Data tables

Data tables are identified in references throughout this section by a '14A' prefix (for example, table 14A.1) and are available from the website <https://www.pc.gov.au/research/ongoing/report-on-government-services>.

This section reports on government funded care and support services (provided at home and in residential care facilities) for older people (and their carers).

Further information on the Report on Government Services including other reported service areas, the glossary and list of abbreviations is available at <https://www.pc.gov.au/research/ongoing/report-on-government-services>.

Impact of COVID-19 on data in this section

COVID-19 may affect data in this Report in a number of ways. This includes in respect of actual performance (that is, the impact of COVID-19 on service delivery in 2020 which is reflected in the data results), and the collection and processing of data (that is, the ability of data providers to undertake data collection and process results for inclusion in the Report).

For the aged care services section, there has been some impact on the data that is attributable to COVID-19, but this has not affected either the comparability or completeness of any indicators. The data affected relate to the measurement of compliance with aged care quality standards. This impact is primarily due to adjustments made by the Aged Care Quality and Safety Commission to auditing activity undertaken to determine compliance with the Aged Care Quality Standards by aged care services providers.

Some specific footnoting identifies additional technical matters in the data tables.

14.1 Profile of aged care services

Service overview

As people age they may need care and support to maintain health, social connectedness, wellbeing and the independence to remain in their homes and communities. Around two in five older people reported being in need of assistance as they aged (ABS 2019). Much of the care and support for older people is provided by family members, friends or neighbours (ABS 2019). But not everyone's care needs can be fully met through this care and support and 80 per cent of older people will access some form of government funded aged care service before death (AIHW 2018).

Government funded aged care services are provided to those who both want them and have been assessed as being in need of them. Services assist people who can no longer live without support to access appropriate care in their home, in the community or in a residential care facility. Approved aged care service providers receive government funding to provide these services and are required to meet minimum standards as well as demonstrate commitment to continuous improvement in quality of care.

Roles and responsibilities

Regulation and policy oversight of aged care services are predominantly the role of the Australian Government. The *Aged Care Act 1997* (Cwlth) and the accompanying Aged Care Principles are the main regulatory instruments establishing the framework for aged care services in Australia. Provisions of the Act cover service planning, user rights, eligibility for care, funding, quality assurance and accountability and other matters. There are also a number of independent statutory bodies that have important responsibilities in relation to aged care services: the Aged Care Quality and Safety Commission, the Aged Care Pricing Commissioner, and the National Aged Care Advocacy Program. In addition, the Aged Care Sector Committee advises the Australian Government on aged care policy development and implementation.¹

State and Territory governments are funded by the Australian Government to provide comprehensive assessment services through the day-to-day operation and administration of Aged Care Assessment Teams (ACAT).²

¹ In 2020, the Committee released its vision for quality in aged care, to complement the Aged Care Quality Standards and the Charter of Aged Care Rights (Aged Care Sector Committee 2020).

² While ACAT undertake comprehensive assessment for services under the Aged Care Act, lower entry-level service needs are assessed by Australian Government funded Regional Assessment Services (RAS). An ACAT is referred to as an Aged Care Assessment Service in Victoria.

The Australian Government funds residential aged care, home care and home support, with State, Territory and local governments also funding and/or delivering some of these services directly — for example, a small proportion of residential aged care facilities are owned by State and Territory governments. However, most services are delivered by non-government providers (tables 14A.10–11) such as private-for-profit, religious and charitable organisations.

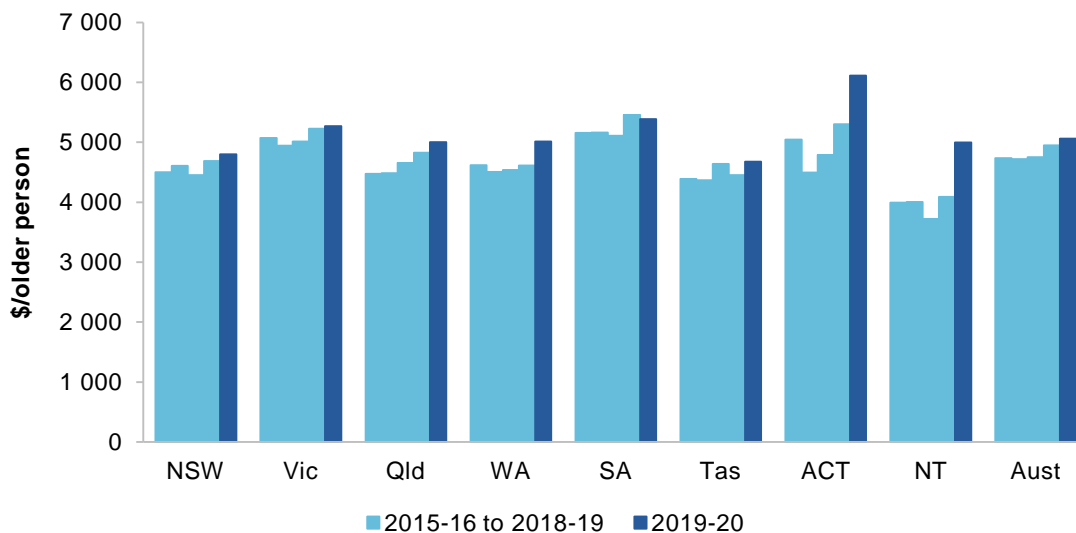

The Australian Government and State and Territory governments jointly administer/fund the Transition Care and Multi-Purpose Service (MPS) programs.

While the Australian Government subsidises a significant³ portion of the cost of providing aged care, clients and residents are expected to contribute where they can and may be charged fees and payments by service providers.

Government expenditure

Government recurrent expenditure on aged care services was \$21.5 billion in 2019-20 or \$5063 per older person (table 14A.4 and figure 14.1).

Figure 14.1 **Real recurrent expenditure on aged care services per older person (2019-20 dollars)^a**

^a See table 14A.4 for detailed footnotes and caveats.

Source: Department of Health (unpublished); Department of Veterans' Affairs (unpublished); State and Territory governments (unpublished); table 14A.4.

³ In 2018-19, the Commonwealth Government contribution to aged care of \$15.5 billion* covered approximately 76 per cent of total expenditure in the aged care sector (*excludes CHSP contribution of \$2.5 billion) (Aged Care Financing Authority 2020).

Residential aged care services accounted for the largest proportion of expenditure in 2019-20 (\$13.6 billion, or 63.4 per cent). Home care and home support services accounted for much of the remainder (\$6.7 billion) (table 14A.3).

The Australian Government provided 98.5 per cent of the government funding for aged care services in 2019-20. State and Territory governments provided the remainder (table 14A.3). Detailed expenditure data by program are contained in tables 14A.3–8.

Size and scope of sector

Aged care target population

Demand for aged care services is driven by the size and health of the older population. The Australian population is ageing rapidly, with the proportion of people aged 65 years or over in the total population projected to increase from 15 per cent at 30 June 2017 to between 21 and 23 per cent in 2066 (ABS 2018a). Although the Aboriginal and Torres Strait Islander population is also ageing, life expectancy at birth for Aboriginal and Torres Strait Islander people is lower when compared with the non-Indigenous population (ABS 2018b).

The aged care target population is defined as all people aged 65 years or over and Aboriginal and Torres Strait Islander people aged 50–64 years (this aligns with the funding arrangements as specified under the National Health Reform Agreement). This aged care target population differs from the Australian Government’s aged care ‘planning population’ of people aged 70 years or over which is used, along with the population of Aboriginal and Torres Strait Islander people aged 50–69 years in some cases, to allocate places under the Aged Care Act. See sub-section 14.4 for a definition of the aged care planning population.

Types of care and support

Home care and home support

Governments provide services to help older people remain, or return to living independently, in their homes. Carers can also access respite care through home care and home support programs:

- the Commonwealth Home Support Programme (CHSP) helps older people to access entry-level support services to remain living independently and safely at home and in their community. Services available under the CHSP include domestic assistance, personal care, social support, allied health and respite services (tables 14A.22–23). Table 14A.23 provides a full list of CHSP services
- the Home Care Packages Program helps people with complex care needs to live independently in their own homes. There are four levels of care ranging from low level care needs (Home Care Package Level 1) to high care needs (Home Care Package

Level 4). Services provided under these packages are tailored to the individual and might include personal care (such as showering), support services (such as cleaning) and/or clinical care (such as nursing and allied health support). As at 30 June 2020, 142 436 people were recipients of Home Care Packages, of which 41.3 per cent received a Home Care Package Level 2 (table 14A.9)

- Department of Veterans’ Affairs (DVA) community care for eligible veterans — Veteran Home Care (VHC) services provide domestic assistance, home and garden maintenance, and respite for people with low care needs; DVA community nursing services provide acute/post-acute support and maintenance and palliative care for people with high care needs or disability. In 2019-20, 37 735 older veterans were approved for VHC services and 13 842 older people received community nursing services, representing 29.5 and 10.8 per cent of older eligible veterans respectively (tables 14A.7–8).

In 2019-20, there were 829 193 older CHSP clients nationally, equivalent to around 195.2 older clients per 1000 older people (figure 14.2). There were a further 171 797 older clients of Home Care Packages, equivalent to around 40.4 older clients per 1000 older people (table 14A.2).

Figure 14.2 **Older clients of Commonwealth Home Support Programme services per 1000 older people, by program, 2019-20^a**

^a See table 14A.2 for detailed footnotes and caveats.

Source: Department of Health Aged Care Data Warehouse; table 14A.2.

Residential care services

Residential aged care is provided in aged care homes on a permanent or respite basis. Residents receive accommodation, support (cleaning, laundry and meals) and personal care

This page has been changed since an earlier version of the Report. See errata at <http://www.pc.gov.au/research/ongoing/report-on-government-services/2021/community-services/aged-care-services>

services (such as assistance with showering and toileting). Residents who have been assessed as requiring it may also receive mobility aids, continence products and tailored therapy services, as well as more complex nursing care.

For permanent residents, the Aged Care Funding Instrument (ACFI) is used to appraise care needs and the annual subsidy available through the Australian Government. Residents can be reappraised as their care needs change. Respite residents are not appraised under the ACFI but are classified as high or low care based on their ACAT approval.

The planning framework for services provided under the Aged Care Act aims to keep the growth in residential aged care places⁴ in line with growth in the older population, and to ensure a balance of services across Australia, including services for people with lower levels of need and in rural and remote areas. Nationally, at 30 June 2020, the number of residential care places was 76.1 per 1000 people in the aged care planning population (i.e., aged 70 years or over) (table 14A.14). If the population of Aboriginal and Torres Strait Islander people aged 50–69 years is taken into account, the rate is 73.0 per 1000 older people (table 14A.15). This rate is higher in major cities (78.0) compared to regional areas (65.1) and remote/very remote areas (41.8) (tables 14A.16).

During 2019-20, 238 778 older people were in permanent care (56.2 per 1000 older people) and 65 709 in respite care (15.5 per 1000 older people) (figure 14.3). At 30 June 2020, the occupancy rate for residential aged care was 88.3 per cent — the lowest rate over the 10 years of reported data (table 14A.13).

⁴ Up until February 2017, Home care places were also allocated under this framework. Under the Increasing Choices initiative introduced 27 February 2017, Home Care Packages are allocated to consumers rather than providers (consumers then choose a provider). At the same time, short-term restorative care places were introduced and are important in ensuring access to services across geographic locations.

Figure 14.3 **Older permanent and respite residential aged care clients per 1000 older people, 2019-20^a**

^a See table 14A.2 for detailed footnotes and caveats.

Source: Department of Health (Aged Care Data Warehouse); table 14A.2.

Flexible care services

Where mainstream residential or home care services are unable to cater for an older person's specific needs, flexible care options are available:

- Transition Care provides goal-oriented and therapy-focussed care on a time-limited basis to older people after a hospital stay, to help maximise their independence and functional decline, thereby avoiding premature entry to residential aged care. During 2019-20, there were 24 057 older clients of Transition Care (table 14A.2).
- Short-term restorative care (STRC) is similar to transition care, and aims to improve the physical functioning, wellbeing and independence of older people, but without the need to have been in hospital. In 2019-20, 4458 people aged 65 years or over received STRC services, with 809 people receiving care at 30 June 2020 (Department of Health 2020a).
- The MPS program delivers flexible and integrated health and aged care services to small rural and remote communities. At 30 June 2020, there were 3668 operational MPS program places (Department of Health 2020a).
- The National Aboriginal and Torres Strait Islander Flexible Aged Care Program funds service providers to provide flexible, culturally appropriate aged care to older Aboriginal and Torres Strait Islander people close to their home and/or community. Services funded under this program can deliver a mix of residential and home care services. At 30 June 2020, there were 1264 operational flexible places under this program (Department of Health 2020a).

Supporting programs

Governments fund ‘Workforce and Quality’ and ‘Ageing and Service improvement’ programs to monitor compliance with the accreditation and quality frameworks, and ensure appropriately skilled staff are available to deliver home and residential care services and to address care issues associated with a predicted rise in the prevalence of dementia. Staff providing home and residential care, and the physical environment at residential facilities, are critical to the health, safety and client experience of care and support.

The Aged Care Act does not prescribe the qualifications required by staff nor the number of staff required to be employed by an aged care service (Department of Health 2018), but the Aged Care Quality Standards include a human resources standard that all government funded aged care providers are required to comply with. Standard 7 requires aged care providers and residences to employ staff with the right skills and qualifications to look after clients and residents, and that aged care workforce interactions with clients and residents should be kind, caring and respectful of clients’ and residents’ identity, culture, and diversity. Table 14.2 in this section provides data on the proportion of assessed aged care providers that met these standards.

Providers have responsibility for ensuring that their workforce upholds the rights of clients and residents as outlined in the Charter of Aged Care Rights.

In 2016, 28.5 per cent of full time equivalent (FTE) direct care staff at aged care homes were either nurses or allied health professionals, down from 31.8 per cent in 2012 (Department of Health 2017a). The physical environment at residential facilities is assessed as part of ongoing accreditation processes by the Aged Care Quality and Safety Commission (tables 14A.34–37).

Accessing care

Information services

Services such as ‘My Aged Care’ provide older people, their families and carers with information to help them access timely and appropriate care, and find approved aged care services in their local area.

Assessment services

An assessment of need by an ACAT (Aged Care Assessment Service in Victoria), is mandatory for admission to residential care, to receive a Home Care Package, or enter STRC or Transition Care. ACATs also make recommendations regarding the most appropriate long-term care arrangements for clients (table 14A.30). Since 2014, approvals for care from most assessments do not lapse. Assessments for other aged care programs are primarily

conducted by other assessment services (for example, Regional Assessment Services (RAS) for CHSP).

Not everyone assessed by an ACAT is approved for care, and some people are approved for more than one type of care. For older people in 2019-20, there were 183 140 completed ACAT assessments (equivalent to 43.1 per 1000 older people) and 205 873 approvals for residential aged care and the Home Care Package program (tables 14A.24–25). ACAT approval rates for Home Care Packages and residential aged care significantly increase with client age (table 14A.25).

Elapsed times — time taken from ACAT approval to access care

The time between an ACAT approval and an older person's access to an aged care service (or offer of a package in the case of Home Care, as distinct from access to care) can be influenced by a range of factors (both service- and person-related) including:

- availability of places/packages and services (which can increase waiting times)
- an older person's:
 - preference to remain at home for as long as possible, going into approved residential aged care at a later date or not at all (choosing instead to access formal home care, or support from family, friends or the community)
 - need to delay entry into residential aged care due to personal circumstances, such as selling their home
 - decision to reject an offer due to the cost or location.

For Home Care Packages, once the assignment of a Package has been made, a client has 56 calendar days to enter into a Home Care Agreement with an approved provider. Clients are able to apply for an extension of 28 days, giving them a total of 84 calendar days in which to enter into an agreement with a provider. This time period is not captured in the elapsed times data for Home Care Packages reported below.

If a client has not entered into a Home Care Agreement by the required time, their Home Care Package will be withdrawn. If the client later decides that they want to receive home care services, they can re-join the National Priority System (NPS). They will re-enter the NPS based on their approval date and hence are not disadvantaged (Department of Health 2017b).

In 2019-20, 42.2 per cent of older people entered residential aged care within 3 months of their ACAT approval (figure 14.4); the median elapsed time was 148 days, a decrease from 152 days in 2018-19 but higher than 121 days in 2017-18 (table 14A.26). Further data on elapsed times for residential aged care are included in tables 14A.26–29.

Figure 14.4 People entering residential care within specified elapsed time periods of their ACAT approval, 2019-20^a

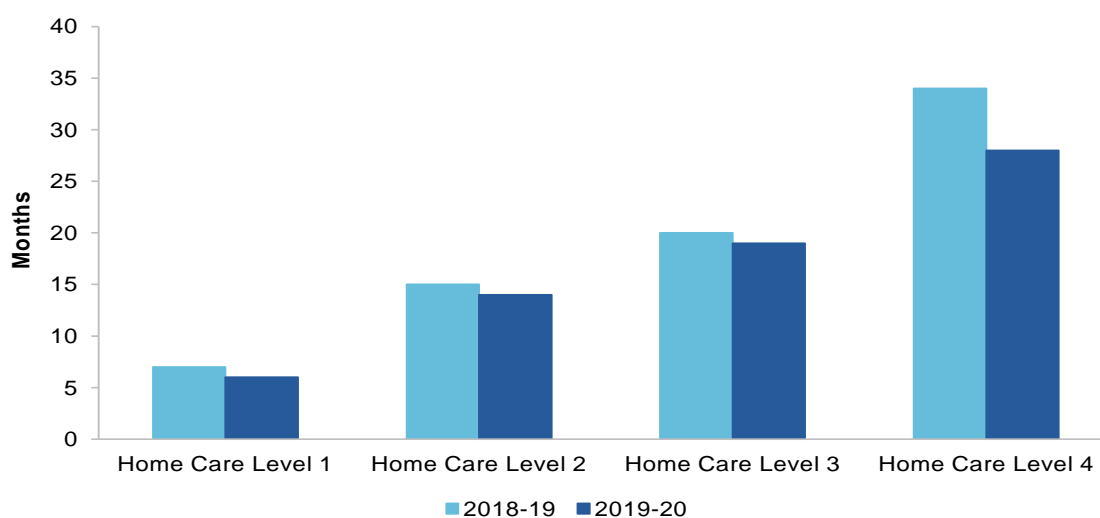

^a See table 14A.26 for detailed definitions, footnotes and caveats.

Source: Department of Health (unpublished); table 14A.26.

In 2019-20, median elapsed times for a Home Care Package ranged from 6 months for a Level 1 package to 28 months for a Level 4 package; lower than for 2018-19 (figure 14.5).

Figure 14.5 National median elapsed time between ACAT approval and offer of a Home Care Package^{a, b}

^a See table 14A.26 for detailed definitions, footnotes and caveats. ^b Table 14A.26 contains data disaggregated by priority type.

Source: Department of Health (unpublished); table 14A.26.

14.2 Framework of performance indicators

The framework of performance indicators for aged care services is based on governments' objectives for the aged care sector (box 14.1).

Box 14.1 Objectives for aged care services

The aged care system aims to promote the wellbeing and independence of older people (and their carers), by enabling them to stay in their own homes or by assisting them in residential care. Governments seek to achieve this aim by subsidising aged care services that are:

- accessible — including timely and affordable
- appropriate to meet the needs of clients — person-centred, with an emphasis on integrated care, ageing in place and restorative approaches
- high quality.

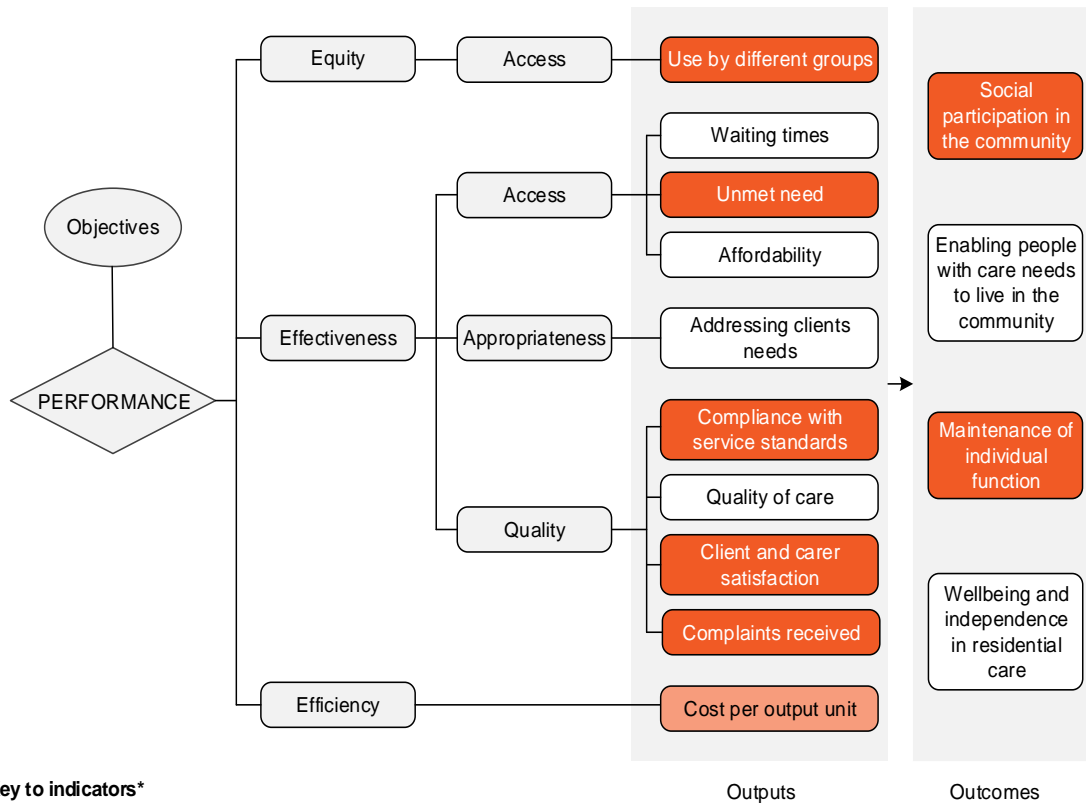

Governments aim for aged care services to meet these objectives in an equitable and efficient manner.

The performance indicator framework provides information on equity, efficiency and effectiveness, and distinguishes the outputs and outcomes of aged care services (figure 14.6).

The performance indicator framework shows which data are complete and comparable in the 2021 Report. For data that are not considered directly comparable, text includes relevant caveats and supporting commentary. Section 1 discusses data comparability, data completeness and information on data quality from a Report-wide perspective. In addition to sub-section 14.1, the Report's statistical context section (section 2) contains data that may assist in interpreting the performance indicators presented in this chapter. Sections 1 and 2 are available from the website at <https://www.pc.gov.au/research/ongoing/report-on-government-services>.

Improvements to performance reporting for aged care services are ongoing and include identifying data sources to fill gaps in reporting for performance indicators and measures, and improving the comparability and completeness of data.

Figure 14.6 Aged care services performance indicator framework

Key to indicators*

- Text Most recent data for all measures are comparable and complete
- Text Most recent data for at least one measure are comparable and complete
- Text Most recent data for all measures are either not comparable and/or not complete
- Text No data reported and/or no measures yet developed

* A description of the comparability and completeness of each measure is provided in indicator interpretation boxes within the section

14.3 Key performance indicator results

Different delivery contexts, locations and types of client may affect the effectiveness and efficiency of aged care services.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are either not comparable (subject to caveats) within jurisdictions over time or are not comparable across jurisdictions or both.

The completeness of performance indicator results is shaded in indicator interpretation boxes, figures and section and data tables as follows:

Data are complete (subject to caveats) for the current reporting period. All required data are available for all jurisdictions

Data are incomplete for the current reporting period. At least some data were not available.

Outputs

Outputs are the services delivered (while outcomes are the impact of these services on the status of an individual or group) (see section 1). Output information is also critical for equitable, efficient and effective management of government services.

Equity

Access – Use by different groups

‘Use by different groups’ is an indicator of governments’ objective to subsidise aged care services in an equitable manner (box 14.2).

Box 14.2 Use by different groups

'Use by different groups' is defined as the proportion of service clients who are from a special needs group, compared with the proportion of the aged care target population who are from that special needs group.

The proportion of service clients from a particular special needs group should be broadly similar to the proportion of the aged care target population who are from that special needs group.

There are nine special needs groups identified by the *Aged Care Act 1997* (Cwlth) (see sub-section 14.4 for details). Data are reported for three special needs groups (Aboriginal and Torres Strait Islander Australians; people from Culturally and Linguistically Diverse (CALD) backgrounds; and people receiving aged care services in outer regional, remote/very remote areas. People from CALD backgrounds are defined as those born overseas from countries other than the United Kingdom, Ireland, New Zealand, Canada, South Africa and the United States of America.

Measures for veterans (including widows and widowers of veterans) and for those who are financially and socially disadvantaged are currently under development (although data are available on the proportion of all permanent residents' care days used by financially disadvantaged residents, see table 14A.21). Data are not available for reporting on the remaining special needs groups.

Several factors should be considered when interpreting these data.

- Special needs groups may have greater need for aged care services. Compared to the rest of the population Aboriginal and Torres Strait Islander Australians have higher rates of disability, lower life expectancy and an increased likelihood of requiring aged care services at a younger age. Because of these factors, the target population for Aboriginal and Torres Strait Islander Australians is people aged 50 years or over, compared to 65 years or over for other population groups.
- Cultural differences and the availability of care and support from family, friends or neighbours can also affect the use of services across different population groups. Stronger support networks can reduce the need for government funded aged care services, or for particular government funded service types.

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2019-20 data are available for all jurisdictions.

Differences in the representation of a special needs group in services compared to their representation in the aged care target population varied across service types and groups. Nationally:

- Aboriginal and Torres Strait Islander people are overrepresented for low level Home Care Packages (Levels 1–2) and high level Home Care Packages (Levels 3–4), but are underrepresented in all other service types
- people from CALD backgrounds are overrepresented amongst those accessing Home Care Packages, but underrepresented in all other service types

- people receiving aged care services in rural and remote areas are overrepresented amongst those accessing CHSP, but underrepresented in all other service types (table 14.1).

Table 14.1 Representation of special needs groups in the aged care target population, compared with their representation in older clients of aged care services (per cent)^a

Data are comparable (subject to caveats) across jurisdictions.

Data are complete (subject to caveats) for the current reporting period.

Effectiveness

Access — Waiting times

‘Waiting times’ is an indicator of governments’ objective to subsidise aged care services that are accessible (box 14.3). The elapsed time between approval for care and commencement of care is reported earlier in the section as contextual material.

Box 14.3 Waiting times

‘Waiting times’ is defined as the proportion of older people who have an ACAT approval and are ready to take up care, who are able to enter residential care or commence Home Care within three months.

Higher proportions of admission to residential care or commencement of Home Care within three months are desirable.

Data for this indicator are not available. See page 14.8 for related information on elapsed times.

Access – Unmet need

‘Unmet need’ is an indicator of governments’ objective of subsidising aged care services

that are accessible (box 14.4).

Box 14.4 Unmet need

'Unmet need' measures the need for aged care services relative to the access to services. Two measures of unmet need (one is a proxy) are reported.

Unmet need in the community

The 'Unmet need in the community' measure is the proportion of older people (aged 65 years or over) who were living in households and reported being in need of assistance, that also reported that their need was not fully met.

A low or decreasing proportion of people reporting their need as not fully met is desirable.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions (only one year of data are reported)
- complete (subject to caveats) for the current reporting period. All required 2018 data are available for all jurisdictions.

Comparability of the NT results against other jurisdictions for this indicator are affected by the scope of the Survey of Disability Ageing and Carers (SDAC) as it does not include people living in discrete Aboriginal and Torres Strait Islander communities or very remote areas.

Hospital patient days used by aged care type patients

The 'Hospital patient days used by aged care type patients' is a *proxy* measure of unmet need defined as the proportion of hospital patient days (for overnight separations only) that were for aged care type patients (see sub-section 14.4 for further details).

Hospital inpatient services are geared towards shorter periods of acute care aimed at addressing serious illness or injury, or diagnosis. The needs of older people for maintenance care (particularly for extended periods of time) can be better met in residential aged care services than hospitals.

A low or decreasing proportion of patient days used by aged care type patients is desirable.

The data should be interpreted with caution, because:

- days for patients who have not completed their period of care in a hospital are not included
- identification in hospital as aged care patient type may not reflect a person's eligibility for residential care services (this is determined by an ACAT assessment) or reliably reflect access issues for residential aged care from the acute care sector — data (utilising appropriate linked hospital separations and ACAT approvals) are not available at this time
- the diagnosis codes for aged care patient type may not be applied consistently across jurisdictions or over time
- the denominator (all patient days for overnight separations) does not directly reflect the need for aged care services.

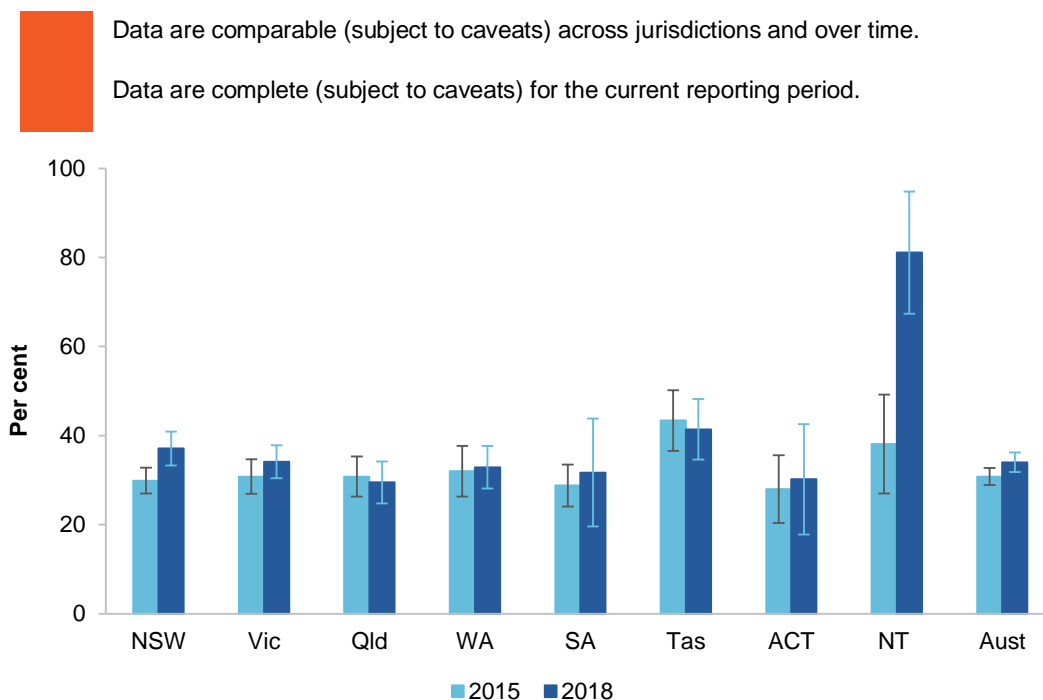

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2018-19 data are available for all jurisdictions.

Unmet need in the community

Nationally in 2018, 34.0 per cent of older people who were living in households and in need of assistance, reported that their need was not fully met (figure 14.7). The proportion was higher for those with a profound or severe disability (41.7 per cent) than for those without a disability (20.5 per cent) (table 14A.31).

Figure 14.7 Older people in need of assistance reporting that their needs were not fully met^a

^a See box 14.4 and table 14A.31 for detailed definitions, footnotes and caveats.

Source: ABS (unpublished) SDAC; table 14A.31.

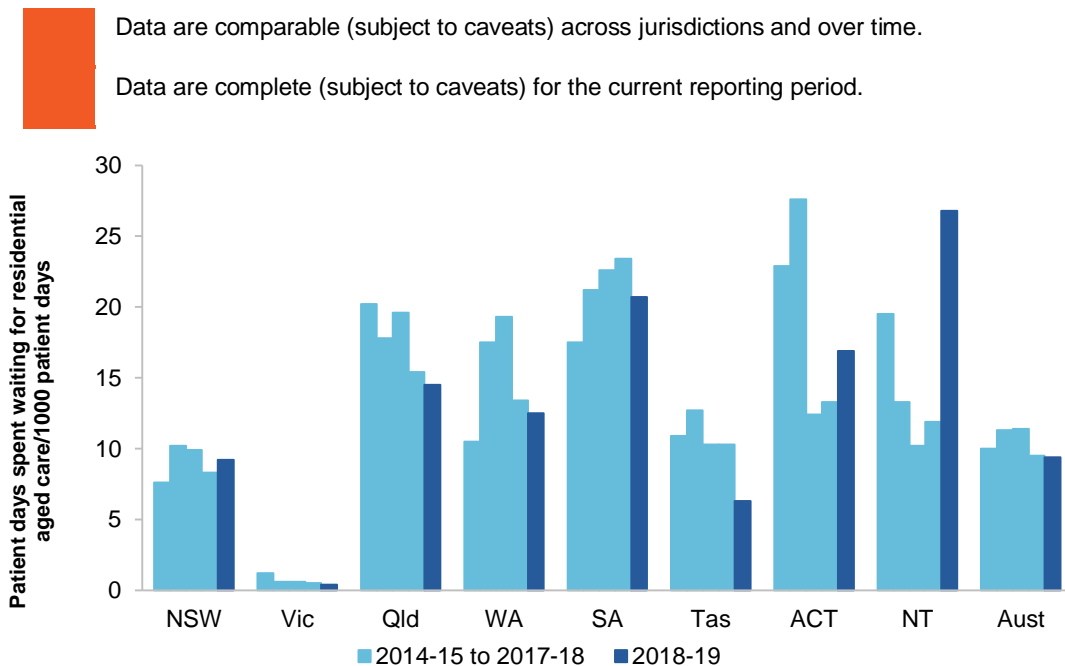

Hospital patient days used by aged care type patients

Understanding the relationship between the aged care and health systems is important as interactions are critical for the performance of both systems. The number of operational residential aged care places can affect demand for public hospital beds, just as the number of older patients in acute and subacute care and the time they spend in hospital can affect demand for aged care services.

Nationally in 2018-19, the proportion of all hospital patient days used by patients waiting for residential aged care was 9.4 per 1000 patient days (figure 14.8). Proportions were lower for Aboriginal and Torres Strait Islander people compared to other Australians, but higher for people from lower compared to higher socioeconomic areas and for people in remote compared to non-remote areas (table 14A.33). The proportion of separations for ‘aged care

type' patients⁵ waiting 35 days or longer was 9.4 per cent nationally in 2018-19 (table 14A.32).

Figure 14.8 **Hospital patient days used by patients waiting for residential aged care^a**

^a See box 14.4 and table 14A.33 for detailed definitions, footnotes and caveats.

Source: Australian Institute of Health and Welfare (unpublished); table 14A.33.

Access – Affordability

'Affordability' is an indicator of governments' objective to subsidise aged care services to make them affordable for those that need them (box 14.5).

Box 14.5 **Affordability**

'Affordability' is defined as the out-of-pocket costs for aged care services (after subsidies) as a proportion of disposable income.

Low or decreasing out-of-pocket cost for aged care services as a proportion of disposable income represents more affordable aged care services and is desirable.

Data are not yet available for reporting against this indicator.

⁵ The scope of these aged care type patients is slightly different to that defined for the indicator. See table 14A.32 for details.

Appropriateness – Addressing client needs

‘Addressing client needs’ is an indicator of governments’ objective to subsidise aged care services that are appropriate to meet the needs of clients — person-centred, with an emphasis on integrated care, ageing in place and restorative approaches (box 14.6).

Box 14.6 Addressing client needs

‘Addressing client needs’ will measure the extent to which:

- care recipients or their representatives had input into the planning of their care
- the supports identified in the care planning process to address an individual’s needs were provided (match of needs)
- individual interests, customs, beliefs and cultural and ethnic backgrounds were valued and fostered.

Data are not yet available for reporting against this indicator.

Quality – Compliance with service standards

‘Compliance with service standards’ is an indicator of governments’ objective to subsidise high quality aged care services (box 14.7).

Box 14.7 Compliance with service standards

‘Compliance with service standards’ measures the extent to which approved aged care services are meeting expected standards. Measures are reported for residential care, and home care and home support.

Residential care — reaccreditation

For residential aged care, the proportion of accredited facilities given three-year re-accreditation is reported. Three years is the longest period for which re-accreditation can be granted (in most cases), so if a service is re-accredited for this period it implies a higher level of service quality than for those re-accredited for a shorter period. Further information on the accreditation standards and process is available at www.agedcarequality.gov.au.

Data for this measure do not include new facilities (1.2 per cent of all residential care facilities) that have not been re-accredited as at 30 June 2020 (table 14A.37).

High or increasing proportions of services that are re-accredited for three years are desirable.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions
- complete (subject to caveats) for the current reporting period. All required June 2020 data are available for all jurisdictions.

(continued next page)

Box 14.7 (continued)

Compliance with Aged Care Quality Standards

On 1 July 2019, the Aged Care Quality Standards took effect for organisations providing all types of Commonwealth-subsidised aged care services.

- Standard 1 – Consumer dignity and choice
- Standard 2 – Ongoing assessment and planning with consumers
- Standard 3 – Personal care and clinical care
- Standard 4 – Services and supports for daily living
- Standard 5 – Organisation's service environment
- Standard 6 – Feedback and complaints
- Standard 7 – Human resources
- Standard 8 – Organisational governance.

High or increasing proportions of services that met all expected outcomes is desirable.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions (first year of new service standards so no time series)
- complete (subject to caveats) for the current reporting period. All required 2019-20 data are available for all jurisdictions.

Residential care — accreditation

During 2019-20, 68.4 per cent of the 624 services re-accredited that year were given three year accreditation status; down from 84.9 per cent in 2018-19 (table 14A.34). This decrease in 2019-20 affects the proportion of all services re-accredited to date. As at 30 June 2020, 89.4 per cent of the 2694 re-accredited residential aged care services had been given three year accreditation, down from 92.3 per cent at 30 June 2019 (table 14A.37).

Compliance with Aged Care Quality Standards

For Australian Government subsidised aged care services, 18.2 per cent of the reviews scheduled to be done over the period 2019 to 2022 had been completed by 30 June 2020 for residential aged care services, and 3.3 per cent had been completed for home care and support (table 14A.39). The proportions of residential aged care and home care and home support service providers reviewed during 2019-20 that achieved all expected outcomes for each of the three standards are in table 14.2.

Table 14.2 Australian Government subsidised aged care services that achieved all relevant expected outcomes, 2019-20 (per cent)^a

Data are comparable (subject to caveats) across jurisdictions.

Data are complete (subject to caveats) for the current reporting period.

Quality – Quality of care

‘Quality of care’ is an indicator of governments’ objective to subsidise high quality aged care services (box 14.8).

Box 14.8 **Quality of care**

‘Quality of care’ is defined as the standards achieved by residential aged care services in providing for the personal, functional, clinical and psycho-social wellbeing of their residents.

Higher quality of care is desirable.

No appropriate direct measure of quality of care is available; two potential measures have been identified for this indicator.

Selected incidents in residential aged care

Data are not available for reporting against this measure.

From 1 July 2019, the Aged Care Legislation Amendment (Quality Indicator Program) Principles 2019 took effect and the *National Aged Care Mandatory Quality Indicator Program* (QI Program) commenced. The previously voluntary QI Program had been operating since 2016.

The QI Program collects and publicly reports on the prevalence of pressure injuries, use of physical restraint and unplanned weight loss quality indicators, on a quarterly basis..

Data from the QI Program are publicly available and can be viewed at www.aihw.gov.au/reports/aged-care/gen-quality-indicators/contents/summary. These data are not currently published in the RoGS. The AIHW advises that not all factors that affect the quality of these data are understood and there are significant concerns around both comparability and completeness of the data (AIHW 2020, p. 3).

A project to review the QI program indicators concluded on 30 June 2020. The QI Program will be expanded to include new falls and major injury and medication management quality indicators, as well as updates to the existing three quality indicators, from 1 July 2021. As the QI Program quality indicators and data further develop and comparability and completeness improve, they will be considered for inclusion in the RoGS.

At the national level, the Report on the Operation of the Aged Care Act reports data on two indicators relating to the safety of residents — reportable assaults, and missing residents. Expressed as a rate of those in permanent residential aged care, the rate of reportable assaults was 2.3 per cent in 2019-20, while there were 1301 notifications of missing residents (Department of Health 2020b).

Hospital leave days from residential aged care for preventable causes

Data are not available for reporting against this measure.

‘Hospital leave days from residential aged care for preventable causes’ is being investigated as a proxy measure and would indicate the days that were spent out-of-residence due to preventable causes.

Quality – Client and carer satisfaction

‘Client and carer satisfaction’ is an indicator of government’s objective to subsidise high quality aged care services (box 14.9).

Box 14.9 Client and carer satisfaction

'Client and carer satisfaction' is defined by four measures:

- the proportion of people aged 65 years or over living in households, who are satisfied with the *range* of organised and formal service options available
- the proportion of people aged 65 years or over living in households, who are satisfied with the *quality* of assistance received from organised and formal services in the last six months
- the proportion of primary carers living in households (caring for people aged 65 years or over), who are satisfied with the *range* of formal service options available to help them in their caring role
- the proportion of primary carers living in households (caring for people aged 65 years or over), who are satisfied with the *quality* of assistance received from formal services in the last six months to help them in their caring role.

A high or increasing proportion of clients and carers who are satisfied is desirable as it suggests that the service received was of a higher quality.

Data reported for these measures are:

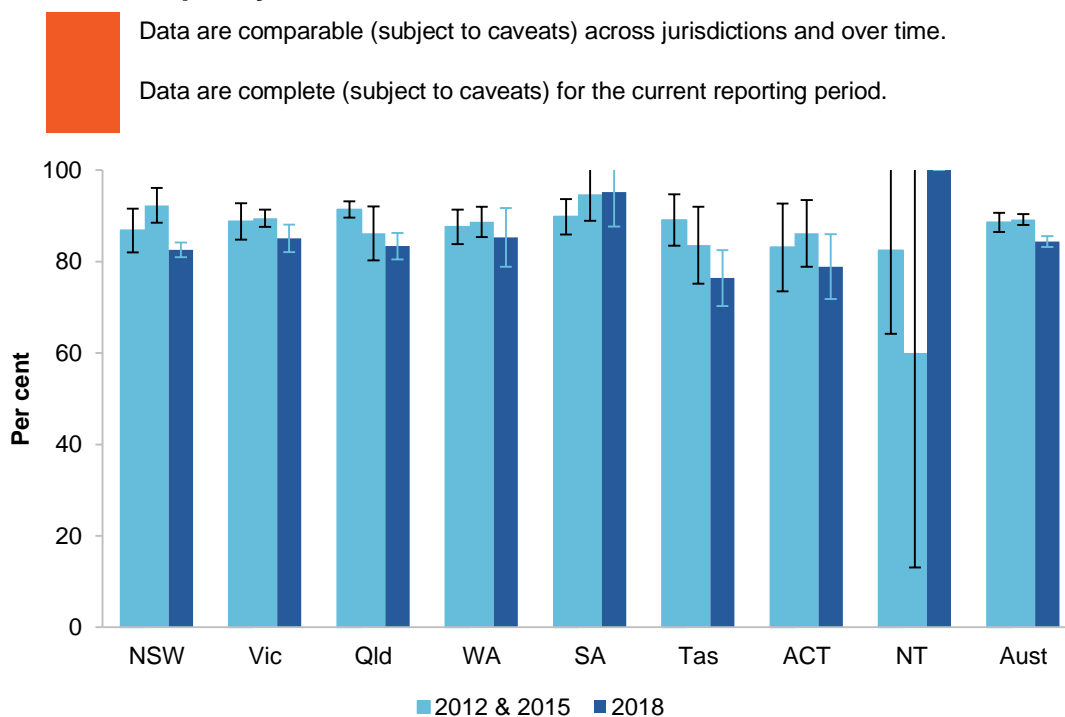

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2018 data are available for all jurisdictions.

Comparability of the NT results against other jurisdictions for this indicator are affected by the scope of the SDAC as it does not include people living in discrete Aboriginal and Torres Strait Islander communities or very remote areas.

Nationally in 2018, 71.2 per cent of people aged 65 years or over who reported a need for, or received formal services in the previous six months, were satisfied with the *range* of services available — a decrease from 2015, but similar to 2012 (table 14A.46).

Of people aged 65 years or over who received formal services in the previous six months, 84.4 per cent were satisfied with the *quality* of assistance they received (figure 14.9) — a decrease from 2015 and 2012 (89.2 per cent and 88.6 per cent respectively).

Figure 14.9 **People aged 65 years or over who are satisfied with the quality of services received^{a,b,c}**

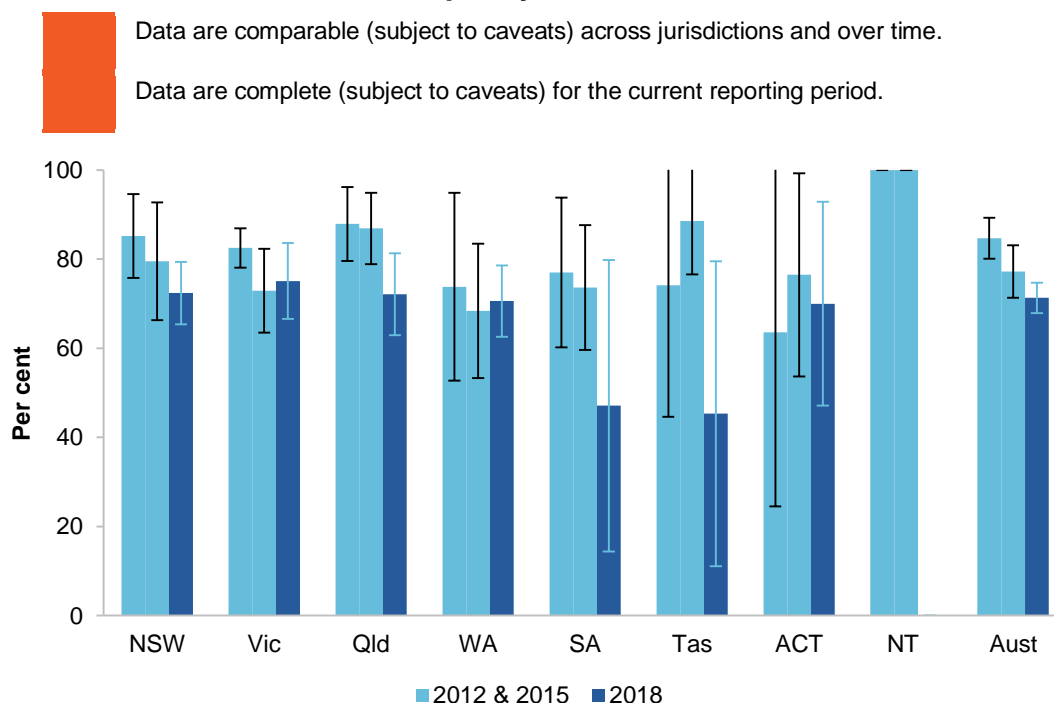

^a See box 14.9 and table 14A.45 for detailed definitions, footnotes and caveats. ^b Confidence intervals for the NT were unavailable for 2018. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) SDAC; table 14A.45.

For primary carers of people aged 65 years or over, the proportion who were satisfied with the *range* of organised services available to help them in their caring role was 36.1 per cent in 2018 — a decrease of around 10 percentage points from 2015 and 2012 (table 14A.48).

Around 7 in 10 primary carers (71.3 per cent) were satisfied with the *quality* of services provided to help them in their caring role — down from 84.7 per cent in 2012 (figure 14.10).

Figure 14.10 **Primary carers (of people aged 65 years or over) who are satisfied with the quality of services received^{a,b,c}**

^a See box 14.9 and table 14A.47 for detailed definitions, footnotes and caveats. ^b Data were not published for the NT for 2018 but are included in Australian totals. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate.

Source: ABS (unpublished) SDAC; table 14A.47.

Quality – Complaints received

‘Complaints received’ is an indicator of governments’ objective to subsidise high quality aged care services (box 14.10).

Box 14.10 **Complaints received**

'Complaints received' is defined as the number of in-scope complaints received by the Aged Care Quality and Safety Commission for residential aged care services per 1000 residential aged care residents (permanent and respite). Complaints within scope relate to Australian Government funded providers of residential care, Home Care, CHSP or flexible aged care services.

All else being equal, a low or decreasing rate of complaints can suggest higher quality services. However, a high or increasing rate of complaints may not necessarily mean lower quality services as it may reflect more effective complaints reporting and monitoring arrangements.

Further information on the operation of the Aged Care Quality and Safety Commission is available at www.agedcarequality.gov.au.

Data reported for this measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2019-20 data are available for all jurisdictions.

During 2019-20, a total of 8539 in-scope complaints were received. Nationally, 6335 complaints were for residential care services (permanent and respite), which equated to 33.4 complaints per 1000 residential care residents. This rate is up from 30.4 and 23.1 complaints per 1000 residents in 2018-19 and 2017-18 respectively (table 14A.38).

Efficiency

Cost per output unit

'Cost per output unit' is an indicator of governments' objective to subsidise aged care services in an efficient manner (box 14.11).

Box 14.11 **Cost per output unit**

'Cost per output unit' is defined by two measures:

- Australian Government expenditure per ACAT assessment — Australian Government expenditure on the Aged Care Assessment Program divided by the number of completed assessments
- expenditure per hour of service for CHSP — Australian Government expenditure on services, divided by the number of hours of service provided.

While high or increasing cost per output unit may reflect deteriorating efficiency, it may also reflect changes in aspects of the service (such as greater time spent with clients) or differences in the characteristics of clients (such as their geographic location). Similarly, while low or declining cost per output unit may reflect improving efficiency it may also reflect declining quality.

(continued next page)

Box 14.11 (continued)

Not all expenditure is included in these measures. Expenditure by local governments and non-government sources on services (for example, client fees for CHSP) and State and Territory governments' contributions to the cost of ACAT assessments are not included.

Data reported for the 'Australian Government expenditure per ACAT assessment' measure are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2019-20 data are available for all jurisdictions.

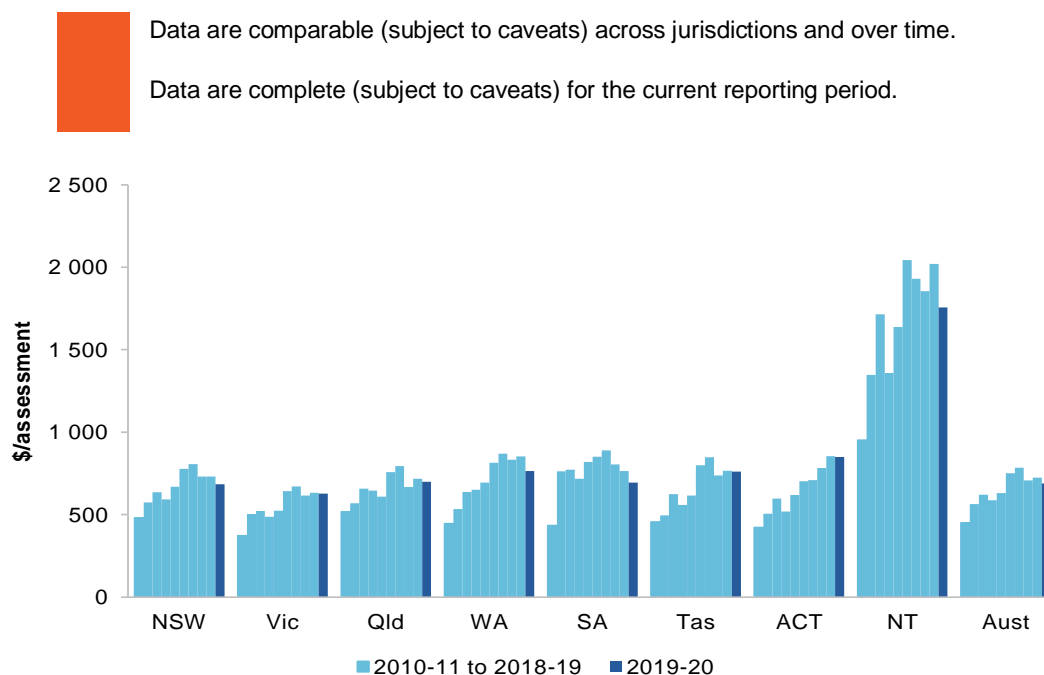

Data reported for the 'expenditure per hour of service for CHSP' measure are:

- not comparable across jurisdictions, but are comparable (subject to caveats) within jurisdictions over time
- complete (subject to caveats) for the current reporting period. All required 2019-20 data were provided for all jurisdictions.

Efficiency (cost per unit) measures for residential care and home care are under development.

Nationally, the average Australian Government expenditure per ACAT assessment during 2019-20 was \$689.65 (figure 14.11).

Figure 14.11 Australian Government expenditure on aged care assessments, per assessment (2019-20 dollars)^a

^a See box 14.11 and table 14A.49 for detailed definitions, footnotes and caveats.

Source: Department of Health (unpublished); table 14A.49.

In 2019-20, Australian Government expenditure on CHSP services per hour was higher for nursing and allied health than for domestic assistance and personal care (table 14A.50).

Outcomes

Outcomes are the impact of services on the status of an individual or group (see sub-section 1).

Social participation in the community

‘Social participation in the community’ is an indicator of governments’ objective to encourage the wellbeing and independence of older people (box 14.12).

Box 14.12 Social participation in the community

‘Social participation in the community’ is indicative of the wellbeing and independence of older people as defined by three measures, the estimated proportions of older people (aged 65 years or over) who:

- participated in social or community activities away from home in the last three months
- had face-to-face contact with family or friends not living in the same household in the last week
- did not leave home or did not leave home as often as they would like.

These measures are reported by disability status (profound or severe disability, other disability, all disability, without disability) and for all older people. Disability status is used as a *proxy* to identify older people who might need more assistance to support their social participation.

High or increasing proportions of social participation in the community are desirable.

Data reported for these measures are:

- comparable (subject to caveats) across jurisdictions (only one year of data are reported)
- complete (subject to caveats) for the current reporting period. All required 2018 data are available for all jurisdictions.

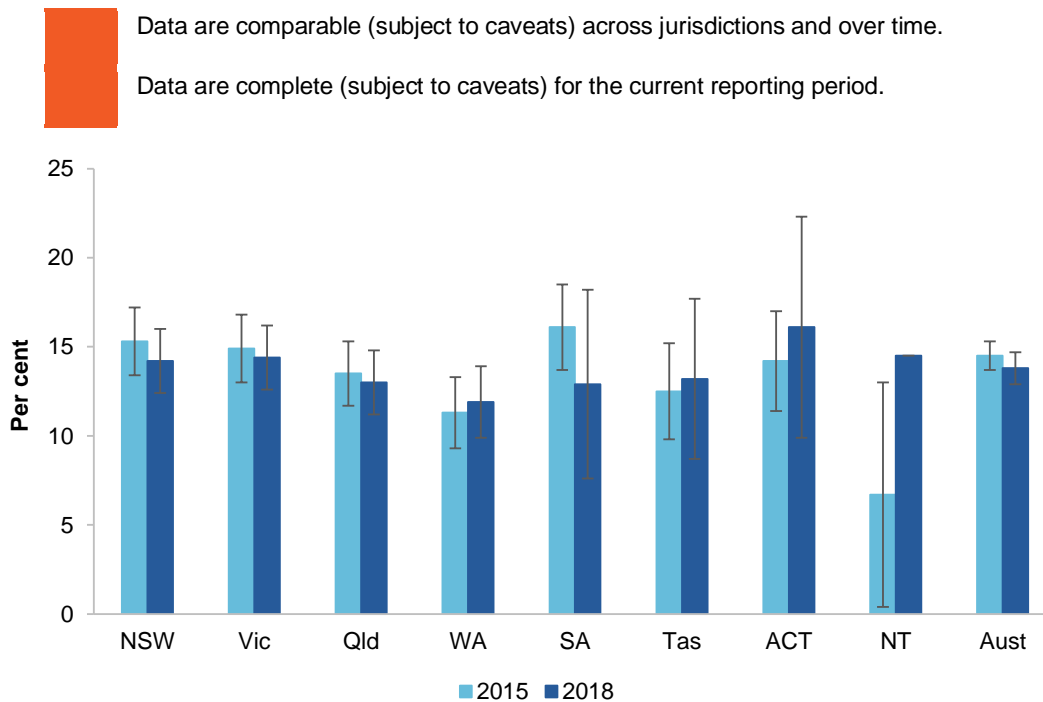

Comparability of the NT results for this indicator are affected by the SDAC as it does not include data for people living in discrete Aboriginal and Torres Strait Islander communities and very remote areas.

Nationally in 2018:

- 94.4 per cent of older people reported having participated in social or community activities away from home in the last three months; similar to 2015 (table 14A.51)
- 77.1 per cent of older people reported having face-to-face contact with family or friends that were not living in the same household in the last week; similar to 2015 (table 14A.52)
- 13.8 per cent of older people reported they did not leave home or did not leave home as often as they would like; similar to 2015 (figure 14.12).

Data are available by disability status in tables 14A.51–53.

Figure 14.12 People aged 65 years or over who did not leave home or did not leave home as often as they would like^{a,b,c}

^a Error bars represent the 95 per cent confidence interval associated with each point estimate. ^b See box 14.12 and table 14A.53 for detailed definitions, footnotes and caveats. ^c Error bars represent the 95 per cent confidence interval associated with each point estimate. Confidence intervals were not published for the NT in 2018.

Source: ABS (unpublished) SDAC; table 14A.53.

Enabling people with care needs to live in the community

‘Enabling people with care needs to live in the community’ is an indicator of governments’ objective to promote the wellbeing and independence of older people, by enabling them to stay in their own homes (box 14.13).

Box 14.13 Enabling people with care needs to live in the community

Enabling people with care needs to live in the community' is defined as proportion of older people with care needs who are living in the community.

An increasing proportion of older people with care needs who are living in the community is desirable, where the older person wants to and their health and wellbeing are not compromised. This indicator should be considered alongside the outcome indicator on social participation.

Data are not yet available for reporting against this indicator.

Maintenance of individual function

'Maintenance of individual function' is an indicator of governments' objective for aged care services to promote the wellbeing and independence of older people (box 14.14).

Box 14.14 Maintenance of individual function

'Maintenance of individual function' is defined as the improvement in the level of physical function for Transition Care Programme (TCP) clients from entry to exit, measured as the difference between the average Modified Barthel Index (MBI) score on TCP entry and exit.

An increase in the score from entry to exit is desirable.

The MBI is a measure of functioning ranging from 0 (fully dependent) to 100 (fully independent). Data are reported for recipients who completed a TCP episode only. See sub-section 14.4 for details on the TCP.

This indicator needs to be interpreted with caution. The TCP operates with some differences across jurisdictions including differences in health and aged care service systems, local operating procedures and client groups. Variation in the average MBI scores on entry and exit from the program may reflect differences in client groups for the program across jurisdictions. Only completed episodes of Transition Care are included in the calculations for this indicator.

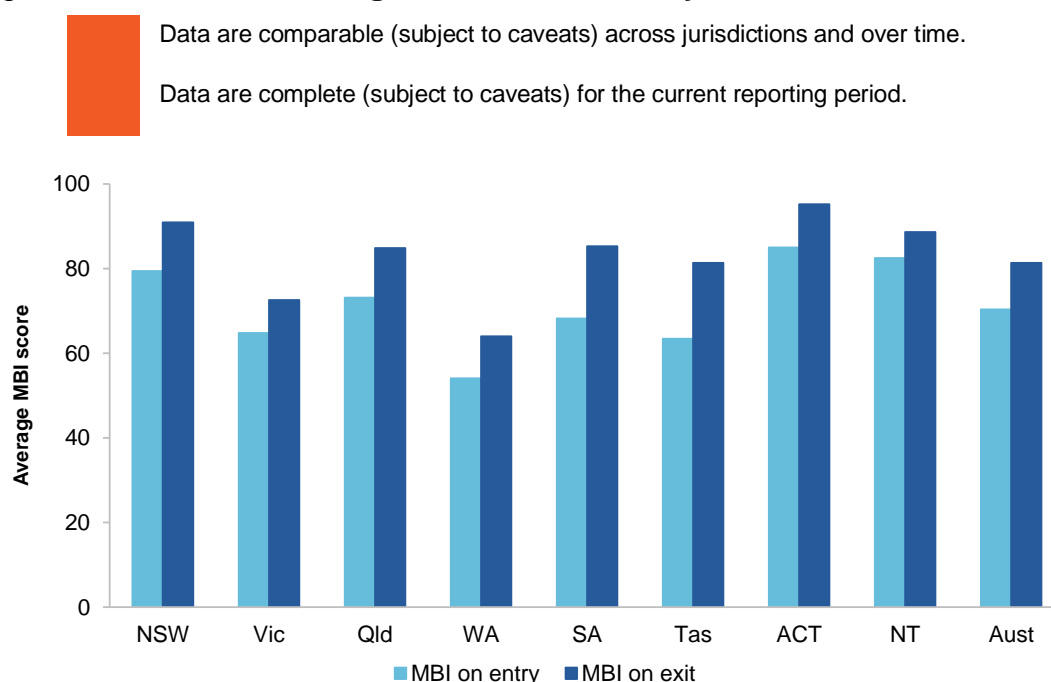

Data reported for this indicator are:

- comparable (subject to caveats) across jurisdictions and over time
- complete (subject to caveats) for the current reporting period. All required 2019-20 data are available for all jurisdictions.

The TCP is a small program only available directly upon discharge from hospital (in 2019-20 there were 24 292 admissions to the TCP) (table 14A.54). The average duration is around 8.6 weeks, with a maximum duration of 12 weeks (may be extended by a further 6 weeks in some circumstances).

Nationally in 2019-20, the average MBI score for TCP clients increased from entry (70) to exit (81) (figure 14.13), as in previous years. Entry and exit scores vary across jurisdictions (table 14A.54).

Figure 14.13 TCP — average MBI score on entry and exit, 2019-20^a

^a See box 14.14 and table 14A.54 for detailed definitions, footnotes and caveats.

Source: Department of Health (unpublished); table 14A.54.

Wellbeing and independence in residential care

‘Wellbeing and independence in residential care’ is an indicator of governments’ objective to promote the wellbeing and independence of older people, by assisting them in residential care (box 14.15).

Box 14.15 Wellbeing and independence in residential care

‘Wellbeing and independence in residential care’ is defined as the proportion of older people in residential aged care assessed as having a high quality of life. Quality of life is the degree to which an individual resident’s wellbeing meets their personal expectations and those of their carers.

A high or increasing proportion of older people in residential aged care with high quality of life is desirable.

Data are not yet available for reporting against this indicator.

14.4 Definitions of key terms

Accreditation	<p>Accreditation is a key component of the Australian Government’s quality framework for federally funded residential aged care and is a quality assurance system for residential aged care services — based on the principle of continuous improvement.</p> <p>Accreditation requires assessment against the Aged Care Quality Standards - grouped into eight standards: consumer dignity and choice; ongoing assessment and planning with consumers; personal care and clinical care; services and supports for daily living; service environment; feedback and complaints; human resources; and organisational governance.</p>
Aged care	<p>Services funded and/or provided by governments that respond to the functional and social needs of older people, and the needs of their carers. Home care and home support services aim to optimise independence and to assist older people to stay in their own homes, while residential care services provide accommodation and care for those who can no longer be cared for at home. Assessment of care needs is an important component of aged care.</p> <p>The majority of aged care services assist in activities of daily living such as personal care (for example, bathing and dressing), housekeeping and meal provision. Other services aim to promote social participation and connectedness. These services are delivered by trained aged care workers and volunteers. However, aged care services may also be delivered by health professionals such as nurses and occupational therapists.</p> <p>Aged care services generally aim to promote wellbeing and foster function rather than to treat illness. Although some aged care services such as transition care have a specific restorative role, they are distinguished from the health services described in Part E of this Report. Aged care services may be funded through programs specifically or mainly directed to older people, or through programs that address the needs of people of different ages.</p>
Aged care target population	<p>The Aged Care target population is defined as all people (Aboriginal and Torres Strait Islander and non-Indigenous) aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years. This is the population within the scope of, and funded for services under, the national aged care system.</p>
Aged care type patient (unmet need indicator)	<p>Aged care type patients are those who are waiting for residential aged care where the care type is <i>Maintenance</i>, a diagnosis was reported as <i>Person awaiting admission to residential aged care service</i> and the separation mode was not <i>Other (includes discharge to place of usual residence)</i>. Includes overnight separations only.</p>
Aged care planning population	<p>The Aged care planning population is defined as people aged 70 years or over. This is the population used by the Australian Government for its needs-based planning framework to ensure sufficient supply of both places by matching the growth in the number of aged care places with growth in the aged population. It also seeks to ensure balance in the provision of services between metropolitan, regional, rural and remote areas, as well as between people needing differing levels of care.</p> <p>Under the framework, the Australian Government seeks to achieve and maintain a specified national provision level of subsidised operational aged care places for every 1 000 people aged 70 years or over. This provision level is known as the aged care provision ratio (DoHA 2012).</p>
Aged Care Quality Standards	<p>From 1 July 2019 organisations providing Australian Government subsidised aged care services have been required to comply with the Aged Care Quality Standards. Organisations are assessed by the Aged Care Quality and Safety Commission and must be able to provide evidence of their compliance with the eight standards (ACQSC 2020):</p> <p>Standard 1 — Consumer dignity and choice: this standard reflects concepts important in treating consumers with dignity and respect, supporting choice and independence, and fostering social inclusion, health and wellbeing.</p>

	<p>Standard 2 — Ongoing assessment and planning with consumers: planned care and services should meet each consumer’s needs, goals and preferences, and optimise their health and wellbeing.</p> <p>Standard 3 — Personal and clinical care: consumers and the community expect the safe, effective and quality delivery of personal and clinical care, applying to all services delivering personal and clinical care specified in the <i>Quality of Care Principles</i>.</p> <p>Standard 4 — Service and supports for daily living: covers a wide range of options that aim to support consumers to live as independently as possible.</p> <p>Standard 5 — Organisation’s service environment: applies to physical service environments that organisations provide for residential care, respite care and day therapy centres.</p> <p>Standard 6 — Feedback and complaints: requires an organisation to have a fair, accessible, confidential and prompt system for resolving complaints.</p> <p>Standard 7 — Human resources: requires an organisation to have and use a skilled and qualified workforce.</p> <p>Standard 8 — Organisational governance: this Standard holds the governing body of an organisation responsible for the organisation and delivery of safe and quality care services.</p> <p>Further detail on the standards can be found on the ACQSC website at https://agedcarequality.gov.au.</p>
Ageing in place in residential care	An approach that aims to provide residents with appropriate care and increased choice by allowing them to remain in the same facility regardless of changes in their level of care needs. It also allows couples with different levels of care needs to be cared for in the same facility. The main facet of ‘ageing in place’ is that funding is tied to the assessed care needs of the client rather than to the services provided by the facility.
Capital expenditure on residential services	Expenditure on building and other capital items, specifically for the provision of Australian Government funded residential aged care.
Care leaver	A care leaver is a person who was in institutional care (such as an orphanage or mental health facility) or other form of out-of-home care, including foster care, as a child or youth (or both) at some time during their lifetime (DoHA 2012).
Centre-based respite	Respite care provided from a facility such as a day care or health centre. Respite care is usually combined with social support services to maintain the functional capabilities of the person receiving care.
Complaint	A complaint by the affected care recipient or his or her representative, or anyone else, to the ACQSC about matters relevant to an approved provider’s responsibilities under the <i>Aged Care Act 1997 (Cwlth)</i> or the Aged Care Principles.
Disability	In the ABS SDAC 2018, a person has a disability if they report they have a limitation, restriction or impairment, which has lasted, or is likely to last, for at least six months and restricts everyday activities. This includes: loss of sight (not corrected by glasses or contact lenses); loss of hearing where communication is restricted, or an aid to assist with, or substitute for, hearing is used; speech difficulties; shortness of breath or breathing difficulties causing restriction; chronic or recurrent pain or discomfort causing restriction; blackouts, seizures, or loss of consciousness; difficulty learning or understanding; incomplete use of arms or fingers; difficulty gripping or holding things; incomplete use of feet or legs; nervous or emotional condition causing restriction; restriction in physical activities or in doing physical work; disfigurement or deformity; mental illness or condition requiring help or supervision; memory problems or periods of confusion causing restriction; social or behavioural difficulties causing restriction; long term effects of head injury, stroke or other brain damage causing restriction; receiving treatment or medication for any other long term conditions or ailments and still being restricted and any other long term conditions resulting in a restriction.

Elapsed time	The measure of the time elapsed between an ACAT approval and entry into a residential care service or assignment of a Home Care Package.
People from non-English speaking countries	People who were born in non-English speaking countries. English-speaking countries are defined as Australia, New Zealand, the United Kingdom, Ireland, the United States, Canada and South Africa.
People with profound, severe and moderate disability	<p>A person with a profound disability is unable to do, or always needs help with, a core activity task.</p> <p>A person with a severe disability: sometimes needs help with a core activity task, and/or has difficulty understanding or being understood by family or friends, or can communicate more easily using sign language or other non-spoken forms of communication.</p> <p>A person with a moderate disability needs no help, but has difficulty with a core activity task.</p>
Older people	All people (Aboriginal and Torres Strait Islander and non-Indigenous) aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years.
Personal care	Assistance in undertaking personal tasks (for example, bathing).
Places	A capacity within an aged care service for the provision of residential care, community care or flexible care in the residential care context to an individual (<i>Aged Care Act 1997 (Cwlth)</i>); also refers to 'beds' (<i>Aged Care (Consequential Provisions) Act 1997 (Cwlth)</i> , s.16).
Primary carer	In the ABS SDAC, a primary carer is defined as a person who provides the most informal assistance to a person with one or more disabilities, with one or more of the core activities of mobility, self care or communication.
Respite care	Alternative care arrangements for dependent people living in the community, with the primary purpose of giving a carer or a care recipient a short term break from their usual care arrangement.
Special needs groups	Section 11-3 of the <i>Aged Care Act 1997</i> , specifies the following people as people with special needs: people from Aboriginal and Torres Strait Islander communities; people from culturally and linguistically diverse backgrounds; veterans; people who live in rural or remote areas; people who are financially or socially disadvantaged; people who are homeless or at risk of becoming homeless; care-leavers; parents separated from their children by forced adoption or removal; and lesbian, gay, bisexual, transgender and intersex people.
Veterans	Veterans, war widows, widowers and dependants who hold a Repatriation Health Card and are entitled to health services and treatment under the <i>Veterans' Entitlements Act 1986 (VEA)</i> , <i>Safety, Rehabilitation and Compensation Act 1988 (SRCA)</i> or the <i>Military Rehabilitation and Compensation Act 2004 (MRCA)</i> .

Impact of COVID-19 on data for the Aged care services section

COVID-19 may affect data in this Report in a number of ways. This includes in respect of actual performance (that is, the impact of COVID-19 on service delivery in 2020 which is reflected in the data results), and the collection and processing of data (that is, the ability of data providers to undertake data collection and process results for inclusion in the Report).

For the Aged care services section, there has been some impact on the data that is attributable to COVID-19, but this has not affected either the comparability or completeness of any indicators. The data affected relate to the measurement of compliance with aged care quality standards.

(a) Data in this table are the target and planning populations used for reporting in this chapter.

(b) Data are based on Statistical Local Area (SLA) (for 2008 to 2013) or Statistical Area 2 (SA2) (from 2014) population projections prepared by the Australian Bureau of Statistics (ABS) for the Department of Health according to assumptions agreed to by the Department of Health. Data for June 2008–2012 are 2006 Census-based population projections. Data from June 2013 are 2011 Census-based population projections.

(c) For years before 30 June 2013, remoteness areas are based on the ABS Australian Standard Geographic Classification (ASGC) (refer to Cat. no. 1216.0 for more information). From 30 June 2013, remoteness areas are based on the ABS Australian Statistical Geographic Standard (ASGS) (refer to Cat. no. 1270.0.55.001 for more information).

Table 14A.1 **Aged care target and planning populations, by remoteness areas, 30 June ('000) (a), (b), (c)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(d)	From June 2011 to June 2013, Aboriginal and Torres Strait Islander population projections were prepared from 2006 Census based Aboriginal and Torres Strait Islander Experimental ERP data (at SLA level) projected forward, so as to align with published ABS <i>Aboriginal and Torres Strait Islander Experimental Estimates and Projections</i> (ABS Cat. no. 3238.0, series B) at the state level.									
(e)	From June 2014, Aboriginal and Torres Strait Islander projections align closely to ABS Cat. no. 3238.0 — <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2001 to 2026</i> (which are 2011 Census-based). These projections have been adjusted slightly by the Department of Health to include Other Territories.									
(f)	For June 2019 onwards, Aboriginal and Torres Strait Islander population is based on projections prepared using the 2016 Census and published in ABS <i>Estimates and Projections, Aboriginal and Torres Strait Islander Australians, 2006 to 2031</i> (ABS Cat. no. 3238.0, series B)									
	.. Not applicable. – Nil or rounded to zero.

Table 14A.2 **People receiving aged care services, 2019-20 (a), (b), (c), (d), (e)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(a)	Includes people who received services at any time in the 12 month period to 30 June. Clients may receive care from multiple services. Clients may receive services in more than one state or territory so the Australia totals may be less than the sum of the states and territories.									
(b)	A person may receive services under more than one aged care program during a year so the number of unique individuals accessing aged care cannot be determined.									
(c)	The State or Territory of people receiving services is derived from the location of the service provider outlet.									
(d)	Data by Indigenous status exclude clients whose Indigenous status has not been identified/stated. For service areas with a high proportion of Indigenous status 'not identified/stated', the non-Indigenous rate will be understated because it is likely that a large number of people aged 65+ years with unknown Indigenous status are non-Indigenous. See table 14A.1 for information on population data used.									
(e)	For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).									
	.. Not applicable. – Nil or rounded to zero.

Transition Care Program	\$m	32.9	43.1	17.1	13.7	8.2	6.5	2.5	0.5	124.5
Total Residential Care and Flexible Care Services (d)	\$m	4 600.3	3 830.1	2 798.8	1 295.5	1 296.4	346.4	151.7	72.6	14 399.5
Aged Care Quality	\$m	72.4	10.0	8.2	4.3	3.1	0.5	43.0	3.3	146.7
Total expenditure on Aged Care Services (d)	\$m	6 678.3	5 552.2	4 243.0	2 066.5	1 833.3	532.0	355.5	151.6	21 511.1

- (a) Not all Australian, State and Territory government aged care expenditure is included in these estimates. For example, capital expenditure by the Australian, State or Territory governments is excluded (table 14A.6).
- (b) In 2019-20 several emergency funding and assistance packages in response to the COVID-19 pandemic were announced by the Australian Government. Funding for those measures are absorbed in expenditure data for Other Access and Information Services, aged care programs (Residential Aged Care, Home Care Packages, Home Support, NATISFACP and MPS), and Aged Care Quality).
- (c) The Australian totals can include other expenditure that cannot be attributed to individual states or territories.
- (d) Totals may not add due to rounding.
- (e) Australian Government expenditure includes funding of younger people with disability using residential aged care and home care. Also includes expenditure on specialist dementia care units.
- (f) The category Other home care and support includes expenditure on Continence Aids Payments and the Continuity of Support Program.
- (g) CHSP expenditure includes additional expenditure on My Aged Care and Regional Assessment Service.
- (h) Figures are subject to significant claiming lag and may therefore be subject to revision. These figures may also differ slightly from the figures published in the DVA annual report for this reason. Total program expenses reported does not include expenditure on wound management consumables.
- (i) Recurrent funding to residential care providers is derived using accrual based reporting (except for DVA clients which is derived using cash based reporting). Due to accrual adjustments, for smaller jurisdictions in particular, this can lead to significant year on year variation.
- (j) The DVA expenditure figures are subject to lag and may therefore be subject to revision.
- (k) State and Territory governments supplements relate to adjusted subsidy reduction payments, Enterprise Bargaining Agreements and rural small nursing homes.
- (l) The category Other flexible and residential aged care includes expenditure on Zero Real Interest Loans, Innovative Pool, Accommodation Bond Guarantee Scheme, Bond Management and other residential care and flexible care.
- (m) For Victoria, expenditure is the cash contribution from the Victorian Government to Health Services.
- (n) For Queensland, expenditure is a cash component based on full occupancy of the transition care places.
- (o) For Tasmania, the State Government contribution reported includes cash and in-kind payments. These preliminary expenditure figures have been provided in September 2020 and may vary from those produced through the annual accountability reporting process for the Australian Department of Health.
- (p) For the NT, this expenditure is in-kind contributions only.
– Nil or rounded to zero.

(a) Time series financial data are adjusted to 2019-20 dollars using the General Government Final Consumption Expenditure (GGFCE) chain price deflator (2019-20=100) (table 2A.26).

(b) See table 14A.5 for data on the sub-categories of service expenditure.

(c) See table 14A.3 for footnotes related to latest year data. Table 14A.5 contains footnotes for earlier years.

(d) Due to revisions to historical VHC expenditure data, VHC expenditure categories and total aged care expenditure may differ slightly from prior editions of the RoGS.

(e) The Australian totals can include other expenditure that cannot be attributed to individual states or territories.

(f) Investment amounts in My Aged Care which are counted in Other Access and Information are distributed by state and territory in 2019-20, based on where that investment occurred or was allocated to (primarily NSW, Queensland and the ACT), whereas in previous years data were only available as a national figure.

- (a) Time series financial data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26).
- (b) The Australian totals can include other expenditure that cannot be attributed to individual states or territories.
- (c) See table 14A.3 for footnotes related to latest year data.
- (d) On 1 August 2013, the Home Care Packages Program replaced the former community packaged care programs — Community Aged Care Package (CACAP), Extended Aged Care At Home (EACH) packages and Extended Aged Care At Home – Dementia (EACHD) packages. Australian Government expenditure on Home Care includes State and Territory governments' funding of younger people with disability using home care. The State and Territory governments' funding of these services is identified separately (but is not double counted in the totals).
- (e) The CHSP officially replaced four separate home care and support programs from 1 July 2015 (except in Victoria and WA): Commonwealth HACC, Day Therapy Centres (DTC), the planned respite component of the NRCP and ACHA (Assistance with Care and Housing for Aged) programs. However, Commonwealth HACC, DTC, NRCP and ACHA programs were extended from 1 July 2015 to 31 October 2015 to allow organisations to transition to the CHSP from 1 November 2015. Expenditure on home support for 2015-16 is combined expenditure from the former Commonwealth HACC, DTC, NRCP and ACHA programs together with CHSP and also includes additional expenditure on My Aged Care and Regional Assessment Service. WA transitioned to the CHSP on 1 July 2018.
- (f) For Victoria, the transition to CHSP occurred on 1 July 2016 and this is reflected in the expenditure from 2016-17.
- (g) Due to delays in finalising the 2013-14 and 2014-15 Schedule B of the National Partnership Agreement for Transitioning Responsibilities for Aged Care and Disability Services, State and Territory funding for young people with disability was not expended in 2013-14 or 2014-15.
- (h) DVA community nursing expenditure data are subject to significant claiming lag and may therefore be subject to revision. These figures may also differ slightly from the figures published in the DVA annual report for this reason. Community nursing program expenditure does not include wound management consumables.
- (i) The VHC service provision expenditure does not include fees for respite care services, as these are paid under separate appropriations. Social Assistance is also not included. Residential respite is funded under the aged care appropriation and separate figures are not available.
- (j) Recurrent funding to residential care providers is derived using accrual based reporting (except for DVA clients which is derived using cash based reporting). Due to accrual adjustments, for smaller jurisdictions in particular, this can lead to significant year on year variation.
- (k) Australian Government (Department of Health) expenditure on residential aged care and home care includes State and Territory governments' funding of younger people with disability using residential aged care and home care. The State and Territory governments' funding of these services is identified separately (but is not double counted in the totals).
- (l) DVA expenditure on residential aged care are subject to lag and may therefore be subject to revision. For data on expenditure per client, see table 14A.8.
- (m) State and Territory governments' supplements are for adjusted subsidy reduction, Enterprise Bargaining Agreement and rural small nursing homes.
- (n) The increase in expenditure for the residential aged care supplement for Tasmania in 2016-17 is related to an increase in the Small Rural Nursing Home Supplement. The increase is attributable to staff costs associated with the transfer of the James Scott Wing to the non-government sector. The decrease in the rural small nursing home supplement in 2017-18 for Tasmania is attributable to the transfer of James Scott Wing to the non-government sector in May 2017.
- (o) The category 'Other flexible and residential aged care' includes expenditure on Innovative Pool, Zero Real Interest Loans and other residential care and flexible care.
- (p) Investment amounts in My Aged Care which are counted in Other Access and Information are distributed by state and territory in 2019-20, based on where that investment occurred or was allocated to (primarily NSW, Queensland and the ACT), whereas in previous years data were only available as a national figure.
- (q) Due to revisions to historical VHC expenditure data, VHC expenditure categories and total aged care expenditure may differ slightly from prior editions of the RoGS.

na Not available. . Not applicable. – Nil or rounded to zero. np Not published.

(a) Time series financial data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26).

(b) These expenditure data are not included in calculations of government expenditure reported in tables 14A.3–5.

(c) While Queensland maintains a regular maintenance and capital renewal program for all its facilities it is not always able to separate capital expenditure that is for aged care services only, from expenditure in the general health capital program

(d) While Tasmania maintains a regular maintenance and capital renewal program for all its facilities it is not always able to quantify its capital expenditure on aged care services only.

(e) Rural and Regional Building Fund/Rural and Remote Building Fund expenditure is to assist aged care residential services in rural or remote locations that are unable to meet the cost of necessary capital works from the income they receive through resident accommodation payments (accommodation bonds and accommodation charges, and the capital component of Australian Government recurrent funding).

(f) Includes Capital Infrastructure (Remote and Indigenous services) expenditure that is used to assist services providing aged care to Indigenous people and remote communities.

(g) From 2011-12 onwards, Capital Infrastructure expenditure (Remote and Indigenous Services) is not included, but is in expenditure on Workforce and Quality, and Ageing and Service Improvement in table 14A.5.

TABLE 14A.7

Table 14A.7 **Australian Government (DVA) Veterans' Home Care (VHC) and Community Nursing programs, 2019-20**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
Total program expense (j)	\$'000	63 800	13 900	26 900	12 600	8 200	4 700	2 500	100	132 500
Average expense per client (k)	\$	691	714	634	840	795	709	668	949	699

- (a) 'Veterans approved for VHC Services' and the 'Average number of hours approved per year for non-transitional veterans' relate to services that were approved to occur but not necessarily provided in the reference year.
- (b) Individual service totals will not add to the all services total because veterans may be approved for more than one service. In addition, state/territory totals may slightly exceed total Australia figure as some veterans move state during the year and are counted in each state of residence.
- (c) Transitional veterans are those veterans who transferred to the VHC program from the HACC program, often with grandfathered service and/or fee levels, and so may have been approved for higher hours of service than other VHC clients. Veterans who did not transfer from the HACC program are referred to as 'non-transitional'.
- (d) These figures are approximations only; the data has been derived from percentage age distributions sourced from a separate data set.
- (e) The Service Provision expense figures do not include fees for respite care services, as these are paid under separate appropriations. Social Assistance is also not included. Residential respite is funded under the aged care appropriation and separate figures are not available.
- (f) Average expense per client figures are for core VHC services only; that is, they exclude Respite Services (in-home, emergency and residential) as these are paid under separate appropriations. They also exclude Social Assistance.
- (g) Individual state/territory totals may not add up to the total for Australia because veterans can move between states. Individual service totals may not add up to the total for all services because veterans can move between service types.
- (h) DVA Community Nursing services are provided under a casemix model using a 28-day claiming cycle, with clients classified into categories based on care interventions. As a substantial proportion of clients receive services for well under 12 months, the average hours per 28-day claim period more accurately reflects the average service levels received by clients.
- (i) Estimated as some data on hours provided are not available.
- (j) Total Program Expense data are subject to significant claiming lag and may therefore be subject to revision. These figures may differ slightly from the figures published in the DVA annual report for this reason. Total program expenses reported does not include expenditure on wound management consumables.
- (k) Average expenses do not include wound management consumables.

- (a) Time series financial data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26).
- (b) The figures are subject to lag and may therefore be subject to revision. All figures on the number of, and expenditure on, veterans in residential aged care are sourced by DVA from the Department of Health. For DVA expenditure by state or territory, Department of Health calculations are based on data at state or territory level supplied by DVA, adjusted to sum to the total accrual amount for Australia. Recurrent funding to residential care providers is derived using cash based reporting.
- (c) The Australian client number includes overseas clients.
- (d) The state/territory figures for 2011 are estimates.
- (e) The category 'Veterans 65 years or over' includes those whose age is unknown. The Australian total for eligible veterans is the treatment population (both veterans and dependants) and does not include those clients residing overseas

(a) For June 2016, these flexible places are included in home care level 2. For June 2017, these programs are excluded as data on the number of recipients for these programs are not available.

(b) For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).

(c) From 27 February 2017, all home care packages have been provided to individual consumers. Previously home care packages were awarded to approved providers. As a result, places are no longer allocated by state/territory.

(a) Data exclude flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool program and Multi-Purpose Service Program. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).

(b) Includes basic subsidy plus Conditional Adjustment Payment (CAP). Subsidy reported in constant 2018-19 dollars using the GCFE chain price deflator (2019-20=100).

(c) Subsidy plus CAP divided by the number of recipient days, multiplied by 365. Differences in average annual subsidies reflect differences in the dependency of residents.

(d) The ACFI proportions are for permanent residents that have an ACFI classification.

(e) Numbers of all residents at 30 June (whether they have an ACFI or not).

(f) Numbers of permanent residents are 'all permanent residents' at 30 June (whether they have an ACFI or not).

– Nil or rounded to zero.

- (a) The occupancy rate is defined as the proportion of available bed days that were used for residential care. Occupancy is measured over the financial year however places are reported at 30 June.
- (b) Data exclude flexible residential places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, Innovative Pool program and Multi-Purpose Service Program. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).
- (c) See footnotes to table 14A.1 for detail on regional data classifications.
- (d) The data on the number of operational places from June 2015 to June 2017 (inclusive) are not comparable to the equivalent data in table 14A.10, which include flexible places.

.. Not applicable. – Nil or rounded to zero. **np** Not published.

- (a) Places do not include those that have been approved, but are not yet operational. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).
- (b) Government planning targets are based on people aged 70 years or over. However, in recognition of poorer health among Aboriginal and Torres Strait Islander communities, planning in some cases also takes account of the Aboriginal and Torres Strait Islander population aged 50–69 years. This means that the provision ratio based on the population aged 70 years and over may appear high in areas with a high Aboriginal and Torres Strait Islander population (such as the NT).
- (c) Population data are calculated on a different basis across years. See table 14A.1 for notes and sources of population data.
- (d) Data include flexible care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program, MPS Program and Innovative Pool Program.
- (e) Totals may not add due to rounding.
- (f) Transition care ratios for 2017 include places for transition care and short term restorative care (STRC).

Table 14A.16 Residential and community aged care places/recipients per 1000 population, by remoteness, 30 June (a), (b)

		<i>Residential aged care places Unit per 1000 population (c)</i>	<i>Community aged care recipients per 1000 population (d)</i>
<i>2020</i>			
Major Cities	rate	78.0	52.1
Inner Regional and Outer Regional	rate	65.1	44.8
Remote and Very Remote	rate	41.8	32.4

- (a) Population based on people aged 70 years and over plus Aboriginal and Torres Strait Islander people aged 50–69 years at 30 June 2020.
- (b) These data should not be compared with data for 30 June 2019 in the previous 2020 Report, as data for the two years were derived using different methods.
- (c) Count is of operational residential places delivered in Australian Government subsidised residential aged care facilities at 30 June 2020 and includes places in the MPS program and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Pool programs delivered in a residential aged care facility.
- (d) Count is of operational home care recipients at 30 June 2020 and includes: Home Care Packages 1-4, Transition Care Program, Short Term Restorative Care, and Multi-Purpose Services and places delivered under the National Aboriginal and Torres Strait Islander Flexible Aged Care and Innovative Care Programs provided in the community.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) The proportion of people from CALD backgrounds in the aged care target population is the number of people aged 65 years or over from CALD backgrounds divided by the total number of people aged 65 years or over.
- (b) The proportion of people from CALD backgrounds in the population of service clients is the number of clients aged 65 years or over from CALD backgrounds divided by the number of clients aged 65 years or over.
- (c) For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).
- (d) People from CALD backgrounds are defined as those who were born overseas in countries other than UK, Ireland, NZ, Canada, South Africa and USA.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) The proportion of people from Aboriginal and Torres Strait Islander backgrounds in the aged care target population is the number of Aboriginal and Torres Strait Islander people aged 50 years or over divided by the sum of the number of people who are Aboriginal and Torres Strait Islander aged 50-64 years and all people aged 65 years or over.
- (b) The proportion of people from Aboriginal and Torres Strait Islander backgrounds in the population of service clients is the number of Aboriginal and Torres Strait Islander clients aged 50 years or over divided by the sum of the number of clients aged 65 years or over and clients who are Aboriginal and Torres Strait Islander aged 50-64 years.
- (c) For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).
- (d) Includes National Aboriginal and Torres Strait Islander Flexible Aged Care Program residential aged care places attributed as residents. Flexible Home Care places under the National Aboriginal and Torres Strait Islander Flexible Aged Care Program are included in Home Care Levels 1–2. Excludes Multi-Purpose Services.
- (e) Totals may not add due to rounding.
- (f) Results for this table may have been derived using small numbers, in particular where the rate/proportion is for a small program or smaller jurisdiction.
- (g) See table 14A.1 for notes and sources of population data.
- (h) As at 30 June.
– Nil or rounded to zero.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) The proportion of people in rural and remote areas in the aged care target population is the number of people aged 65 years or over receiving aged care services in outer regional, remote/very remote areas (location of the service provider outlet, except Commonwealth Home Support Programme which is based on the location of the client according to the most recent client record in the DSS Data Exchange), divided by the total number of people aged 65 years or over residing in outer regional, remote/very remote areas.
- (b) The proportion of people in rural and remote areas in the population of service clients is the number of people aged 65 years or over receiving aged care services in outer regional, remote/very remote areas (location of the service provider outlet, except Commonwealth Home Support Programme which is based on the location of the client according to the most recent client record in the DSS Data Exchange), divided by the number of clients aged 65 years or over.
- (c) For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents).
- (d) As at 30 June.

- (a) Concessional residents are those who entered care prior to 20 March 2008, and who at the date they entered care, received an income support payment and had not owned a home for the last two years (or whose home was occupied by a 'protected' person, for example, the care recipient's partner) and had assets of less than 2.5 times the annual single basic age pension (or for a transfer from 20 September 2009 less than 2.25).
- (b) Assisted residents are those meeting the above criteria, but with assets between 2.5 and 4.0 times the annual single basic age pension (or for a transfer from 20 September 2009 between 2.25 and 3.61).
- (c) Supported residents are those who entered permanent residential care on or after 20 March 2008 (or who re-enter care on or after 20 March 2008 after a break in care of more than 28 days) and have assets below a set amount.
- (d) Low means residents are those who have entered permanent residential care on or after 1 July 2014 (or who re-enter care on or after 1 July 2014 after a break in care of more than 28 days; or who re-enter care on or after 1 July 2014 and choose to 'opt in' to the new means testing arrangements) and have a daily means tested amount (assessed under the combined assets and income means test) at the date they enter care that is less than the maximum daily rate of accommodation supplement.
- (e) These data refer to permanent residents only, at their first admission. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).
- (f) Low means residents data were not available for 2014-15. Therefore, the 2014-15 data for new residents are not available and the data for all permanent residents care days are not comparable with other years.

na Not available.

(a) Reports provisional data that have not been validated and may be subject to revision. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).

Table 14A.22 HACC services received per 1000 people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years (a), (b), (c), (d), (e), (f), (g)

	<i>NSW</i>	<i>Vic (h)</i>	<i>Qld</i>	<i>WA</i>	<i>SA (i)</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(b)	From 1 July 2012, the Australian Government assumed full funding and operational responsibility for Commonwealth HACC services delivered to people aged 65 years or over (or 50 years or over for Aboriginal and Torres Strait Islander peoples), except in WA and Victoria, where state-based arrangements continue for WA, but for the Victoria the transition occurred on 1 July 2016. From 1 July 2015, the Commonwealth Home Support Programme (CHSP) consolidated aged care services provided under the Commonwealth HACC Program, National Respite for Carers Program, Day Therapy Centres Program, and the Assistance with Care and Housing for the Aged Program. For these reasons, HACC data are reported for WA and Victoria only in 2015-16 and for WA only from 2016-17. WA transitioned to CHSP on 1 July 2018.								
(c)	Data in this table represent HACC services received by people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years, divided by people aged 65 years or over and Aboriginal and Torres Strait Islander Australians aged 50–64 years.								
(d)	The proportion of HACC funded agencies that submitted HACC Minimum Data Set data differed across jurisdictions and years. Actual service levels may be higher than those reported here.								
(e)	See table 14A.1 for notes and sources of population data.								
(f)	The proportion of HACC clients with unknown or null Aboriginal and Torres Strait Islander status differed across jurisdictions and years. Client records for people aged 50–64 years that do not contain information on Aboriginal and Torres Strait Islander status are excluded.								
(g)	The proportion of HACC clients with unknown or invalid date of birth differed across jurisdictions and years. Client records that do not contain information on date of birth are excluded.								
(h)	Validation processes for the Victorian Data Repository (VDR) and the HACC Minimum Data Set differ and actual service levels may be up to 9 per cent higher or lower than stated. For example, for 2013-14, in the case of respite care, the VDR recorded service levels 27 per cent higher than shown in the table, for Centre Based Day Care, the VDR recorded service levels 13 per cent higher than shown in the table and for counselling, the VDR recorded service levels 26 per cent higher than shown in the table. No targets are set and relatively little is reported.								
(i)	Validation processes for SA may have differed from HACC MDS and actual service levels may be up to 5 per cent higher or lower than stated.								
(j)	Allied Health Care includes at home and at centre.								
(k)	Nursing Care includes at home and at centre.								
(l)	Goods and Equipment levels for WA in 2014-15 may be under-reported due to a data submission error.								
	.. Not applicable. – Nil or rounded to zero.

- (a) Data in this table include complete assessments only for all years and exclude assessments which were withdrawn or cancelled.
- (b) The number of Aboriginal and Torres Strait Islander assessments is based on self-identification of Aboriginal and Torres Strait Islander status. Therefore these figures may not accurately represent the number of assessment for Aboriginal and Torres Strait Islander persons.
- (c) Results for this table may have been derived using small numbers, in particular where the rates are for a smaller jurisdiction. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).
- (d) See footnotes to table 14A.1 for information on population projections.
- (e) Data for 2015-16 was extracted from the Ageing and Aged Care Data Warehouse in October 2017. ACATs transitioned to use My Aged Care systems in early 2016. My Aged Care assessment data contained an additional 37 473 assessments nationwide that could not be attributed to a state or territory.

Source: Department of Health (unpublished) and Australian Government Department of Health Aged Care data warehouse.

- (a) The population data used to calculate these rates are for 31 December and are available in table 2A.2 of the Chapter 2, Statistical Context attachment.
- (b) For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).
- (c) For 2015-16, there were 694 Home Care and 979 residential aged care assessment approvals excluded as state/territory was not identified.
- (d) The ACAP 2009-10 data for NSW in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and/or Aged Care Assessment Team amalgamations undertaken by the respective state governments. This has a flow-on effect on the national figures.

- (a) The measure of 'elapsed time' is utilised because the period of time between the ACAT approval and entry into residential care and assignment of Home Care may be due to factors which cannot be categorised as 'waiting time'.
- (b) Prior to 27 February 2017, consumers were approved at broad-banded package levels (1-2 or 3-4), without priority. Consumers are now approved at individual package levels (1, 2, 3 or 4) and have their priority considered in a nationally consistent way. People are also assigned packages directly, which allows them more opportunity to engage a provider of their choice.
- (c) Data only include records where ACAT approval is before admission date. Data only include first admissions in the financial year. Data are based on location of the service. Data with unknown elapsed time are excluded.
- (d) Elapsed time refers to the time between ACAT approval and the assignment of a Home Care Package to a client, as distinct from the actual receipt or delivery of services.
- (e) Results are rounded to the nearest month. For example, an elapsed time of precisely 4 months and 23 days would be rounded up to be presented as 5 months of elapsed time. Similarly, an elapsed time of precisely 8 months and 3 days would be represented as an elapsed time of 8 months.

Table 14A.26 Elapsed time between ACAT approval and entry into aged care services (a), (b)

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(f)	The emphasis is on package level assigned as opposed to approved level. As such, the data do not differentiate between whether the package being assigned was at a person's approved level or not. For instance, the data shown for level 2 refer to the time a person has waited to get their level 2, and can be for a person who has been approved for a level, 2, 3 or 4, dependent on their Minimum Package Threshold. (For example, a person with a level 4 approval, with their Minimum Package Threshold set at level 2, will have their elapsed time accounted at their level 2, 3, and 4 package offers). Elapsed times for a specific package level will be the same irrespective of whether that package represents a person's interim package or their approved package.									
(g)	Results reflect the number of package assignments made, not the number of people who were assigned a package, as a person may have been assigned multiple packages in one financial year.									
(h)	Assignments made to both the high priority service NPS and medium priority service NPS are consolidated to derive the results.									
(i)	In 2019-20, 175 500 home care packages were assigned to people on the Home Care National Priority System (NPS). Of these packages, 31 666 were assigned to people who were not actively waiting for the entire time between their approval and their assignment. Later assignments (or 'opt-in afters') have therefore been excluded from the published results as their inclusion would not lead to an accurate representation of elapsed times experienced due to a mix of both over- and under-counting of actual elapsed times for this group. The number of opt-in afters for each package level in 2019-20 were: level 1 — 3551; level 2 — 12 799; level 3 — 6245; level 4 — 9071.									
	.. Not applicable. – Nil or rounded to zero. np Not published.

Total admissions	no.	9	1	48	46	4	5	–	13	126

(a) Data only includes records where ACAT approval is before admission date. Data only includes first admissions in the financial year.

(b) A small number of recipient postcodes are invalid and not able to be reported by remoteness area. Postcodes that span more than one remoteness area are apportioned as per ABS Cat. no. 1270.0.55.006 - Australian Statistical Geography Standard (ASGS): Correspondences, 2016.

(c) Data with unknown elapsed time are excluded.

(d) Remoteness area is the area of the recipient of care at the time of their approval to receive aged care services. State and territory is the state or territory in which the service was provided. Some recipients are counted in remoteness categories that do not exist in the state or territory they are counted in, as they are receiving care in a state or territory other than that in which they received their approval for care.

(e) Data for residential care only includes permanent residents.

(f) The proportion of recipients who experienced elapsed times of nine months and over are not shown in this table. However, recipients who experienced elapsed times below nine months, and nine months and above, are included in the total admissions data.

– Nil or rounded to zero.

- (a) Data include completed assessments and assessments which were withdrawn or cancelled, and exclude assessments that were ongoing at the end of the year.
- (b) The most recent assessment for an individual client is counted (if the client had more than one assessment in the financial year).
- (c) Results for this table may have been derived using small numbers, in particular where the rates are for a small program, smaller jurisdictions or remote/very remote areas. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).
- (d) The 2009-10 data for NSW in the Ageing and Aged Care Data Warehouse includes an unknown number of duplicate records created by a range of database changes and/or ACAT amalgamations undertaken by the respective State governments. This has a flow-on effect on the national figures.
- (e) Includes independent living in retirement villages, supported community accommodation and boarding houses.
- (f) Includes hospital, other institutional care and other.
- (g) No long term plan made includes the following categories: died, cancelled, transferred, other incomplete assessments and unknown.
- (h) For 2015-16, there were 29 256 assessments where the clients' recommended longer-term care arrangements were unknown. There were 37 484 assessments conducted where the State or Territory of assessment was not reported. These have been included in the total number of people receiving assessments, but excluded from the percentages of longer-term arrangements and 'no long term plan made'.
– Nil or rounded to zero.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

Table 14A.31 **Older people needing assistance with at least one everyday activity: extent to which need was met, by disability status (per cent) (a), (b), (c), (d)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (e)</i>	<i>Aust</i>
(a)	Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS cat. no. 4430.0) for more details.									
(b)	Aged 65 years or over, living in households.									
(c)	Measures need for assistance with the following activities: cognitive or emotional tasks, communication, health care, household chores, meal preparation, mobility, property maintenance, reading or writing, self-care and transport.									
(d)	The rates reported in this table include 95 per cent confidence intervals (for example, X per cent \pm X per cent).									
(e)	Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.									
(f)	Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.									
(g)	Includes those with moderate or mild core activity limitations, schooling or employment restrictions and those who do not have a specific limitation or restriction.									
(h)	Includes those who do not have a specific limitation or restriction. – Nil or rounded to zero. np Not published.

Total number of public hospital separations for people aged 65 years and over and Aboriginal and Torres Strait Islander Australians aged 50–64 years	no.	840 310	790 816	596 301	251 958	197 949	59 311	44 166	80 090	2 860 901

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) Data include completed hospital separations with a care type of maintenance care for people aged 65 years or over and Aboriginal and Torres Strait Islander persons aged 50–64 years, with a principal or additional diagnosis of Z75.11 or Z74.2. The code Z75.11 is defined as 'person awaiting admission to residential aged care'. The code Z74.2 is defined as 'need for assistance at home and no other household member able to render care'.
- (b) These data only account for completed unlinked separations — that is, if a change in the type of care occurs during a patient's hospital stay, these data do not combine these separations to reflect the full length of hospital stay for a patient.
- (c) Diagnosis codes may not be applied consistently across jurisdictions, or over time. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au).
- (d) Although the diagnosis codes reflect a care type, they do not determine a person's appropriate requirement for residential aged care (this is determined by an ACAT assessment).
- (e) The code 'need for assistance at home and no other household member able to render care' may also be used for respite care for aged care residents or those receiving community care and some jurisdictions may have a high proportion of this type of use. This is particularly relevant in some rural areas where there are few alternative options for these clients.
- (f) Excludes separations with a care type of Newborn without qualified days, and records for Hospital boarders and Posthumous organ procurement.

Total	rate	7.8	3.8	24.6	12.9	26.2	11.9	12.6	20.6	12.4

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) Cells have been suppressed to protect confidentiality where the presentation could identify a patient or service provider or where rates are likely to be highly volatile, for example, where the denominator is very small. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (www.aihw.gov.au).
- (b) Victoria has developed alternative care pathways for older people waiting for residential aged care to be supported outside the acute hospital system. These alternative care pathways impact on the data reporting the number of hospital patient days by those eligible and waiting for residential aged care.
- (c) Due to specific state-based attributes relating to the administration of residential aged care in SA, data relating to the rate per 1000 patient days should be interpreted with care.
- (d) For 2010-11 and subsequent years, Indigenous status data for Tasmania and the ACT are of sufficient quality for statistical reporting purposes. For 2009-10 and previous years, data for Tasmania and the ACT should be interpreted with caution.
- (e) 'Other Australians' includes non-Indigenous Australians and those for whom Indigenous status was not stated.
- (f) Disaggregation by remoteness is by the patient's usual residence, not the location of the hospital. Patient days are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of residence. Hence, rates represent the number of patient days for patients living in each remoteness area (regardless of their jurisdiction of usual residence) divided by the total number of patient days for patients living in that remoteness area and hospitalised in the reporting jurisdiction.
- (g) Socio-Economic Indexes for Areas (SEIFA) quintiles are based on the ABS Index of Relative Socio-Economic Disadvantage (IRSD), with quintile 1 being the most disadvantaged and quintile 5 being the least disadvantaged. Each SEIFA quintile represents approximately 20 per cent of the national population, but does not necessarily represent 20 per cent of the population in each state or territory. Disaggregation by SEIFA is by the patient's usual residence, not the location of the hospital. Patient days are reported by jurisdiction of hospitalisation, regardless of the jurisdiction of residence. Hence, rates represent the number of patient days for patients living in each SEIFA quintile (regardless of their jurisdiction of usual residence) divided by the total number of patient days for patients living in that SEIFA quintile and hospitalised in the reporting jurisdiction.
- (h) Total includes separations for which place of residence was not known, not stated or could not be mapped to a SEIFA index.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) Data as at 30 June relates only to decisions made during the relevant financial year following a re-accreditation site audit or a review audit activity. Excludes Commencing Home decisions on 31 commencing services during 2019-20, 33 commencing services in 2018-19 and 35 commencing services in 2017-18.
- (b) Data for 2019-20 reflects adjustments made to the Commission's regulatory program in response to the COVID-19 pandemic from 16 March 2020. Adjustments were made to minimise infection risks and focus additional effort on areas of risk to ensure that providers were doing everything possible to keep aged care consumers safe. The Commission's modified regulatory program increased the frequency of assessment contacts with providers by deferring re-accreditation audits and reprioritising home services quality audits. Short notice site visits temporarily replaced unannounced visits based on public health advice and other clinical advice, including from the Commission's Chief Clinical Advisor. Unannounced visits resumed in June 2020 once protocols were put in place for these visits to occur safely and re-accreditation audits resumed in August 2020. See www.agedcarequality.gov.au for more detail on the modified regulatory program.
- (c) For the period 2017-18 the 3 years decisions includes 520 own motion decisions made by the Agency.
- (d) Note that accreditation period shows the decision in effect as at 30 June.
- .. Not applicable. – Nil or rounded to zero.

Table 14A.39 Compliance with service standards for Australian Government residential aged care, home care and support service providers, 2019-20 (a), (b)

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
	Data are comparable (subject to caveats) across jurisdictions and over time.									
	Data are complete (subject to caveats) for the current reporting period.									
(a)	Data for 2019-20 reflects adjustments made to the Commission's regulatory program in response to the COVID-19 pandemic from 16 March 2020. Adjustments were made to minimise infection risks and focus additional effort on areas of risk to ensure that providers were doing everything possible to keep aged care consumers safe. The Commission's modified regulatory program increased the frequency of assessment contacts with providers by deferring re-accreditation audits and reprioritising home services quality audits. Short notice site visits temporarily replaced unannounced visits based on public health advice and other clinical advice, including from the Commission's Chief Clinical Advisor. Unannounced visits resumed in June 2020 once protocols were put in place for these visits to occur safely and re-accreditation audits resumed in August 2020. Further information about the Commission's regulatory activities are available at www.agedcarequality.gov.au .									
(b)	Each standard consists of a number of requirements. Details on requirements can be found at www.agedcarequality.gov.au .									
(c)	The organisation: (a) has a culture of inclusion and respect for consumers; and (b) supports consumers to exercise choice and independence; and (c) respects consumers' privacy. Consists of six requirements.									
(d)	The organisation undertakes initial and ongoing assessment and planning for care and services in partnership with the consumer. Assessment and planning has a focus on optimising health and well-being in accordance with the consumer's needs, goals and preferences. Consists of five requirements.									
(e)	The organisation delivers safe and effective personal care, clinical care, or both personal care and clinical care, in accordance with the consumer's needs, goals and preferences to optimise health and well-being. Consists of seven requirements.									
(f)	The organisation provides safe and effective services and supports for daily living that optimise the consumer's independence, health, well-being and quality of life. Consists of seven requirements.									
(g)	The organisation provides a safe and comfortable service environment that promotes the consumer's independence, function and enjoyment. Consists of three requirements. Not applicable for home care and support services.									
(h)	The organisation regularly seeks input and feedback from consumers, carers, the workforce and others and uses the input and feedback to inform continuous improvements for individual consumers and the whole organisation. Consists of four requirements.									
(i)	The organisation has a workforce that is sufficient, and is skilled and qualified to provide safe, respectful and quality care and services. Consists of five requirements.									
(j)	The organisations' governing body is accountable for the delivery of safe and quality care and services. Consists of five requirements.									
	.. Not applicable. – Nil or rounded to zero.

Table 14A.40 **Compliance with service standards for WA HACC service providers**

		2017	2018	2019	2020
<i>Progress with reviews to be conducted during 3-year cycle (2015 – 2018)</i>					
Reviews conducted to 30 June	no.	94	94
Reviews to be conducted during cycle	no.	117	117
Reviews conducted to 30 June of those to be conducted	%	80.3	80.3
<i>Proportion of reviews that met all expected outcomes under each of the Standards (a)</i>					
Standard 1 — Effective management (b)					
	%	88.0
Standard 2 — Appropriate access and service delivery (c)					
	%	94.0
Standard 3 — Service user rights and responsibilities (d)					
	%	97.0

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) The proportion of reviews that met all expected outcomes under each of the standards was not collected for 2018. The Quality Review compliance process for the WA HACC Program was ceased from mid-2017 due to the WA HACC Transition to the Commonwealth Home Support Programme (CHSP) and the National Disability Insurance Scheme (NDIS).
- (b) Standard 1 — Effective management — the service provider demonstrates effective management processes based on a continuous improvement approach to service management, planning and delivery.
- (c) Standard 2 — Appropriate access and service delivery — each service user (and prospective service user) has access to services and service users receive appropriate services that are planned, delivered and evaluated in partnership with themselves and/or their representatives.
- (d) Standard 3 — Service user rights and responsibilities — each service user (and/or their representative) is provided with information to assist them to make service choices and has the right (and responsibility) to be consulted and respected. Service users (and/or their representative) have access to complaints and advocacy information and processes and their privacy and confidentiality and right to independence is respected.
- .. Not applicable.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

Table 14A.43 **Primary carers (carers of people aged 65 years or over) who are satisfied with the quality of formal services received to help in their caring role, by sex of carer, by State and Territory (a), (b), (c), (d), (e)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (f)</i>	<i>Aust</i>
(a)	Includes primary carers (aged 15 years or over) with a main recipient of care aged 65 years or more, or a non-main recipient aged 65 years or more. Recipients of primary carers are people living with a profound or severe core activity limitation. See section 15.4 for more details.									
(b)	Organised services to help in caring role may include services which are not directly related to a carer's recipient but which the primary carer perceives as helping them in their caring role.									
(c)	Data includes only those persons who undertook a personal interview, and does not include proxy interviews.									
(d)	Primary carers who did not state their receipt and satisfaction with the quality of organised services have been excluded from both the numerator and the denominator. Proportions have been calculated excluding these 'not stated' responses. It should be noted that in 2015 this represents 32 per cent of all Primary Carers of persons aged 65 years or over who used services. In 2012, 48 per cent of Primary Carers of persons aged 65 years or over did not state their receipt and satisfaction with the quality of organised services.									
(e)	Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for more details.									
(f)	Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.									
	– Nil or rounded to zero. np Not published.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

- (a) Data includes only those persons living in households who undertook a personal interview, and does not include proxy interviews.
- (b) Satisfaction questions only asked of persons who reported receiving assistance from at least one organised service in the last 6 months.
- (c) Only persons who reported receiving assistance from at least one organised service in the last 6 months.
- (d) Satisfaction with quality of assistance received from organised services includes assistance with cognitive or emotional tasks, health care, household chores, meal preparation, mobility, property maintenance, reading and writing, self-care tasks and transport. Data excludes assistance received with communication tasks.
- (e) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for more details.
- (f) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (g) Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.
- (h) Includes inner regional, outer regional and remote. Excludes very remote and migratory areas. Refer to the SDAC Summary of Findings publication (ABS Cat. no. 4430.0) for further details.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

- (a) Data includes only those persons living in households who undertook a personal interview, and does not include proxy interviews.
- (b) Includes persons who reported receiving assistance from at least one organised service in the last six months and persons who have an unmet need for assistance from organised services.
- (c) Satisfaction with range of organised services available includes assistance with cognitive or emotional tasks, health care, household chores, meal preparation, mobility tasks, property maintenance, reading and writing, self-care tasks and transport. Data excludes satisfaction with the range of organised communication services available.
- (d) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for more details.
- (e) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (f) Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.
- (g) Includes inner regional, outer regional and remote. Excludes very remote and migratory areas. Refer to the SDAC Summary of Findings publication (ABS Cat. no. 4430.0) for further details.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

- (a) Includes primary carers (aged 15 years or over living in households) with a main recipient of care aged 65 years or more, or a non-main recipient aged 65 years or more. Recipients of primary carers are people living with a profound or severe core activity limitation. See definitions for Main recipient of care and Primary Carer in the Survey of Disability, Ageing and Carers, Australia: Summary of Findings, 2015 (Cat. no. 4430.0) Glossary.
- (b) Organised services to help in caring role may include services which are not directly related to a carer's recipient but which the primary carer perceives as helping them in their caring role.
- (c) Data includes only those persons who undertook a personal interview, and does not include proxy interviews.
- (d) Only includes primary carers who reported receiving assistance from organised services to assist with their caring role in the last 6 months.
- (e) Primary carers who did not state their receipt and satisfaction with the quality of organised services have been excluded from both the numerator and the denominator. Proportions have been calculated excluding these 'not stated' responses. It should be noted that in 2018 this represents 24 per cent of all Primary Carers of persons aged 65 years or over who used organised services in the previous 6 months and 32 per cent and 48 per cent of the same population in 2015 and 2012 respectively. Refer to SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for further information about the 'not stated' responses for these data items.
- (f) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for more details.

Table 14A.47 **Primary carers (carers of people aged 65 years or over) who are satisfied with the quality of formal services received to help in their caring role, by remoteness area, by State and Territory (a), (b), (c), (d), (e), (f), (g)**

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

- (a) Includes primary carers (aged 15 years or over living in households) with a main recipient of care aged 65 years or more, or a non-main recipient aged 65 years or more. Recipients of primary carers are people living with a profound or severe core activity limitation. See definitions for Main recipient of care and Primary Carer in the Survey of Disability, Ageing and Carers, Australia: Summary of Findings, 2015 (Cat. no. 4430.0) Glossary.
- (b) Organised services to help in caring role may include services which are not directly related to a carer's recipient but which the primary carer perceives as helping them in their caring role.
- (c) Data includes only those persons who undertook a personal interview, and does not include proxy interviews.
- (d) Primary carers who did not state their satisfaction with the range of organised services have been excluded from both the numerator and the denominator. Proportions have been calculated excluding these 'not stated' responses. It should be noted that in 2018 this represents 24 per cent of all Primary Carers of persons aged 65 years or over, 32 per cent of the same population in 2015, and 28% 2012. Refer to SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for further information about the 'not stated' responses for these data items.
- (e) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS Cat. no. 4430.0) for more details.
- (f) Includes those who do not currently receive any assistance.
- (g) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).

Table 14A.48 **Primary carers (carers of people aged 65 years or over) who are satisfied with the range of formal services available to help in their caring role, by remoteness area, by State and Territory (a), (b), (c), (d), (e), (f), (g)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (h)</i>	<i>Aust</i>
(h)	Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.									
(i)	Includes inner regional, outer regional and remote. Excludes very remote and migratory areas. Refer to the SDAC Summary of Findings publication (ABS Cat. no. 4430.0) for further details.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) Data in this table include complete assessments only for all years and exclude assessments which were withdrawn or cancelled.
- (b) The high cost for ACAT assessment in the NT is influenced by assessments of clients in remote locations necessitating additional costs including travel and accommodation for ACAT assessors.
- (c) Aged care assessment expenditure is Australian Government spending only.
- (d) Time series financial data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26).
- (e) Cost per assessment includes clients aged less than 65 years.
- (f) Data for 2015-16 was extracted from the Ageing and Aged Care Data Warehouse in October 2017. ACATs transitioned to use My Aged Care systems in early 2016. My Aged Care assessment data contained an additional 37 473 assessments nationwide that could not be attributed to a state or territory.

Data are not comparable across jurisdictions (see caveats in footnotes below).

Data are complete (subject to caveats) for the current reporting period.

(a) Time series financial data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26).

Table 14A.50 **CHSP and HACC — cost per hour of service (2019-20 dollars) (a), (b)**

	<i>NSW</i>	<i>Vic (c)</i>	<i>Qld</i>	<i>WA (d)</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (e)</i>	<i>Aust</i>
(b) There is no commonly agreed methodology for calculating unit costs and therefore unit costs across jurisdictions are not comparable.									
(c) For the Victorian HACC program from 2012-13 to 2015-16, the unit costs reported for some years do not correspond to Victoria's HACC unit prices published by the Department of Health, since they are based on a different methodology.									
(d) WA contract by service group. Unit costs reported are an average across all services in the group.									
(e) Unit costings are not available for the NT for some years or for some services in some years due to remote services and other factors.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

Table 14A.51 **Participation of people aged 65 years or over in any social and community activities away from home in the last three months, by disability status (per cent) (a), (b), (c), (d)**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT (e)</i>	<i>Aust</i>
(a)	Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS cat. no. 4430.0) for more details.									
(b)	The rates reported in this table include 95 per cent confidence intervals (for example, X per cent \pm X per cent).									
(c)	Persons aged 65 years or over, living in households.									
(d)	The social and community activities participated in away from home in the last 3 months are: visited relatives or friends, went out with friends or relatives, religious or spiritual group activities, voluntary or community service activities, performing arts group activity, art or craft, or practical hobby group activities, went on holidays or camping with others, sport or physical recreation with others, other recreational or special interest group activities, support groups and other activities not specified elsewhere.									
(e)	Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.									
(f)	Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.									
(g)	Includes those with moderate or mild core activity limitations, schooling or employment restrictions and those who do not have a specific limitation or restriction.									
(h)	Includes those who do not have a specific limitation or restriction.									
	– Nil or rounded to zero. np Not published.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

* Indicates the estimate or proportion has a relative standard error between 25 per cent and 50 per cent and should therefore be used with caution.

** Indicates the estimate or proportion has a relative standard error greater than 50 per cent and is considered too unreliable for general use.

- (a) Cells in the table have been randomly adjusted to avoid the release of confidential data. Discrepancies may occur between sums of the component items and totals. Refer to the SDAC Summary of Findings Publication (ABS cat. no. 4430.0) for more details.
- (b) The rates reported in this table include 95 per cent confidence intervals (for example, X per cent ± X per cent).
- (c) Data are for persons aged 65 years or over, living in households.
- (d) Data for the NT should be interpreted with caution as the Survey of Disability, Ageing and Carers excludes very remote areas which comprises more than 20 per cent of the estimated resident population in the NT living in private dwellings.
- (e) Profound or severe core activity limitation refers to always or sometimes needing assistance with one or more of the core activities. Core activities comprise communication, mobility and self care.
- (f) Includes those with moderate or mild core activity limitations, schooling or employment restrictions and those who do not have a specific limitation or restriction.
- (g) Includes those who do not have a specific limitation or restriction.
– Nil or rounded to zero. **np** Not published.

Data are comparable (subject to caveats) across jurisdictions and over time.

Data are complete (subject to caveats) for the current reporting period.

- (a) Average length of stay and the Modified Barthel Index data only include recipients who completed a transition care episode, while admissions and discharges are totals for the financial year (that is, not restricted to those who completed transition care episode).
- (b) At 30 June.
- (c) Allocated places include places that will not be funded and therefore cannot become operational until the next financial year. For more information on data quality, including collection methodologies and data limitations, see the AIHW website (<https://www.aihw.gov.au/reports/aged-care/national-aged-care-data-clearinghouse-data-dictionary-version-1-0/contents/table-of-contents>).
- (d) Data are adjusted to 2019-20 dollars using the GGFCE chain price deflator (2019-20=100) (table 2A.26). Includes direct funding only.
- (e) Includes direct funding and in-kind contributions. See table 14A.3 for footnotes related to State and Territory expenditure on the Transition Care Program.
- (f) The Modified Barthel Index is a measure of functioning in the activities of daily living reported for Transition Care Program recipients who completed a transition care episode with zero being fully dependent and 100 being fully independent.
- (g) Different health and aged care service systems, local operating procedures and client groups can have an effect on the outcomes of the Transition Care Program across jurisdictions.
- (h) Average Functional Capacity Scores on Entry and on Exit are for Transition Care completed episodes only.

Table 14A.54 **Transition Care Program, summary measures**

	<i>Unit</i>	<i>NSW</i>	<i>Vic</i>	<i>Qld</i>	<i>WA</i>	<i>SA</i>	<i>Tas</i>	<i>ACT</i>	<i>NT</i>	<i>Aust</i>
(i)	Incomplete episodes of Transition Care are excluded from calculations for the Modified Barthel Index. During 2019-20, 25 per cent of Transition Care episodes were incomplete. The majority of early discharges from the program were due to the client returning to hospital (90 per cent of all incomplete episodes), or transferring to another aged care service (3 per cent). An individual may have multiple episodes of Transition Care during a year, and hence, some clients who had an incomplete episode of care may have also had a complete episode of care within the year.
