e In Tasmania, in 2012-13 and 2013-14, administrative expenditure increased due to a change in methodology for allocating corporate and divisional overheads.

Source: Australian, State and Territory governments (unpublished); table 14A.91.

Outcomes

Outcomes are the impact of services on the status of an individual or group (while outputs are the services delivered) (see chapter 1, section 1.5).

The following outcome indicators are included in the performance framework:

- ‘labour force participation and employment of people with disability’
- ‘labour force participation of primary carers of people with disability’
- ‘social participation of people with disability’
- ‘use of other services by people with disability’.

Interpreting data for some outcome indicators

For the outcome indicators reported using survey data, 95 per cent confidence intervals are presented. These intervals assist with making comparisons across jurisdictions, and across different disability status groups. Confidence intervals are a standard way of expressing the degree of uncertainty associated with survey estimates. An estimate of 80 with a

confidence interval of ± 4 , for example, means that if another sample had been drawn there is a 95 per cent chance that the result would lie between 76 and 84. Where ranges do not overlap, there is a statistically significant difference. If one jurisdiction's results range from 78–80 and another's from 82–89, then it is possible to say that one differs from the other (because there is a statistically significant difference). To say that there is a statistically significant difference means there is a high probability that there is an actual difference — it does not imply that the difference is necessarily large or important.

Labour force participation and employment of people with disability

'Labour force participation and employment of people with disability' is an indicator of governments' objective of assisting people with disability to participate fully in the community (box 14.20). Participation in the labour force and employment is important to the overall wellbeing of people with disability, providing opportunities for personal development and financial independence.

Box 14.20 Labour force participation and employment of people with disability

'Labour force participation and employment of people with disability' is defined as the labour force participation and employment rates of people aged 15–64 years with a profound or severe core activity limitation. Labour force participation rates and employment rates of people aged 15–64 years without a profound or severe core activity limitation are also reported.

Two measures are reported:

- employment to population rate for people with disability aged 15–64 years, by disability status
- unemployment rate for people with disability aged 15–64 years, all with reported disability, by disability status.

High or increasing labour force participation and employment rates for people with disability are desirable. Higher rates are likely to increase the quality of life of people with disability by providing greater opportunities for self-development and for economic and social participation.

This indicator does not provide information on why people choose not to participate in the labour force and why people are not employed. It also does not provide information on whether the employment positions are appropriate or fulfilling.

Data reported for this measure are:

- comparable across jurisdictions and over time
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally, in 2012, the estimated employment rate of people aged 15–64 years with a profound or severe core activity limitation (26.4 ± 2.5 per cent) was lower than the rate for people with disability excluding those with a profound or severe core activity limitation

(54.7± 1.5 per cent) and the rate for people with no disability (78.5 ± 0.4 per cent) (figure 14.35).

Detailed definitions of the employment rate and its calculation method are provided in section 14.7. Employment rates should be interpreted in conjunction with labour force participation rates. Other data on the employment of people with disability, including labour force participation rates are reported in tables 14A.92–109.

Figure 14.35 Estimated employment rate for people aged 15–64 years, by disability status, 2012^{a, b, c}

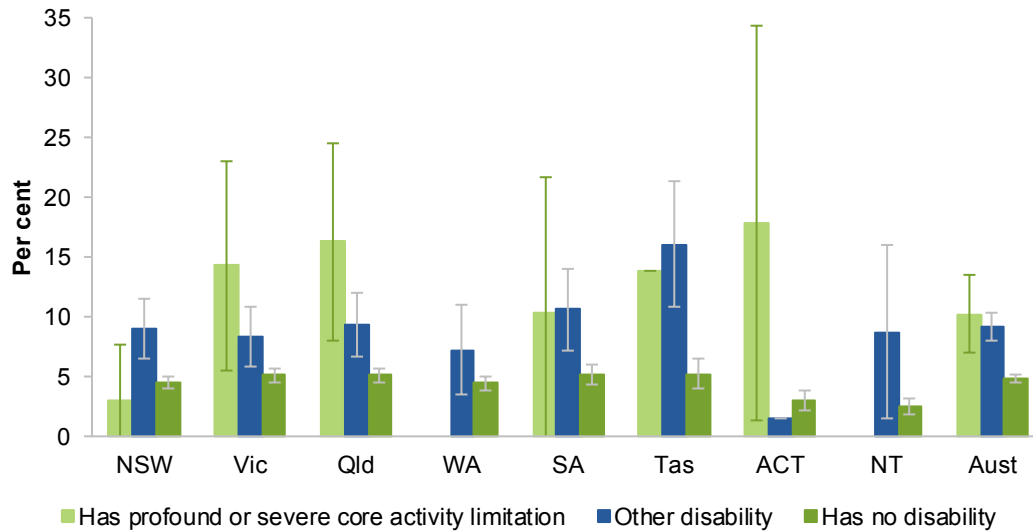

^a For people aged 15–64 years, living in households. ^b Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers, 2012*; table 14A.94.

Nationally, in 2012, the estimated unemployment rate of people aged 15–64 years with a profound or severe core activity limitation (10.3 ± 3.3 per cent) was higher than the rate for people with disability excluding those with a profound or severe core activity limitation (9.2 ± 1.2 per cent) and the rate for people with no disability (4.9 ± 0.3 per cent) (figure 14.36).

Figure 14.36 **Estimated unemployment rate of people aged 15–64 years, by disability status, 2012^{a, b, c, d}**

a For people aged 15–64 years, living in households. **b** Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care. **c** Some data for WA, and NT is not included as this data is not reliable. **d** Error bars represent the 95 per cent confidence interval associated with each point estimate. Confidence intervals can exceed 100 per cent or zero due to the low reliability of the estimate.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers, 2012*; table 14A.95.

Labour force participation of primary carers of people with disability

‘Labour force participation of primary carers of people with disability’ is an indicator of governments’ objective of assisting primary carers of people with disability to participate fully in the community (box 14.21). Participation in the labour force is important to the overall wellbeing of carers, providing opportunities for personal development and financial independence.

Box 14.21 Labour force participation of primary carers of people with disability

‘Labour force participation of primary carers of people with disability’ is defined as the labour force participation rate for primary carers aged 15–64 years of people with disability.

Primary carer is defined as a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities. A detailed definition is provided in section 14.7.

Higher or increasing labour force participation rates for primary carers of people with disability are desirable. Higher rates are likely to increase the quality of life of primary carers of people with disability by providing greater opportunities for self-development.

This indicator does not provide information on why people choose not to participate in the labour force. It also does not provide information on whether the participation in the labour force is fulfilling.

Data reported for this measure are:

- comparable across jurisdictions and over time
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally in 2012, the estimated labour force participation rate for people aged 15–64 years of primary carers of people with disability (52.8 ± 3.2 per cent) was less than both the estimated labour force participation rate for all carers (66.9 ± 1.7 per cent) and the estimated labour force participation rate for non-carers (79.7 ± 0.4 per cent) (figure 14.37).

Detailed definitions of the labour force participation rate and its calculation method are provided in section 14.7. Other data on the labour force participation for primary carers of people with disability are reported in tables 14A.110–117.

Figure 14.37 Labour force participation rate for people aged 15–64 years by whether a primary carer of someone with a disability aged 0–64 years, a carer of someone with a disability aged 0–64 years, or not caring for someone with a disability aged 0–64 years, by State/Territory, 2012^a

^a Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers, 2012*, tables 14A.110 and 14A.112.

Social participation of people with disability

‘Social participation of people with disability’ is an indicator of governments’ objective to assist people with disability to live as valued and participating members of the community (box 14.22).

Box 14.22 **Social participation of people with disability**

'Social participation of people with disability' is defined as the proportion of people who participate in selected social or community activities by disability status:

- profound or severe core activity limitation
- other disability.

A high or increasing proportion of people with disability who participate in social or community activities reflects their greater inclusion in the community.

This indicator does not provide information on the degree to which the identified types of social or community activities contribute to people's quality of life. It also does not provide information on why some people did not participate.

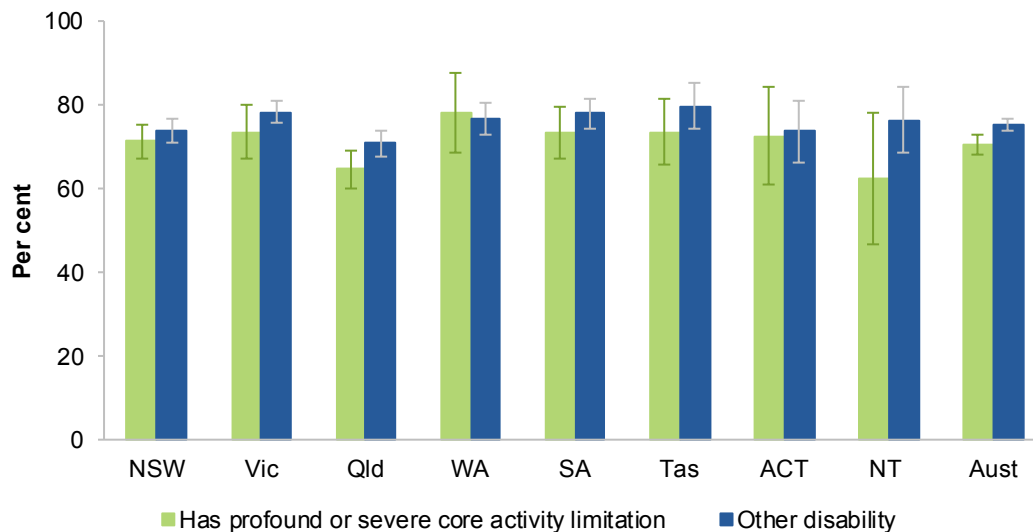

Data reported for this measure are:

- comparable across jurisdictions and over time
- complete (subject to caveats) for the current reporting period.

Data quality information for this indicator is at www.pc.gov.au/rogs/2015.

Nationally in 2012, the estimated proportion of people with disability aged 15-64 years with a profound or severe disability who had face-to-face contact with ex-household family or friends in the previous week (70.6 ± 2.6 per cent) was lower than the rate for people with disability without a profound or severe core activity limitation (75.4 ± 1.5 per cent) (figure 14.38).

Figure 14.38 **People with disability aged 15–64 years who had face-to-face contact with ex-household family or friends in the previous week, 2012^{a, b, c}**

^a For people aged 15–64 years, living in households. ^b Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self-care. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers, 2012*; table 14A.12.

Nationally in 2012, the estimated proportion of people with disability aged 5–64 years with a profound or severe disability who reported the main reason for not leaving home as often as they would like is their disability or condition (31.4 ± 1.8 per cent) was significantly higher than the rate for people with disability without a profound or severe core activity limitation (8.2 ± 1.0 per cent) (figure 14.39).

Other data on participation of people with disability in selected social and community activities are reported in tables 14A.124–132.

Figure 14.39 **People with disability aged 5–64 years who report the main reason for not leaving home as often as they would like is their disability or condition, by disability status, 2012^{a, b, c}**

^a For people aged 5-64 years, living in households. ^b Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) *Survey of Disability, Ageing and Carers, 2012*; table 14A.134.

Use of other services by people with disability

‘Use of other services by people with disability’ is an indicator of governments’ objective of enhancing the quality of life experienced by people with disability by assisting them to gain access to mainstream government services (box 14.23).

Box 14.23 Use of other services by people with disability

‘Use of other services by people with disability’ is yet to be defined and reported on a consistent basis.

A higher or increasing proportion of people with disability who use mainstream government services suggests greater access to these services.

This indicator does not provide information on whether the service accessed is the most appropriate, or the degree to which the service contributes to people’s quality of life. It also does not provide information on why some people do not access mainstream services.

Data for this indicator were not available for the 2015 Report.

Data quality information for this indicator is under development.

'Use of other services' data reported elsewhere in this Report

Data on the participation of people with disability in various government services are incorporated in the performance indicator frameworks for other chapters of this Report. Participation is reported for early childhood education and care (chapter 3); VET (chapter 5); social, community and State owned and managed Indigenous housing (chapter 17) and Commonwealth Rent Assistance (sector overview G). In addition, the following chapters include data on services provided to people with disability:

- 'School education' (chapter 4) reports data on students with disability in the student body mix, disaggregated by sector
- 'Mental health management' (chapter 12) reports performance data on specialised mental health services
- 'Aged care services' (chapter 13) reports data on the age-specific usage rates (including for younger people) of residential and home care services provided under the aged care program. Data are also reported on the use of HACC services, including those received by people with a profound, severe or moderate core activity limitation, for people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years
- 'Housing' (chapter 17) reports data on people with disability for the 'dwelling condition', 'amenity/location' and 'customer satisfaction' indicators.

14.4 Future directions in performance reporting

Scope for further improvements to reporting

There is scope for further improvements in reporting against the current framework, including improvements to the data on service quality. The Steering Committee intends to address limitations over time by:

- ensuring the DS NMDS remains relevant to informing the rollout of the NDIS
- seeking access to NDIS data to report against performance indicators in the framework
- reporting more comprehensive social and community participation data, when available
- reporting nationally consistent client and carer satisfaction with service quality for all jurisdictions.

COAG developments

The Steering Committee is committed to ensuring this chapter remains aligned with the significant reforms being implemented by COAG.

Indicators in the chapter will continue to be aligned with indicators in the NDA, and the chapter will reflect development in the National Disability Strategy and the continued implementation of the National Disability Insurance Scheme.

National Disability Strategy

The National Disability Strategy 2010–2020 was formally endorsed by COAG on 13 February 2011 and launched by the Australian Government on 18 March 2011. This represents the first time that all governments have committed to a unified, national approach to improving the lives of people with disability, their families and carers.

The Strategy is designed to guide public policy across governments and aims to bring about changes to all mainstream services and programs, as well as community infrastructure, to ensure they are accessible and responsive to the needs of people with disability.

Every two years, a high level progress report will track achievements under the Strategy and provide a picture of how people with disability are faring.

National Health Reform Agreement

COAG agreed the National Health Reform Agreement out of session in August 2011. The Agreement gives effect to the commitment COAG made on 13 February 2011, and in doing so, supersedes the National Health and Hospitals Network Agreement and the Heads of Agreement on National Health Reform.

The Agreement will deliver major reforms to the organisation, funding and delivery of health and aged care. It sets out the shared intention of the Australian, State and Territory governments to work in partnership to improve health outcomes for all Australians and ensure the sustainability of the national health system. The reforms aim to help patients gain better access to services, improve local accountability and responsiveness to the needs of communities, and provide a stronger financial basis for our health system into the future.

14.5 Jurisdictions' comments

This section provides comments from each jurisdiction on the services covered in this chapter.

Australian Government comments

“

During 2013-14 the Australian Government funded supported employment for over 21 250 people with disability in 299 Australian Disability Enterprise (ADE) outlets across Australia.

- Transition of supported employment to the National Disability Insurance Scheme commenced in trial sites in NSW, Victoria and Tasmania on 1 July 2013, and preparatory work for the commencement of the new ACT and Perth Hills trial sites from 1 July 2014 was completed.
- Case management and practical support continued for more than 2500 supported employees aged 55 years and older to assist them to explore options for retirement and to try alternative non-work community-based activities.
- Jurisdictional endorsement of the revised National Standards for Disability Services (NSDS) was finalised in December 2013. The NSDS have been through extensive consultation, validation, and user testing, culminating in a set of six standards that focus on person centred approaches and promoting choice and control by people with disability. The NSDS are able to be applied across a broad range of service types. Commonwealth funded employment services for people with disability are transitioning from the Disability Service Standards to the NSDS between 1 January 2014 and 31 December 2014.
- During 2013-14, the responsibility of the Disability Employment Services programme transferred to the Department of Social Services following the Machinery of Government changes that took effect on 18 September 2013.
- The Department continued managing the Disability Employment Services (DES) programme, finding 46 500 jobs for Australians with disability. This includes over 24 300 jobs for Australians with disability in the Disability Employment Services — Employment Support Service programme.
- The Evaluation of Disability Employment Services 2010–2013 final report was published, adding to our knowledge of DES strengths and enabling us to increase the quality and responsiveness of our support for people with disability and their employers. The report is available at www.dss.gov.au/our-responsibilities/disability-and-carers/publications-articles/policy-research/evaluation-of-disability-employment-services-2010-2013.
- Proportion of job seekers in employment three months following participation in Employment Support Service was 31.8 per cent as at June 2014.

”

New South Wales Government comments

“

Ready Together continues the NSW *Stronger Together 2* reforms, committing \$2 billion in new funding from 2011-12 to 2015-16, for 47 200 new places to support people with disability. *Living Life My Way Framework* continues to provide individualised funding arrangements, giving people choice and control over their supports.

Ready Together 2013-14 Highlights

- Introduction of the *National Disability Insurance Scheme (NSW Enabling) Act 2013* to support the transition to the NDIS; and the *Disability Inclusion Act 2014* to make communities more inclusive and accessible, to provide safeguards and protect the rights of people during and following NDIS transition.
- Increasing opportunities for people to make decisions about their supports, and reducing barriers to participation in daily life by expanding individualised funding arrangements and opportunities for consolidating funding for multiple supports.
- As at 30 June 2014, 2251 active NDIS participants had approved plans, including 119 residents at the Stockton Large Residential Centre. An additional 300 people had been deemed eligible and were awaiting plan approval.
- Over 1300 people were directly supported by Ability Links program, which links people with disability with their communities, and over 44 500 community contacts were made. Ability Links commenced State-wide on 1 July 2014 with 248 Linkers operating across the community, building on the already established Ability Links in the Hunter New England district.
- Continuing investment in the *My Choice Matters NSW Consumer Development Fund*, to assist people with disability, their families and carers to build the skills they need to have more choice and control now and in the context of the NDIS.
- NSW has spent \$39.84 million in capital expenditure on redeveloping large residential centres (LRCs), both government and non-government operated. 27 people transitioned from these centres into new community-based homes. The redevelopment of LRCs continues the move away from institutional housing models, and increases the availability of housing options in preparation for the NDIS.
- A range of capacity building initiatives and supports were delivered to the non-government organisation disability sector as part of the ongoing investment of the \$17 million Industry Development Fund.
- Funding of a Chair in Intellectual Disability and Behaviour Support at the University of NSW to develop a framework for provision of services to clients with complex support needs.
- Over 2700 respite places provided within the community and to support people living in LRCs.

”

Victorian Government comments

“

Victoria continues to work with our funded service providers and community partners, families, individuals and communities to ensure people with a disability have more choice and tailored supports to live their lives more independently.

Notable achievements in 2013-14 include:

- More than 14 500 Victorians with a disability were provided with individual support to live in the community in 2013-14.
- Over 29 100 people received assistance through the Victorian aids and equipment program.
- \$14.1 million was provided in the 2013-14 State Budget to further move from outmoded congregate care models to supported accommodation. The funding allows for the closure of the Oakleigh Centre congregate services, which accommodates 29 people with an intellectual disability. Plans are also underway to build new accommodation for the residents of another congregate care facility, Sandhurst Residential Services.
- A new facility based respite service opened in June 2014, providing respite options for people with a disability and their families in the Morwell area.
- In May 2014, more than 400 people with a disability from metropolitan and rural Victoria provided their views on the progress of Victorian state disability plan 2013–16, as part of a statewide survey. The results will be used to monitor the effectiveness of the plan and help ensure that it is meeting the needs of people with a disability.
- Victoria continues to build on its achievements in disability reform to ensure people with a disability have more choice and more tailored supports to live independently.
- A three year trial of the National Disability Insurance Scheme (NDIS) in the Barwon area commenced on 1 July 2013 and will support over 5000 people with disability by the end of trial period.
- The Victorian Government committed \$320 million during the trial period to support the establishment of the NDIS. A further \$25 million was also provided over three years to support the establishment of the National Disability Insurance Agency (NDIA) headquarters in Geelong. In the first year of trial 2897 participants were supported by the scheme. All clients on the Disability Support Register and the Early Childhood Intervention Service wait list were the first cohorts to transition into the scheme and there is no wait list for these services operating in the trial site. Other State funded clients progressively transferred into the scheme throughout 2012-13 and this process will be completed in the first half of 2014-15.

”

Queensland Government comments

“

In December 2013, the Queensland Government released the *Queensland Disability Plan 2014–19 — Enabling choices and opportunities*, to prepare Queensland for the roll-out of the National Disability Insurance Scheme (NDIS) from July 2016 and expected to be fully implemented by 2019.

As part of the state’s commitment to the NDIS, an additional \$868 million was invested in disability services. In 2013-14, \$25 million of the additional funding was made available to deliver additional accommodation and support services, assist young people with disability to move from the care of the state into supported accommodation, and provide immediate responses to urgent situations.

In 2013-14, the Queensland Government invested \$1.98 million in delivering training and resources for people with disability, families and disability services providers to prepare for the consumer-driven NDIS market.

Planning commenced between the Australian and Queensland Governments for an agreement that will set out arrangements for eligible people with disability to transition between 2016 and 2019 to the NDIS. The bilateral agreement is scheduled to be in place by December 2014 in line with the Heads of Agreement timetable.

In 2013-14, planning commenced for a Queensland Sector NDIS Workforce Strategy and a Queensland Aboriginal and Torres Strait Islander NDIS Workforce Strategy with the aim to assist organisations to attract and retain skilled workers to meet the expected increased workforce demand of 13 000 jobs.

Your Life Your Choice self-directed support framework provides people with disability the opportunity to have greater choice and control over their disability services. As at 30 September 2014, there were 1197 people with disability who had chosen self-directed support; 75 chose to receive direct payments and 1122 chose to use a host provider.

Commencing from 2012-13, the three-year Elderly Parent Carer Innovation Trial supports elderly parents of adult sons or daughters with disability to secure sustainable and long-term future living arrangements for when they are no longer able to care for their family member with disability. In 2013-14, two funding rounds were completed and over \$7.18 million was awarded to create up to 61 places for adults with disability.

In 2013-14, the Queensland Government provided Disability Services funding of \$16.24 million for the Spinal Cord Injuries Response (SCIR) program assisting 175 people with disability including 26 clients with new individual funding. In addition, \$2.68 million was funded to 51 people for home modifications.

In 2013-14, \$2 million was allocated for 25 younger people with disability, who were long-stay residents in Queensland public health facilities, to transition to community living.

”

Western Australian Government comments

“

In 2013-14, 24 017 Western Australians accessed a disability support service. The Disability Services Commission's (the Commission) total expenditure was \$794.12 million and averaged \$33 065 per person in receipt of funded services. The Commission's funding to disability sector organisations was \$567.83 million, accounting for 71 per cent of the Commission's total expenditure.

WA has engaged in multiple reform projects in the transition towards a system where the individual with disability, their family and carers can have an increased level of control over determining what support or service they need, when they need it and which organisation they will use.

Key initiatives implemented in 2013-14 include:

- WA's agreement to participate in the National Disability Insurance Scheme trial (NDIS). Following the August 2013 agreement between the states and Commonwealth governments, WA undertook significant steps to prepare for the 1 July 2014 start of the two-model NDIS trial in WA, involving My Way NDIS in the Lower Southwest and NDIS-NDIA in the Perth Hills.
- This year saw the establishment of a Disability Justice Service which supports people with disability who come in contact with the criminal justice system. A particular focus will be on supporting people with intellectual or cognitive disability who have been charged with offences but are deemed by the court system to be unfit to plead. Two key focus areas are the planning and preparation required to build and begin operating the state's first disability justice centre by mid-2015, and the start of the in-reach service which provides support for people within prisons who have been unfit to stand trial.
- Roll-out of the second round of State Government funding to support the sustainability of the not-for-profit sector. There was an allocation of \$20 million for 2013-14 and there will be further funding in 2014-15.
- The completion of a three-year \$95 million housing program that saw almost 240 people provided with universally designed community-based accommodation. The housing program was a joint project between the Commission and the Department of Housing to find flexible appropriate housing that offered opportunities for people to live the life they chose in the community while meeting their disability-related needs.

Preparations were made to enhance WA's Quality System to incorporate the new national standards for disability services and ensure that requirements for the two-model NDIS trial in WA are met.

”

South Australian Government comments

“

The South Australian Government is progressing significant reforms in the provision of disability services. A range of initiatives are being implemented to improve the rights, inclusion and participation of people with disability. These reforms are guided by the former Social Inclusion Board's report *Strong Voices: A Blueprint to Enhance Life and Claim the Rights of People with Disability in South Australia (2010–2020)*.

Highlights for 2013-14 include:

- Launch of the National Disability Insurance Scheme (NDIS). The focus of the trial in SA is on supporting children aged from birth to 14 years. In the first year, over 1500 eligible children aged from birth to five years were able to access support through the NDIS and the scope is expanding each year.
- Expansion of State Government Individualised Funding Program, enabling people to have greater choice and control in the supports they need to achieve their goals and aspirations. Over 3200 individuals in receipt of disability support services now have ongoing personal budgets.
- Implementation of a suite of policies which promote a systemic and systematic approach to safeguarding people with disability. These relate to management of care concerns, restrictive practices and supported decision making and consent.
- Passing of the *Disability Services (Assessment of Relevant History) Regulations 2014*. These Regulations establish new screening arrangements for those who work or volunteer in the disability services sector, minimising the likelihood that a person who poses an unacceptable risk of harm or abuse is engaged in disability-related work. A key feature of the Regulations is the concept of assessing an applicant's 'relevant history' as opposed to simply 'criminal history'. Relevant history is broader than criminal history and can also include police charges and workplace records held by government and non-government agencies. Access to a greater range of information facilitates a more robust screening assessment.
- Passing of the Disability Services (Rights, Protection and Inclusion) Amendment Act 2013. This followed significant consultation with people with disability, carers, advocates and organisations. The new Act contains a number of important provisions including referencing the United Nations *Convention of the Rights of Persons with Disabilities*, mandated safeguarding policies and strengthened powers to monitor and act on inadequate performance by agencies, both government and government-funded.
- Continued progress towards meeting the *South Australian Strategic Plan* www.saplan.org.au Target 11, to increase the number of people with disability in stable, supported community accommodation to 7000 by 2020.

”

Tasmanian Government comments

“

In 2013-14 Tasmania commenced a trial of the National Disability Insurance Scheme (NDIS) with a cohort of young people 15–24 years of age. Eligible young people commenced entering the Scheme from July 2013. As at 30 June 2014, 786 young people had become active participants in the NDIS.

The Disability Gateways, established in July 2010, provide an intake and referral model responsive to the needs of people with disability and work in partnership with mainstream and specialist disability services. The Disability Gateways have played an active role in the NDIS trial in Tasmania, providing Local Area Coordination to participants in the Scheme in partnership with the National Disability Insurance Agency (NDIA).

A review of Disability Gateways service model in 2012-13 provided a comprehensive report and recommendations which Disability and Community Services and the Disability Gateways have worked together to implement over 2013-14. The implementation of recommendations will continue through 2014-15.

In 2013, Tasmania appointed a NDIS State Implementation Team (SIT) to work with the sector in order to ready non-government disability service providers for the NDIS. The SIT have actively promoted sector development opportunities and worked with the NDIA, Disability Gateways and the sector to respond effectively to change.

Tasmania undertook a Self-Directed Funding pilot project with disability services clients outside the NDIS cohort during 2013-14. The pilot was evaluated May-June 2014. The evaluation showed that people participating in the pilot had positive experiences, demonstrated increased choice and control and reported greater wellbeing. Recommendations from the evaluation will be implemented during 2014-15.

The continued implementation of initiatives arising from the *Disability Services Act 2011* in 2013-14 included the appointment and training of Authorised Officers. Authorised Officers are empowered under the Act to enter premises, where services are funded by Government, to ensure that the services are being delivered, the person with disability is receiving the right support and the person with disability is safe and well. Authorised officers may inspect premises, open any container, filing cabinet or storage facility on the property and/or ask for copies of any documents or records. Consultation on the development of the Disability Services Strategic Plan, also a requirement of the *Disability Services Act 2011*, occurred during 2013-14.

Tasmania continues to support the provision of appropriate housing for people with disability. There are a number of building projects currently under construction which will provide accessible accommodation for people with disability as they come on line in 2014-15. During 2013-14 Tasmania has had a focus on better understanding the housing needs of people with disability in the context of a NDIS.

”

Australian Capital Territory Government comments

“

In 2013-14, the Community Services Directorate, through Disability ACT continued to deliver on the ACT Government's commitments under Future Directions: Towards Challenge 2014. During this period the ACT Government also announced the gradual withdrawal of Disability ACT supported accommodation services by June 2017 and Therapy ACT services by December 2016. This is to support the move to individual choice and control and a market based model of support under a National Disability Insurance Scheme (NDIS). The ACT will be the first jurisdiction in Australia to accept all eligible people into the scheme by July 2016.

In 2013-14, a range of programs were implemented to improve outcomes and whole-of-life opportunities for people with disability in the ACT, while also preparing for the rollout of the NDIS from 1 July 2014. Highlights include:

- \$7.7 million over two years in grants through an Enhanced Service Offer program to assist 1456 people with a disability, including psychosocial disability, to prepare for the NDIS.
- 25 organisations were offered a Governance and Financial Management Package of \$20 000 each, and 20 organisations were offered a Business Investment Package of \$50 000 each as part of sector readiness for the NDIS.
- The *Disability Services (Disability Service Providers) Amendment Act 2014* was passed in June 2014 to enable the ACT to maintain existing safeguards and quality standards for disability services during the NDIS trial.
- Disability ACT consolidated its adult respite services and transferred the management of its three centre-based respite houses to the non-government sector.
- The Everyone, Everyday program teaching resource to promote inclusion in the community has been implemented in nine mainstream primary schools involving 87 teachers and 2769 students. An additional five schools implemented the program in Semester 2, 2014.
- Two Official Visitors for Disability Specialist Services were appointed to increase safeguards for people with disability living in supported accommodation, accessing centre based respite services or residential aged care.
- The ACT Government continued to explore innovative housing options for people with disability including Project Independence; Living In Networked Communities; Homeshare model of support and a series of public information sessions and housing symposia to progress good outcomes.

”

Northern Territory Government comments

“ The NT Government is committed to ensuring a society where people with a disability have productive and fulfilling lives as valued members of their communities. This is delivered through disability support provision that is based on contemporary best practice and underpinned by a collaborative approach. Through continued provision of improved access to support services for Territorians with a disability, the Territory also aims to ensure that carers of people with disability also enjoy good health, wellbeing, resilience and financial security.

Key initiatives undertaken to progress disability reform in the NT in 2013-14 include:

- The portfolio of Minister for Disability Services was established in February 2014. This is the first time this portfolio has existed in the NT.
- The Ministerial Advisory Council on Disability Reform (the MAC) was established in May 2014 to provide strategic advice to the NT Government on key disability reform issues. The MAC membership is comprised of disability service providers and consumers of disability services from across the NT.
- In March 2014, the NT Government established the Disability Services Scholarship. The scholarships are aimed at building the capacity of the disability services sector in the NT. The scholarships are awarded to employees and staff working in the disability services sector (a non-government organisation, Local Government, or front-line NT Government agency) in the NT who are currently enrolled or intending to enrol in a course that is relevant to the strategic workforce directions of the disability services. Four annual scholarships will be awarded each year.
- On 1 July 2014, the National Disability Insurance Scheme trial was launched in the Barkly region. As the only remote trial in the country, the Barkly is distinctly different from the other trials currently underway in Australia. More than 100 Barkly residents with significant and profound disabilities will have their needs assessed under the trial, and most of the participants are Aboriginal or Torres Strait Islander. The Barkly trial will run for two years concluding on 30 June 2016.
- The Department of Health proudly contributed to the 2013 NT Disability Services Awards which celebrated its third year in the NT. This event provides a great opportunity to celebrate the achievements of outstanding individuals and organisations in the disability sector.

”

14.6 Service user data quality and other issues

Data quality

Data quality considerations should be taken into account when interpreting the DS NMDS service user data used in this chapter. In particular, data quality should be considered when making comparisons across jurisdictions and across years.

There are three aspects of quality that affect the accuracy and reliability of the data reported in this chapter:

- service type outlet participation rates
- service user participation rates
- ‘not stated’ response rates for individual data items.

The first two of these affect the service user counts — nationally, by jurisdiction and service type — and all three affect the accuracy of analyses of individual data items (AIHW 2012a).

‘Not stated’ rates for individual data items vary between jurisdictions (AIHW 2012a). Reasons for the higher level of not stated responses to some data items may be:

- the increased efforts to improve the coverage and completeness of the DS NMDS collection overall. For example, therapy services (a community support service) in the ACT participated for the first time in the 2004-05 collection. In an effort to include all users of these services, provisional data collection processes were used that meant minimal data were provided for each user (AIHW 2012a)
- changes in collection practices, such as data on communication and frequency of support needed for new users of open employment services not being collected in 2010-11. This change resulted in high overall non-response rates for these items and data not being strictly comparable with previous years.

Other issues

Service user data/data items not collected

Service user data are not collected for the following NDA specialist disability service types: advocacy, information/referral, combined information/advocacy, mutual support/self-help groups, print disability/alternative formats of communication, research and evaluation, training and development, peak bodies and other support services. In

addition, some service types are not required to collect all service user data items. In particular:

- ‘recreation/holiday programs’ (service type 3.02) are required to collect only information related to the statistical linkage key (selected letters of name, date of birth, sex, commencement date and date of last service)
- employment services (service types 5.01 and 5.02) are not required to collect selected informal carer information, including primary status (AIHW 2007).

Specialist psychiatric disability services

Data for specialist psychiatric disability services are excluded to improve the comparability of data across jurisdictions. People with psychiatric disability may use a range of NDA specialist disability service types. In some jurisdictions (Victoria and Queensland), specialist psychiatric disability services are funded specifically to provide such support (AIHW 2014a). Nationally in 2012-13, 12 594 people used only specialist psychiatric disability services (AIHW unpublished). Data for these services are included in other publications on the DS NMDS, such as AIHW (2011a). Therefore, service user data for Victoria, Queensland, and Australia in this chapter will differ from other publications.

Statistical linkage key

A statistical linkage key is used to derive the service user counts in this chapter. The statistical linkage key enables the number of service users to be estimated from data collected from different service outlets and agencies (AIHW 2014a). Using the linkage key minimises double counting of service users who use more than one service outlet during the reporting period.

The statistical linkage key components of each service record are compared with the statistical linkage key components of all other records. Records that have matching statistical linkage keys are assumed to belong to the same service user.

As the statistical linkage key is not a unique identifier, some degree of false linking is expected. A small probability exists that some of the linked records do not actually belong to the same service user and, conversely, that some records that did not link do belong to the same service user. The statistical linkage key does not enable the linking of records to the extent needed to be certain that a ‘service user’ is one individual person.

Missing or invalid statistical linkage keys cannot be linked to other records and so must be treated as belonging to separate service users. This may result in the number of service users being overestimated (AIHW 2014a).

Deriving potential populations for the special needs groups

Potential populations have been estimated for each of the special needs groups (outer regional and remote/very remote areas, Aboriginal and Torres Strait Islander and people born in a non-English speaking country) and for those outside of the special needs groups (major cities and inner regional areas, non-Indigenous and people born in an English speaking country). These potential populations are estimates of the number of people with the potential to require disability support services in the relevant group, including individuals who meet the service eligibility criteria but who do not use the services.

The approach used to derive the potential population estimates by country of birth and geographic location involved the following steps:

- deriving State/Territory based 10-year age and sex specific proportions of people with A Core Activity Need for Assistance (ASSNP) by geographic location and country of birth using the 2011 Census
- multiplying these State/Territory based 10-year age and sex specific proportions by the 10-year age specific estimates of the number of people in the potential population in each State/Territory
- summing the resultant 10-year age and sex group counts to derive the total potential populations for the geographic locations, people born in Australia, people born in another English speaking country and people born in a non-English speaking country. Summing the potential populations for people born in Australia and people born in another English speaking country to derive the total potential population for people born in an English speaking country
- for employment, repeating the above steps, but restricting the calculations to those people aged 15–64 years, then multiplying each State/Territory total by State/Territory specific labour force participation rates for people aged 15–64 years.

The approach used to derive the potential populations by Indigenous status involved the following steps:

- deriving current State/Territory based 10-year age and sex specific rate ratios of people with ASSNP by Indigenous status using the 2011 Census
- multiplying the current State/Territory Aboriginal and Torres Strait Islander and non-Indigenous 10-year age and sex population estimates by national 10-year age and sex specific rates of the potential population from the 2012 SDAC. Then multiplying the Aboriginal and Torres Strait Islander and non-Indigenous counts for each 10-year age and sex group by the 10-year age and sex specific rate ratios of people with ASSNP to obtain an Aboriginal and Torres Strait Islander/non-Indigenous potential population within each age and sex group
- summing the 10-year age and sex group counts to derive a total Aboriginal and Torres Strait Islander and non-Indigenous potential population for each State/Territory

-
- for employment, repeating the above steps, but restricting the calculations to those people aged 15–64 years, then multiplying each State/Territory total by State/Territory specific labour force participation rates for people aged 15–64 years.

Data quality issues

Data measuring the potential populations of the special needs groups are not explicitly available for the required time periods and have been estimated using several different data sources (as noted above), under several key assumptions. Some issues with this approach are:

- The method used to estimate the potential populations assumes:
 - that disability rates vary only by age and sex, and there is no effect of remoteness, disadvantage, or any other variable — this is likely to affect the reliability of comparisons across states and territories, however, it is currently not possible to detect the size or direction of any potential bias
 - that age- and sex-specific disability rates do not change significantly over time.
- New potential population estimates based on the 2012 SDAC have created a break in series, as potential population data extracted from this survey are substantially higher than those extracted from the 2009 SDAC. The growth in the potential population between 2009 and 2012 was 63 100 or 13 per cent. This contributed to an increase in prevalence amongst the population aged 0–64 years, from 2.6 per cent to 2.8 per cent. The growth in the number of people with a profound or severe core activity limitation over the same period was 47 300, or 7 per cent. This contributed to an increase in prevalence, from 3.6 per cent of the population aged 0–64 years to 3.7 per cent. To minimise the size of the change in the potential population from 2011-12 to 2012-13, SDAC data have been smoothed between 2009 and 2012 and the potential population has been backcast to 2008-09 for this Report.
- The rate ratio/proportion adjustments (that is, multiplication) assumes consistency between the rate ratio/proportion as calculated from the 2011 Census and the corresponding information if it were collected from the 2012 SDAC. Two points to note about this assumption are that:
 - information about people with ASSNP is based on the self-enumeration of four questions under the 2011 Census (although personal interviews in were conducted in Aboriginal and Torres Strait Islander communities), whereas in SDAC 2012 people are deemed to be in the potential population on the basis of a comprehensive interviewer-administered module of questions — although the two populations are different, they are conceptually related
 - the special needs groups identification may not be the same between the 2011 Census and the 2012 SDAC (ABS research indicates, for example, that the Aboriginal and Torres Strait Islander identification rate differs between the Census and interviewer administered surveys).

-
- It is not known if the data collection instruments are culturally appropriate for all special needs groups; nor is it known how this, combined with different data collection methods, impacts on the accuracy of the estimated potential population
 - There are a number of potential sources of error related to the Census that stem from failure to return a Census form or failure to answer every applicable question. 2011 Census data used in calculating the potential population exclude people for whom data is not stated. As with any collection, should the characteristics of interest (for example, ASSNP and/or special needs group status) of the people excluded differ from those people included, a potential for bias is introduced. In particular, for Aboriginal and Torres Strait Islander estimates, differential undercount of Aboriginal and Torres Strait Islander people across states and territories may introduce bias into the results that would affect the comparability of estimates across jurisdictions, if those missed by the Census had a different rate of disability status to those included.

14.7 Definitions of key terms

| | |
|---|--|
| Accommodation support service users receiving community accommodation and care services | People using the following NDA accommodation support services: group homes; attendant care/personal care; in-home accommodation support; alternative family placement and other accommodation support (types 1.04–1.08), as a proportion of all people using NDA accommodation support services (excludes service users of specialist psychiatric disability services only). See Australian Institute of Health and Welfare (AIHW) (2014b) for more information on service types 1.04–1.08. |
| Administration expenditure as a proportion of total expenditure | The numerator — expenditure (accrual) by jurisdictions on administering the disability service system as a whole (including the regional program management and administration, the central policy and program management and administration, and the disability program share of corporate administration costs under the umbrella department, but excluding administration expenditure on a service that has been already counted in the direct expenditure on the service) — divided by the denominator — total government expenditure on services for people with disability (including expenditure on both programs and administration, direct expenditure and grants to government service providers, and government grants to non-government service providers (except major capital grants)). |
| Comparability | Data are considered comparable if (subject to caveats) they can be used to inform an assessment of comparative performance. Typically, data are considered comparable when they are collected in the same way and in accordance with the same definitions. For comparable indicators or measures, significant differences in reported results allow an assessment of differences in performance, rather than being the result of anomalies in the data. |
| Completeness | Data are considered complete if all required data are available for all jurisdictions that provide the service. |
| Core activities as per the 2012 ABS SDAC | Communication, mobility and self-care |
| Cost per user of government provided accommodation support services — group homes | The numerator — government expenditure (accrual) on government provided accommodation support services in group homes (as defined by DS NMDS service type 1.04) — divided by the denominator — the number of users of government provided accommodation support services in group homes. |
| Cost per user of government provided accommodation support services — institutional/residential settings | The numerator — government expenditure (accrual) on government provided accommodation support services in institutional/residential settings (as defined by DS NMDS service types 1.01, 1.02 and 1.03) — divided by the denominator — the number of users of accommodation support services in institutional/residential settings. See AIHW (2014b) for more information on service types 1.01–1.03. |
| Disability | <p>The United Nation's <i>Convention on the Rights of Persons with Disabilities</i>, ratified by Australia on 17 July 2008, defines 'persons with disabilities' as those who have long-term physical, mental, intellectual or sensory impairments which in interaction with various barriers may hinder their full and effective participation in society on an equal basis with others.</p> <p>The World Health Organisation defines 'disabilities' as impairments, activity limitations, and participation restrictions: an impairment is a problem in body function or structure; an activity limitation is a difficulty encountered by an individual in executing a task or action; and a participation restriction is a problem experienced by an individual in involvement in life situations. Disability is a complex phenomenon, reflecting an interaction between features of a person's body and features of the society in which he or she lives (WHO 2009).</p> <p>In the ABS SDAC 2012, a person has a disability if they 'report they have a limitation, restriction or impairment, which has lasted, or is likely to last, for at least six months and restricts everyday activities. This includes:</p> <ul style="list-style-type: none">• loss of sight (not corrected by glasses or contact lenses)• loss of hearing where communication is restricted, or an aid to assist with, or substitute for, hearing is used• speech difficulties• shortness of breath or breathing difficulties causing restriction |

- chronic or recurrent pain or discomfort causing restriction
- blackouts, seizures, or loss of consciousness
- difficulty learning or understanding
- incomplete use of arms or fingers
- difficulty gripping or holding things
- incomplete use of feet or legs
- nervous or emotional condition causing restriction
- restriction in physical activities or in doing physical work
- disfigurement or deformity
- mental illness or condition requiring help or supervision
- long-term effects of head injury, stroke or other brain damage causing restriction
- receiving treatment or medication for any other long-term conditions or ailments and still being restricted
- any other long-term conditions resulting in a restriction.

The third CSTDA (2003, p. 9) defined 'people with disabilities' as those whose disability manifests itself before the age of 65 years and for which they require significant ongoing and/or long-term episodic support. For these people, the disability will be attributable to an intellectual, psychiatric, sensory, physical or neurological impairment or acquired brain injury (or some combination of these) which is likely to be permanent and results in substantially reduced capacity in at least one of the following: self-care/management, mobility and communication.

Employment services

Employment services comprise open employment services and supported employment services. Where users of employment services are described without further qualification, this includes people who use either or both open and supported employment services.

All open employment services are now included in the Disability Employment Services (DES) program administered by the Department of Social Services (DSS). Disability Employment Services has two parts: Disability Management Service is for job seekers with disability, injury or health condition who need assistance to find a job and occasional support to keep a job; and Employment Support Service provides assistance to people with permanent disability and who need regular, ongoing support to keep a job. Supported employment services are administered by DSS (formerly FaHCSIA) under the Disability Employment Assistance activity as Australian Disability Enterprises. Australian Disability Enterprises are commercial businesses that provide employment for people with disability in a supportive environment.

Employment rate for people with a profound or severe core activity limitation

Total estimated number of people aged 15–64 years with a profound or severe core activity limitation who are employed, divided by the total estimated number of people aged 15–64 years with a profound or severe core activity limitation in the labour force, multiplied by 100.

Employment rate for total population

Total estimated number of people aged 15–64 years who are employed, divided by the total number of people aged 15–64 years in the labour force, multiplied by 100.

Funded agency

An organisation that delivers one or more NDA service types (service type outlets). Funded agencies are usually legal entities. They are generally responsible for providing DS NMDS data to jurisdictions. Where a funded agency operates only one service type outlet, the service type outlet and the funded agency are the same entity.

Geographic location

Geographic location is based on the Australian Statistical Geography Standard of Remoteness Areas, which categorises areas as 'major cities', 'inner regional', 'outer regional', 'remote', 'very remote' and 'migratory'. The criteria for Remoteness Areas are based on the Accessibility/Remoteness Index of Australia, which measures the remoteness of a point based on the physical road distance to the nearest urban centre in each of five size classes (ABS 2011b). The 'outer regional and remote/very remote' classification used in this Report was derived by adding outer regional, remote and very remote data.

| | |
|---|---|
| Government contribution per user of non-government provided employment services | The numerator — Australian Government grant and case based funding expenditure (accrual) on specialist disability employment services (as defined by DS NMDS service types 5.01 (open) and 5.02 (supported)) — divided by the denominator — number of service users who received assistance. (For data prior to 2005-06, service type 5.03 (combined open and supported) is also included.) See AIHW (2014b) for more information on service types 5.01–5.03. |
| Government contribution per user of non-government provided services — accommodation support in group homes | The numerator — government expenditure (accrual) on non-government provided accommodation support services in group homes (as defined by DS NMDS service type 1.04) — divided by the denominator — the number of users of non-government provided accommodation support services in group homes. |
| Government contribution per user of non-government provided services — accommodation support in institutional/residential settings | The numerator — government expenditure (accrual) on non-government provided accommodation support services in institutional/residential settings (as defined by DS NMDS service types 1.01, 1.02 and 1.03) — divided by the denominator — the number of users of non-government provided accommodation support services in institutional/residential settings. |
| Government contribution per user of non-government provided services — accommodation support in other community settings | The numerator — government expenditure (accrual) on non-government provided accommodation support services in other community settings (as defined by DS NMDS service types 1.05–1.08) — divided by the denominator — the number of users of non-government provided accommodation support services in other community settings. |
| Aboriginal and Torres Strait Islander factor | <p>The potential populations were estimated by applying the 2012 national age- and sex- specific rates of the potential population to the age and sex structure of each jurisdiction in the current year. As Aboriginal and Torres Strait Islander people have significantly higher disability prevalence rates and greater representation in some NDA specialist disability services than non-Indigenous people, and there are differences in the share of different jurisdictions' populations who are Aboriginal and Torres Strait Islander, a further Aboriginal and Torres Strait Islander factor adjustment was undertaken. The Aboriginal and Torres Strait Islander factor was multiplied by the 'expected current population estimate' of people in the potential population in each jurisdiction to derive the 'potential population'.</p> <p>The following steps were undertaken to estimate the Aboriginal and Torres Strait Islander factors:</p> <ul style="list-style-type: none"> • Data for all people (weighted) were calculated by multiplying the data for Aboriginal and Torres Strait Islander people by 2.4 and adding the data for non-Indigenous people. Hence Aboriginal and Torres Strait Islander people are weighted at 2.4 and non-Indigenous people at one • Data for all people (weighted per person) were calculated by dividing the all people (weighted) data by the sum of the Aboriginal and Torres Strait Islander people data and the non-Indigenous people data • The Aboriginal and Torres Strait Islander factors were then calculated by multiplying the all people (weighted per person) data by 100 and dividing by the all people (weighted per person) total for Australia. |
| Informal carer | <i>ABS informal carer:</i> A person of any age who provides any informal assistance, in terms of help or supervision, to people with disabilities or long-term conditions, or older people (that is, aged 65 years and over). This assistance has to be ongoing, or likely to be ongoing, for at least 6 months. Assistance to a person in a different household relates to 'everyday types of activities', without specific information on the activities. Where the care recipient lives in the same household, the assistance is for one or more of the following activities: cognition or emotion, communication, health care, housework, meal preparation, mobility, paperwork, property maintenance, self-care and transport (ABS 2011a). |

| | |
|--|---|
| | <p><i>DS NMDS informal carer</i>: an informal carer is a person such as a family member, friend or neighbour who provides regular and sustained care and assistance to the person requiring support (AIHW 2012a). This includes people who may receive a pension or benefit associated with their caring role, but does not include people, either paid or voluntary, whose services are arranged by a formal service organisation. Informal carers can be defined as primary if they help with one or more of the activities of daily living: self-care, mobility or communication.</p> <p>See also primary carer.</p> |
| Labour force participation rate for people with a profound or severe core activity limitation | <p>The total number of people with a profound or severe core activity limitation in the labour force (where the labour force includes employed and unemployed people), divided by the total number of people with a profound or severe core activity limitation who are aged 15–64 years, multiplied by 100.</p> <p>An employed person is a person who, in his or her main job during the remuneration period (reference week):</p> <ul style="list-style-type: none"> • worked one hour or more for pay, profit, commission or payment in kind in a job or business, or on a farm (including employees, employers and self-employed people) • worked one hour or more without pay in a family business, or on a farm (excluding people undertaking other unpaid voluntary work), or • was an employer, employee or self-employed person or unpaid family helper who had a job, business or farm, but was not at work. <p>An unemployed person is a person aged 15–64 years who was not employed during the remuneration period, but was looking for work.</p> |
| Labour force participation rate for the total population | <p>Total number of people aged 15–64 years in the labour force (where the labour force includes both employed and unemployed people) divided by the total number of people aged 15–64 years, multiplied by 100.</p> |
| Mild core activity limitation | <p>The person needs no help and has no difficulty with any of the core activity tasks, but:</p> <ul style="list-style-type: none"> • uses aids or equipment, or has one or more of the following limitations • cannot easily walk 200 metres • cannot walk up and down stairs without a handrail • cannot easily bend to pick up an object from the floor • cannot use public transport • can use public transport, but needs help or supervision • needs no help or supervision, but has difficulty using public transport. (as per the 2012 SDAC). |
| Moderate core activity limitation | <p>The person needs no help, but has difficulty with a core activity task (as per the 2012 SDAC).</p> |
| Non-English speaking country of birth | <p>People with a country of birth other than Australia and classified in English proficiency groups 2, 3 or 4 (DIMA 1999, 2003). For 2003-04 and 2004-05 data these countries include countries other than New Zealand, Canada, the United Kingdom, South Africa, Ireland and the United States. For 2005-06 onwards, data include Zimbabwe as an 'English-speaking country'.</p> |
| Payroll tax | <p>A tax levied on employers based on the value of wages and certain supplements paid or payable to, or on behalf of, their employees (SCRCSSP 1999). Payroll tax arrangements for government funded and delivered services differ across jurisdictions. Differences in the treatment of payroll tax can affect the comparability of unit costs across jurisdictions and services. These differences include payroll tax exemptions, marginal tax rates, tax-free thresholds and clawback arrangements (see SCRCSSP 1999).</p> <p>There are two forms of payroll tax reported:</p> <ul style="list-style-type: none"> • <i>actual</i> — payroll tax actually paid by non-exempt services • <i>imputed</i> — a hypothetical payroll tax amount estimated for exempt services. A jurisdiction's estimate is based on the cost of salaries and salary related expenses, the payroll tax threshold and the tax rate. |

Potential population

Potential population estimates are used as the denominators for the performance measures reported under the indicator 'access to NDA specialist disability services'.

The 'potential population' is the number of people with the potential to require disability support services, including individuals who meet the service eligibility criteria but who do not demand the services.

The potential population is the number of people aged 0–64 years who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities. For respite services, only those people with a primary carer were included. For supported employment services, only the potential population aged 15–64 years participating in the labour force are included. For open employment services, the potential population is not used; instead, an estimate of all people with a disability and an employment restriction aged 15–64 is used. Where combined employment services denominators or rates are presented, the supported employment potential population is used.

The relatively high standard errors in the prevalence rates for smaller jurisdictions, as well as the need to adjust for the Aboriginal and Torres Strait Islander population necessitated the preparation of special estimates of the 'potential population' for specialist disability services.

Briefly, the potential population was estimated by applying the national age- and sex-specific distribution of the potential population identified in the 2012 SDAC to the age and sex structure of each jurisdiction in the current year, to give an 'expected current estimate' of the potential population in that jurisdiction. These estimates were adjusted by the Aboriginal and Torres Strait Islander factor to account for differences in the proportion of jurisdictions' populations who are Aboriginal and Torres Strait Islander. Aboriginal and Torres Strait Islander people have been given a weighting of 2.4 in these estimates, in recognition of their greater prevalence rates of disability and their relatively greater representation in NDA specialist disability services (AIHW 2006).

The potential populations for 2004–05 to 2006–07 were calculated using national age- and sex-specific rates of severe or profound core activity limitation from the ABS Survey of Disability, Ageing and Carers (SDAC) conducted in 2003. In 2011, the 2009 SDAC was released, and recalculation of the potential population has resulted in a break in series between the 2003 and 2009 surveys. In 2014, the 2012 SDAC was released, and recalculation of the potential population has resulted in a break in series between the 2009 and 2012 surveys.

Data measuring the potential population is not available for each reported year and so has been estimated from several sources based on the following assumptions:

- (a) for the purposes of calculation, it is assumed that age-sex specific proportions of the potential population changed smoothly from 2009 to 2012.
- (b) the assumption that national age-sex specific proportions of the potential population from SDAC 2009 and SDAC 2012 apply consistently across states/territories is untested.

Primary carer

ABS SDAC primary carer: A primary carer is a person who provides the most informal assistance, in terms of help or supervision, to a person with one or more disabilities, with one or more of the core activities of mobility, self-care or communication. In this survey, primary carers only include people aged 15 years and over. People aged 15 to 17 years were only interviewed personally if parental permission was granted (ABS <http://www.abs.gov.au/AUSSTATS/abs@.nsf/Latestproducts/4430.0Glossary602012?opendocument&tabname=Notes&prodno=4430.0&issue=2012&num=&view=>).

DS NMDS primary carer: an informal carer who assists the person requiring support, in one or more of the following ADL: self-care, mobility or communication.

See also informal carer.

| | |
|--|--|
| Primary disability group | Disability group that most clearly expresses the experience of disability by a person. The primary disability group can also be considered as the disability group causing the most difficulty to the person (overall difficulty in daily life, not just within the context of the support offered by a particular service). |
| Profound core activity limitation | The person is unable to do or always needs help with, a core activity task. (as per the 2012 SDAC). |
| Real expenditure | Actual expenditure (accrual) adjusted for changes in prices, using the Gross Domestic P(E) price deflator, and expressed in terms of current year dollars. |
| Schooling or employment restriction | <p><i>Schooling restriction:</i> as a result of disability, being unable to attend school; having to attend a special school; having to attend special classes at an ordinary school; needing at least one day a week off school on average; and/or having difficulty at school.</p> <p><i>Employment restriction:</i> as a result of disability, being permanently unable to work; being restricted in the type of work they can do; needing at least one day a week off work on average; being restricted in the number of hours they can work; requiring an employer to provide special equipment, modify the work environment or make special arrangements; needing to be given ongoing assistance or supervision; and/or finding it difficult to change jobs or to get a preferred job.</p> |
| Service | A service is a support activity provided to a service user, in accord with the NDA. Services within the scope of the collection are those for which funding has been provided during the specified period by a government organisation operating under the NDA. |
| Service type | The support activity that the service type outlet has been funded to provide under the NDA. The DS NMDS classifies services according to 'service type'. The service type classification groups services into seven categories: accommodation support; community support; community access; respite; employment; advocacy, information and alternative forms of communication; and other support services. Each of these categories has subcategories. |
| Service type outlet | A service type outlet is the unit of the funded agency that delivers a particular NDA service type at or from a discrete location. If a funded agency provides, for example, both accommodation support and respite services, it is counted as two service type outlets. Similarly, if an agency is funded to provide more than one accommodation support service type (for example, group homes and attendant care), then it is providing (and is usually separately funded for) two different service types — that is, there are two service type outlets for the funded agency. |
| Service user | A service user is a person with disability who receives a NDA specialist disability service. A service user may receive more than one service over a period of time or on a single day. |
| Service users with different levels of need for assistance with ADL | Data on service users with different levels of need for assistance with ADL are derived using information on the level of support needed in one or more of the core support areas: self-care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL reported needing no support in all the core activity support areas. |
| Severe core activity limitation | The person sometimes needs help with a core activity task, and/or has difficulty understanding or being understood by family or friends, or can communicate more easily using sign language or other non-spoken forms of communication. (as per the SDAC 2012). |
| Users of NDA accommodation support services | People using one or more accommodation support services that correspond to the following DS NMDS service types: 1.01 large residential/institutions (more than 20 places); 1.02 small residential/institutions (7–20 places); 1.03 hostels; 1.04 group homes (usually less than seven places); 1.05 attendant care/personal care; 1.06 in-home accommodation support; 1.07 alternative family placement; and 1.08 other accommodation support. |

| | |
|--|--|
| Users of NDA community access services | People using one or more services that correspond to the following DS NMDS service types: 3.01 learning and life skills development; 3.02 recreation/holiday programs; and 3.03 other community access. See AIHW (2014a) for more information on service types 3.01–3.03. |
| Users of NDA community support services | People using one or more services that correspond to the following DS NMDS service types: 2.01 therapy support for individuals; 2.02 early childhood intervention; 2.03 behaviour/specialist intervention; 2.04 counselling; 2.05 regional resource and support teams; 2.06 case management, local coordination and development; and 2.07 other community support. See AIHW (2014a) for more information on service types 2.01–2.07. |
| Users of NDA employment services | People using one or more services that correspond to the following DS NMDS service types: 5.01 open employment and 5.02 supported employment. (For data prior to 2005-06, people using service type 5.03 [combined open and supported] are also included.) |
| Users of NDA respite services | People using one or more services that correspond to the following DS NMDS service types: 4.01 own home respite; 4.02 centre-based respite/respite homes; 4.03 host family respite/peer support respite; 4.04 flexible/combination respite; and 4.05 other respite. See AIHW (2014a) for more information on service types 4.01–4.05. |

14.8 List of attachment tables

Attachment tables are identified in references throughout this chapter by a ‘14A’ prefix (for example, table 14A.1). Attachment tables are available on the Review website (www.pc.gov.au/gsp).

14A Services for people with disability — attachment

Definitions for the descriptors in this attachment are in section 14.7 of the chapter. Unsourced information was obtained from the Australian, State and Territory governments.

Data in this chapter are examined by the Disability Services Working Group, but have not been formally audited by the Secretariat.

Data reported in the attachment tables are the most accurate available at the time of data collection. Historical data may have been updated since the last edition of RoGS.

This file is available in Adobe PDF format on the Review web page (www.pc.gov.au/gsp).

(a) Pensions, allowances and payments are not funded under the CSTDA/NDA. Australian totals may not sum as a result of rounding.

(b) The Disability Support Pension is a means tested income support payment for people aged 16 or over who have a physical, intellectual or psychiatric impairment (meeting set criteria) resulting in an inability to work or to be re-skilled for work for at least the next two years (as a result of impairment), or who are participating in the supported wage system. Special rules apply to the vision impaired.

Table 14A.1 Recipients of Disability Support Pension, Mobility Allowance, Carer Payment, Carer Allowance, Sickness Allowance, Child Disability Assistance Payment and Carer Supplement ('000) (a)

| | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Other</i> | <i>Aust</i> |
|---|------------|------------|------------|-----------|-----------|------------|------------|-----------|--------------|-------------|
| (c) The Mobility Allowance is a non-means tested income supplement to assist with transport costs for people aged 16 or over with a disability who are in employment, vocational training, a combination of vocational training and employment, job search activities or voluntary work, and who are unable to use public transport without substantial assistance. | | | | | | | | | | |
| (d) The Carer Payment provides income support to people who, as a result of the demands of their caring role, are unable to support themselves through substantial workforce participation. | | | | | | | | | | |
| (e) The Carer Allowance is a supplementary payment available to people who provide daily care and attention at home for an adult or a child with a disability or severe medical condition. Data include Health Care Card only recipients. | | | | | | | | | | |
| (f) Sickness Allowance is a means tested income support payment for people aged 21 or over who are temporarily incapacitated from doing their normal work or study, due to illness or injury, and have a job or study to return to when they are fit. | | | | | | | | | | |
| (g) The Child Disability Assistance Payment is an annual payment made for a child with disability under 16 years who attracts a payment of Carer Allowance for their carer. The payment can be used to assist families purchase support, aids, therapies, or respite that they require for their child with disability. | | | | | | | | | | |
| (h) An annual supplement to Carer Payment recipients and to Carer Allowance recipients for each person to which they provide care. | | | | | | | | | | |
| (i) No carer supplements were paid for the year ended 30 June 2010. – Nil or rounded to zero. | | | | | | | | | | |

TABLE 14A.2

Table 14A.2 **Users of National Disability Agreement (NDA) specialist disability services, existence of an informal/primary carer, by geographic location (a), (b), (c), (d), (e)**

| | <i>Unit</i> | <i>Major cities</i> | <i>Inner regional</i> | <i>Outer regional</i> | <i>Remote</i> | <i>Very remote</i> | <i>Not stated/ collected</i> | <i>Total (f)</i> |
|--|-------------|---------------------|-----------------------|-----------------------|---------------|--------------------|----------------------------------|------------------|
| Informal carer status not stated/not collected | % | 35.7 | 33.9 | 36.9 | 36.1 | 20.6 | 55.2 | 35.6 |
| Total | % | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

- (a) These data need to be interpreted with care due to a number of factors affecting data quality. See section 14.6 of the chapter for further information on these quality issues.
- (b) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Total includes data for service users whose location was not collected/identified.
- (e) Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.
- (f) A number of records for 'whether had an informal carer' for 2011-12 and marked 'did not have an informal carer' were actually 'not stated'. These data have been revised. This revision has affected the numbers of primary carers and the level of response for this item in 2012-13.

- (a) These data need to be interpreted with care due to a number of factors affecting data quality. See section 14.6 of the chapter for further information on these quality issues.
- (b) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status.
- (c) A number of records for 'whether had an informal carer' for 2011-12 and marked 'did not have an informal carer' were actually 'not stated'. These data have been revised. This revision has affected the numbers of primary carers and the level of response for this item in 2012-13.
- (d) Total includes data for service users whose location was not collected/identified.

TABLE 14A.3

Table 14A.3 **Users of National Disability Agreement (NDA) specialist disability services, existence of an informal/primary carer, by State and Territory, by geographic location (a), (b), (c), (d), (e)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Commonwealth</i> | <i>Aust</i> |
|-----|--|------------|------------|------------|-----------|-----------|------------|------------|-----------|---------------------|-------------|
| (e) | Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status. | | | | | | | | | | |

- (a) These data need to be interpreted with care due to a number of factors affecting data quality. See section 14.6 of the chapter for further information on these quality issues.
- (b) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

Table 14A.4 **Users of NDA specialist disability services, age of primary carers, by geographic location (a), (b), (c)**

| | <i>Unit</i> | <i>Major cities</i> | <i>Inner regional</i> | <i>Outer regional</i> | <i>Remote</i> | <i>Very remote</i> | <i>Not stated/collected</i> | <i>Total (d)</i> |
|--|-------------|---------------------|-----------------------|-----------------------|---------------|--------------------|-----------------------------|------------------|
|--|-------------|---------------------|-----------------------|-----------------------|---------------|--------------------|-----------------------------|------------------|

(d) Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.

(e) Total includes data for service users whose location was not collected/identified.

– Nil or rounded to zero. **np** Not published.

TABLE 14A.5

Table 14A.5 **Users of NDA specialist disability services, age of primary carers, by State and Territory, by geographic location (a), (b), (c), (d)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (e)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Commonwealth</i> | <i>Aust (f)</i> |
|--------------------------|-------------|--------------|--------------|--------------|--------------|---------------|--------------|--------------|--------------|---------------------|-----------------|
| Age not collected | % | 0.0 | 0.1 | 0.1 | 0.2 | 0.0 | – | – | – | – | 0.1 |
| Total | % | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

- (a) These data need to be interpreted with care due to a number of factors affecting data quality. See section 14.6 of the chapter for further information on these quality issues.
- (b) Data relating to primary carers are not reported for all service users. Some service types are not required to collect all service user data items. For example, employment services are not required to collect selected informal carer information, including primary status.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Percentages of informal carer categories are affected by the levels of unknown responses. For example, for Australia, 31 per cent of all users with a known response had no informal carer, compared with 20 per cent of all users. Similarly, 56 per cent of all users where primary carer status was known had an informal carer who is a primary carer, compared with 32 per cent. High levels of not stated responses are mainly for users of open employment services, for whom 83 per cent had not stated informal carer status.
- (e) Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (f) Total includes data for service users whose location was not collected/identified.
– Nil or rounded to zero. np Not published.

(a) In NSW, expenditure data in 2004-05, may differ from data reported elsewhere as they exclude one-off non-cash expenditures such as bad debts and gain or loss on sale of assets. Administrative expenditure for 2004-05 to 2008-09 have been revised to exclude capital grants to non-government service providers, as this expenditure is now reported separately. Data for 2008-09 to 2013-14 exclude payroll tax. The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. NSW provided funding via a transfer of \$131 million (2011-12) \$130 million (2012-13) and \$143 million (2013-14) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies.

| | NSW (a) | Vic (b) | Qld (c) | WA (d) | SA (e) | Tas (f) | ACT (g) | NT (h) | S/T (i) | Aus Gov | Aust |
|-----|---|---------|---------|--------|--------|---------|---------|--------|---------|---------|------|
| (b) | In Victoria, administrative expenditure for 2013-14 relates to activity based expenditure inclusive of Direct Management (Output Management) as part of a Departmental restructure. | | | | | | | | | | |
| (c) | In Queensland, direct service delivery expenditure and administrative expenditure data exclude payroll tax for all years. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services. | | | | | | | | | | |
| (d) | The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance. The increase in WA administrative expenditure in 2009-10 consists mainly of one off (non capital) projects. | | | | | | | | | | |
| (e) | For SA, in 2004-05, administrative expenditure includes one-off Service Excellence Framework (SEF) funding. From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only. For 2007-08, expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years. | | | | | | | | | | |
| (f) | For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes. In Tasmania, capital grants to non-government service providers include transfer payments to Housing Tasmania for development of disability specific accommodation. In 2009-10, a reduction in administrative expenditure was due to improved processes for aligning administrative and direct service delivery expenditure. In 2012-13 and 2013-14, administrative expenditure increased due to a change in methodology for allocating corporate and divisional overheads. | | | | | | | | | | |
| (g) | In the ACT in 2006-07, administrative expenditure was impacted by the centralisation of some administrative services. | | | | | | | | | | |
| (h) | In the NT, a new standardised formula was introduced in 2005-06 to calculate corporate overheads, this has led to variation in relation to previous years. | | | | | | | | | | |
| (i) | Total of states and territories. | | | | | | | | | | |
| (j) | Expenditure for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, Victoria and Tasmania 2013-14 total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, total government expenditure also includes 'cash' contributions. Total government expenditure for SA excludes 'cash' contributions to the NDIA (\$2.6 million), but includes in-kind services. For SA, expenditure reduced by revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000). Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. | | | | | | | | | | |
| (k) | Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See Chapter 2 (section 2.5) for details. | | | | | | | | | | |

.. Not applicable. – Nil or rounded to zero.

- (a) Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). GGFCE replaces the Gross Domestic Product implicit price deflator used in previous editions. See Chapter 2 (section 2.5) for details.
- (b) In NSW, expenditure data in 2004-05, may differ from data reported elsewhere as they exclude one-off non-cash expenditures such as bad debts and gain or loss on sale of assets. Data for 2008-09 to 2013-14 exclude payroll tax. NSW provided funding via a transfer of \$131 million (2011-12), \$130 million (2012-13) and \$143 million (2013-14) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies.
- (c) For Victoria, 2004-05 transfer payments data exclude \$2 million funding for the Signpost Program and include funding for the Disability Advisory Council. For 2005-06 data, transfer payments from the Australian Government include funding for the Disability Advisory Council. For 2006-07, transfer payments from the Australian Government exclude funding for the Disability Advisory Council.
- (d) Queensland transfer payments data for 2005-06 exclude \$3 788 582 targeted for the ageing carers respite initiative. These funds were excluded even though they were provided by the Australian Government in 2005-06. These funds are included in the data for 2006-07. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.
- (e) WA transfer payments data include Australian Government funding for specific projects in addition to core-CSTDA funding. A cash accounting method to record transfer payments has been used in 2009-10.
- (f) SA transfer payments for 2005-06 include Aged Carer Bilateral Funds of \$3 million. From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only. For 2007-08, expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years. For 2013-14, Excludes portion of Commonwealth funding relating to the NDIS trial (\$333 000).
- (g) For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes.

|--|----------------|----------------|----------------|---------------|---------------|----------------|------------|---------------|----------------|----------------|-------------|

(h) In 2004-05, NT transfer payments data include funding for older carers.

(i) Total of states and territories.

(j) Transfer payments data are provided by State and Territory governments.

(k) Expenditure for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, Victoria and Tasmania 2013-14 total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, total government expenditure also includes 'cash' contributions. Total government expenditure for SA excludes 'cash' contributions to the NDIA (\$2.6 million), but includes in-kind services. For SA, expenditure reduced by revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000). Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA.

.. Not applicable.

Table 14A.9 **Real government direct service delivery and total expenditure adjusted for payroll tax (2013-14 dollars) (\$'000) (a)**

| | <i>NSW (b)</i> | <i>Vic (c)</i> | <i>Qld (d)</i> | <i>WA (e)</i> | <i>SA (f)</i> | <i>Tas (g)</i> | <i>ACT</i> | <i>NT (h)</i> | <i>S/T (i)</i> | <i>Aus Gov</i> | <i>Aust</i> |
|-----|---|----------------|----------------|---------------|---------------|----------------|------------|---------------|----------------|----------------|-------------|
| (a) | Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See Chapter 2 (section 2.5) for details. | | | | | | | | | | |
| (b) | NSW expenditure data in 2004-05, may differ from data reported elsewhere as they exclude one-off non-cash expenditures such as bad debts and gain or loss on sale of assets. Data for 2008-09 to 2013-14 exclude payroll tax. The decrease in NSW administration expenditure in 2012-13 results from a change to the way in which administration expenditure has been calculated and from efficiency savings arising from an organisational restructure, which consolidated corporate services of several Government Divisions. | | | | | | | | | | |
| (c) | The increase in actual payroll tax in Victoria is a result of government delivered services no longer being exempt from the tax. Administrative expenditure for 2013-14 relates to activity based expenditure inclusive of Direct Management (Output Management) as part of a Departmental restructure. Payroll tax relates to internally delivered services only. | | | | | | | | | | |
| (d) | Payroll tax data for Queensland include paid payroll tax and accrued payroll tax. Direct service delivery expenditure and administrative expenditure data exclude payroll tax. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services. | | | | | | | | | | |
| (e) | The decrease in WA administrative expenditure in 2007-08 mainly reflects the abolition of the capital user charge by Department of Treasury and Finance. The increase in WA administrative expenditure in 2009-10 consists mainly of one off (non capital) projects. | | | | | | | | | | |
| (f) | In 2004-05, SA administrative expenditure includes one-off Service Excellence Framework (SEF) funding. For 2007-08 expenditure includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure in SA includes expenditure on equipment services for all years. | | | | | | | | | | |
| (g) | For Tasmania, 2007-08 expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes. In Tasmania, capital grants to non-government service providers include transfer payments to Housing Tasmania for development of disability specific accommodation. In 2012-13 and 2013-14, administrative expenditure increased due to a change in methodology for allocating corporate and divisional overheads. | | | | | | | | | | |
| (h) | From 2005-06, the NT payroll tax data are calculated using a new standardised formula. | | | | | | | | | | |
| (i) | Total of states and territories. | | | | | | | | | | |
| (j) | NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies. | | | | | | | | | | |

|-----|---|----------------|----------------|---------------|---------------|----------------|------------|---------------|----------------|----------------|-------------|
| (k) | Expenditure for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, Victoria and Tasmania 2013-14 total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, total government expenditure also includes 'cash' contributions. Total government expenditure for SA excludes 'cash' contributions to the NDIA (\$2.6 million), but includes in-kind services. For SA, expenditure reduced by revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000). Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. | | | | | | | | | | |

.. Not applicable. – Nil or rounded to zero.

- (a) Real dollars are previous years' expenditure in current year's dollars after basing expenditure on the ABS GGFCE chain price deflator 2012-13=100 (table 2A.51). See Chapter 2 (section 2.5) for details.
- (b) For NSW, expenditure data in 2004-05, may differ from data reported elsewhere as they exclude one-off non-cash expenditures such as bad debts and gain or loss on sale of assets. Data for 2008-09 to 2013-14 exclude payroll tax.
- (c) For Victorian 2004-05 data, direct service expenditure data include expenditure on the Disability Advisory Council. For 2005-06 data, service expenditure on respite services includes funding provided under the State/Commonwealth Bilateral Agreement. Expenditure on accommodation support, community support, community access and respite include expenditure on refurbishments, service reconfiguration and other service and client related costs. Data for 2008-09, 2009-10 and 2011-12 excludes payroll tax. Data for accommodation support services in 2008-09 excludes former Homefirst (personal/attendance care) program and Infrastructure development and enhancement grants for non-government services. Data for community support in 2008-09 includes former Homefirst (personal/attendance care) and Community Options programs now delivered through Individual Support Packages. Data for community access services in 2008-09 excludes former Community Options program (ongoing community access support and activities). In 2012-13, the reduction in expenditure dollars in Community Access was offset equally by a corresponding increase in Community Support. This was due to an output structure realignment, whereby Day Programs was amalgamated under Individualised Support Packages from 2012-13 onwards.
- (d) For Queensland, a review of 2010-11 cost centre allocations has improved the accuracy of expenditure for accommodation support, community support, community access and respite services. Direct service delivery expenditure data exclude payroll tax for all years reported. 2012-13 financial have been revised as a result of the inclusion expenditure not related to NDA funded services.

Table 14A.10 **Real government direct service delivery expenditure, by service type (2013-14 dollars) (\$'000) (a)**

| | NSW (b) | Vic (c) | Qld (d) | WA (e) | SA (f) | Tas (g) | ACT (h) | NT (i) | S/T (j) | Aus Gov | Aust |
|-----|---|---------|---------|--------|--------|---------|---------|--------|---------|---------|------|
| (e) | For WA in 2004-05, expenditure on other support services reflects one-off expenditure for equipment purchases and a carers and community awareness campaign. For 2005-06 and 2006-07 data, advocacy, information and print disability expenditure includes one-off grants to NGA's for strategic plans and access initiatives. 2008-09 includes a transfer payment to the Dept of Housing of \$13.8M. Services in WA are not subject to payroll tax. In 2013-14, the increase in accommodation support expenditure and decrease in respite services expenditure reflects the transfer of approximately 500 service users, previously captured against respite transferred to accommodation as a result of the WA Procurement Reforms that commenced mid-year 2013-14. | | | | | | | | | | |
| (f) | For SA in 2004-05, administrative expenditure includes one-off Service Excellence Framework (SEF) funding. From 2006-07, data include payroll tax. For 2006-07, payroll tax was partial only. For 2007-08, expenditure on 'other support' includes capital funds under the supported accommodation memorandum of understanding with the Australian Government, and fringe benefit tax transition payments to government providers. Expenditure on other support in SA includes expenditure on equipment services for all years. | | | | | | | | | | |
| (g) | For Tasmania, direct service expenditure includes payroll tax. For 2007-08, accommodation support expenditure includes significant one-off additional expenses related to the outsourcing of government provided group homes. | | | | | | | | | | |
| (h) | Services in the ACT are not subject to payroll tax. | | | | | | | | | | |
| (i) | In the NT, in 2004-05, community support services provided to children was transferred from Community Health to Disability Services leading to an increase in expenditure from previous years on community support. The decrease in expenditure on advocacy, information and print disability in 2007-08 is due to the reclassification of a service. Direct service expenditure includes payroll tax. | | | | | | | | | | |
| (j) | Total of states and territories. | | | | | | | | | | |
| (k) | NSW provided funding via a transfer of \$131 million (2011-12) and \$130 million (2012-13) to the Australian Government for the notional support costs for younger people receiving residential and packaged aged care, as required under the National Partnership Agreement on Transitioning Responsibilities for Aged Care and Disability Services. This expenditure is not included in this table. This expenditure is included in the Aged Care expenditure in chapter 13 (see tables 13A.5 and 13A.8). This expenditure is included in NSW figures when reporting to NSW central agencies. | | | | | | | | | | |
| (l) | Expenditure for NSW, Victoria, SA and Tasmania for 2013-14 are affected by the introduction of the National Disability Insurance Scheme (NDIS). For NSW, Victoria and Tasmania 2013-14 total government expenditure includes 'in-kind' funding to the National Disability Insurance Agency (NDIA), but excludes 'cash' contributions. For Victoria, total government expenditure also includes 'cash' contributions. Total government expenditure for SA excludes 'cash' contributions to the NDIA (\$2.6 million), but includes in-kind services. For SA, expenditure reduced by revenue received from NDIS trial (\$485 000) and grant recoveries received in relation to transitioned clients (\$672 000). Australian Government expenditure excludes both 'cash' and 'in-kind' funding to the NDIA. .. Not applicable. | | | | | | | | | | |

A '*' indicates a relative standard error (RSE) of between 25 per cent and 50 per cent.

(a) Core activities comprise communication, mobility and self care.

(b) Data are age standardised.

(c) For the ABS Survey of Disability, Ageing and Carers 2003 the sample in the NT was reduced to a level such that NT records contributed appropriately to national estimates but could not support reliable estimates for the NT. As a result, estimates for the NT are not published separately by the ABS.

np Not published.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals for Australia may not be the sum of the components since individuals might have accessed services in more than one State or Territory. Totals for services administered by State and Territory governments may not be the sum of the government and non-government components as the sector of the auspicing agency may be 'not stated' for some service users. Totals for each State and Territory or service group may not be the sum of the government and non-government components since individuals might have accessed both government and non-government provided services.
- (b) Data for service users of NDA specialist disability services funded by the states and territories exclude specialist psychiatric disability services identified by the jurisdiction.
- (c) Data for service users of the following NDA specialist disability service types were not collected: advocacy, information/referral, combined information/advocacy, mutual support/self-help groups, print disability/alternative formats of communication, research and evaluation, training and development, peak bodies and other support services.
- (d) Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) Section 14.6 of the chapter includes the service type outlet response rates for all years.
- (g) NSW data has had lower-than-average response rates, which has led to under reporting of service user numbers compared to other jurisdictions. Government and non-government sectors have not been accurately recorded in the NSW DS MDS up to 2009-10. Some non-government providers have been coded as government and this will affect the comparability of the number of service users from government and non-government sectors over time.
- (h) Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users.
- (i) WA community access and respite data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06.

Table 14A.15 Users of NDA government and non-government provided services, by service type (a), (b), (c), (d), (e), (f)

| | <i>Unit NSW (g)</i> | <i>Vic (h)</i> | <i>Qld</i> | <i>WA (i)</i> | <i>SA (j)</i> | <i>Tas</i> | <i>ACT (k)</i> | <i>NT (l)</i> | <i>Aust</i> |
|-----|---|----------------|------------|---------------|---------------|------------|----------------|---------------|-------------|
| (j) | South Australia State/Territory services sector data have been revised for 2012-13, updating the figures published in AIHW 2014 (table B14 of that report). SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | |
| (k) | For the ACT, the decreased community support service user count for 2005-06 was due to the data collection for therapy services being incomplete, resulting in therapy service user numbers falling from 2316 users in 2004-05 to 1807 in 2005-06. | | | | | | | | |
| (l) | Due to updates in NT agency sector information, 2003-04 data for respite service differ to those published by the AIHW in the following report: <i>Disability Support Services 2003-04: National Data on Services Provided Under the Commonwealth State/Territory Disability Agreement</i> . | | | | | | | | |
| (m) | The potential population is the number of people aged 0-64 (15-64 for employment services) who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities, adjusted for the Indigenous factor for that jurisdiction. For respite services, only those people with a primary carer are included. See section 14.7 for detailed information on the estimated potential population. The potential population for 2008-09 to 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | |
| (n) | Australian Government administered services classified as 'government' are not provided by the Australian Government, but by organisations classified as government related, such as local councils. | | | | | | | | |
| (o) | Data for 2012-13 do not include a number of 'not stated' sector records (nationally, 52 426 non-government Open employment records) and are not comparable to previous years. | | | | | | | | |
| | – Nil or rounded to zero. | | | | | | | | |

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (e)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aus Gov</i> | <i>Aust</i> |
|---------------------|-------------|---------------|---------------|---------------|---------------|---------------|--------------|--------------|--------------|----------------|----------------|
| Total number | no. | 53 128 | 58 466 | 27 152 | 17 187 | 18 386 | 6 547 | 4 673 | 2 757 | 129 698 | 299 945 |

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals for Australia may not be the sum of the components since individuals might have accessed services in more than one State or Territory.
- (b) Data for service users of NDA services funded by the states and territories exclude specialist psychiatric disability services identified by the jurisdiction.
- (c) Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting data quality (see section 14.6 of the chapter). Differences in data item response rates across years, for example, should be taken into account when interpreting these data.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.
- (f) 'Not reported' includes both service users accessing only 3.02 services (recreation/holiday programs) for whom primary data were not collected and other – Nil or rounded to zero.

- (a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals for Australia may not be the sum of the components since individuals might have accessed services in more than one State or Territory.
- (b) Data for service users of NDA services funded by the states and territories exclude specialist psychiatric disability services identified by the jurisdiction.
- (c) Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting data quality (see section 14.6 of the chapter). Differences in data item response rates across years, for example, should be taken into account when interpreting these data.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) More than one 'other disability group' can be recorded, so the overall proportions within each jurisdiction will generally be greater than 100 per cent.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients.

– Nil or rounded to zero.

(a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.

Table 14A.18 Users of NDA accommodation support services (all ages), as a proportion of the total estimated potential population for accommodation support services (a), (b), (c), (d), (e)

| | <i>Unit</i> | <i>NSW (f)</i> | <i>Vic (g)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT (i)</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|----------------|----------------|------------|-----------|---------------|------------|----------------|-----------|-------------|
| (b) | The potential population estimates (national age- and sex-specific rates applied to each jurisdiction) for accommodation support services are the number of people aged under 65 years who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities, adjusted for the Indigenous factor for each jurisdiction. See section 14.7 for information on how the potential population is defined. | | | | | | | | | |
| (c) | Data for users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | | |
| (d) | Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting data quality (see section 14.6 of the chapter). Differences in data item response rates across years, for example, should be taken into account when interpreting these data. | | | | | | | | | |
| (e) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (f) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (g) | Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users. | | | | | | | | | |
| (h) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |
| (i) | In 2006-07, Disability ACT better aligned the funded service types with the NMDS Classifications. This realignment better reflects the costs of expenditure on accommodation support in the ACT non-government sector. | | | | | | | | | |
| (j) | The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | | |

(a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.

Table 14A.19 Users of NDA community support services (all ages), as a proportion of the total potential population for community support services (a), (b), (c), (d), (e)

| | <i>Unit</i> | <i>NSW (f)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA (g)</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT (i)</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|----------------|------------|------------|---------------|---------------|------------|----------------|-----------|-------------|
| (b) | The potential population estimates (national age- and sex-specific rates applied to each jurisdiction) for community support services are the number of people aged under 65 years, who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities, adjusted for the Indigenous factor for each jurisdiction. See section 14.7 for information on how the potential population is defined. | | | | | | | | | |
| (c) | Data for service users of NDA funded community support services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | | |
| (d) | Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data. | | | | | | | | | |
| (e) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (f) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (g) | The increase in the number of WA service users in 2004-05 is due to the inclusion of data from a new electronic database for the first time. | | | | | | | | | |
| (h) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |
| (i) | For the ACT, improved data capture for therapy services resulted in an increased service user count between 2003-04 and 2004-05. The decreased community support service user count for 2005-06 was due to the data collection for therapy services being incomplete resulting in service user numbers falling from 2316 users in 2004-05 to 1807 in 2005-06. In 2006-07, Disability ACT better aligned the funded service types with the NMDS classifications. This realignment better reflects the costs of expenditure on community support in the ACT non-government sector. | | | | | | | | | |
| (j) | The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | | |

| 2010-11 | no. | 163 139 | 120 222 | 104 854 | 54 104 | 36 121 | 11 930 | 8 297 | 7 984 | 506 652 |
| 2011-12 | no. | 169 062 | 125 227 | 109 265 | 57 021 | 37 387 | 12 297 | 8 671 | 8 229 | 527 159 |
| 2012-13 | no. | 174 904 | 130 306 | 113 979 | 60 300 | 38 661 | 12 586 | 9 041 | 8 550 | 548 326 |

(a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.

Table 14A.20 Users of NDA community access services (all ages), as a proportion of the total potential population for community access services (a), (b), (c), (d), (e)

| | <i>Unit</i> | <i>NSW (f)</i> | <i>Vic (g)</i> | <i>Qld</i> | <i>WA (h)</i> | <i>SA (i)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|----------------|----------------|------------|---------------|---------------|------------|------------|-----------|-------------|
| (b) | The potential population estimates (national age- and sex-specific rates applied to each jurisdiction) for community access services are the number of people aged under 65 years, who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities, adjusted for the Indigenous factor for that jurisdiction. See section 14.7 for information on how the potential population is defined. | | | | | | | | | |
| (c) | Data for service users of NDA funded community access services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | | |
| (d) | Data quality continues to improve following the implementation of the DS NMDS. However, these data need to be interpreted with care due to a number of factors affecting quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data. | | | | | | | | | |
| (e) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (f) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (g) | Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users. As part of an output structure review in Victoria, an activity that was previously classified under community access was amalgamated under community support in that jurisdiction from 2012-13 onwards. | | | | | | | | | |
| (h) | The decrease in the number of WA service users between 2003-04 and 2004-05 is due to a change in reporting by one recreation agency. Data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06. | | | | | | | | | |
| (i) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |
| (j) | The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | | |

(a) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.

Table 14A.21 Users of NDA respite services (all ages), as a proportion of the total potential population for respite services (a), (b), (c), (d), (e)

| | <i>Unit</i> | <i>NSW (f)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA (g)</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|----------------|------------|------------|---------------|---------------|------------|------------|-----------|-------------|
| (b) | The potential population estimates (national age- and sex-specific rates applied to each jurisdiction) for respite services are the number of people aged under 65 years, who are most appropriately supported by disability services, require ongoing and/or long-term episodic support, have a permanent or chronic impairment and with a substantially reduced capacity in one or more core activities, adjusted for the Indigenous factor for that jurisdiction. For respite services, only those people with a primary carer are included. See section 14.7 for information on how the potential population is defined. | | | | | | | | | |
| (c) | Data for service users of NDA funded respite services exclude specialist psychiatric disability services identified by the jurisdiction. | | | | | | | | | |
| (d) | Data quality continues to improve following the implementation of the NDA NMDS. However, these data need to be interpreted with care due to a number of factors affecting quality. Differences in service type outlet and service user response rates between jurisdictions and across years, for example, should be taken into account when interpreting these data. | | | | | | | | | |
| (e) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (f) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (g) | WA data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06. | | | | | | | | | |
| (h) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |
| (i) | The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report. | | | | | | | | | |

Table 14A.23 **People with disability (aged 15–64 years with an employment restriction) accessing Disability Employment Services/Open Employment Services (Disability Management Services), by sex and age group (a), (b)**

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust (c)</i> |
|----------------|-------------|------------|------------|------------|------------|------------|-------------|------------|------------|-----------------|
| Persons | % | 8.8 | 9.0 | 8.8 | 5.2 | 9.7 | 11.4 | 4.1 | 5.8 | 8.4 |

(a) Disability Management Services are delivered by the Australian Government.

(b) The estimated number of people aged 15–64 years with an employment restriction for 2010-11 and 2011-12 has been revised. See section 14.7. Data previously published in the 2014 Report have been updated in this Report.

(c) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.

- (a) Supported employment services are delivered by the Australian Government.
- (b) The potential population is calculated for people aged 15-64 adjusted for labour force participation. See section 14.7 for information on how the potential population is defined. The potential population for 2008-09, 2009-10, 2010-11 and 2011-12 has been revised. Data previously published in the 2014 Report have been updated in this Report.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) State/Territory delivered disability support services comprise accommodation support, community support (includes case management/co-ordination), community access and respite.
- (d) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.
- (e) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (g) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.

| Total | % | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

- (a) Data exclude 4899 service users in 2003-04, 1459 service users in 2004-05, 1160 service users in 2005-06 and 993 service users in 2006-07 who did not report on a need for support with any of the areas: self-care, mobility, or communication. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator.
- (b) Data on the need for help with Activities of daily living (ADL) (2003-2004 to 2007-08) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (c) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (d) Data for service users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (e) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality.
- (f) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users.

Table 14A.26 Users of NDA accommodation support services (all ages), by severity of disability (a), (b), (c), (d), (e), (f)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic (g)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|----------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (h) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16). – Nil or rounded to zero. | | | | | | | | | |

| Total | % | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.

– Nil or rounded to zero. **np** Not published.

(a) Data exclude 30 297 service users in 2004-05, 27 382 service users in 2005-06 and 23 613 service users in 2006-07 who did not report on a need for support with any of the areas: self-care, mobility, or communication. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator.

Table 14A.28 Users of NDA community support services (all ages), by severity of disability (a), (b), (c), (d), (e), (f)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (g)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (b) | Data on the need for help with ADL (2004-05 to 2007-08) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life. | | | | | | | | | |
| (c) | Data on the need for help with ADL (2008-09) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living are reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL. | | | | | | | | | |
| (d) | Data for service users of NDA funded community support services exclude specialist psychiatric disability services specifically identified by the jurisdiction. | | | | | | | | | |
| (e) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. | | | | | | | | | |
| (f) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (e) | Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16). | | | | | | | | | |
| | – Nil or rounded to zero. | | | | | | | | | |

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.

np Not published.

- (a) Data exclude 13 417 service users in 2003-04, 4517 service users in 2004-05, 4637 service users in 2005-06 and 5845 service users in 2006-07 who did not report on a need for support with any of the areas: self-care, mobility, or communication. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. This 'not reported' total includes users of service type 3.02 (recreation/holiday programs) who were not required to complete this item; however those who did provide a response are included in the data.
- (b) Data on the need for help with Activities of daily living (ADL) (2003-04 to 2007-08) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (c) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (d) Data for service users of NDA funded community access services exclude specialist psychiatric disability services specifically identified by the jurisdiction.
- (e) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality.
- (f) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (g) Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users.
- (h) WA data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06.

|-----|--|------------|----------------|------------|---------------|---------------|------------|------------|-----------|-------------|
| (i) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16). | | | | | | | | | |
| | – Nil or rounded to zero. | | | | | | | | | |

| Need for assistance not determined (g) | % | 7.9 | 53.1 | 12.1 | 3.5 | 9.3 | 6.1 | 17.1 | 14.6 | 15.7 |
| Total | % | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 | 100.0 |

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.
- (d) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (e) As part of an output structure review in Victoria, an activity that was previously classified under community access was amalgamated under community support in that jurisdiction from 2012-13 onwards.
- (f) SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16).

(a) Data exclude 2824 service users in 2004-05, 3214 service users in 2005-06 and 3229 service users in 2006-07 who did not report on a need for support with any of the areas: self-care, mobility, or communication. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator.

Table 14A.32 Users of NDA respite services (all ages), by severity of disability (a), (b), (c), (d), (e), (f)

| | <i>Unit</i> | <i>NSW</i> | <i>Vic</i> | <i>Qld</i> | <i>WA (g)</i> | <i>SA (h)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|---|------------|------------|------------|---------------|---------------|------------|------------|-----------|-------------|
| (b) | Data on the need for help with Activities of daily living (ADL) (2004-05 to 2007-08) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life. | | | | | | | | | |
| (c) | Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL. | | | | | | | | | |
| (d) | Data for service users of NDA funded respite services exclude specialist psychiatric disability services specifically identified by the jurisdiction. | | | | | | | | | |
| (e) | Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality. | | | | | | | | | |
| (f) | Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years. | | | | | | | | | |
| (g) | WA data for 2005-06 have been corrected for miscoding of data and, therefore, vary from the data reported in the AIHW report on Disability Support Services in 2005-06. | | | | | | | | | |
| (h) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16). – Nil or rounded to zero. | | | | | | | | | |

- (a) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (b) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the NMDS for these years.
- (d) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.

Table 14A.33 **Users of NDA respite services (aged 0-64 years), by severity of disability (a), (b), (c), (d)**

| | <i>Unit NSW (g)</i> | <i>Vic</i> | <i>Qld</i> | <i>WA</i> | <i>SA (e)</i> | <i>Tas</i> | <i>ACT</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|------------|------------|-----------|---------------|------------|------------|-----------|-------------|
| (e) | SA data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. SA has a relatively high proportion of clients who do not need help with ADL. Most of these people have a vision/sensory disability with lower level support needs. In 2012-13, 12.9 per cent of SA clients had a vision related disability, compared with 4.2 per cent nationally (table 14A.16). | | | | | | | | |
| (f) | Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'. – Nil or rounded to zero. np Not published. | | | | | | | | |

- (a) Data for previous years are not published due to a coding error relating to communication support needs. Due to this error, results for previous years are significantly different and should not be compared with 2007-08 data.
- (b) Data on the need for help with Activities of daily living (ADL) (2007-08) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (c) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (d) Need for help with ADL relates to the level of support needed in the areas of self care, mobility and communication. It does not necessarily relate to the level of support needed to find or maintain employment.
- (e) The coding procedures used for need for assistance data items changed for open employment service users in 2008-09. Data should be used with caution.
- (f) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- Nil or rounded to zero.

- (a) Open employment services are delivered by the Australian Government.
- (b) Total service users for Australia may not be the sum of components because individuals may have accessed services in more than one State or Territory during the 12 month period.
- (c) Changes in the linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.
- (d) Data on the need for help with Activities of daily living (ADL) in 2007-08 are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Service users who need help with ADL reported always/sometimes needing help in one or more of these areas (people who need help with ADL are 'conceptually comparable' with people who have a profound or severe core activity limitation). Service users who did not need help with ADL, reported needing no support in all the core activity support areas. For these service users, help may be needed in other areas, for example, with interpersonal interactions, learning, and community and economic life.
- (e) Data on the need for help with ADL (2008-09 and later) are derived using information on the level of support needed in one or more of the core support areas: self care, mobility, and communication. Data for service users who need help with independent living or work, education and community living were reported for the first time in 2008-09. This includes people who need help with such things as interpersonal interactions and relationships, learning, applying knowledge and general tasks and demands; and domestic life or help with education, community (civic) and economic life; and work but who do not need help with ADL.
- (f) Includes people whose need for assistance was 'not stated', 'not collected' or 'not applicable (due to age)'.
– Nil or rounded to zero. **np** Not published.

- (a) The potential population for 2008-09, 2009-10 and 2010-11 has been revised. See section 14.7. Data previously published in the 2013 Report have been updated in this Report.
- (b) Data on service users in each geographic location were estimated based on service users' residential postcodes. In some jurisdictions, there are services users from geographical locations that do not exist in that jurisdiction. This occurs when service users have accessed services in a state or territory other than their jurisdiction of residence. In addition, some postcode areas were split between two or more geographic locations. Where this was the case the data were weighted according to the proportion of the population of the postcode area in each geographic location.
- (c) Service user data are estimates after a statistical linkage key is used to account for individuals who received services from more than one service type outlet during each period. Row totals may not be the sum of the components because individuals might have accessed services from more than one State or Territory.
- (d) Data for all service users exclude 283 service users in 2003-04, 290 service users in 2004-05, 216 service users in 2005-06, 382 service users in 2006-07, 269 service users in 2007-08 whose postcode was not reported and 259 service users in 2008-09 whose geographic location could not be derived. Hence service user totals may differ from other tables and care should be taken when interpreting this indicator. The calculation of non-response rates for service users with not stated/not known responses for postcode has been modified slightly, hence non-response rates have increased slightly for 2007-08 and 2008-09.
- (e) Data for users of NDA funded accommodation support services exclude specialist psychiatric disability services identified by the jurisdiction.
- (f) Data on service users per 1000 people are derived by dividing the number of service users in a geographic location by the number of people aged under 65 years in that geographic location, multiplied by 1000. Data on service users per 1000 potential population are derived by dividing the number of service users in a geographic location by the potential population aged under 65 years in that geographic location, multiplied by 1000. The 'major cities and inner regional' classification was derived by adding major cities and inner regional data. The 'outer regional and remote/very remote' classification was derived by adding outer regional, remote and very remote data.
- (g) Data quality continues to improve following the implementation of the DS NMDS. However, this indicator needs to be interpreted with care due to a number of factors affecting data quality.
- (h) Changes to linking procedures implemented for 2007-08 and 2008-09 data may have the effect of slightly increasing the number of unique service users within the CSTDA NMDS for these years.

Table 14A.37 **Users of NDA accommodation support services, by geographic location (a), (b), (c), (d), (e), (f), (g), (h), (i)**

| | <i>Unit</i> | <i>NSW (j)</i> | <i>Vic (k)</i> | <i>Qld</i> | <i>WA</i> | <i>SA (l)</i> | <i>Tas</i> | <i>ACT (m)</i> | <i>NT</i> | <i>Aust</i> |
|-----|--|----------------|----------------|------------|-----------|---------------|------------|----------------|-----------|-------------|
| (i) | Comparisons of access per 1000 people between the outer regional and remote/very remote population and other populations should be undertaken with care. Outer regional and remote/very remote areas have a higher proportion of Indigenous Australians than other areas and therefore the need for services may be greater in outer regional and remote areas due to the higher prevalence of disability. | | | | | | | | | |
| (j) | NSW data has had lower-than-average response rates, which has led to underreporting of service user numbers compared to other jurisdictions. | | | | | | | | | |
| (k) | Victorian 2003-04 data are reported to be significantly understated because errors in the 'date of last service received' and lower than expected response rates have led to under-counting of service users. | | | | | | | | | |
| (l) | Data for 2012-13 are not comparable to previous years. A large non-government provider in SA ceased reporting non-NDA clients which were incorrectly included in previous years data, while another SA agency experienced data reporting problems, resulting in some clients not being reported. Data for 2011-12 are not comparable with other years. A large government service provider in SA ceased reporting case management services for people who received telephone contact only once or twice a year. This contributed to a large decrease in clients. | | | | | | | | | |
| (m) | ACT data for service users per 1000 people in inner regional areas are not published as they are based on a small number of service users. | | | | | | | | | |

.. Not applicable. **np** Not published. – Nil or rounded to zero.
