
Report on Government Services 2020

PART C, SECTION 8: RELEASED ON 29 JANUARY 2020

8 Corrective services

This section is presented in a new online format. Dynamic data visualisations replace the static chapter format used in previous editions. Machine readable data are also available for download. A guide is available on [accessing information in the new format](#).

This section reports on prison custody and a range of community corrections orders and programs for adult offenders which are delivered separately by the eight states and territories.

The **Indicator Results** tab uses data from the data tables to provide information on the performance for each indicator in the **Indicator Framework**. The same data in the data tables are also available in CSV format.

[Skip to downloadable Corrective services data tables and supporting material](#)

Context

Objectives for corrective services

Corrective services aim to contribute to the protection and creation of safer communities through the effective management of offenders and prisoners, commensurate with their needs and the risks they pose to the community, by providing:

- a safe, secure and humane custodial environment
- appropriate management of community corrections orders
- programs and services that address the causes of offending, maximise the chances of successful reintegration into the community, and encourage offenders to adopt a law abiding way of life.

Governments aim for corrective services to meet these objectives in an equitable and efficient manner.

Service overview

The operation of corrective services is significantly influenced by, and in turn influences, other components of the criminal justice system such as police services and courts. The management of prisoners and of offenders serving community corrections orders is the core business of all corrective services agencies. However, the legislative frameworks governing and impacting on corrective services, for example sentencing acts, vary widely. The scope of the responsibilities of these agencies also varies, for example, functions administered by corrective services in one

jurisdiction may be administered by a different justice sector agency in another, such as the management of prisoners held in court cells.

This section reports on the performance of corrective services, which include prison custody and a range of community corrections orders and programs for adult offenders¹ (for example, parole and community work orders). Both public and privately operated correctional facilities are included; however, the scope of this section generally does not extend to:

- youth justice (reported on in [section 17](#), Youth justice services)
- prisoners or alleged offenders held in forensic mental health facilities to receive psychiatric care (who are usually the responsibility of health departments)
- prisoners held in police custody (reported on in [section 6](#), Police services)
- people held in facilities such as immigration detention centres.

1. Adult offenders in prison and community corrections are aged 18 years and over in all Australian states and territories with the exception of Queensland. In February 2018, the *Youth Justice and Other Legislation (Inclusion of 17-year-old Persons) Amendment Act 2016* commenced in Queensland, increasing the age that a person can be charged as an adult from 17 to 18 years, bringing Queensland legislation in line with all other Australian jurisdictions. Transitional provisions mean that 17-year-olds are being gradually transferred from adult community corrections and prisons to youth justice supervision. For 2018-19, adult corrections data may still include 17-year-olds in Queensland, but the numbers involved are relatively small and will have a minimal impact on reported rates during this period.

Roles and responsibilities

Corrective services are the responsibility of State and Territory governments, which may deliver services directly, purchase them through contractual arrangements or operate a combination of both arrangements. All jurisdictions maintained government operated prison facilities during the reporting period while private prisons operated in five jurisdictions (NSW, Victoria, Queensland, WA and SA). No jurisdiction operated periodic detention in 2018-19.

Community corrections is responsible for administering a range of non-custodial sanctions and also manages prisoners who are released into the community and continue to be subject to corrective services supervision. These services vary in the extent and nature of supervision, the conditions of the order (such as a community work component or a requirement to attend an offender program) and the level of restriction placed on the offender's freedom of movement in the community (for example, home detention).

No single objective or set of characteristics is common to all jurisdictions' community corrections services, other than that they generally provide a non-custodial sentencing alternative or a post-custodial mechanism for reintegrating prisoners into the community under continued supervision. In some jurisdictions, community corrections responsibility includes managing offenders on supervised bail orders. [Table 8.1](#) shows the range of sanctions involving corrective services that operated in each jurisdiction during the reporting period.

Funding

Nationally in 2018-19, expenditure (net of revenues) on corrective services was \$3.64 billion for prisons and \$0.71 billion for community corrections² (table 8A.1). Expenditure plus depreciation (matching expenditure reporting by other justice sector agencies) was almost \$4.77 billion – a real

increase of 5.8 per cent from 2017-18 (table 8A.2). Changes in expenditure need to be considered in the context of the growth in corrective services populations over time.

2. This expenditure is net of operating revenues and excludes capital costs (depreciation, user cost of capital and debt service fees), payroll tax, and expenditure on transport/escort services and prisoner health. Some jurisdictions are unable to fully disaggregate transport costs and/or health expenditure from other prison operating costs. See table 8A.1 for detailed definitions, footnotes and caveats.

Size and scope

Prison custody

Corrective services operated 119 custodial facilities nationally at 30 June 2019, comprising 93 government operated prisons, 10 privately operated prisons, four transitional centres, and twelve 24-hour court cell complexes (holding prisoners under the responsibility of corrective services in NSW) (table 8A.3).

On average, 43 115 people per day were held in Australian prisons during 2018-19 (table 8A.4), of which 81.1 per cent were held in secure facilities. A daily average of 8549 prisoners (19.8 per cent of the prisoner population), were held in privately operated facilities during the year (table 8A.4). Nationally, females represented 8.3 per cent of the daily average prison population, and Aboriginal and Torres Strait Islander prisoners represented 27.8 per cent of the daily average population.

In 2018-19, the national imprisonment rate was 220.2 per 100 000 people in the relevant adult population (figure 8.1). This represents an increase of 28.4 per cent since 2009-10 (table 8A.5). The rate for males (411.0 per 100 000 males) was over 11 times the rate for females (36.1 per 100 000 females) (table 8A.5).

Select year(s):

Multiple values

Figure 8.1 Imprisonment rate per 100 000 adults, Crude, Total prisoners by jurisdiction, by year

Source: table 8A.5

Data tables are referenced above by a '8A' prefix and all data (footnotes and data sources) are available for download from the supporting material below (both in Excel and CSV format).

■ 2009-10 ■ 2018-19
■ 2017-18

+ a b | e a u

The national crude imprisonment rate per 100 000 Aboriginal and Torres Strait Islander population was 2359.5 in 2018-19 compared with a rate of 161.3 for the non-Indigenous population (table 8A.5). Comparisons of imprisonment rates should be made with care, especially for states and territories with relatively small Aboriginal and Torres Strait Islander populations. Small changes in prisoner numbers can cause variations in rates that do not accurately represent either real trends over time or consistent differences from other jurisdictions.

The Aboriginal and Torres Strait Islander population has a younger age profile compared with the non-Indigenous population, which contributes to higher crude imprisonment rates. After adjusting for differences in population age structures, the national age standardised imprisonment rate per 100 000 Aboriginal and Torres Strait Islander population in 2018-19 was 1911.0, compared with a corresponding rate of 170.4 for the non-Indigenous population (figure 8.2). Therefore, after taking into account the effect of differences in the age profiles between the two populations, the national imprisonment rate for the Aboriginal and Torres Strait Islander population is 11 times greater than for the non-Indigenous population. Rates that do not take age profile differences into account are almost 15 times greater.

Figure 8.2 Age standardised Imprisonment rate per 100 000 adults, 2018-19
by jurisdiction, by Indigenous status

Source: table 8A.5

Data tables are referenced above by a '8A' prefix and all data (footnotes and data sources) are available for download from the supporting material below (both in Excel and CSV format).

■ Aboriginal and Torres Strait Islander
 ■ Non-Indigenous

While imprisonment rates for the Aboriginal and Torres Strait Islander population, whether calculated on a crude or age standardised basis, are higher than those for the non-Indigenous population, the majority of prisoners are non-Indigenous. Ten-year trends in daily average numbers and rates for Aboriginal and Torres Strait Islander and non-Indigenous prisoners are reported in table 8A.6.

Community corrections

Nationally, on a daily average, there were 15.6 offenders for every one (full time equivalent) community corrections staff member in 2018-19 (table 8A.7). Nationally, an average of 75 235 offenders per day were serving community corrections orders in 2018-19 (table 8A.8), with females representing 19.3 per cent of the offender population (higher than the proportion in the prison population), and Aboriginal and Torres Strait Islander offenders representing 21.2 per cent of the offender population (lower than the proportion in the prison population).

In 2018-19, the national crude community corrections rate was 384.2 per 100 000 relevant adult population. This is higher than the rate of 340.6 in 2009-10 (figure 8.3). The rate for female offenders was 145.4 compared with 631.5 for male offenders (table 8A.5).

Select year(s):

Multiple values

Figure 8.3 Community corrections rate per 100 000 adults, Crude, Total offenders
by jurisdiction, by year

Source: table 8A.5

Data tables are referenced above by a '8A' prefix and all data (footnotes and data sources) are available for download from the supporting material below (both in Excel and CSV format).

The national crude rate for the Aboriginal and Torres Strait Islander population was 3144.0 offenders per 100 000 relevant adult population, compared with 302.7 for the non-Indigenous population (table 8A.5). After adjusting for differences in population age structures, the rate per 100 000 Aboriginal and Torres Strait Islander population in 2018-19 was 2515.4, compared with a rate of 305.5 for the non-Indigenous population (figure 8.4). Therefore, after taking into account the effect of differences in the age profiles between the two populations, the national Aboriginal and Torres Strait Islander community corrections rate is eight times greater than for the non-Indigenous population. Rates that do not take age profile differences into account are 10 times greater.

As with prisoners, comparisons should be made with care because small changes in offender numbers in jurisdictions with relatively small Aboriginal and Torres Strait Islander populations can cause variations in rates that do not accurately represent either real trends over time or consistent differences from other jurisdictions. Ten year trends are reported in table 8A.9.

Non-Indigenous

Indicator Framework

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of corrective services.

The performance indicator framework shows which data are complete and comparable in this Report. For data that are not considered directly comparable, text includes relevant caveats and supporting commentary. [Section 1](#) discusses data comparability and completeness from a Report-wide perspective. In addition to the service area's Profile information, the Report's statistical context ([Section 2](#)) contains data that may assist in interpreting the performance indicators presented in this section.

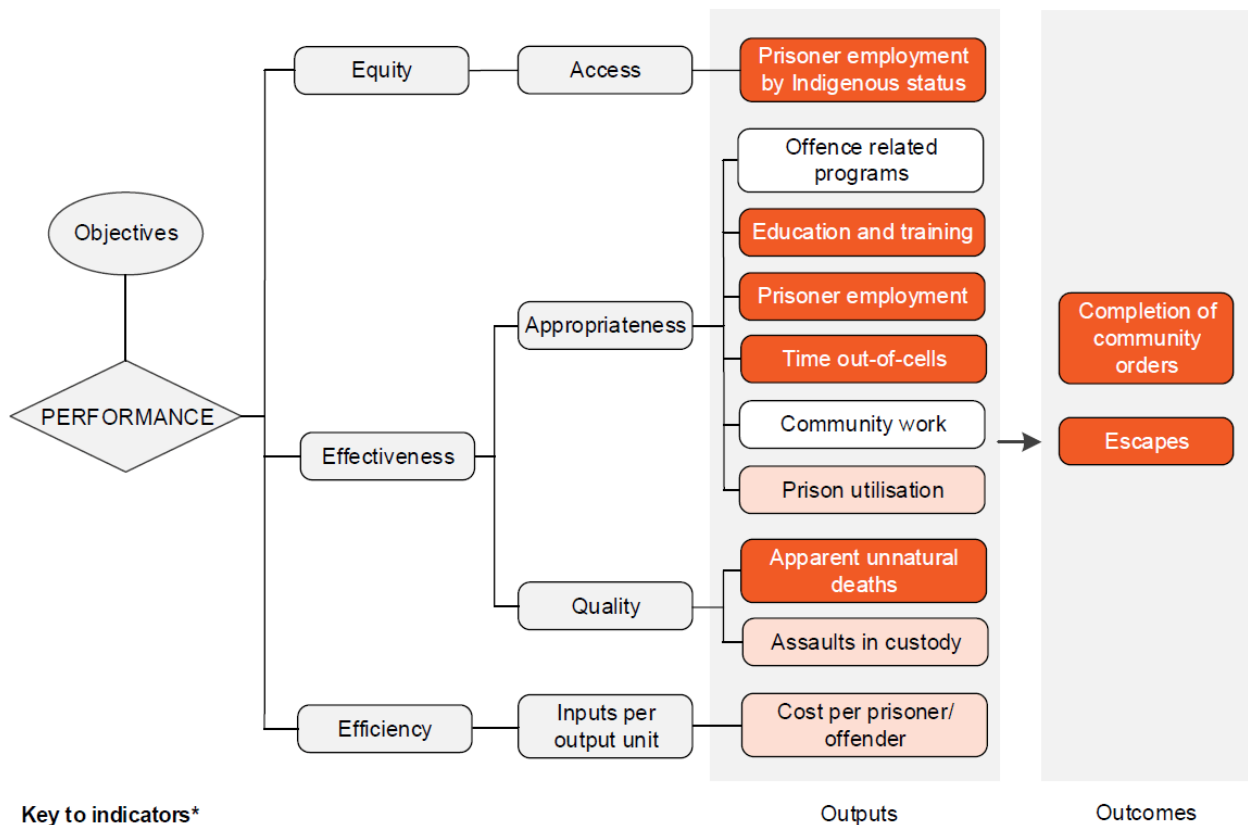

Improvements to performance reporting for corrective services are ongoing and will include identifying indicators to fill gaps in reporting against key objectives, improving the comparability and completeness of data and reviewing proxy indicators to see if more direct measures can be developed.

Outputs

Outputs are the actual services delivered (while outcomes are the impact of these services on the status of an individual or group) (see section 1). Output information is also critical for equitable, efficient and effective management of government services.

Outcomes

Outcomes are the impact of services on the status of an individual or group (see section 1).

Key to indicators*

- Text Most recent data for all measures are comparable and complete
- Text Most recent data for at least one measure are comparable and complete
- Text Most recent data for all measures are either not comparable and/or not complete
- Text No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the section

Indicator Results

An overview of the Corrective services performance indicator results are presented. Jurisdictional differences in service delivery settings, geographic dispersal and prisoner/offender population profiles have an impact on the effectiveness and efficiency of correctional service systems.

Information to assist the interpretation of these data can be found in the Corrective services interpretative material and data tables. The figures use data from the data tables. Data tables are identified by a '8A' prefix (for example, table 8A.1).

All data are available for download as an excel spreadsheet and as a CSV dataset — refer to [Download supporting material](#). Specific data used in figures can be downloaded by clicking in the figure area, navigating to the bottom of the visualisation to the grey toolbar, clicking on the 'Download' icon and selecting 'Data' from the menu. Selecting 'PDF' or 'Powerpoint' from the 'Download' menu will download a static view of the performance indicator results.

Prisoner employment by Indigenous status is an indicator of governments' objective to provide programs and services in an equitable manner.

Measure: The proportion of Aboriginal and Torres Strait Islander prisoners employed as a percentage of all Aboriginal and Torres Strait Islander prisoners eligible to work, compared with the percentage of employed non-Indigenous prisoners.

Guidance: Similar proportions of employment for Aboriginal and Torres Strait Islander and non-Indigenous prisoners indicates equity of access to participate in work programs.

- Data are comparable (subject to caveats) across jurisdictions and over time.
- Data are complete (subject to caveats) for the current reporting period.

Figure 8.5 Prisoner employment by Indigenous status, 2018-19
by jurisdiction

Source: table 8A.10

Nationally in 2018-19, 72.5 per cent of the eligible Aboriginal and Torres Strait Islander prisoner population was employed, compared with 83.6 per cent of the eligible non-Indigenous prisoner population.

- Aboriginal and Torres Strait Islander
- Non-Indigenous

Offence-related programs is an indicator of governments' objective to provide programs and services that address the causes of offending, maximise the chances of successful reintegration into the community, and encourage offenders to adopt a law abiding way of life.

Measure: the delivery of programs to prisoners and offenders by corrective services that target specific factors related to their risk of reoffending.

Data are not yet available for reporting against this indicator.

Education and training is an indicator of governments' objective of providing programs and services that address the causes of offending, maximise the chances of successful reintegration into the community, and encourage offenders to adopt a law abiding way of life.

Measure: The number of prisoners participating in one or more accredited education and training courses under the Australian Qualifications Framework, as a percentage of those eligible to participate.

Guidance: High or increasing education and training participation rates of prisoners are desirable.

- Data are comparable (subject to caveats) across jurisdictions and over time.
- Data are complete (subject to caveats) for the current reporting period.

Select year(s):

Figure 8.6 Percentage of eligible prisoners in education and training by jurisdiction, by year

Source: table 8A.11
 Data are not available for Tasmania prior to 2011-12.

Nationally in 2018-19, 35.1 per cent of eligible prisoners participated in accredited education and training courses. Vocational education and training courses had the highest participation levels (24.9 per cent), followed by pre-certificate Level 1 courses (8.0 per cent), secondary school education (3.6 per cent) and higher education (1.5 per cent) (table 8A.11).

■ 2009-10 ■ 2018-19
 ■ 2017-18

Prisoner employment is an indicator of governments' objective of providing programs and services that address the causes of offending, maximise the chances of successful reintegration into the community, and encourage offenders to adopt a law abiding way of life.

Measure: The number of prisoners employed as a percentage of those eligible to work.

Guidance: High or increasing percentages of prisoners in employment are desirable.

■ Data are comparable (subject to caveats) across jurisdictions and over time.

■ Data are complete (subject to caveats) for the current reporting period.

Select year(s):

(Multiple values) ▼

Figure 8.7 Prisoner employment by jurisdiction, by year

Source: table 8A.12

Nationally in 2018-19, 80.3 per cent of the eligible prisoner population was employed.

■ 2009-10 ■ 2018-19
 ■ 2017-18

Time out-of-cells is an indicator of governments' objective of providing a safe, secure and humane custodial environment.

Measure: The average number of hours in a 24 hour period that prisoners are not confined to their cells or units.

Guidance: A relatively high or increasing average time out-of-cells per day is desirable.

- Data are comparable (subject to caveats) across jurisdictions and over time.
- Data are complete (subject to caveats) for the current reporting period.

Figure 8.8a Time out-of-cells per day, 2018-19
by jurisdiction, by custody type

Source: table 8A.13

Nationally in 2018-19, the average number of hours of time out-of-cells per prisoner per day was 9.7. Average time out-of-cells was higher for prisoners in open custody (12.5 hours) than for those held in secure custody (9.0 hours).

■ NSW ■ Aust

Community work is an indicator of governments' objective to provide appropriate management of community corrections orders.

Measure: The number of hours unpaid community work acquitted on eligible community corrections orders as a percentage of the total hours that were imposed on the orders, for orders that were discharged during the reference period.

Guidance: A high or increasing percentage of ordered hours acquitted is desirable.

Data are not yet available for reporting against this indicator.

Prison utilisation is an indicator of governments' objective of providing a safe, secure and humane custodial environment.

Measure: The annual daily average prisoner population as a percentage of the number of single occupancy cells and designated beds in shared occupancy cells provided for in the design capacity of the prisons.

Guidance: Percentages close to but not exceeding 100 per cent are desirable.

■ Data are comparable (subject to caveats) across jurisdictions and over time.

■ Data are not complete for the current reporting period. Data for 2018-19 were not provided by NSW, Victoria or SA.

Figure 8.9a Prison design capacity utilisation, 2018-19 by jurisdiction

Source: table 8A.14

For most jurisdictions (with available data), prison utilisation as a proportion of design capacity was higher for secure facilities compared to open prisons.

Data are not available for Victoria and SA for all years and NSW from 2017-18.

■ 2009-10 ■ 2017-18 ■ 2018-19

Apparent unnatural deaths is an indicator of governments' objective of providing a safe, secure and humane custodial environment.

Measure: The number of deaths, divided by the annual average prisoner population, multiplied by 100 (to give the rate per 100 prisoners), where the likely cause of death is suicide, drug overdose, accidental injury or homicide.

Guidance: Zero, low or decreasing rates of apparent unnatural deaths are desirable.

- Data are comparable (subject to caveats) across jurisdictions and over time.
- Data are complete (subject to caveats) for the current reporting period.

Select year (applies to both tables 8.2a and 8.2b):

2018-19

— Nil or rounded to zero.

Nationally in 2018-19, the overall rate of deaths of prisoners from apparent unnatural causes was 0.06 per 100 prisoners. The rate for Aboriginal and Torres Strait Islander prisoners was 0.02 and for non-Indigenous prisoners was 0.08.

Assaults in custody is an indicator of governments' objective of providing a safe, secure and humane custodial environment.

Measure: The number of victims of acts of physical violence committed by a prisoner that resulted in physical injuries reported over the year, divided by the annual daily average prisoner population, multiplied by 100 (to give the rate per 100 prisoners). Rates are reported for two measures:

- assaults against another prisoner by seriousness of impact
- assaults against a member of staff by seriousness of impact.

Guidance: Zero, low or decreasing rates of assaults in custody are desirable.

■ Data are not comparable across jurisdictions, but data are comparable (subject to caveats) within jurisdictions over time.

■ Data are complete (subject to caveats) for the current reporting period.

na Not available. — Nil or rounded to zero.

Australian averages have not been calculated due to different reporting practices and variation in service delivery arrangements for delivering prisoner health care across jurisdictions.

Cost per prisoner/offender is an indicator of governments' objective to provide corrective services in an efficient manner.

Measure: The average daily cost of providing corrective services per prisoner and per offender, reported separately for net operating expenditure and for capital costs per prisoner and offender and for secure and open custody for prisoners.

Guidance: A low or decreasing cost is desirable in achieving efficient resource management

- Data are not comparable across jurisdictions or over time.
- Data are complete (subject to caveats) for the current reporting period.

Figure 8.10a Real recurrent expenditure, Per prisoner per day, 2018-19
by jurisdiction, Total net operating expenditure and capital costs, 2018-19 dollars

Source: table 8A.18

Nationally in 2018-19, recurrent expenditure per prisoner per day, comprising net operating expenditure and capital costs was \$310.

Select year(s) (applies to both figures 8.10b and 8.10c):

(Multiple values)

Figure 8.10b has been changed since an earlier version of the Report. See errata below.

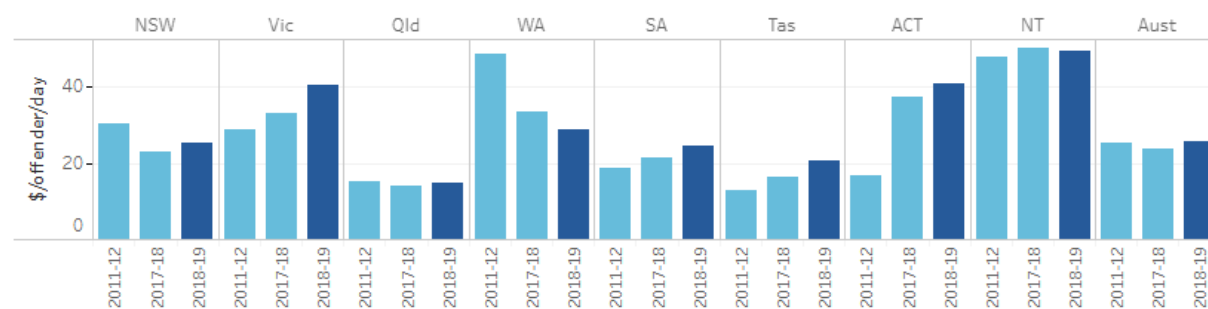

Figure 8.10b Real net operating expenditure (excluding capital costs), Per prisoner per day
by jurisdiction, by year, 2018-19 dollars

Source: table 8A.19

Nationally in 2018-19, excluding capital costs, the real net operating expenditure was \$231 per prisoner per day.

Figure 8.10c Real net operating expenditure (excluding capital costs), Per offender per day
by jurisdiction, by year, 2018-19 dollars

Source: table 8A.19

Data are presented from 2011-12 to improve comparability across jurisdictions, data are not available for prior years. Nationally in 2018-19, excluding capital costs, the real net operating expenditure was \$26 per offender per day.

Completion of community orders is an indicator of governments' objective to contribute to the protection and creation of safer communities through the effective management of offenders.

Measure: The percentage of community corrections orders completed during the year that were not breached for failure to meet the order requirements or because further offences were committed.

Guidance: High or increasing percentages of order completions are desirable

■ Data are comparable (subject to caveats) across jurisdictions and over time.

■ Data are complete (subject to caveats) for the current reporting period.

Select year(s) (applies to figure 8.11):

(Multiple values) ▼

Figure 8.11 Completion of community corrections orders, All orders by jurisdiction, by year

Source: table 8A.20

.. Not applicable. na Not available.

Nationally in 2018-19, completions by order type were highest for restricted movement orders (73.9 per cent), followed by reparation orders (68.9 per cent) and supervision orders (68.7 per cent).

Escapes is an indicator of governments' objective to contribute to the protection and creation of safer communities through the effective management of prisoners.

Measure: The number of escapes divided by the annual average prisoner population, multiplied by 100 (for a rate per 100 prisoners), and is reported separately for prisoners escaping from secure custody and from open custody.

Guidance: Zero, low or decreasing rates are desirable.

■ Data are comparable (subject to caveats) across jurisdictions and over time.

■ Data are complete (subject to caveats) for the current reporting period.

Note: An errata was released with the Corrective services section reflecting updates to the presentation and files above.

Errata

The following data have changed for Section 8 Corrective services:

- Amended data for real net operating expenditure per prisoner for 2011-12 to 2016-17 for NSW, 2011-12 to 2015-16 for ACT and 2011-12 to 2016-17 for Australian totals. Affects figure 8.10b and data table 8A.19.
